The Roosevelt Administration

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, April 25 (legislative day of Wednesday, April 24), 1940

ARTICLE BY ARTHUR W. WATWOOD

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Old Stuff," written by Arthur W. Watwood, and published in the Dallas News, Dallas, S. Dak., April 11, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Dallas (S. Dak.) News of April 11, 1940]

OLD STUFF

(By Arthur W. Watwood)

A late press dispatch quotes Hugh Johnson, of N. R. A. fame, as belaboring the Roosevelt administrations recently before a group of Wall Street Democrats assembled at a so-called Thomas Jefferson banquet.

In so criticizing the humanitarian work of Roosevelt, who has faithfully worked in behalf of the neglected and underprivileged masses of the Nation, Johnson is handing out the same "old stuff" used since George Washington's oldest dog was a pup.

Whenever a group of politicians, representing the plutocrats, exploiters, and big business grabbers want to discredit something or someone who has achieved success, either for the people or themselves, they arrange a banquet under the name of Thomas Jefferson, Abraham Lincoln, or some other famed individual. Instead of discussing principles advocated by such famous men, they proceed to misrepresent and, if possible, destroy, in the eyes of the people, a man or principle the voters should support.

What right has Hugh Johnson to say in the name of a Thomas Jefferson Democrat that Roosevelt has failed, when Johnson stands directly opposed to everything good and noble for which the great Thomas Jefferson fought during his lifetime?

No real Democrat, who believes that the Democratic Party should fight in the interest of the rank and file of humanity, needs to apologize for the administrations of Franklin D. Roosevelt.

CONDITIONS OF 1931 AND 1932

When Roosevelt was elected in 1932 this Nation was on the verge of a revolution; farmers were halting sheriff's sales; hungry people were breaking store windows to obtain food; millions of men and women and little children walked in soup lines; banks were failing by the hundreds; small-business men were going bankrupt; big-business men were crying for a Moses to lead them out of a wilderness into which their greed had taken them; soldiers of the late World War were marching to Washington as a protest of their mistreatment; wheat was selling for 20 cents a bushel; hogs were selling for $2.50 a hundred; corn wasn't worth the price of hauling to market; millionaires made paupers by their own financial trickery, approved by the Republican Party, were jumping out of skyscrapers; and everyone, including some of Roosevelt's modern-day critics, was clamoring for a change in government.

BETTER DAY—BUT NOT PERFECT DAY

Roosevelt brought us a better day, but not a perfect one. There is room for improvement in our Government, as well as in the general make-up of our economic system. We shall never see the day of perfection. We shall have to fight as long as there is time to get what we want—and then, perhaps, we shall get only a part.

But when critics like Hugh Johnson point a finger of scorn at Roosevelt, I say, "Let us look at the record."

Roosevelt has given us the best banking law we have ever had. He has given us the best farm program. He has given us the foundation of a social security system to help the aged, the crippled, the blind, and underprivileged mothers. He has helped education more than any President in the history of this Republic. He has taken millions of our young men and boys off the street and placed them in C. C. C. camps. He has helped honest business, whether large or small. He has made investments safe. He has helped to lift mortgages off farms and homes. He has reached out his hand to American labor. He has kept us out of war. In brief, he has fought for humanity.

Does Hugh Johnson think the American people have forgotten 1931 and 1932? The people—a grateful people—simply are not going to turn on Roosevelt, their tried and proven friend. If he wants a third term, he may have it; and I will do what I can toward helping him to win again. Only reactionaries, or people who fail to think about what Roosevelt has done, want him out of the way.

The American Attitude Toward the European War

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, April 25 (legislative day of Wednesday, April 24), 1940

ADDRESS BY RT. REV. WILLIAM LAWRENCE, D. D.

Mr. LODGE. Mr. President, one of the most eminent and inspiring living Americans is Rt. Rev. William Lawrence, of Massachusetts, who now approaches his ninetieth birthday. On April 10 he made a speech on the American attitude toward the European war which I think is so interesting and inspiring and full of wisdom that I should like to make it available to the Members of the Senate. Consequently, I ask unanimous consent that it be printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Every Presidential candidate is claiming that if he is elected he "will keep this country out of war," and those promises are cabled around the world.

In return come back questions from correspondents (I have some from Americans in Europe), "Why does not our country come in and help the Allies? Tell us, and let the world know."

And then we proceed to give our reasons. We protest that we hate war and its carnage and murderous armament—so does almost everyone in the world. We assume, perhaps a little too easily, that no one suspects any of us of cowardice, or even of a desire to make money out of the war. And then we come to sounder reasons: it is a European war, economic, of national boundaries and historic racial rights, in which we have not an essential part. We say to our friends in Europe, "We sympathize with the causes for which you Allies are fighting—the right of small nations to life, the overthrow of military aggression, for the right of personal liberty, free speech, freedom of worship, those rights upon which Christian civilization is founded and upon which our country stands."

We continue our protestations: "We sympathize with you; we will help you with money and goods; we will sell you arms, if you will pay in cash and carry them away. It is your fight. We are a strong Nation, separated from you by the Atlantic; it is due future civilization that we keep strong in order that we may be able, whatever happens in Europe, to carry on Christian civilization. And when your fight is over, and, as we hope, the Allies have won, we shall be glad to advise you and, perhaps, be a mediator between you and your former enemies in laying the foundation of peace by the creation of a federation of countries, something like the economic and political Union which we, in this Nation, have had for a century."

Now I should not take your time in saying all of this if I did not have something to contribute which affects directly the members of this convention and all members of the church, indeed all citizens.

Has it occurred to you that this statement of reasons, which we think sounds so plausible and sympathetic, is so smug and patronizing that if it sinks into the minds of the allied peoples of Europe they will scorn us as hypocrites? Of course, the totalitarian states have no use, anyway, for our talk and boastings.

And now let us look more closely at the situation. The people of the allied nations have no fond imagination that they are on a picnic; they have solemnly pledged to fight this thing through to the end—to victory or to their own annihilation. They have tightened their belts and have put themselves under rigid forms of rationing, labor, service, taxes, and self-sacrifice. All their younger men have left their homes; every man, woman, and child is doing his bit. English, French, and other peoples—they are expecting to have their hospitals filled, their sons and lovers wounded and killed—and for what? For the defense of personal liberty, the rights and sacredness of the individual, the freedom of the press, religious liberty, Christian civilization. And then they look across at this country, great and strong, talking so sympathetically of the cause of the Allies, and yet in the same breath, saying firmly that we will not enter the war but that we will advise and may lead in the future.

Is not this the time for us to ask ourselves the question: What preparation are we making for carrying this Nation into leadership in civilization?

Here are some plain facts. Our country is piling up a debt of over $40,000,000,000, a sizeable percentage of which is used in giving us comforts for which not we but our descendants have got to pay; a country which has billions of gold stored in the mountains of Kentucky, whose drink bill is enormous, whose public gambling runs into the millions, whose Empire State has just adopted pari-mutuel betting, demoralizing to thousands of youth in order that the State may, as does Massachusetts, take a rake-off; a country notoriously lawless, whose luxuries, sports, and amusements are absorbing millions of dollars. We talk much of ourselves as a great and strong Nation, our citizens write eloquently of international brotherhood and good neighbors and pronounce us ready to help and lead the world, but this Nation will not risk a single life to join those who are defending the principles upon which our Nation is founded.

All these facts are well known to the peoples of Europe, many of whom are boiling with indignation. They may not say much publicly; it would not be prudent. We are a strong Nation and they must stay on good terms with us outwardly. We are, in my judgment, moving along a path which will make us suspected, unpopular, and even despised among all nations.

The truth is, and we know it when we take time to consider, that the strength of a nation is not in its material wealth, its military defenses or its form of government, except so far as these are supported by a people of character.

I name three qualities, which among many I select, which we should do well to cultivate; and my hope is that we may make this a personal matter for each one of us and not allow our thoughts to float off in vague generalities.

My first quality is honesty, a determination to face the facts, to stand for the truth.

A while ago, a presidential candidate thanked God that in this great and free country we could look into the eyes of every baby born in this land, of whatever color or race, with the assurance that it was within the possibilities that he might one day be President. A beautiful thought acclaimed throughout our glorious land. And yet that candidate knows, and we know, that there are several millions of citizens in the South, given by our Constitution the right to vote, who dare not go to the polls; and neither political party dares to make it an issue or protect the voter.

We proclaim the virtues of our democracy, but we know that the administration of some of our cities is wasteful or corrupt beyond the record of many cities of totalitarian governments. We dare not face the problem of balancing the Budget but leave it to our descendants.

We slip into habits of self-indulgence, of gaming, of drink, which are weakening the moral fiber of young and old. The people of Europe have tightened their belts and are ready for action. What are we—you and I—doing for plain, simple honesty and truth? Are we facing the facts while we talk of leadership?

Second: Intelligent sympathy with the conditions of others.

How glibly we talk of the situation in China, Japan, the Balkans, and Russia, when we have not the slightest knowledge of the history, the habits, the social life of those people. It seems as if some of us thought that about all that we have to do is to read the Constitution of the United States to any foreign people, shout "Democracy forever" and they will leap with enthusiasm to adopt a democratic government.

We are too apt to draw conclusions from our own narrow viewpoint. It was the mistake that Christian missions made long ago; trying to convert peoples of whose traditions, habits, and religion they knew little or nothing. That is all changed now; but the cause of missions suffers today because of that earlier, mistaken method of Christian men and women. That has been a weak spot in many international treaties: that the treaty makers have not known intimately or sympathetically the people with whom they were in treaty. You recall the stupid action of the Senate some years ago about Japanese immigration, an unintentional insult which Japan has never forgotten and which affects her relations to us to this day.

Coming to ourselves, as I get older I appreciate more and more the worth of imagination, the ability to put ourselves in the other man's place and try to think as he thinks. Without this we can have no intelligent sympathy. The development of rapid transit, the steamship, and the airplane are great and increasing agencies toward gaining such intelligence; but there must be a far more intimate knowledge and more patient study than is possible for the casual traveler. Each of us in our family, town, and neighborhood life has the opportunity to cultivate that imagination. The Italian, the Chinaman, the day laborer, whomever we pass upon the street, the man or woman who is at the opposite pole from ourselves in social life, has qualities and traditions of life, often very fine ones, of which we are totally unaware.

If peace ever comes to this world, real peace through good will, it will come only after the masses of people in each and every nation have the willingness and patience to understand each other and the sympathy to act upon that understanding. Good will must take possession before peace can settle down.

Third: Sacrifice. Besides friendliness and understanding, there must be a readiness to adjust ourselves to others by mutual sacrifice.

We know that a community is knit together by the members of the community joining in giving up something for each other. Our Union of federated States was accomplished because each Colony gave up something which it treasured; the doctrine of States' rights was tempered by sacrifice for greater unity. It is upon this ideal, is it not, that we hope, even though it may take

centuries, for a brotherhood or a federation of nations that will insure world peace.

What I am trying to press home is that we put a softer pedal upon our talk of Europe, war, and political and strategic guesses, and put a heavier emphasis upon the building of our own country in character and true leadership.

Recognizing our military and political force, our officers of government and our Congress, we know that we are founded upon the tradition and the fact that the people are behind them all; and not only the people as a mass, but each individual. What the people are, what they think and say and do, the official leaders and legislators will in time say and think and do.

Now, we the people are of good stock. From our forbears we—and I speak of the people as a whole, not the Sons of the Mayflower alone, but the hundred and thirty million—have the traditions of a religious faith; we have enterprise, optimism, determination, and above all we have ideals. Tap any American, and if you go deep enough you will find that however noisy or vacillating or wild he may be he has some ideals. The trouble is that in all of us our finest ideals are allowed to fall into the background under the pressure of everyday life, especially when, as in these times, the pressure of material competition is heavy; but the ideals are there.

The renaissance of Abraham Lincoln in these days is, I believe, a sign that we miss him—the honesty, the sympathy, and the sacrifice even unto death which were his. We want, and we know that we want to be finer, that we are not satisfied with life as it is with its superficiality, its evasions of hard duty, its everlasting pressure of trivialities. The need of today is to so kindle the finer life and arouse the ideals in every separate person that, in time, the mass will be leavened: the young of today will be the elders of tomorrow.

Here, my friends—and mark my words—here is our job.

If our civilization is to be a Christian civilization, then Christ must be behind and beneath it. The man or woman, however humble, who is by life and teaching, trying to lift just one person up to a finer character, is at the very heart of the movement for international peace.

Let us rise, each of us, to the dignity of our work as father, mother, teacher, pastor, men, and women who are trying so to live in the spirit of Christ that we have at heart the building of national character. We are far away from the realization of world peace, but each one of us can do his bit in the creation of a manhood and womanhood—honest, sympathetic, and ready to sacrifice self for the good of others.

My last word is this:

We recall the tradition of the aged Apostle John, Bishop of Ephesus, being carried through the city and with outstretched hands saying again and again, "Little children, love one another."

I am older than was John at that time, having been born just around the corner from this very spot 90 years ago next month. I do not have to be carried; I can walk. For 47 years I have been your bishop.

Whatever may be said of a world peace—cannons may roar or armies and navies may be silent—we are sure that, fundamentally, peace is a matter of the heart, the will, the temper, of the spirit, of personal and national character. The song on the birthday of Jesus Christ was of "good will, peace."

Therefore I can do no better than St. John, and repeat to you, my people, "Little children, love one another; little children, love one another."

Embellishment of Public Buildings

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, April 25 (legislative day of Wednesday, April 24), 1940

LETTER FROM GILMORE D. CLARKE

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter which I received from Mr. Gilmore D. Clarke, Chairman of the Commission of Fine Arts, which I think should be of interest to the Members of the Senate and others.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE COMMISSION OF FINE ARTS,
Washington, April 20, 1940.

MY DEAR SENATOR LA FOLLETTE: During the past several years the Commission of Fine Arts has supported a movement, inaugurated by this administration, to embellish public buildings in the District of Columbia and in the several States of the Union. This movement has conclusively demonstrated that we have in the United States artists—architects, painters, and sculptors—who have rendered most distinguished service in the professions of the arts.

The Commission of Fine Arts respectfully wish to emphasize the importance of maintaining the highest standards in respect to both design and execution of buildings erected by the Federal Government, for, in quality of excellence, the examples established in the art and architecture of governmental structures exert a potent national influence.

A serious handicap in the current movement to embellish public buildings has been the rather meager allotment of funds for sculpture and mural paintings. On many Federal post-office buildings but 1 percent of the total building cost has been allocated for the purposes of decoration. This sum seems much too small in consideration of the great influence which the work of competent painters and sculptors has upon the lives of people in all parts of the United States. In Italy, for example, 5 percent of the total cost of governmental buildings is the normal allowance for works of art developed collaboratively.

In the case of public buildings constructed in the National Capital since 1927, the percentages of the cost of sculpture and mural decoration, in relation to the total cost, were as follows:

	Percent
Building for the Department of Justice	3.5
Building for The Archives	3.1
Building for the Post Office Department	3.0
Building for the Department of Commerce	1.2
Building for the Department of the Interior	1.0
Building for the Federal Trade Commission	1.7
The United States Supreme Court	3.0

In many instances the allocations of funds for sculpture and mural painting have been, in the opinion of the Commission of Fine Arts, woefully inadequate. It is the considered judgment of this Commission that appropriations for decoration should never be less than 3 percent of the cost of the building; often these appropriations might be increased to provide an allowance of from more than 3 to 5 percent of the cost of a given structure. In any case the percentage should be sufficient to meet the cost of decoration as may be determined by the governmental agencies in immediate charge of the design of each project in conference with the architect of each building. The needs for embellishment of public buildings, in consideration of the particular character or type of structure should be, we believe, fixed and not sacrificed later for unforeseen expenditures in other directions, as has frequently obtained in the past.

It is unnecessary to remind the Members of the Congress of the important place the fine arts have in the history of the great nations of the world. The record of national achievement is largely told in sculpture and mural painting; we usually think of the nations of the past in terms of their principal heritage, the fine arts. "Art confers immortality. A noble, artistic representation immortalizes the cause symbolized, the thought embodied, the individual portrayed."

The decoration of our public buildings has an important bearing upon the future of art in this country. Linked with our artistic development are questions of patriotism and culture. This Nation, while young, has, nevertheless, a notable record of oustanding achievement and noble and inspiring historic events which deserve to be portrayed for posterity in great and important works of art.

The Commission of Fine Arts respectfully present this problem to the Members of the Congress with the earnest hope that the art of the United States may be encouraged to grow and to find expression in association with buildings, great and small, erected by authority of the Congress in Washington and in the States of the Union.

Respectfully submitted for the Commission of Fine Arts.

GILMORE D. CLARKE, *Chairman.*

HON ROBERT M. LA FOLLETTE, JR.,
United States Senate, Washington, D. C.

Sale of Airplanes to Great Britain and France

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, April 25 (legislative day of Wednesday, April 24), 1940

ARTICLE BY JACK PURCELL

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article which I clipped from the April 24 issue of the Washington

Times-Herald entitled "Plane Sales Boon to Army, Says Air Chief."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of April 24, 1940]

PLANE SALES BOON TO ARMY, SAYS AIR CHIEF—GENERAL ARNOLD TESTIFIES AT SENATE HEARING

(By Jack Purcell)

The administration's policy of selling latest-type warplanes to the Allies is a great boon to this country's aircraft industry and enables the Army to obtain better planes at lower costs, Maj. Gen. H. H. Arnold, chief of the Army Air Corps, told the Senate Naval Affairs Committee yesterday.

Testifying on the effect of these sales on the defense program, Arnold denied foreign purchases delayed in any way procurement of aircraft for American use.

QUOTA NOT ALTERED

He pointed out that production delays have been ordered only on those contracts for planes intended for reserve use. The quota of 3,337 planes for tactical combat by June 30, 1941, he said, has not been altered.

Therefore, Arnold declared, the 2,200 ships necessary for reserve strength will be top-notch planes constructed in the light of the war experience of previous models in combat duty with the Allied air armada.

CITES PLANE SALE

As an example, he cited the sale of the Curtiss P-40's to the Allies.

"It became apparent in the light of war conditions that our planes were not top notch," Arnold said. "One item, in particular, was the self-sealing gas tank," a German invention which automatically seals bullet holes.

"France and England had to substitute similar tanks for those in use. It's a wise move for us to delay production for increased plane performance, self-sealing tanks, and increased armament."

COURTESY EXCHANGED

Interrupting him at this point, Senator MILLARD TYDINGS (Democrat), of Maryland, pointed out that English and French planes were open to our inspection. Therefore, he said, we could take advantage of their technical improvements without revealing any of our own military secrets.

Benefits to the plane industry in foreign purchases, Arnold testified, are apparent in increased production space and employment.

In 1938 the aircraft companies had 6,089,000 square feet of space and employed 23,140 men. Today floor space has increased to 7,800,000 square feet and employees total 55,700, Arnold declared.

The Army air chief revealed that 4,000 war planes have been ordered by foreign buyers, of which 3,173 are for England and France. He said that 580 have already been delivered.

CLOSED SESSIONS NEXT

Arnold was the last major witness to appear before the committee on the House-approved $655,000,000 naval-expansion bill. Chairman DAVID I. WALSH (Democrat), of Massachusetts, announced that the committee will go into closed session next week to consider the measure.

Meanwhile, congressional protest against Rear Admiral Taussig's prediction that "war with Japan is inevitable" was voiced today by Representative HAMILTON FISH (Republican), of New York, perennial foe of the Roosevelt adminstration. FISH charged that Taussig's statement before the Senate Naval Affairs Committee Monday was the "most provocative, inflammatory, and dangerous remark made by any naval man in our time."

He suggested that Congress investigate all "warlike" forecasts or statements by naval officers, accusing them of embarking on a propaganda campaign every time a Navy bill is under consideration.

To Destroy Labor Standards

EXTENSION OF REMARKS

OF

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

EDITORIAL FROM THE NEW YORK POST

Mr. MICHAEL J. KENNEDY. Mr. Speaker, under leave to extend my remarks I wish to include therein an editorial which appeared in the New York Post, Monday, April 15, 1940, entitled "To Destroy Labor Standards." This editorial refers to the Barden amendments to the Wage and Hour Act, depriving 1,500,000 agricultural employees of the protection of this fine law, which has been so effective in raising the living standards of so many millions of working men and women. I was opposed to this bill when it was introduced last July and stated my position in the RECORD at that time. During the interim I have had an opportunity to observe the effective and beneficial operation of this law more thoroughly in my own State, and I am more than ever opposed to these amendments, which are designed to oppress the living conditions of the laboring classes. I concur in the opinion set forth in the following editorial that the Barden amendments would, in effect, destroy labor standards, and they will continue to receive my opposition:

[From the New York Post of April 15, 1940]

TO DESTROY LABOR STANDARDS

The wage and hour law now faces a fight for its very existence. The opponents of the act do not try for its outright repeal; the principles incorporated in the law are far too popular for that. Instead, its opponents propose amendments, cloaked in the attractive garb of "protecting the farmers" and clearing up "certain ambiguities in the statute." The suggested changes may sound innocent and not unreasonable. But as soon as their effects are understood it is clear that the amendments would destroy the law by exempting from its provisions those who most need its protection.

The emasculatory changes are incorporated in a bill introduced by Representative BARDEN of North Carolina, last July. The bill is tentatively scheduled for consideration by the House next week along with the Logan-Walter bill, which is also designed to hamstring New Deal activity under the guise of minor improvement in administrative procedure.

The Barden bill has nothing to do with the farmers, who do not come under the wage and hour law. It is simply a device to take away the law's protection from 1,500,000 employees who perform industrial operations on agricultural, horticultural, and dairy products from the time they have left the farm until they have reached the ultimate retail distributors. In October 1939, when the 30-cent hourly wage and the 42-hour week went into effect, only 650,000 workers got raises, and only 2,400,000 were benefited by the minimum-hour provision. By depriving 1,500,000 workers in the most poorly paid industries of the law's protection, therefore, the Barden amendments would vitiate the greater part of the law's effectiveness.

The wage and hour law was designed to put a floor under wages in some of the most shockingly underpaid industries in the United States and at the same time to fix a limit to impossibly long hours. In each case the minimum standards set were extremely modest—no more than a first step toward the conditions that would be socially desirable. After a year and a half the lobbyists for those who have maintained the lowest standards of employment are about to succeed in bringing their destructive amendments to a vote.

Congress should reply by treating the Barden amendments to a smashing defeat.

Is Secretary of Agriculture Wallace Interested in a Farm Program, or Is He Interested in a Political Campaign for the Presidency?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

Mr. HOFFMAN. Mr. Speaker, under the guise of a program to help the farmer, some people are getting the idea that the Secretary of Agriculture is interested as much in building up a political machine as he is in getting aid to the dirt farmer.

A constituent from Allegan County, Mich., writes me as follows—I withhold his name, as the publicity might affect the number or the amount of checks which he might otherwise be eligible to receive from the Department:

APRIL 4, 1940.

DEAR MR. HOFFMAN: I am one of the A. A. A. committeemen of ——— township.

About March 1 a meeting was called of all the committeemen of the county, at a cost of over $300, which comes out of the farmers' soil checks, to boost a dinner to celebrate the anniversary of the A. A. A.

I am glad to say that the committeemen refused to act.

These meetings were called all over the country.

To that I replied, asking him as to where he got the information that it would cost $300 for the county dinner, and

whether he had any idea how that expense was met. To that letter he replied as follows:

APRIL 18, 1940.

DEAR MR. HOFFMAN: In reply to your letter of April 15.

A meeting of the community committeemen was called, or 72 of them, at $4.50 a day each, to push the dinner.

There were tickets printed with form to fill in with purchaser's name and address. Then a church or society could put on the dinner; then all the tickets sold were to be turned in, so that whoever was behind the affair would have the names and addresses of all those attending.

The pay to the committee members is charged to administration of the farm program, so comes out of the farmers' soil checks.

We were to get someone else to push the dinners so that our hands wouldn't show.

I give you this correspondence for what it is worth. I have introduced a privileged resolution, calling upon the Secretary to advise us how much, if any, truth there is in the statements contained in this letter.

Whether there is any truth or whether the farmer who wrote me bases his conclusions upon gossip among the farmers, justice demands that the situation be cleared, and that from authoritative sources; hence my resolution.

I trust you will watch for the reply of the Secretary of Agriculture.

New Deal Propaganda

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

Mr. WOODRUFF of Michigan. Mr. Speaker, one of the techniques developed by the New Deal administration to a greater state of perfection than it has hitherto ever reached in this country is the practice of letting high-ranking personages, either in or out of the Military Establishments, or the diplomatic ranks, make alarming statements which will find ready and permanent lodgment in the mind of the Nation and then, in order to evade official responsibility, later to disavow the statement. This has been the case so many times, in one form or another, during the last 7 years that it has come to be recognized as a part of the New Deal technique of propaganda.

Sometimes these utterances, speeches, testimony before committees of the Congress, or newspaper interviews, are fully disavowed. In other cases they are merely deprecated. In still other cases they have been referred to as indiscreet. In still other cases they are disposed of by a perfunctory assertion that they were merely personal views.

It remains a fact, however, and a very dangerous fact, so far as the peace and security of this Nation are concerned, that when diplomats of ambassadorial or ministerial rank, naval or military officers of the rank of admiral or general, or men or women of Cabinet rank make serious public statements, those statements not only lodge in the mind of the Nation but the people believe what is said. Therefore, it is deceitful and dangerous for any administration to promote propaganda and endeavor to mold public opinion by such technique as this.

It is true, of course, that perfectly honest, sincere, and able officers in the Naval and Military Establishments of the United States at times find themselves in positions where they are made to understand that statements which ordinarily they would be too discreet to make would be appreciated, even though departments of the Government or the White House might have to disavow them the next day. Such a position is a most delicate and uncomfortable one for any officer of the Navy or the Army, or for any other official of the Government, so far as that is concerned. Whenever any officer of the Naval or Military Establishment, or of any other department of Government, is so used by an administration, it is an outrageous procedure, and doubly dangerous because the people have no way of recognizing such utterances as propaganda.

There are times when courageous officers do speak their minds and their statements are later disavowed. There are other times when they speak their minds and get court-martialed for it. There are other times, as in the case of our Canadian minister recently, when the most indiscreet—not to say reprehensible—statements were made, and the official was permitted to continue drawing his pay, and was rebuked by a slight verbal tap on the wrist and an admonition to "please don't do it again." It would seem, however, he has been rewarded with the Democratic nomination for the United States Senate from New Jersey for his indiscreet speech.

It is always difficult, even for a Member of Congress, to tell when an officer of the Navy or the Army, or some other official, is speaking voluntarily or because of suggestions from "on high."

In any event the people of this country ought to and do regard any expressions or statements from any official, military or otherwise, which would persuade us to go into war, or which would tend to embroil us with other nations, with very great suspicion and disapproval.

It is just as much the duty of the Navy and the Army as it is of any other branch of our Government to do its utmost to keep the United States out of war with any other nation.

The greatest possible defense for this Nation would be just that—to keep it out of war.

There have been times—and the people should be alert—when it has seemed that men ordinarily known as being very discreet have made some exceedingly rash utterances at a time when it was almost like tossing a firebrand into a powder magazine to say such things.

All of these expressions do not change one iota the fact that the overwhelming majority of the American people want their Nation to stay out of war.

Relation of Our Foreign Trade to the Problem of Unemployment

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

Mr. THOMAS F. FORD. Mr. Speaker, as a member of the unemployment conference of the House, I was assigned the task of presenting to my subcommittee a study of the relation of our foreign trade to the problem of unemployment. In the course of this study I have examined this intricate problem from various angles. It is necessary to state at the beginning that the relationship of foreign trade to our whole economic structure is one of such major importance that a complete study and analysis would take months of intensive labor. Hundreds of statistical tables would have to be assembled and broken down. I, of course, was unable to indulge in any such elaborate undertaking. The following study, while hastily prepared, does, I believe, fairly present the highlights of the subject.

Those who study the subject with an open mind are bound to realize that our foreign trade gives employment to thousands and even to hundreds of thousands of our people. I am convinced that if this trade is developed by sound economic policies, such development will greatly expand employment and thus contribute materially to the reduction of our unemployment rolls.

I realize that many otherwise well-informed people look upon foreign trade as a very minor factor in employment.

It is commonly stated in an offhand way that, since our foreign trade is only about 10 percent of our total trade, it is of little importance one way or another and hence can have no vital bearing on the problem of unemployment.

Let us consider for a moment what this 10 percent of our entire trade means in terms of jobs. Normally there should be 50,000,000 employed men and women in the United States. Since it is conceded that foreign trade constitutes one-tenth of our entire trade, it is apparent that this means employment for one-tenth of 50,000,000 people, or the very important item of 5,000,000 jobs. What intelligent man or woman will sniff at that?

Furthermore, while 10 percent relates to the whole of our trade, it is a fact that many branches of industry are dependent upon foreign markets, not for a mere one-tenth of their business, but for as much as 40 or 50 or 60 percent of their business.

Take cotton, for instance. For many years over two-thirds of our raw cotton was regularly exported. Dr. James A. B. Scherer some years ago wrote a notable book showing that cotton had throughout the years paid what would otherwise have been an enormous adverse balance of trade. This book, Cotton as a World Power, is worth any man's reading, despite the fact that conditions have so greatly changed since its publication. Basically, it is a sound book and one that makes clear many problems not sufficiently well understood.

In order to show what conditions prevail at present in regard to the importance of our exports, I have dug out the figures in regard to the value of our exports in certain commodities and have figured out the percentage this bears to our total production of each of these.

It proved rather difficult to get all the data I needed, but I have made what I can guarantee are pretty correct estimates in the few cases where exact figures were not available.

Here is the table:

	Percent of production exported			Value of exports		
	1929	1933	1937	1929	1933	1937
Raw cotton	54.8	64.9	46.5	$770,830,000	$398,212,000	$368,660,000
Leaf tobacco	41.2	34.3	45.3	145,763,000	82,094,000	134,520,000
Wheat	22.5	4.5	7.3	192,292,000	18,592,000	63,977,000
Automobiles	12.0	10.9	10.0	541,396,000	90,630,000	346,887,000
Radio apparatus	5.6	14.1	12.0	23,122,000	16,126,000	25,454,000
Sewing machines	29.8	35.0	31.6	12,189,000	3,356,000	[1] 11,053,000
Office appliances	30.2	27.0	23.2	54,754,000	15,768,000	37,523,000
Borax	47.0	46.0	42.9	8,271,000	5,552,000	----------
Mining and pumping machinery	18.5	15.2	23.0	54,449,000	13,504,000	50,989,000

[1] For 1935.

I am not going to read the entire table, but running through it I find that in 1929, 54.8 percent of our raw cotton was exported, as against 46.5 percent for 1937. The value of our cotton exports in 1929 was $770,830,000, and in 1937, $368,660,000. Did these enormous sales in 1929 mean anything to the men and women engaged in producing cotton? Did these exports give work to only an insignificant number of people, or did they mean the difference between penury and comfort for hundreds of thousands of people? Of course, the first statement is false and the second is true. That is why no amount of propaganda can influence the cotton States against the reciprocal-trade agreements. They know what the export trade means to them in the way of markets, jobs, better prices, and better returns on each year's work.

The second item on the table is leaf tobacco.

Tobacco farmers and all employed in the tobacco trade watch with intense interest the rise or fall of the exports of tobacco. All know that when exports are high there will be more activity all along the line, with greater employment at better pay.

In 1929 our exports of leaf tobacco took care of 41.2 percent of our production. This fell in 1933 to 34.3 percent and rose in 1937 to 45.3. No one need point out which year brought better returns, with fuller employment in the tobacco country.

Wheat exports have varied greatly from year to year. As the table shows, in 1929 the percentage of our production exported was 22.5 or nearly a quarter of the crop. This fell to 4.5 percent in 1933 and rose to only 7.3 percent in 1937. No one here needs to be told how largely our wheat farmers and all the thousands of men and women who get their living from wheat farming depend upon the foreign market. We either must increase our exports, and do what is possible to stabilize them from year to year, or we must convert thousands of acres of first-class wheat land to some other use. That this involves great and difficult changes in the lives and fortunes of tens of thousands of families is apparent to all. The solution for this large part of our population is to promote exports of wheat and keep on promoting them. Thus only can the farmer and his family and his hired men hope to have any security in their jobs and in their purchasing power.

Turning to some of our great manufacturing industries that depend to a high degree on the export market, we find that from 10 to 12 percent of the automobiles produced in this country each year find a market abroad. When our production fell in 1931–33 armies of men were thrown out of work, with repercussions that affected every part of this country. The part that the falling off of exports of automobiles played in this is indicated by the fall of the value of the exports from over half a billion dollars in 1929 to $90,000,000 in 1933. How many men did this slump in exports throw out of work and put in the bread line? It is difficult to say definitely, but there were enough to threaten our entire employment structure.

The United States long ago took the international lead in the manufacture of sewing machines. In quality, appearance, price, and general superiority they ranked first. By consistent effort the manufacturers built up an enormous export sale of these machines, so that even in 1933 over a third of the sewing machines made in the United States was exported. This rose to nearly a half in 1937. The value exceeded $37,000,000 that year. That this gave employment to an army of workers in the factories is apparent. Not so readily recognized is the fact that this export trade also gave jobs to many railroad and other transportation workers and to a great organization of American salesmen, sales managers, and office workers both here and abroad.

An interesting item that I selected from many others is that of borax, which regularly exports very nearly half of each year's production. A lot of men and a lot of mules found work in mining and transporting borax. Without the export market they would have been in the surplus category.

One might go on indefinitely with the different products. For instance, the great dependence of our corn and hog farmers on the foreign market might be stressed. Or the value of exports to our fresh- and dried-fruit industries and to all the various canning factories might be noted. But I hope enough has been considered to bring out the basic fact that foreign trade means jobs, purchasing power, stability, and prosperity to men and women in almost countless industries.

Now, as to precisely how many people depend upon foreign trade for their livelihood, authorities differ. As I said in the beginning, it is commonly stated that our export trade in general constitutes one-tenth of our total. This should indicate 5,000,000 jobs when industry is active and times fairly good.

Looking at the latest summary made by the Bureau of Foreign and Domestic Commerce, dated January 19, 1939, we find a set of conservative figures. These estimate that the number of persons engaged in production and distribution for export was in 1929, about 3,198,000; for 1933, about 2,384,000; and for 1937, about 2,400,000. The percent of total employment in agriculture, manufacturing, mining, and transportation in 1929 was 12.4; in 1935 it was 8.9 percent; and in 1937, 9.6 percent.

	1929	1933	1935	1937
Estimated number of persons engaged in production and distribution for export	3,198,000	2,384,000	2,088,000	2,400,000
Percent of total employment in agriculture, manufactures, mining, and transportation in the United States	12.4	11.1	8.9	9.6
Percent of total employment in all industries in the United States	6.6	6.0	4.7	5.1
Manufactures, total	846,000	374,000	468,000	673,000
Mining, total	102,000	49,000	57,000	75,000
Fishing	10,000	4,000	28,000	38,000
Agriculture	1,958,000	1,807,000	1,393,000	1,432,000
Distribution	267,000	139,000	154,000	204,000
Banking and marine insurance	15,000	11,000	12,000	12,000

These estimates, while doubtless as carefully made as possible, necessarily fail to include much employment indirectly due to foreign trade. For example, the total effect on our 31,000,000 farm population, living on over 6,000,000 farms, of a drastic drop in farm exports is not confined to them. The income of this population depends upon marketing their crops readily at fair prices. With as much as half the crop frequently depending upon the export market, the falling away of that market is ruinous. For it piles up surpluses, brings prices tumbling down, cuts the precious cash income to pieces, and destroys the farmers' purchasing power. At once the market for the products of industry falls. Farm machinery, automobiles, sewing machines, shoes, clothing, millinery, furniture, and all the other commodities the farmer ordinarily buys remain in the stockroom. Factories cut production and lay off employees. The railroads go into bankruptcy. In every industry the pinch is felt, with retrenchment and discharge of employees repeating itself in ever-widening circles. That is why it is impossible to state definitely the effect of our export trade on employment. All that we can assert with complete assurance is that it is much greater than even the five million estimate given at the beginning of this report.

The old mercantile theory that declared an excess of exports over imports created a favorable balance of trade, still prevails to a surprising extent. In fact, the feeling against imports is rather general. This is due to the theory that a dollar's worth of imports necessarily displaces a dollar's worth of goods that might otherwise be produced in this country by our own labor. The fact that one-third of our imports in 1937 was made up of crude materials for use in manufacturing and nearly one-seventh was crude foodstuffs that were processed here, is an answer to the displacement theory. These imports certainly gave jobs to our workers. Since they either supplemented an insufficient domestic production or were entirely noncompetitive, the truth is apparent.

Even the most rigid mercantilist admits that certain imports are essential to our industry and our well-being. Hence, little objection is made to bringing in such imports as crude rubber, tin in the form of bars, blocks, and pigs to keep our tin mills going, chemicals needed in industry, certain grades of wool and fibers required by our manufacturers, coffee, tea, and cocoa, and certain tropical imports not produced here. As a matter of fact, many other imports are essential to our industry and to full employment in our factories.

There is also a class of partly competitive imports that supplement our domestic production and are considered essential.

It is undisputable that imports directly or indirectly give employment to great numbers of our people. All sorts of rubber manufactures, food-processing industries, chemical works, and many other industries depend upon imports for their very existence. Hence, their employees owe their jobs to imports.

Manufactured imports also open employment to our people. Take such luxury articles as beaded or hand-embroidered bags, hand-wrought laces, carved or painted fans, perfumery, and dozens of other imports that appeal to those who indulge in such things. These imports maintain great importing houses, with their staff of experts, clerks, salesmen, packers, correspondents. Sent by truck, train, boat, or air to stores in all parts of the country, they help employment in all the transportation industries. In the small shops and large mercantile establishments they open jobs for salesmen and women. It is doubtless true that they do in some cases displace domestic products, but not to the extent that is generally thought.

In the end, of course, the whole question of imports rests upon the necessity of our taking imports to pay for our exports, and thus keeping our people employed in export industries. The only alternative is to take services, such as shipping and insurance, to build up great export balances and invest them in foreign securities, as we did to our sorrow in the era of Harding and Coolidge and Hoover, or to take imports for our exports. The truth is that trade is and must be an exchange of goods for goods or services or something of value. To speed up exports and dam up imports is to court disaster and create unemployment. Right now we are all concerned over the enormous amount of gold we are accumulating. This gold influx is due, first, to our too "favorable" balance of trade, which is partly settled by establishing credits here derived from gold imports. Second, our unwieldy gold stock is partly due to foreign investors snapping up the credits established by gold shipments and purchasing stocks and bonds and buildings and other investments here. Why? Because this is the safest country in the world for investments as well as for people. We can check or stop the imports of gold by developing the reciprocal-trade treaties in a way that imports and services will balance exports and services. That way means full employment for our people.

Incidentally, the influx of gold is not due to the price paid here for gold. That price is uniform in the United States and Great Britain.

In closing I wish to call your attention to this extract from a statement recently made by the State Department:

> Restoration of foreign trade is essential to the ability of industry to employ labor at high wage levels.
>
> Exports, although never making up much more than 10 percent of the total national production of movable goods, are important enough to make the difference between operating at a profit and operating at a loss in a number of industries. Reopening of profitable foreign markets means the opening of plants shut down during the depression, with consequent reemployment, not only of men to produce exports but of men to produce for home sales. Elsewhere, where export-trade losses have necessitated the spreading of work, wage increases or added working time result from increased foreign trade. These gains gradually spread through the entire economy. New employment resulting from increased exports is created not only for those workers employed in making radios for Brazil or office machines for the United Kingdom but for all workers in manufacturing, distribution, or service industries. Increased pay rolls in manufacturing mean increased travel by motor, rail, and water; increased consumption of meat and dairy products, etc.
>
> Evidence of the close relationship between foreign trade and domestic prosperity is found in the fact that increased factory employment has always accompanied increased foreign trade, while employment falls with decreases in foreign trade. This parallel not only refutes the theory that increased imports hurt domestic labor but further points to the fact that domestic activity depends to an important extent on the volume of foreign trade.

Can't the Waterway People Figure?

REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

Mr. VAN ZANDT. Mr. Speaker, in the Appendix of the CONGRESSIONAL RECORD, page 2337, the gentleman from Arkansas, Congressman KITCHENS, made an attack upon S. 2009, the Wheeler-Lea transportation bill, which is based on entirely erroneous information.

In the first place, someone has misled Congressman KITCHENS into believing that the National Conference of Railroad Investors has raised a lobbying fund of over $100,000,000 in

behalf of this bill. There are today less than $11,000,000,000 in bonds issued by American railroads. Taking the gentleman from Arkansas [Mr. KITCHENS'] own figure that the National Conference of Railroad Investors was requesting contributions of 5 cents for each $1,000 railroad bond, this would make approximately $550,000. When the gentleman from Arkansas [Mr. KITCHENS] speaks of $100,000,000, he is just overestimating the amount the National Conference of Railroad Investors could raise under their scheme by 200 times.

This is not unusual, however, because we have all seen the wild and extravagant statements of proponents of the wasteful appropriations for waterways. In my short period of service in the House, I have never seen them make a conservative estimate about anything.

I want also to point out that the National Conference of Railroad Investors has no connection with the Association of American Railroads, or with the railroad employees' organizations. I do not hold any brief for the National Conference of Railroad Investors, but I am interested in a sound transportation system for this country.

S. 2009 is a step in the direction of bringing around stable and satisfactory transportation conditions, thereby benefiting all types of transportation—water, rail, and highway. I want to see happy and contented railroad employees, which is one of my first objectives, and S. 2009 is a step in that direction.

In Defense of the Cause of Trade Unions

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

ARTICLE FROM TACOMA (WASH.) LABOR ADVOCATE OF APRIL 12, 1940

Mr. COFFEE of Washington. Mr. Speaker, for some little time there has been pronounced criticism, by the tories, of trade unions. There is an increasing tendency manifest among commentators and writers of bitter criticism of the trade-union movement. I have been disturbed by the failure on the part of many thoughtful citizens to recognize the important part played in our national economy by the expansion and strengthening of unionism.

Because John McGivney, editor of the Tacoma Labor Advocate, is a brilliant scholar and student of the history of trade-unions, I believe an editorial appearing in the recent issue of the Tacoma Labor Advocate, which is the official organ of the Tacoma Central Labor Council, affiliated with the American Federation of Labor, is worthy of inclusion in the CONGRESSIONAL RECORD. In this editorial he devastatingly shatters certain criticisms directed at the trade-union movement. I commend the reading of the editorial to those who may be unthinkingly inclined to lend support to ill-considered criticism of trade-unionists.

The editorial is as follows:

FOR UNIONISM

Under the heading "Against Unions," here is a letter that appeared in the Post-Intelligencer of last Tuesday:

To the Post-Intelligencer:

Every so often some craze overtakes mankind and a great many people are coerced into believing that a panacea for a blissful existence has been found. Today such a dilemma is spreading through this Nation in the form of organized labor.

Unionism contradicts the first law of life—individual self-expression.

All gain is a result of intelligence. Intelligence is the result of initiative, that something which differentiates each from the other by means of individual expressiveness.

"Unionism aims at power through strength of numbers, and not, as it should, through strength of mind. Unionism makes men weak; because it deprives its adherents of the right to individual self-expression by competitive initiative. Competition is the incentive from which the power of initiative emanates, and when unionism deprives a man of his right to willful progress by out-thinking his contemporaries, it robs him of his life and soul.

"G. G. HOLT.

"SEATTLE."

We don't know what or who is responsible for the pessimistic views as to the unions which Mr. Holt has concerning them, and whether it was the breakfast he ate, or the hangover of the night before that made him see things in America as through a dark glass darkly.

He is, however, voicing an opinion which the votaries of the National Association of Manufacturers and other economic royalists have been expressing for some time, when every operator of an establishment, two by four or larger, see in themselves gifted, talented geniuses, and examples of the survival of the fittest.

Mr. Holt's idea that unionism contradicts the first law of life is very definitely a statement that all the facts of industrial history disprove. And the mere fact that with the advancement and progress of humanity, unionism also has progressed, should be enough to show this theorist that he is absolutely in error.

The fact is that unionism gives expression to the highest impulse in man and that to which man's survival is mainly due. The fact that mutual aid has in the history of living things been the main protection and the stay of all living animals, is one that no sort of illusion can destroy. And the tendency of mankind to get together in racial, class, national groups for their own protection is one that is so inherently hereditary that it has become second instinct with the children of men.

All gain, says Holt, is the result of intelligence. That of course is just a half truth, and certainly intelligence does not necessarily bring gain to the individual. The intelligence that makes a great invention may, nay it has, died in the workhouse. And the man whose wealth could acquire that invention, although born a dullard, may make an immense gain.

That intelligence is the result of initiative is not true. There can be initiative that is intelligence and initiative that is in its essence very stupid, but a man like Holt could not understand that. Unions can.

The statement is made that unions aim at power through strength of numbers, and not as it should, through strength of mind. That is very inconclusive. For strength of numbers is not necessarily incompatible with strength of mind, and it has been noted of old that two heads are better than one.

We would like to express resentment at the stupidity which declares with a brazen indifference to facts that unionism deprives its adherents of self-expression. What else has given the workers the right of self-expression but the unions which they established? No union worker has been allowed to apply the Bill of Rights on the job until recent days. He has been subjected to yellow-dog contracts and chased and smashed and scattered with spies and thugs and all the mechanism of suppression of which political tyrants in American industry were capable of sustaining. And in this, worse luck, they were sustained by judges with injunctive measures to shut up their attempts at self-expression and compelling them to an employer's subjection, regardless of the Bill of Rights, regardless of the law.

Holt sees in competition, that is, of man against man, worker against worker, an ideal condition. As, indeed, it is for the employers who thereby can work their will upon the men who produce all the wealth of the Nation. We confess that that sentence, "competition is the incentive from which the power of initiative emanates," is a new one on us. We don't know what it means, and we doubt if anyone else could interpret such a bunch of weedy hooey.

Quite otherwise is his declaration that when "unionism deprives a man of his right to willful progress by out-thinking his contemporaries it robs him of his life and soul." For one can very easily realize that such a theory of ethics would bring much consolation to a Capone, to a Dillinger, or a Baby-Face Nelson, to scrupulously avoid mention of eminent rogues in the more legitimate business world but whose ways are so singularly akin.

These attempts to attack unionism are becoming exceedingly general. They are expressions of hatred and resistance to the steady advance of the "craze," as Holt calls it. They are also efforts to take unionism down a peg, as the system of individualist enterprise has been taken down and debunked by the economic facts as to what followed the debacle of 1929 and the collapse of that system with almost the finality of the fall of Humpty-Dumpty.

The Townsend Plan—A Brief Study of Income and Statistical Background—Senate Authorizes Committee Study

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

Mr. SMITH of Washington. Mr. Speaker, the Townsend plan is receiving more serious attention and consideration

in both House and Senate than ever before. I insert the news story which appeared in the Washington Evening Star, April 9, 1940:

SENATORS PROPOSE COMMITTEE STUDY OF TOWNSEND PLAN

Senator GEORGE, Democrat, of Georgia, suggested today that the Senate Finance Committee might well begin a study of the Townsend old-age pension plan so that it would be prepared to deal with the legislation if it comes up next session.

A proposal for a study of the Townsend plan and a review of the operations of the present Social Security Act won bipartisan support in the Senate yesterday.

Senator DOWNEY, Democrat, of California made the proposal. He asked that the committee investigate and report to Congress on the system and on the Townsend plan.

Several Senators offered encouragement to the Californian. Senators LODGE, Republican, of Massachusetts and LUNDEEN, Farmer-Labor, of Minnesota expressed the hope that Senator DOWNEY would obtain an early and complete hearing on the "General Welfare Act," incorporating the Townsend plan.

IDAHOAN PRAISES PLAN

Senator CLARK, Democrat, of Idaho said he thought the Townsend plan was the only one extant which "promises to keep money in circulation and keep the productive plant of the Nation at anywhere near capacity without the vicious counterpart of going into debt."

Senator MINTON, Democrat, of Indiana broke in to inquire what was being done about the Townsend movement, and Republican leader MCNARY suggested that Senator DOWNEY'S proposal for a special study be submitted directly to the Senate without the delay of reference to a committee.

Senator ASHURST, Democrat, of Arizona, said he wished to commend the legislation containing the Townsend plan "to the Senate and to the country." He said he believed Dr. Francis E. Townsend, founder of the Townsend pension movement, had "hit upon a truth that may be the solution of the financial problems of this country—no appropriation without a tax to accompany it."

At one point Senator VANDENBERG, Republican, of Michigan, interrupted Senator DOWNEY to comment that the social-security program entails "horrible discrimination against the less privileged."

A $6,000,000,000 YIELD ESTIMATED

Senator DOWNEY told his colleagues that the Townsend plan, on the basis of the present national income, would raise about $6,000,000,000 a year through imposition of a 2-percent gross income tax. The money, he said, would be distributed among 10,000,000 persons over 60, with payments averaging $50 a month.

At the present time, he said, old-age pensioners received an average of $4 a week.

On April 22, 1940, a special subcommittee consisting of the following Senators was appointed: GEORGE, of Georgia, chairman; CONNALLY, of Texas; BYRD, of Virginia; HERRING, of Iowa; JOHNSON of Colorado; LA FOLLETTE, of Wisconsin; VANDENBERG, of Michigan, and TOWNSEND, of Delaware. The appointment of this senatorial committee, which will make a thorough study and investigation of the Townsend plan, marks the greatest forward step and recognition accorded on the proposal in the history of the Townsend movement, and should be a source of gratification to the American people.

Mr. Speaker, I desire to set forth a brief study of income and statistical background relating to the pending Townsend bill, H. R. 8264, introduced by the gentleman from Florida [Mr. HENDRICKS], and S. 3255, introduced in the Senate by Senator DOWNEY, of California. Reply will also be made in the course of these remarks to the recent speech against the Townsend bill by the able gentleman from New York [Mr. TABER].

FIRST. HOW MANY PEOPLE IN THE UNITED STATES ARE PAST 60?

On page 86 of volume 1 of social-security hearings will be found the Bureau of the Census figures and estimates prepared by W. L. Austin, director.

In 1930 there were 10,385,026 persons 60 years of age and over. The estimate for July 1938 was 12,450,000.

HOW MANY OF THESE ARE EMPLOYED?

In 1937, according to the same authority, more than 4,000,000 past the age of 60 had jobs. At least half of these, because of earnings, might reasonably be expected to continue their employment. Not more than 10,000,000 persons are, therefore, expected to apply for pensions under the Townsend plan.

The new Townsend bill proposes to finance its program by means of a 2-percent gross-income tax applied to incomes in excess of $250 per month or $3,000 per year. The net returns from this tax are to be equally divided between citizens past 60 without regard to race, religion, color, or sex.

Income of religious, labor, fraternal, civic, service, and charity organizations of a nonprofit nature is exempt from the tax, as well as payments received on insurance policies, or in compensation for injuries or death under employer's liability.

HOW MUCH PER MONTH WILL EACH RETIRED PERSON RECEIVE?

This depends on the national gross income. On page 83 of volume 1, social-security hearings, there will be found gross-income totals for 1934 of $271,000,000,000, and for 1936, $449,000,000,000. Senator SHERIDAN DOWNEY, in preparing his estimates of possible yield of the 2-percent tax, used a conservative gross-income figure of $365,000,000,000. From this he subtracted $65,000,000,000 to cover the exempted incomes of the lower wage, salary, and business groups, as well as exempt income of firms and individuals with incomes over $3,000. This leaves $300,000,000,000 subject to a 2-percent tax. The gross incomes of individuals and companies receiving less than $3,000 per annum is $44,614,889,000. The exemption of the first $3,000 allowed to those who will pay the tax amounts to $12,080,000,000. These statistics were estimated by reference to the pay-roll data of the Bureau of Old Age and Survivor's Insurance, Social Security Board, while the census of business for 1935 supplied the data in regard to companies under the $3,000 level. See also Bureau of Agricultural Economics for rural community income figures. The exempt income of businesses grossing more than $3,000 annually was obtained by multiplying the number of such firms by $3,000.

As the figures used are authoritative, and the estimates derived from them conservative, we may reasonably look for a 2-percent net tax yield of $6,000,000,000 annually; which, when divided amongst the 10,000,000 annuitants, will provide a minimum pension at the outset of approximately $50 per month. The first month the law is in operation, there will be paid out $500,000,000. This should turn over at least 5 times, providing an additional two and a half billion dollars of gross income, a large part of which will be subject to the tax.

In order to encourage home markets, to stimulate turnover and prevent hoarding, each annuitant must spend his pension within the United States, and within 35 days of its receipt.

It seems logical that through enforced circulation, as outlined, there will be a gradual increase in general prosperity and a gradual rise in the amount available for pensions. This rise should continue under proper control until the Nation approximates full-demand production.

To provide opportunities for youth, beneficiaries will not be permitted to engage in any gainful occupation. To discourage slothfulness, annuitants are forbidden to support any able-bodied person in idleness except husband or wife.

Thrifty pensioners are not to be penalized for their past productive efforts, and so are permitted to collect interest, rents, or other revenues from their own investments.

The right to receive retirement compensation is not transferable under the Townsend Act and none of the moneys or rights are subject to attachment. It is, however, considered to be the duty of the annuitant to pay his just obligations and to allot at least 10 percent of any monthly installment for obligations incurred before any pension money was received.

THE TOWNSEND BILL HAS TEETH

Fines not to exceed $10,000 or imprisonment not to exceed 10 years, or both, may be imposed for attempts to evade the payment of the 2-percent tax or for the making of false returns or statements.

CERTAIN OPPONENTS OF THE TOWNSEND PLAN USE AS THEIR STOCK ARGUMENT THE FEAR OF INCREASED TAXATION

While it is true that there will be a per capita rise in the income of the elder citizens, this rise will be largely met by savings in other forms of taxation. The social-security tax, for instance, amounting to 6 percent on pay rolls, will be wiped out along with charity age pensions, institutional care, and other expenses. The Townsend plan offers a tested, simple, and almost painless method to provide the

funds necessary for age security. Instead of taxing the lower-income groups, as under the social security pay-roll tax, the Townsend plan begins where social security leaves off and assesses those best able to pay. That the tax will be reflected in a slight increase in the cost of living is to be expected, but this increase should not exceed 5 percent and enables all to share justly in the expense. The low wage and income groups, however, will enjoy a 2 percent tax exemption, and so their increased cost of living should not exceed 3 percent, no more than the social-security tax, which will be abolished.

Our colleague the gentleman from New York [Mr. TABER], ranking Republican member of the Appropriations Committee and one of the ablest and most industrious Members on the Republican side of the House and a vigorous opponent of the Townsend plan, brings up a point which has confused many. He states:

> The bill proposes a 2-percent tax on gross incomes, but provides an exemption of $3,000 per year. In other words, if a man receives a salary of $3,000 per year he pays no tax. If a merchant has gross sales of $20,000 and has a net profit of 7½ percent, or $1,500, after taking out an exemption of $3,000 on his gross income, he would pay 2 percent on $17,000, or $340. In this particular case the man with an income of $3,000 in salary would pay no tax, while a man with a net income of $1,500 in a business would pay $340, or 22½ percent, on his net income.

The fallacy in the above argument lies in the apparent failure to understand the operation of our present tax structure.

Let us say that the man in the above illustration is in the automobile business, and before the imposition of the 2-percent tax sold 20 cars at a thousand dollars each. After the imposition of the tax he would simply add $20 to the price of each car, not disturbing his profit margin. That is exactly what this automobile man and every businessman does with his taxes—he adds them to the price of his product. And that is exactly what would happen when the Townsend plan is in operation.

To illustrate further, we will point to the gasoline or cigarette business. Here are two industries which carry taxes of from 40 to more than 50 percent. Yet the wholesaler, the middleman, and the retailer add their costs, taxes, and profit, and business continues.

The gentleman from New York also states:

> Now, it appears that only 30 percent of the gross income is received by individuals and corporations whose gross income exceeds $3,000 a year.

Unfortunately, the gentleman from New York [Mr. TABER] does not tell us to whom it appears, where it appears, or how it appears. It magically appears. From the authentic figures it may be estimated that considerably less than one-sixth of the national gross income is received by firms and individuals grossing less than $3,000 per year; while approximately five-sixths of the gross income may be accounted for in the higher income brackets and therefore will be subject to the tax.

The gentleman from New York, Representative TABER, has evidently confused net family and individual incomes with individual, family, and gross corporation incomes. See National Resources Committee report, "Consumer Incomes in the United States," August 1938, p. 6, table 2, column 6—30.9 percent of the aggregate net income received by families and single individuals with net incomes in excess of $3,000. Of corporative gross income, considerably less than 1 percent goes to corporations receiving less than $100,000 annually. Reference is made to Statistics of Income for 1936 (Bureau of Internal Revenue), pt. 2, pp. 9–10 and 39.

The gentleman from New York goes on to say:

> In other words, taking the figures offered to us by the advocates of the bill (Townsend bill), and nothing else, and using a pencil and paper to figure it out, we find that adding practically $1,600,000,000 to the taxes of the country would only result in the payment of $12.25 to each individual pensioner.

But the gentleman from New York [Mr. TABER] does not use the figures offered by the Townsend-plan advocates. He uses his own figures and his own methods to arrive at his conclusions. He says that present pay-roll taxes on business have operated to stifle and prevent recovery. Yet he gives the Townsend plan no credit for entirely stamping out the pay-roll taxes on poverty and shifting the burden to the shoulders of those best able to sustain it.

The gentleman from New York [Mr. TABER] says:

> I doubt very much the ability of the people in this country under 60 years of age to pay taxes enough to provide a substantial pension to those over 60.

We are compelled to wonder if the gentleman from New York doubts the ability of American productive enterprise to produce goods and services sufficient to meet the legitimate needs of our elder citizens. If it is physically possible to produce the goods and services necessary to assure an American standard of living to our elders, then certainly it must be possible to evolve a bookkeeping or financial system capable of distributing these goods.

Our leading manufacturers, engineers, and economists are agreed that due to the far-reaching technological improvements in the past decade our full productive capacity has increased to such a degree that in this year of 1940 it is probably 50 percent greater than in 1929. The enormous extent to which we could increase our national income is indicated by the estimate of the Brookings Institution that in 1929, when it was ninety-four billions in goods and services, we only utilized 81 percent of our capacity, allowing 19 percent to remain unused. We could readily have produced twenty billions more, or one hundred and fourteen billions of goods and services instead of ninety-four billions. The Government's national survey of potential production capacity shows that in 1929 we could have produced one hundred and thirty-five billions, or forty-one billions more than we did.

Our national income this year will probably be about seventy billions, as compared with the figure of eighty billions envisioned by President Roosevelt and the one hundred billions which Senator MCNARY, of Oregon, recently declared to be possible. Estimates of possible national income run as high as one hundred and fifty billions by some of the most eminent engineers, scientists, architects, and builders living today, based, of course, upon the assumption that we would utilize upon a sound economical basis our full productive capacity by producing first and foremost a maximum of foodstuffs, clothing, and housing for all our people and then proceed to provide slum clearance, superhighways, airports, flood control, health and sanitation, antistream pollution, river and harbor improvements, reforestation, irrigation, reclamation, and armed and equipped with the products of the test tubes and crucibles in our laboratories, by adopting the Townsend old-age pension and national-recovery plan, abolish poverty, disease, and crime in America.

Development of the White River in Missouri and Arkansas

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

STATEMENT OF HON. CLYDE T. ELLIS, OF ARKANSAS, BEFORE THE HOUSE FLOOD CONTROL COMMITTEE

Mr. ELLIS. Mr. Speaker, under permission granted me by the House, I herewith insert in the RECORD my testimony before the House Flood Control Committee on the development of the White River in Missouri and Arkansas, as follows:

> Mr. ELLIS. Mr. Chairman, you and all of the Flood Control Committee have been so patient and considerate with us on all of the matters that have been presented in behalf of the White River Basin that I am almost embarrassed to ask your indulgence further.

The first testimony for the White was given by Lt. Col. Stanley L. Scott, district engineer, of Little Rock, on Saturday, March 23. Then on Monday, March 25, you heard five witnesses, all from the territory affected—three county officials from Arkansas and two from Missouri. Then on Monday, April 1, you heard six State officials, three county officials, and two private citizens, all from Arkansas and from the territory affected. Today, and especially for the benefit of you members who did not hear the witnesses from the White River, I should like to make a general and supplemental statement.

THE WHITE RIVER

To give you a bird's-eye view of the White River, I should like to lay before you these small maps prepared by the engineers. You will note that it rises in northwest Arkansas, in the Ozark Mountains, and flows northward a distance of more than 100 miles into Missouri, then bears eastward for a hundred miles or so and flows back into Arkansas, then southeastward through the mountains again and down into the lowlands and on to the Mississippi just above the mouth of the Arkansas, a total distance of 733 miles. The basin covers 28,000 square miles, in whole or in part 41 counties in Arkansas and 21 counties in Missouri, or an area only 12,000 square miles less than the celebrated Tennessee. Three-fourths of this area, or 21,000 square miles, is above the point where the river leaves the mountains and 7,000 square miles is in the rich alluvial valley below the mountains and subject to the floods.

The CHAIRMAN. At what place?

Mr. ELLIS. Batesville, at mile 301 above the mouth. There is one thing that the White can always be depended upon to do, and that is to furnish approximately one-fifth of the waters of any major flood below its confluence with the Mississippi.

PROJECTS AUTHORIZED

The Congress authorized, by the Flood Control Act of 1938, six small flood-control reservoirs on the White. The specific authorization I quote as follows:

"WHITE RIVER BASIN

"The general comprehensive plan for flood control and other purposes in the White River Basin, as set forth in Flood-Control Committee Document No. 1, Seventy-fifth Congress, first session, with such modifications thereof as in the discretion of the Secretary of War and the Chief of Engineers may be advisable, is approved and for the initiation and partial accomplishment of said plan there is hereby authorized $25,000,000 for reservoirs; the reservoirs to be selected and approved by the Chief of Engineers."

The act of 1938 also provides:

"That pen stocks or other similar facilities adapted to possible future use in the development of hydroelectric power shall be installed in any dam herein authorized when approved by the Secretary of War upon the recommendation of the Chief of Engineers and of the Federal Power Commission."

House Document No. 1, Seventy-fifth Congress, to which the authorization act refers, lists the following projects, which are of course now authorized: Norfork, Clearwater, Lone Rock, Water Valley, Greers Ferry, and Bell Foley. These are all on the tributaries and would cost, according to plans as of that date, a total of $55,297,000. These projects, developed for power also, would cost a total of more than $100,000,000, according to the present plans of the engineers, and the $25,000,000 ceiling placed in the 1938 act virtually precludes any progress on the plan. I will come back to that again in a minute. Two of these projects, in fact the two largest, are in my district. They are the Norfork and Lone Rock. Incidentally, the only reason, I understand, that no projects were authorized in 1938 for the main stem of the White was that there had not been adequate surveys and reports at that time, due to the fact that certain power companies held licenses from the Federal Power Commission, which have since been canceled, to construct hydroelectric projects on the main stem. It is putting it mildly to say that we feel that the situation has gotten to the point where a tragic error will be committed, to the very great detriment of our people, unless this committee and the Congress revise the 1938 authorization.

OUR REQUESTS FOR FURTHER AUTHORIZATIONS NOW

Mr. Chairman, we are making three specific requests for authorizations at this time, at least two of which we feel are imperative.

The CHAIRMAN. We recall your former statement, and without meaning to interrupt we have had under consideration here the matter of changing your authorization with respect to the Norfork Reservoir so as to provide for the power. Would you favor that change or modification?

Mr. ELLIS. Yes, indeed, we favor it. Everybody in that country favors it.

I

First, we are asking that the $25,000,000 ceiling placed in the 1938 act be raised. Clearwater and Norfork, authorized in the 1938 act, have already been selected and are regarded as started. For instance, there was a Budget allotment this year of $2,400,000 for Clearwater and $2,200,000 for Norfork, on the basis of a $70,000,000 appropriation for flood control. Clearwater will cost an estimated $15,900,000 and Norfork an estimated less than $10,000,000 for flood control only.

The CHAIRMAN. With respect to Bull Shoals and Table Rock and other allied interests, as you know, we have not a report on those projects yet, and, as the gentleman knows, we are without authority to include any of those projects in the committee report which it may or may not make on these projects.

Is there any other recommendation on any other projects except the modification at Norfork you wanted to bring particularly to our attention?

Mr. ELLIS. I understand not, except we want the ceiling raised, unless the reports get in on Bull Shoals or Table Rock.

The CHAIRMAN. Of course, it is not your fault, because I know you have done everything in your power to see that it got here.

Mr. ELLIS. Thank you, Mr. Chairman. And the engineers have done a swell job.

II

Secondly, we are asking authorization for Bull Shoals (substitute for Wild Cat Shoals) and Table Rock Reservoirs. Much to our disappointment, the report on these projects, on which the engineers have now been working for some 2 years—although they have been made by the district and division offices to the Chief of Engineers—have not as yet had time to clear through the Board and to reach the Congress in the form of a formal report. It is generally known that favorable recommendations are coming through for dual-purpose reservoirs at these sites—that is, flood control and power—and that the two reservoirs, completed, will cost around $72,000,000. If you deem it advisable to authorize these projects in substantial accordance with plans now on file in the office of the Chief of Engineers, then we would like very much to have such an authorization at this time. These projects are both on the main stem of the White.

The CHAIRMAN. What is the amount needed for Norfork to provide for the additional authorization?

Mr. ELLIS. $5,000,000, Mr. Chairman, not including the powerhouse, equipment, and transmission lines.

The CHAIRMAN. You wish to provide an additional authorization of $5,000,000 for the dam?

Mr. ELLIS. Yes, Mr. Chairman.

III

Thirdly, we are asking specific authorization of an additional $5,000,000 for the Norfork project, as provided in my bill, H. R. 9037, and Senator MILLER'S companion bill, S. 3668, on which favorable reports and recommendations have been received by this committee from both the War Department and Federal Power Commission.

IV

We are also requesting a resolution from this committee for further surveys on the upper White, and particularly at Beaver, and on the upper Buffalo, and particularly for the proposed site near the mouth of Mill Creek.

I will discuss these requests further in a few minutes, Mr. Chairman, but I should like to now call your attention to the general situation in the White River Basin.

FLOOD-CONTROL BENEFITS

The Army engineers tell us in their various documents that at the height of the record flood of 1927 the White River was discharging 440,000 cubic feet of water per second into the Mississippi, or approximately one-fifth of the floodwaters below that point. They tell us that for 12 days, from April 23 to May 5, it averaged a discharge of over 300,000 cubic feet per second and that during the 16 highest floods for the past 50 years its contribution has averaged from 50,000 to 440,000 cubic feet per second. This means, of course, that not only the 7,000 square miles of the alluvial valley of the White but an additional 50,000 square miles in Arkansas, Mississippi, and Louisiana, below the mouth of the White, are subject to the floodwaters of the White.

If you look, gentlemen, at this map of the basin which I hold in my hand you can see that the rainfall over this tremendous mountain region finally forces itself through a funnel-stem into these lowlands. The average fall of the river in the upper three-fourths of the basin is approximately 4 feet per mile. In the lowlands the fall is barely one-third of a foot per mile. It takes no stretch of the imagination to see these floodwaters piling up with terrific force the instant they hit the plains.

It is not possible, as you know, to adequately estimate flood losses. However, the engineers have arrived at a few figures which are worthy of consideration. They tell us that this region has experienced seven floods during the period from 1927 to 1938, inclusive, and that the average annual direct flood losses exceeded $2,500,000, the major portion of which are crop losses. Think of it, gentlemen, $2,500,000 average per year in the valleys of the White alone. The six small reservoirs authorized will control a total of 2,730,000 acre-feet or only 24 percent of the drainage area of the White. These six, it is estimated, would lower the height of the White at the Mississippi approximately 1 foot.

It would serve no point here, Mr. Chairman, for me to review for this committee the horrible scenes—scenes in which homes and human life are always destroyed—which come to us in Arkansas in each of these floods, but I would like to remind you that gradually and year by year the floods are making it increasingly difficult for the people to survive in the valley, because of the reasons, first, that they are wiping out property and crops and human life; and, secondly, that they are gradually covering the lowlands—not with rich silt as in the ages past—but with sand and clay; and, thirdly, that there is now a more irregular stream flow, due to the clearing away of the highlands and the quick run-off which now manifests itself in the floods. This is further magnified by the filling of the river bed with sand and gravel. The water level of the vast irrigated rice lands in the lower White is gradually going down to the point of the impossible. There is testimony in the hearing here now that

today they are having to pump water an average of 100 feet. Only a few years ago it was much less.

POWER BENEFITS

Gentlemen, regardless of how some of you feel toward the development of multiple-purpose dams, and even if you should be opposed to them as a general proposition, we believe that the peculiar circumstances here involved entitle us to special consideration. First, because in this vast area, a region 700 miles long and several hundred miles wide, there is not a ton of coal, a barrel of oil, nor a cubic foot of gas. In other words, we have no natural power. In this region there are several counties in my district alone that have no electricity whatever even in the larger towns, except from local power plants, most of which are selling their current at a rate upward of 15 cents per kilowatt-hour, and not giving efficient service either. Underlying this whole mountain region are vast and valuable mineral resources in commercial quantities, none of which are being developed because of the lack of power. In other words, our people are, and have been for a long, long time, crying out for hydroelectric development along the White. Power companies held licenses over decades but never built dams, except one small, 50-foot dam at Ozark Beach in Missouri.

The comprehensive development of the White River Basin includes flood control, hydroelectric power, recreation, navigation, and irrigation for rice culture. It is true that there is little demand for flood control in the hilly or mountainous three-fourths of the basin, for the valleys are generally narrow, rocky, and little cultivated near these proposed dam sites.

Incidentally, I might say here, too, that these would all be comparatively low-cost undertakings for the reason that there would be practically no valuable lands inundated as compared with the average reservoir projects, no highways to relocate, except the raising of one across one reservoir, no railroads to relocate, and no towns to relocate, except one town of 100 or so people.

The Federal Power Commission and the Army engineers agree that "more than 500,000 kilowatts of hydroelectric power are potentially capable of development in the White River Basin, with an output of more than 2,000,000,000 kilowatt-hours annually." The Federal Power Commission advises me that there is a ready market in this region for more power than any one of these dams would generate and that there would be sufficient market for the power of the second largest dam by the time it could be completed.

The Federal Power Commission, for instance, advises that:

"In the power supply areas, which include St. Louis, southern Missouri, southeastern Kansas, Arkansas, and northern Louisiana, the load requirements in 1936 were about 805,000 kilowatts and 4,100,000,000 kilowatt-hours.

"The rate of growth of energy production, which is representative of the rate of growth of consumption or requirements, for the 15 years from 1921 to 1936 (both inclusive) in Missouri, Arkansas, and Kansas, has been as follows: Missouri, 6.13 percent annually; Kansas, 7.25 percent annually; Arkansas, 4.85 percent annually."

I wish to point out, too, that these growths are compounded, or the rate of increase over the previous years.

"The weighted rate of growth for the three States is about 6 percent annually It may be seen that the 175,000,000 kilowatt-hours which could be generated at Norfork is about only 4 percent of the 4,100,000,000 kilowatt-hours consumed in this general area in 1936. Based upon the rate of growth experienced in the 16 years stated, it is probable that the consumption during this year will increase to approximately 5,000,000,000 kilowatt-hours."

The rich minerals of the basin include lead, zinc, manganese, aluminum, marble, phosphate, silica, sulfur, iron, commercial clays, limestone, glass sands, and many others. Just as one specific instance of how the high power rates are holding us back—and incidentally the power rates of the larger power companies operating in this country are enormously high, due partially to the fact that they have to transport the power for such long distances—I call your attention to the fact that a silica plant operating at Rogers, Ark., has recently been forced to install its own power plant in order to keep operating.

Right here I would like to answer some of the questions which were propounded during the hearing on the proposition of this power being generated in competition with power now being sold in Arkansas.

Mr. Tom Fitzhugh, chairman of the State utilities commission, when testifying before you, told you that more than half of the power generated in Arkansas is imported from outside the State. Some of it is being purchased from the Tennessee Valley Authority, but this is only peak power, which is taken in the rainy season. Except for the lower region of the White, it is between two and three hundred miles from this area to the nearest power source on the Tennessee, including Gilbertsville, now under construction. Part of our power is being produced in Oklahoma. This is 150 miles to the nearest point of the White and more than 300 miles from what we might call the center of the basin, where these proposed projects are to be located. By far the outstanding power source for Arkansas, however—and two other major companies have first claim on this—is Monroe, La., a distance of more than 200 miles to the nearest point of the White River Basin and a distance of nearly 400 miles to the center of the basin. In other words, gentlemen, any power we use in that basin, with a few minor exceptions, comes more than 200 miles, and we just can't survive under these circumstances.

If the Creator ever intended that the White River Basin be settled at all, he must have planned hydroelectric development. As was testified to here in the hearings, there are more springs on the upper White than on any other two rivers of its size in the United States. According to the United States Geological Survey, Department of the Interior, in its publication entitled "Large Springs in the United States" (1927), the Nation's springs have been identified and classified. Those yielding 100 cubic feet of water per second are classified as springs of the first magnitude. A second-foot of water is equal to 646,000 gallons daily. According to this document there are only 65 springs in the United States having an average annual discharge of 100 cubic feet per second, and 6 of those, as shown on page 17 of that document, are in the upper reaches of the White River in Missouri and Arkansas. There is only one spring of the first magnitude, according to this document, east of the Mississippi and north of Florida, and it, Mr. Chairman, is in northwest Alabama. There are only 12 such springs in the whole Mississippi Valley, 3 in Montana, the 1 in Alabama, and 8 in this Ozark region. There are springs of the first magnitude in only 9 of the 48 States. Most people don't know what a big spring is. Some of the largest in the world feed this White River 12 months of the year. More than half a hundred of them are virtually rivers gushing from the mountainsides.

The CHAIRMAN (interposing). You have all of those significant names out there: Bull Shoals, Wild Cat Shoals, Eureka, and so forth. Now, give us the names of some of your big springs and tell us how big they are.

Mr. ELLIS. We have Mammouth Springs in Arkansas, which has 161,500,000 gallons daily flow; and we have Big Springs in Missouri, which has 276,488,000 gallons flow per day—sizable rivers gushing out of the ground. And so I repeat the statement, Mother Nature seems to have provided the White River with a more even year-round flow, which is so much desired for water-power production.

I may call your attention to the fact that so far as we know there is no opposition to this hydroelectric development by power companies operating in this region. Officials of these companies have recently made the statement that it is absolutely necessary for them to look for new power sources and that it is their hope that they will be able to buy power produced at these projects. This is some evidence of the emergency which exists.

Here is another thought, gentlemen, in connection with power. When you develop a flood-control dam that costs, let us say, $10,000,000, the benefits that come manifest themselves in property held by individuals. When you expend, let us say, an additional $10,000,000 for power, the benefits that come manifest themselves first in increased standards of living for individuals. But what is perhaps more important right now, they pay for themselves in direct returns to the Federal Government not only the full $10,000,000 but more. There is also a new thought concerning power development, which I have observed in recent reports, not only of the Federal Power Commission but of the Army Engineers, that it is often the case that when the floods come not only the flood-control head on these reservoirs will be empty but a portion of the power head will also be empty, and therefore both the flood-control head and part of the power head can be used to store floodwaters. The power head, therefore, also facilitates flood control.

The CHAIRMAN. Do you know of any greater possibilities for power facilities west of the Mississippi River and east of the Colorado?

Mr. ELLIS. I understand that is right. With the exception of the Tennessee there are no such possibilities.

The Federal Power Commission says 2,000,000,000 kilowatt-hours can be developed there annually.

The CHAIRMAN. What would be the estimated cost if this $5,000,000 is added to Norfork?

Mr. ELLIS. Twenty million dollars.

The CHAIRMAN. And what would be the estimated cost of the Bull Shoals Reservoir providing for power, on which we have not yet received a report, according to the information?

Mr. ELLIS. Seventy-two million dollars for the two projects.

The CHAIRMAN. That is Bull Shoals and what?

Mr. ELLIS. Table Rock.

The CHAIRMAN. How far are they apart?

Mr. ELLIS. About a hundred miles.

The CHAIRMAN. Table Rock is up in the district by Mr. SHORT?

Mr. ELLIS. That is right.

The CHAIRMAN. And Bull Shoals is represented by the gentleman speaking at the present time.

Mr. ELLIS. That is right.

NAVIGATION BENEFITS

Another thing that is retarding the development of the White River Basin is the high freight rates which we endure. Our rates are 75 percent higher than in the official zone. We do have certain minerals and natural resources that are peculiarly adapted to water transportation, and it could be developed without interference with railroad traffic. One would enhance the other, as I see it.

The White is considered navigable to Branson, Mo., a point 520 miles from the mouth. As a matter of fact, it is navigable only to Batesville, Ark., 301 miles above the mouth. However, the gradual lowering of the water level and the filling of the river with sand and gravel are virtually destroying water transportation. If this river were made navigable to Forsythe, Mo., as can easily be done according to the engineers, the low water rates would not only increase water transportation but would bring lower transportation rates and would greatly increase railroad transportation, and all this would add to the normal development of the region.

RECREATIONAL BENEFITS

The Ozark uplift in the White River Basin has long been noted for its recreational attractions. At the Ozark Beach Dam on the

White it is estimated, as was testified here by Rex Allman, of Forsythe, Mo., who lives near the dam, that the investments and improvements around the lake shore far exceed in tax revenues which they yield the tax revenues of the area inundated. However, this is happening to us: The vast tourist trade which we have enjoyed in these mountains for now more than a century is rapidly falling off, and for no other reason than that we have no water in the Ozarks. By that, I mean bodies of water; for conveniences cannot be built along a river as they can be built along a lake shore, and even mountain streams are not attractive if there are mountain lakes available. We have no mountain lakes except the small one at Ozark Beach in Missouri.

PUBLIC WORKS AND CAPITAL INVESTMENT

The 21,000 square miles of the Ozark uplift is a diversified farming country. A large percentage of the people own their own homes, but they are relatively poor. Because we do not have any of the major cash crops we have not participated to any great extent in the Nation's agricultural program. I have recent figures indicating that we have gotten less than half the benefits per acre in cultivation which have been received by the farmers in any direction, north, south, east, or west, of the Ozark uplift. This, perhaps, has no place in this argument except to point out that our people feel they have suffered some discrimination and the building of these dams would vastly overcome such discrimination, for they would provide work for thousands of people over a period of years. Money spent in this way not only serves to increase the purchasing power and to relieve persons in distress but it adds to the capital wealth of the Nation. It is unfair to call it a Government expenditure, except that part over and above benefits derived, and there would be none in these instances as we understand it.

NATIONAL DEFENSE

The President has made various references to the necessity for adequate power reservoirs in case of war. Certainly we think it is advisable to have, not a crying need for power but an adequate power development in the very region of the source of at least five strategic war materials—lead, zinc, phosphate, manganese, and iron.

THE EMERGENCY AT NORFORK

If for any reason, gentlemen of the committee, you are not able to give us at this time the authorization for Bull Shoals and Table Rock, then we feel that this is all the more reason why there must be immediate action to clarify the Norfork authorization. There is no doubt in our minds but that the project is authorized for power, except for the limitations that were placed in the 1938 act, but if something isn't done the Army engineers will let the contract shortly for only 189 feet of the dam when a 225-foot dam is desired. My bill, H. R. 9037, which I am appealing to you to incorporate in the general act, will not necessitate one penny of additional expenditures for some 3 years, but will provide that the contract be let now for the full height and in order that the full power resources may be developed. This is the height proposed by the engineers and the Federal Power Commission.

The Secretary of War in his report to you on this bill says:

"It is desirable from an engineering standpoint to build the dam to full height now rather than to have to raise it later, and it is believed that money will be saved in the long run if the proposed authorization is granted.

"Insofar as the interests committed to this Department are concerned, no objection is seen to the enactment of H. R. 9037.

"The Bureau of the Budget advises that there is no objection to the submission of this report."

The report of the Federal Power Commission to you on this bill is in part as follows:

"Enactment of this bill would increase the authorization for reservoirs in the White River Basin from $25,000,000 to $30,000,000 and would authorize the construction of the North Fork to a height of approximately 588 feet above sea level in order to provide for the development of the possibilities of the site, which include the production of hydroelectric power.

"Studies by the staff of the Commission show that the Norfork project is strategically located to serve the power markets in Arkansas and adjoining areas and that the power developed at this project could be absorbed readily in these areas when the project is completed. Based upon the estimates of cost prepared by the War Department for the Norfork project, an increase in the authorization to $30,000,000 will permit the construction of a dam of height sufficient to preserve the power potentialities. An additional authorization of $7,500,000 for power generating facilities would be required before advantage could be taken of the higher dam for the production of hydroelectric power.

"Therefore, the total authorization for power development would amount to $12,500,000, including the $7,500,000 authorization for generating facilities and the $5,000,000 increase in the cost of the dam. The studies by the Commission's staff show that this total cost for power would be well justified on the basis of the anticipated returns from the sale of the power. The net returns from this sale of the power would, in fact, be sufficient to justify a considerably greater investment for the power available at this site.

"The Commission believes that the Norfork project should be utilized for the dual purposes of flood control and power development, that a substantial saving would be effected in the cost of the high dam by constructing it initially to the greater height proposed in H. R. 9037, that it would be in the public interest to effect this saving now provided that the additional $7,500,000 necessary to complete the project for the dual purposes contemplated is authorized when required to assure installation of generating facilities at approximately the time when the dam is completed. The Commission therefore recommends early and appropriate action to permit these desirable alterations in the Norfork Dam and Reservoir project.

"The Norfork Dam and Reservoir project is one of the most important units in a plan to develop comprehensively for all desirable purposes the wonderful water resources of the White River Basin."

I am advised both by the engineers and the Federal Power Commission that there will be an ultimate saving of approximately $1,000,000 if my bill is passed. The Federal Power Commission advises me that the Norfork project, strategically located as it is to serve the power needs of this vast region and producing a minimum of 175,000 kilowatt-hours annually, will yield returns sufficient not only to carry all the charges against the power features but to support a considerable portion of the project cost chargeable to flood control.

Mr. Tom Fitzhugh, chairman of the State utilities commission, told this committee that he believed it advisable to construct all these projects for full power development. Mr. L. A. Henry, director of the State planning board, made a similar recommendation. Mr. R. E. Overman, chairman of the State flood-control commission; Mr. Layton Coffman, the member of the flood-control commission for this region; Mr. Charles Christian, chief engineer for the commission; and Mr. W. C. McClure, secretary of the commission, all testified that these flood-control projects are necessary, but that it is also necessary and advisable that these choice power sites be developed at the same time as multiple-purpose projects.

It was the Norfork project which, you will recall, Chairman Leland Olds, of the Federal Power Commission, used yesterday in his testimony here, as an example of multipurpose dams, the power from which, he says, will largely repay the total cost. Figuring on the basis of 6 percent, this project costing ultimately $28,000,000 for flood control, power, and transmission, would actually repay, he told you, not only the $12,500,000 allotted to power, but $9,500,000 more, or a total of $22,000,000. This would make the flood-control costs neglible.

Among the others who came here to testify in behalf of Norfork and the other projects from Arkansas and Missouri, were Mr. John T. Woodruff, secretary of the chamber of commerce of Springfield; Mr. Rex Allman of Forsythe, Mo., president of the White River Development Association; Mr. Arthur N. Wood, county judge of Marion County, which is located near the proposed dams; Mr. John Fee, county treasurer of Marion County, and Mr. Henry Young, State representative from Marion County; County Judge R. M. Ruthven of Baxter County—three of the proposed dams would be in, or bordering, Baxter County; Mr. Tom Shiras, editor of the Baxter Bulletin; Mr. Hugh Hackler, mayor of Mountain Home, the county seat of Baxter County; Mr. T. J. McCabe, automobile dealer in Baxter County; and Mr. Ralph Ferguson, revenue collector of Searcy County, in which one of the dams would be located.

I think it no breach of confidence, gentlemen, to tell you that Senator MILLER and I went down and talked with President Roosevelt specially about this Norfork project, and that he agreed with us that it certainly should be developed to the full height now. I think it is no breach of trust to tell you, too, that he sent a special note to the Budget on the matter. It was after that that we became aware of the fact that the new report of the engineers might not reach this committee in time for consideration, and it was then decided to introduce this H. R. 9037, and its companion bill (S. 3668). I can tell you also that when the Secretary of War and the Federal Power Commission submitted their favorable reports to the Budget, as they are required to do under Executive order. that the Budget then called the matter again to the President's attention and that he personally placed his O. K. on this bill.

PUBLIC SENTIMENT

I make you this statement concerning the public sentiment of the people in the White River Valley, that so far as I know there is not one single person in all that vast region with a population of 750,000 people who is opposed to this dual-purpose development. As an evidence of the overwhelming demand for it, I call your attention to this voluminous report of the Army engineers of a hearing held at Harrison, Ark., in the basin, on January 10 of last year, which was attended not only by the engineers but by representatives of the Federal Power Commission. Notices were sent out to all parts of the basin that people interested would be heard. However, the matter was not widely advertised and notices went out only a few days in advance. There was no organized effort to swamp the hearing. I believe you will agree that what happened there would be pretty good evidence of how the people feel. I hold here in my hand the record of that hearing as reported by Lt. Col. Stanley L. Scott, district engineer of Little Rock. In the beginning here he lists the names, the addresses and the interests represented of all people attending. They came from every nook and corner of the White River Valley, from the lowlands, the mountains, and the plains. They came asking flood control. They came asking navigation, irrigation, and recreation. They came asking power. More than 1,000, from outside the city of Harrison, poured into this hearing. They testified one after another and they submitted scores of pages of data to support their appeals. Here it is. As Colonel Scott reports, the people in the lowlands want flood control and the power that can be generated at the dams. The people in the uplands want flood control but

they don't want the dams built for flood control only. The sentiment, he reports, is almost unanimous for this multipurpose development, and it is strong.

As Editor Tom Shiras, of Mountain Home, Ark., so appropriately pointed out in his testimony before you, we have 750,000 wild horses running wild in the gorges of the White River. They are killing people and destroying property that runs into millions of dollars' damage annually. The people want these horses corraled, but they don't want the corral to cover what bottom land we have unless the horses are at the same time put to work. If put to work they will return to the Government every penny expended and at the same time give to our people a source of cheap power so badly needed in the basin.

CONCLUSION

In conclusion, gentlemen, I want to call your attention to the Fortune poll for April. They report 13,062 votes on their questionnaire for the most popular public works. Their question to these people was: "Of these kinds of public construction—Federal power plants, flood control, big national highways, or airports—which do you think the most important on which to spend money in order to build up a better and stronger Nation?" Thirty-eight percent voted flood control first, 21 percent voted highways first, 18 percent voted airports first, and 13.9 percent voted Federal power plants first. The question was unfair with regard to Federal power plants because there are strictly speaking, no such things. The item "Federal power plants" should have been included with flood control, and this would give you a total of 51.2 percent of all the people voting this type of public works first.

In other words, gentlemen, I think that in spite of recent articles in which the press has quoted the President as not favorable to increased authorizations at this time, you are wholly justified in proceeding with this program, and I confidently believe Mr. Roosevelt will sign whatever bill is passed. President Roosevelt, great humanitarian that he is, cannot consistently veto a bill that will save millions annually in property to the people of Arkansas, that will save untold human lives, a bill that will bring light and happiness and development and progress to an impoverished people in a vast region filled with all kinds of natural resources, but those essential for power—and what this general bill will do for us it will do for practically every other valley in the Nation. Your revision of the present authorization which we request, and the President's ultimate approval of it, is almost a life-and-death matter with us in the White River Basin, and I appeal to you with all the power at my command to do the very best for us you possibly can.

Again thanking you from the bottom of my heart for your patience and endurance, I leave much of our fate in your hands.

The CHAIRMAN. We are glad to have had your statement.

Y. W. C. A. National Convention Endorses the Geyer Anti-Poll-Tax Bill

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 25, 1940

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR

Mr. GEYER of California. Mr. Speaker, under permission to extend my remarks, I insert an article from the Christian Science Monitor. The article is replete with information that the world should know. Can you read this and still say that we live in a democracy?

[From the Christian Science Monitor of April 17, 1940]

Y. W. C. A. PLEDGES AID IN CIVIL RIGHTS DRIVE

ATLANTIC CITY, N. J., April 17.—The Young Women's Christian Associations of the United States, with 2,866,797 active constituents, were pledged today to support the antilynching and anti-poll-tax bills as part of their civil rights campaign.

The associations also will continue local experimenting in the health education field for members, comparing notes on their findings, in order to work out a Nation-wide program that can be fitted into the national Y. W. C. A. budget.

These actions were authorized by final vote on resolutions as the sixteenth national biennial convention closed here. Besides the stands on lynching and poll tax, delegates pledged the Y. W. C. A. to work for equal opportunities for all races "in all relationships of life" and for the "ultimate elimination of all segregation and discrimination." In this connection a resolution stressed that the National Student Council of the Y. W. C. A. "has been basically interracial in membership" for 18 years through its Negro and Indian members.

DATE FOR CONVENTION

The national board will meet in New York next month and is expected to decide whether the next national convention shall be called in 2 or 3 years from now. Majority sentiment at the sessions here favored the longer term, which would make the entire platform a 3-year program.

Mrs. Austin L. Kimball, of Buffalo, N. Y., retiring national Y. W. C. A. president, and Mrs. Cleveland E. Dodge, president of the New York City Y. W. C. A. and national board member, were chosen as new American members of the World's Council of the Y. W. C. A.

Mrs. M. C. Migel and Miss Elizabeth K. Lamont, both of New York, were reelected to that body. The World's Council maintains headquarters in Geneva, Switzerland, and has 15 elected and 2 ex officio members from this Nation.

In the antilynching resolution delegates stressed that they were devoted to the task of realizing in our common life those ideals of personal and social living to which we are committed by our faith as Christians.

POTENTIAL VOTE REDUCED

The anti-poll-tax resolution was telegraphed to Representative FRANCIS E. WALTER (Democrat), of Pennsylvania, a House Judiciary Subcommittee chairman. It supports a bill introduced by Representative LEE E. GEYER (Democrat), of California, prohibiting the use of the poll tax as a requirement for voting in Federal elections.

Mrs. T. H. Eckerson, of Los Angeles, who introduced this resolution, reported that the 8 Southern States imposing poll taxes have a total potential voting population of 11,606,406, yet in the 1936 election they cast only 2,679,473 votes, or only a few more than were cast by Pennsylvania alone. Percentages of the eligible vote that is actually cast in those poll-tax States range from 33⅓ down to 14.

"Millions are thus disfranchised in violation of the Constitution," she said.

Mrs. Eckerson reported that average gross annual income in 13 Southern States ranges from $186 a person for farmers down to $73 for tenants and from $38 to $87 for sharecroppers. Large numbers of tenants and sharecroppers get no money income at all, their share having been advanced in food or supplies, she declared.

SOME TAXES CUMULATIVE

"In order to vote they must pay out of such scanty income a poll tax of $1 a year in South Carolina, Tennessee, Georgia, and Arkansas; $1.50 a year in Alabama and Virginia; $1.50 to $1.75 a year in Texas; and $2 in Mississippi," she continued.

"That is not all. Mississippi, Tennessee, and Virginia allow their counties to add another $1, and the tax is cumulative for 2 years in Mississippi, 3 years in Virginia, and without limit in Alabama and Georgia. Thus, if a tenant farmer has missed several elections in hard times, the cost of catching up back poll taxes to be eligible to resume voting becomes prohibitive.

"In Texas, where the tax is not cumulative, the delinquency penalty is 3 days' road work or $3 fine. In South Carolina it is not cumulative, but the delinquency penalty is $10 and costs or 20 days' hard labor. In Texas, in 1936, 26 percent of the potential vote was cast, and in South Carolina only 14 percent.

"Lifting the poll tax in Florida practically doubled the vote cast, and in Louisiana it doubled the number of women voters."

Stop, Look, and Listen—History Is Repeating

EXTENSION OF REMARKS
OF
HON. J. THORKELSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 25, 1940

EDITORIAL FROM THE NEW YORK ENQUIRER

Mr. THORKELSON. Mr. Speaker, everyone should be familiar with the manner in which we were dragged into the last war by Anglophiles in our own Government and among our representatives abroad. These facts are now recorded in State papers, intelligence memoranda, and in reports from our foreign representatives.

Nineteen hundred and twelve was the beginning of an era when LL. D.'s and DD. L.'s began to run the Government of the United States by direction of the internationalists. This faculty of educators has now run the Government successfully away from the Constitution and into the hands of communism. It appears that all of them are radicals, perhaps innocently, but the result is just the same.

We had the same gentry running us during the World War, and they were then, as now, related to international teaching groups and philanthropic organizations. Our most well-versed Anglophiles were the late Mr. Edward M. House, gypsy Ambassador, and Mr. Walter Hines Page, our British Ambassador, both of them apparently awe-struck by the splendor of the British throne. Those who have the opportunity should read the works of these gentlemen, because they are very illuminating and expressive as to where their interests were at that time.

We are facing the same situation, with another gypsy Ambassador just having returned from a war-mongering trek through Europe, and the result of his trip is now evident in the invasion of Scandinavia.

It is unfortunate that we cannot mind our own business, and it is still more unfortunate that the Democratic administrations are tied to the apron strings of the British Crown. One may ask, What has Great Britain done for the United States? The echo comes back, "What?"

However, it is not my purpose to discuss this crusade for the British internationalists at this time; but I shall, instead, ask leave to insert in the CONGRESSIONAL RECORD an editorial written by Mr. Griffin, in the New York Enquirer, April 15, 1940, which I now quote:

[From the New York Enquirer of April 15, 1940]

SHALL WILSONIAN TORIES SUCCEED IN WAR SCHEMES?

The other day a prominent Senator arose in our National Capitol to defend Woodrow Wilson from any imputation of having plunged the United States into the World War for ulterior purposes.

This embattled statesman unreservedly affirmed that Uncle Sam was not tricked into the conflict, but that, on the contrary, President Wilson placed the Republic militarily on the side of the enemies of Kaiser Wilhelm solely because he had no alternative as a result of German aggression against the United States.

Here is a matter which is of far more than academic interest to America at the present time, when history is repeating itself in this land with alarming accuracy.

History will deal sternly with the men who, on Good Friday, April 6, 1917, on the sacred day of the prince of peace, justice, and charity opened the floodgates of war upon the United States of America and set in motion a train of events which were to inflict uncalculable damage, political, economic, and social, upon the American people for generations to come.

History will be compelled to hand down the verdict that those immediately responsible for our declaration of war in the spring of 1917 escaped the penalty entailed by their foul betrayal of the Republic, which, among other consequences, resulted in the mass murder of thousands of American boys.

Yes, history is repeating itself with amazing exactitude.

Those who are now engaged in a conspiracy to bring about another declaration of war by Congress would, however, do well to sit down and consider whether they can expect to avoid having visited upon them the legal retribution which the conspirator of 1917 escaped.

In 1917 the American people were cruelly deceived by propaganda. They had no precedent and no experience, such as they have today, to forewarn and guide them.

No one can deny that America is being prepared for another colossal betrayal. If the American people allow the plotters to succeed this time, they will be able to blame nobody but their own selves.

The betrayal of 1917 accomplished what the Tories of the War of Independence, in their most fanciful visions of the future, could never have foreseen.

It was the toryism of the Revolution which so strenuously upheld Britannia against George Washington, and not the aggression of Kaiser Wilhelm that encompassed our involvement in the World War on the diabolically false plea that we were to assist in making the world safe for democracy.

Let us consider the role of Woodrow Wilson, Tory in chief of the conspiracy which involved this Republic in the armed contention of rival European imperialisms on Good Friday 1917.

Thomas Watt Gregory was Attorney General in the Cabinet of President Wilson, and as such had an ideal opportunity of knowing just what factors motivated the man who turned his back on George Washington and entangled Uncle Sam in Europe's interminable outbreaks of gangsterism.

On January 29, 1925, Gregory addressed a letter to the New York Times in vindication of Woodrow Wilson's war policies and acts. This missive is an invaluable document—invaluable for a reason which the one-time Attorney General of the United States did not notice. No more damning evidence of Woodrow Wilson's un-Americanism, false neutrality, and disdain for the American people could be penned. Listen to Mr. Gregory:

"Sometimes through ignorance, and sometimes through malice, the war President has been charged with having had no sympathy with the Allies, with having improperly delayed the entry of the United States into the war, and with having failed to vigorously prosecute that war."

Let those who would have us believe that Woodrow Wilson was impartial toward the belligerents and that he had no reason other than German aggression for driving us into the war, give careful consideration to Mr. Gregory's very next statement:

"A single incident furnishes a complete refutation of the first charge. Up to the time that Germany began its atrocious submarine warfare, culminating in the sinking of the *Lusitania*, we had far less cause for complaint against her than we had against Great Britain.

"The latter had repeatedly seized on the high seas our vessels bound for neutral ports; it had appropriated these vessels and their cargoes; it had opened our mail and prevented its delivery; it had ignored our protests, and in some instances had for weeks and months even failed to acknowledge their receipt.

"These were substantially the same acts that brought on the War of 1812."

The trouble was that in 1917 we had a scion of the Tories of the Revolution in the White House, who permitted Britain to do as she pleased with American rights and national self-respect, while in 1812 we had in the Executive Mansion on the Potomac an American who stood boldly for the Republic against British aggression and was not afraid to tackle the British Empire in war.

In 1812, President Madison was not so traitorous as to condone England's aggression against the Republic and join with her in arms against "the mad dog of Europe," Napoleon (the Hitler of that day), with whom she was battling.

Of course, Britain burned the White House and the National Capitol. But had Wilson been in Madison's shoes, there never would have been a Battle of New Orleans, nor would the Republic have experienced the preeminent advantages which the War of 1812 brought it.

Woodrow Wilson's Attorney General goes on to relate, in his letter to the New York Times, that while the condition of things described by him in the statement just quoted prevailed, a Cabinet meeting took place wherein several of the President's counselors voiced great indignation over what they regarded as infringement of America's international rights, and urged that we pursue a more vigorous policy.

The Tory in chief who sat in the White House declined to accede. He had one set of rules for the Allies and another set of rules for those with whom they were waging war.

This was true Wilsonian impartiality, the impartiality of the man who, tongue in cheek, admonished the American people to be neutral not only in act but in thought.

While Americans render homage to the patriotism, valor, and statesmanship of George Washington, they should not neglect to ponder the record of Woodrow Wilson, the man who scorned the counsel and example of the Father of his Country, raised high the unholy flag of internationalism in this land, plunged our country into a ghastly adventure in Europe, piled up billions of dollars of public debt, and set in motion a chain of events which have brought the Republic disaster after disaster from our entry into the Great War until the present hour.

Two extracts from addresses delivered by Wilson visualize in dramatic and masterly fashion how void of actuality were the reasons advanced by him for leading us into war in 1917, after he had been reelected to the White House as the man who "kept us out of war."

Speaking to our National Legislature on April 2, 1917, just 4 days before Congress declared war, the President expressed himself in this manner:

"The world must be made safe for democracy. Its peace must be planted upon the tested foundation of political liberty. We have no selfish ends to serve. We desire no conquest, no dominion. We seek no indemnities for ourselves. * * * We are but one of the champions of the rights of mankind."

Read again the words just quoted from Wilson's address to Congress a few days before this Nation dishonored Washington, the man who made it a nation, by taking sides in the Great War and enmeshing itself in foreign entanglements. And having read them again, consider these words of Wilson, uttered at St. Louis on September 5, 1919, after the war was over:

"The real reason that the war that we have just finished took place was that Germany was afraid her commercial rivals were going to get the better of her, and the reason why some nations went into the war against Germany was that they thought Germany would get the commercial advantage of them."

Surely the American people have learned and taken to heart the lesson of Wilson's trickery, and surely they will not permit themselves to be betrayed again as they were betrayed in 1917.

This Republic will follow the example and advice of a real American, George Washington, not the hypocrisy and disloyalty of Woodrow Wilson, whose Tory forebears the Father of his Country squelched in the ever-glorious days of 1776.

And in following in the footsteps of the first American they will let the mad dogs of Germany, France, England, Italy, Japan, Russia, and the rest tear themselves to their hearts' content and save America from dictatorship at home and another catastrophe abroad.

WILLIAM GRIFFIN.

Republic Steel Corporation against the National Labor Relations Board and Steel Workers' Organizing Committee

EXTENSION OF REMARKS
OF
HON. JAMES A. SHANLEY
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 25, 1940

OPINION OF THE CIRCUIT COURT

Mr. SHANLEY. Mr. Speaker, it is the practice of the Supreme Court in refusing certiorari to uphold the opinion in the lower court rather than to write a formal opinion of its own. Because of this practice I have asked and obtained unanimous consent to insert in the RECORD the opinion of the United States circuit court of appeals in the case of Republic Steel Corporation et al. against the National Labor Relations Act.

The opinion follows:

[In the United States Circuit Court of Appeals for the Third Circuit. No. 6907. March term, 1939. Republic Steel Corporation, petitioner, and Central Council of Steel Plants, Northern District, Republic Steel Corporation; and 1,50 or more employees of Upson Division of the Republic Steel Corporation, intervenors-petitioners against National Labor Relations Board, respondent, and Steel Workers Organizing Committee, intervenor-respondent. On petition for review and enforcement of an order of the National Labor Relations Board. Opinion. Filed November 8, 1939]

Before Biggs, Maris, and Clark, circuit judges.

Maris, circuit judge:

Upon a complaint based upon charges filed by the Steel Workers' Organizing Committee (hereinafter called S. W. O. C.), a labor-union organization affiliated with the Committee for Industrial Organization, the National Labor Relations Board found the Republic Steel Corporation (hereinafter called Republic) guilty of unfair labor practices, and ordered it to cease and desist from them and to take certain affirmative action which the Board found would effectuate the policies of the National Labor Relations Act. Republic thereupon petitioned this court to review and set aside the order as contrary to law.

Republic is a large manufacturer of steel, having plants at Youngstown, Canton, Massillon, Warren, and Cleveland, Ohio, among other places. In June 1936 S. W. O. C. began a campaign to organize Republic's employees. Three years before, in June 1933, Republic had introduced into each of its plants a plan of employee representation. These plans, company imposed and dominated ones, were doubtless a concession to the mandate of section 7 (a) of the National Industrial Recovery Act of 1933, "that employees shall have the right to organize and bargain collectively through representatives of their own choosing * * *." At least the record of Republic would indicate that this modest concession to the right of collective bargaining was not wholly voluntary.

Almost immediately after S. W. O. C. commenced its organization campaign Republic, in its turn, began a counter campaign to crush the union. It announced to all its employees at once that "Republic stands for the open-shop principle," that "No employee has to join any organization to get or hold a job," and that "Every Republic employee owes a duty of loyalty to the company, so that its best interests may be served. Conduct detrimental to the interests of the company and which may disrupt the satisfactory relations between employees and management will not be tolerated." The union was denounced and vilified. From the beginning the organizers of the union were followed and spied upon by Republic's company police. The latter also maintained surveillance over union meetings, thus discouraging employee attendance. Employees were threatened with discharge if they accepted union literature outside the plant gates. Union organizers were attacked and brutally beaten.

When, in March 1937, the employee representatives under the representation plans then in effect in Republic's plants, proposed to amend them so as to eliminate company domination and provide for real collective bargaining, Republic refused its consent. On the other hand, it caused many of the employee representatives to spread anti-union propaganda and to campaign actively against the union in its plants. On March 17, 1937, the United States Steel Corporation and its subsidiaries signed a union contract with S. W. O. C. as the representative of its members who were employees of those companies. The next day Republic called a meeting of the central council of its employee representatives at which a motion was unanimously adopted that all the representatives back the management in opposition to all outside labor organizations.

Employees were coerced by foremen and representatives to sign petitions supporting the representation plans and opposing S. W. O. C. Meetings of employees were held by the management at which the virtues of the representation plans were praised; employees were threatened with discharge if they joined the outside union, and antiunion literature was distributed. At least 18 employees, Cikah, Arias, Popik, Pirichy, Troyanovich, Naletrich, Korecky, Exall, Petak, Babich, Neuman, Ugranovich, Armeli, White, Fagan, Wright, Shaban, and Mouyios, were discharged because of their activity in behalf of the S. W. O. C.

On March 30, 1937, Golden, regional director of S. W. O. C., requested a conference with Girdler, chairman of the board of Republic, and submitted a proposed union contract containing provisions respecting wages, hours, vacations, seniority, and methods of handling grievances substantially equivalent to those then in force in Republic's mills. It also contained the following provisions:

"SEC. 2. Recognition: The corporation recognizes the union as the collective-bargaining agency for those employees of the corporation who are members of the union. The corporation recognizes and will not interfere with the right of its employees to become members of the union. There shall be no discrimination, interference, restraint, or coercion by the corporation or any of its agents against any members because of membership in the union. * * *

"SEC. 8. Management: The management of the works and the direction of the working forces, including the right to hire, suspend, or discharge for proper cause, or transfer, and the right to relieve employees from duty because of lack of work, or for other legitimate reasons, is vested exclusively in the corporation; provided that this will not be used for purposes of discrimination against any member of the union.

"SEC. 9. Discharge cases: In the event a member of the union shall be discharged from his employment from and and after the date hereof, and he believes he has been unjustly dealt with, such discharge shall constitute a case arising under the method of adjusting grievances herein provided. In the event it should be decided under the rules of this agreement that an injustice has been dealt the employee with regard to the discharge, the corporation shall reinstate such employee and pay full compensation at the employee's regular rate for the time lost. All such cases of discharge shall be taken up and disposed of within 5 days from the date of discharge."

No reply to the request for a conference was made until May 5, when Republic's director of industrial relations wired, "In view of Wagner Act, see no necessity for signed contract," and suggested May 11 for a conference. A conference was held on that day without result, whereupon Republic issued a statement to its employees that it adhered to its policy not to sign a contract with the C. I. O. At about the same time Republic shut down its Canton tin-plate mill, a stronghold of the union, and nearly all the mills of its Massillon works, and locked out all but the maintenance employees. These lockouts, coming after a long period of continued drastic antiunion measures, placed the union in a position where it could not hope to preserve itself without immediate resort to action. Accordingly, on May 25 and 26, the union employees of Republic's Canton, Massillon, Youngstown, Warren, and Cleveland plants went on strike.

The strike resulted in the closing of all of these plants and they remained closed for more than a month. Upon their reopening toward the end of June, a great many of Republic's employees were refused reinstatement because of their union membership. Among these were Green, Hite, Lazer, Krill, Chismus, Haren, Nevedusky, and DeLong. From the time the strike began Republic undertook to secure, and did secure, the aid of local police officials to break picket lines, enlisted workers in back-to-work movements, and in other ways endeavored to defeat the strike by reopening its plants without any concessions to the union. By threats to remove its plants Republic succeeded in causing municipal authorities and businessmen to turn against the union. Violence and hysteria were incited deliberately by Republic in order to terrorize union members. Tear gas and firearms were donated to the police department of Massillon.

This course of conduct had its tragic result on the evening of July 11 in Massillon. The city police had been augmented by a number of specially deputized Republic foremen and other employees. On this evening the chief of police was absent. In his absence command of the police was taken by one Curley, who had come to the force with the hearty recommendation of Republic's district manager. Under Curley's leadership, the augmented force made an unprovoked attack on an unarmed crowd of strikers at their headquarters, killing three of them and wounding many others. During the shooting, which continued for half an hour, none of the policemen received any sort of injury. Immediately after it was over one of the special policemen, who was a Republic foreman, led a group of his fellows in a round-up in which all persons in the neighborhood of union headquarters were arrested without warrants. These policemen in the early hours of the morning broke into rooming houses occupied by union members, dragged men from their beds, and hauled them to jail, where they were kept for several days.

Meanwhile, on April 21, 1937, the Supreme Court had upheld the constitutionality of the National Labor Relations Act. Republic immediately took steps to eliminate some of the obviously objectionable features of its employee-representation plans. In some plants these were replaced by new organizations, but in each case they were dominated by Republic. After the strike a third group of

organizations appeared in the Massillon, Canton, and Youngstown plants. In form they were independent but in fact they were formed and officered in whole or in part by those who had been officers and representatives in the prior plans and who were known to be under Republic domination. They were accorded the use of Republic's time and property for organization purposes, including the solicitation of memberships and the collection of dues. Republic, through its superintendents and foremen, assisted in persuading employees to join them. Each of the three organizations was in fact but a continuation of its predecessor and was under the domination of Republic.

The foregoing brief recital is an epitome of the findings of fact made by the Board in an elaborate opinion (9 N. L. R. B. 219). To further detail them would serve no useful purpose. Republic strongly urges that they are not supported by substantial evidence, and must therefore be set aside. It points out evidence which is inconsistent with the findings. A great mass of testimony was taken in the case, much of it directly conflicting. The duty of reconciling this evidence was placed by the act upon the Board, however, and not upon this court. Our sole duty is to determine whether there is in the record substantial evidence to support the Board's findings. Examining the record we find ample evidence to support these findings, and they must therefore be sustained (*Washington Coach Co.* v. *Labor Board*, 301 U. S. 142; *Labor Board* v. *Fansteel Corporation*, 306 U. S. 240). They, in turn, fully support the conclusion of the Board that Republic had engaged in unfair labor practices within the meaning of section 8, subsections (1), (2), and (3) of the act (29 U. S. C., sec. 158), (1) by interfering with, restraining, and coercing its employees in the exercise of the rights guaranteed in section 7[1] of the act; (2) by dominating and interfering with the formation and administration of the employee-representation plans and associations of its employees which succeeded them and by contributing financial and other support thereto; and (3) by discriminating in regard to the hire and tenure of employment of the 26 employees above-mentioned.

Upon these findings and conclusions the Board ordered Republic to cease and desist from (a) dominating or interfering with the formation or administration of any labor organization of its employees or contributing financial or other support thereto; (b) discouraging membership in S. W. O. C. or any other labor organization of its employees, by discharging and refusing to reinstate employees, or otherwise discriminating in regard to hire or tenure of employment or any term or condition of employment or by threats of such discrimination; or (c) in any other manner interfering with, restraining, or coercing its employees in the exercise of the rights guaranteed in section 7 of the act. It is clear that under the Board's findings and conclusions this order was proper.

It remains for us to consider the validity of that part of the Board's order which required affirmative action to be taken by Republic. In this connection it is to be remembered that section 10 (c) of the act (29 U. S. C., sec. 160 (c)) authorizes the Board, if it finds that an employer has engaged in an unfair labor practice, to require him to take such affirmative action, including reinstatement of employees with or without back pay, as will effectuate the policies of the act. Section 1 of the act (29 U. S. C., sec. 151) declares that it is the policy of the United States "to eliminate the causes of certain substantial obstructions to the free flow of commerce and to mitigate and eliminate these obstructions when they have occurred by encouraging the practice and procedure of collective bargaining and by protecting the exercise by workers of full freedom of association, self-organization, and designation of representatives of their own choosing, for the purpose of negotiating the terms and conditions of their employment or other mutual aid or protection."

The directions for affirmative action are contained in section 2 of the Board's order. The section is subdivided into paragraphs which will be considered consecutively. Paragraph (a) directs Republic to withdraw recognition from and disestablish the labor organizations of its employees which the Board found it had dominated, interfered with, or supported in violation of section 8 (2) of the act. Paragraph (b) directs the posting of notices that this has been done. As we have already indicated, the evidence supports the Board's finding that these organizations were dominated, interfered with, or supported by Republic. The original employee representation plans were imposed by Republic upon its employees and as originally drawn they were incapable of serving as collective-bargaining agencies representing the employees. The changes in form made after the decision of the Jones & Laughlin case and after the strike did not change their nature. They continued in charge of employees who had been active in the original organizations and who were known to be under Republic's domination. The organizations continued to enjoy the sunshine of Republic's favor in many ways. Employees were made to feel that membership in them was advisable in order to hold their jobs. They were undoubtedly what have come to be known as "company unions." It is clear that so long as these organizations exist Republic's employees will be unable to exercise and enjoy that free choice of bargaining agents which the act intends that they should have. The Board's order of disestablishment was, therefore, proper. *Labor Board* v. *Greyhound Lines* (303 U. S. 261); *Labor Board* v. *Pacific Lines* (303 U. S. 272); *Labor Board* v. *Fansteel Corporation*, supra; *National Labor Relations Board* v. *Stackpole Carbon Co.* (105 F. (2d) 167); *Tuan Metal Mfg. Co.* v. *National Labor Relations Board* (106 F. 2d 254).

Since the order ran only against Republic, the so-called company unions, some of which were permitted to intervene in this court, were not entitled to notice and hearing before the Board (*Labor Board* v. *Greyhound Lines*, supra). Their application to this court for leave to adduce additional evidence must be denied (*National Labor Relations Board* v. *Stackpole Carbon Co.*, supra).

Paragraphs (b) and (c) of section 2 of the Board's order require Republic to reinstate with back pay 14 employees, 6 who were discharged for union activities, and 8 who were refused reinstatement after the strike because of union membership. In the cases of 12 other employees who were similarly discharged and subsequently reinstated or offered reinstatement, Republic is required to make them whole for pay lost for the period before the strike. Paragraphs (d) and (e) direct Republic to make whole those employees of its Canton and Massillon mills who were locked out in May 1937 for the pay lost during the period of the lock-outs. The Board's findings of discrimination as to these employees are sustained by the evidence, as we have already pointed out. It follows that the order is justified under section 10 (c) of the act in order to effectuate its policies. *Labor Board* v. *Jones & Laughlin* (301 U. S. 1); *Labor Board* v. *Mackay Co.* (304 U. S. 333).

One phase of this part of the order requires special mention. The order provides that any sums which these employees may have received in the interim for work performed upon Federal, State, county, municipal, or other work-relief projects shall be deducted from the amounts ordered to be paid to them by Republic and shall be paid over to the appropriate governmental agencies which supplied the funds for the work-relief projects. Republic urges that this provision is beyond the Board's jurisdiction. We think, however, that it is within the discretionary power of the Board and that it is not unreasonable. A similar order was enforced in *National Labor Relations Board* v. *Planters Mfg. Co.* (105 F. (2d) 750).

There remain for our consideration paragraphs (f) and (g) of section 2 of the Board's order. These paragraphs require Republic to offer to employees who went on strike reinstatement in their former or equivalent positions, or if positions cannot be provided for them by dismissing new employees taken on since the strike, then to place them upon a preferential list for employment when available, and if they are not thus reinstated or placed on the preferential list, to reimburse them for wages lost for the period beginning 5 days after their application. These provisions raise the major controversy in the case. This controversy is as to the cause of the strike. Republic vehemently contends that the strike was caused solely by its refusal to sign the contract submitted by S. W. O. C. This refusal the Board concedes was not an unfair labor practice. Consequently, if Republic is right as to this, the Board had no power to order the reinstatement of the strikers.

The Board, however, found "that the underlying cause of the strike, and a substantial factor in its precipitation on May 25 and 26, was" Republic's "campaign to crush the union by means of the unfair labor practices" in which the Board found Republic had engaged prior to the strike, and which we have already described. We think that this finding is supported by the evidence and must be sustained. It is true that the strike was precipitated by Republic's refusal to sign the union contract and thus to recognize the union as the bargaining agent for its members. It is equally clear, however, that the signing of the contract was sought by the union not to raise wages or improve working conditions, for it purported to do neither, but solely to put an end to the warfare between the union and Republic which had resulted from the latter's unfair labor practices. What was sought, as the clauses of the contract hereinabove quoted demonstrate, was a formal declaration and agreement by Republic that it would not continue those practices but would recognize and not interfere with the right of its employees to become members of the union.

It is thus seen that the proposal to sign the contract was but a phase of the union's struggle against Republic's unfair labor practices and that the latter's refusal to sign was but one more indication that it proposed to continue those practices. The union contract in such a case as this becomes merely the symbol of the employer's acceptance of the union. If the contract is refused, we cannot say that the refusal is the cause of the ensuing strike, even though doubtless its acceptance would have averted it. The causes of the strike remain the unfair labor practices which the employer, by his refusal of the proffered covenant of peace, indicates that he will continue. As the Congress, in section 1 of the act (29 U. S. C., sec. 151) significantly said: "The denial by employers of the right of employees to organize and the refusal by employers to accept the procedure of collective bargaining lead to strikes and other forms of industrial strife or unrest * * *."

Republic further contends that the order for the reinstatement of the strikers was invalid because the complaint did not tender the issue of the reinstatement of the strikers. The complaint did, however, enumerate certain unfair labor practices and allege that because of these practices and of the refusal to sign the contract the strike took place. Section 10 (c) of the act specifically authorizes the Board to direct reinstatement of employees if unfair

[1] SEC. 7. Employees shall have the right to self-organization, to form, join, or assist labor organizations, to bargain collectively through representatives of their own choosing, and to engage in concerted activities, for the purpose of collective bargaining or other mutual aid or protection.

labor practices are found. Republic was, therefore, sufficiently informed that such action might be required by the Board.

It is argued that none of the strikers should be reinstated since they were all members of a combination and conspiracy and as such responsible for the acts of violence committed by some of their fellows. This argument, however, fails to take into account the provisions of section 6 of the Norris-LaGuardia Act (29 U. S. C. sec. 106), which prohibit courts of the United States from holding members of a union participating in a labor dispute responsible "for the unlawful acts of individual officers, members, or agents, except upon clear proof of actual participation in, or actual authorization of, such acts, or of ratification of such acts after actual knowledge thereof." The act applies to this proceeding for the enforcement of the Board's order. No proof of actual participation, authorization, or ratification was offered with respect to the strikers generally. Equally untenable is the contention that the strikers are not entitled to reinstatement because they have not come into court with clean hands. This principle is not applicable to a proceeding in which a governmental agency is seeking enforcement of its order in the public interest. *National Labor Relations Board* v. *Remington Rand, Inc.* (94 F. (2d) 862, cert. den., 304 U. S. 576); *National Labor Relations Board* v. *Carlisle Lumber Co.* (99 F. (2d) 533).

Finally Republic contends that the Board had no power to require the reinstatement of the individual strikers who had been guilty of criminal conduct in connection with the strike and it sought from the Board and from this court leave to present evidence on this subject. While leave was refused by the Board it treated Republic's offers of proof as evidence in deciding the case and we have done the same. Republic's petition for leave to adduce additional evidence will accordingly be denied.

In *Labor Board* v. *Fansteel Corporation*, supra, the Supreme Court had before it a case involving the reinstatement of strikers who had been guilty of unlawfully seizing and holding their employer's buildings in a sit-down strike. The Court held that their reinstatement would not effectuate the policies of the act and that it was, therefore, beyond the power of the Board to order it. In that case Chief Justice Hughes said (p. 253): "The employees had the right to strike but they had no license to commit acts of violence or to seize their employer's plant. We may put on one side the contested questions as to the circumstances and extent of injury to the plant and its contents in the efforts of the men to resist eviction. The seizure and holding of the buildings was itself a wrong apart from any acts of sabotage. But in its legal aspect the ousting of the owner from lawful possession is not essentially different from an assault upon the officers of an employing company, or the seizure and conversion of its goods, or the despoiling of its property or other unlawful acts in order to force compliance with demands. To justify such conduct because of the existence of a labor dispute or of an unfair labor practice would be to put a premium on resort to force instead of legal remedies and to subvert the principles of law and order which lie at the foundations of society."

In the Fansteel case the Court was dealing with a case which involved a sit-down strike in which the strikers forcibly and unlawfully deprived their employer of possession of his plant. The Court made it clear that unlawful conduct of that character deprived the participant of the right of reinstatement. We think it must be conceded, however, that some disorder is unfortunately quite usual in any extensive or long-drawn-out strike. A strike is essentially a battle waged with economic weapons. Engaged in it are human beings whose feelings are stirred to the depths. Rising passions call forth hot words. Hot words lead to blows on the picket line. The transformation from economic to physical combat by those engaged in the contest is difficult to prevent even when cool heads direct the fight. Violence of this nature, however much it is to be regretted, must have been in the contemplation of the Congress when it provided in section 13 of the act that nothing therein should be construed so as to interfere with or impede or diminish in any way the right to strike. If this were not so the rights afforded to employees by the act would be indeed illusory. We accordingly recently held that it was not intended by the act that minor disorders of this nature should deprive a striker of the possibility of reinstatement. *National Labor Relations Board* v. *Stackpole Carbon Co.*, supra.

In the present case there was evidence of violence and disorder on the part of many strikers. Numbers of them were convicted of crimes in the State courts. The Board accordingly undertook to determine which of these were sufficiently serious to bar reinstatement. This it did without the benefit of the Fansteel opinion, which was not handed down until 4 months later. In making its determination the Board confined itself to evidence of convictions and properly refused to try accusations of violence which had not resulted in convictions in the criminal courts. It decided that all strikers who had been convicted of possession and use of explosives, malicious destruction of property to the value of $300, and possession of a bomb, all felonies, should be denied reinstatement, but that all others who had been convicted of less serious offenses should be reinstated. Among these others were 9 convicted of unlawfully obstructing and retarding the passage of the United States mail, 3 of discharging firearms, 7 of malicious destruction of property to the value of less than $300, 1 of unlawfully interfering with telegraph or telephone messages, 1 of transporting explosives, 5 of interfering with and obstructing railway tracks, 13 of carrying concealed weapons, and 1 of assault and battery sufficiently serious to call for the imposition of a fine of $200 and costs and a suspended sentence of 6 months.

Whether all of these defendants were striking Republic employees does not clearly appear from the record although it seems that they were all affiliated with S. W. O. C. We think, however, that their offenses were sufficiently serious to render the reinstatement of those of them who were Republic employees inappropriate and improper under the rule laid down in the Fansteel case. Paragraph (f) of section 2 of the order of the Board is accordingly modified to this extent. As to the remaining offenses proved to have been committed we are satisfied from their character and from the small penalties imposed that they were all sufficiently minor to come within our decision in the Stackpole case and the order of the Board directing the reinstatement of the persons involved in them will be enforced.

Republic raises certain objections to the form of the order. Its principal complaint is to a provision that employees directed to be reinstated for whom no positions are presently available shall be placed on a single preferential hiring list for all of Republic's plants in Ohio, in Monroe, Mich., and in Pittsburgh and Beaver Falls, Pa. The objection is as to the provision directing possible reinstatement at a plant other than that at which the employee formerly worked. The Board has power to make such an order, however. *National Labor Relations Board* v. *Remington Rand, Inc.*, supra. We do not think that its use in this case was an abuse of the discretion vested in the Board. We have also carefully considered Republic's other objections to the form of the order. Finding them without merit we will not discuss them further.

Finally Republic contends that it was not accorded procedural due process by the Board. We think that this point also is wholly without merit. After lengthy hearings the Board issued its findings and order on April 8, 1938. On June 14, 1939, after proceedings in this court and in the Supreme Court (304 U. S. 486) the Board set aside its findings and order. On July 8, 1938, it issued a draft of proposed findings and order. Thereafter both Republic and S. W. O. C. filed exceptions to the proposed findings and order and also filed briefs in support of their exceptions. Oral argument upon the exceptions was had before the Board on August 11, 1938, participated in by counsel for Republic and S. W. O. C. On October 18, 1938, the Board issued the findings and order now before us for review. It is obvious from this recital that Republic was not denied due process. See *Labor Board* v. *Mackay Co.*, supra; *Edison Co.* v. *Labor Board* (305 U. S. 197).

Paragraph (f) of section 2 of the order of the Board is modified as hereinabove indicated. In all other respects the order is affirmed. A decree enforcing it will be entered.

Schools and Training Courses in Government Departments—National Labor Relations Board and Bituminous Coal Commission Take Issue With Acting Comptroller General's Report

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

LETTERS FROM NATIONAL LABOR RELATIONS BOARD AND BITUMINOUS COAL DIVISION OF THE DEPARTMENT OF THE INTERIOR

Mr. COCHRAN. Mr. Speaker, on April 12, the Acting Comptroller General, R. N. Elliott, submitted to you a report on schools and training courses in Government departments, and independent agencies. You referred that report to the Committee on Expenditures in the Executive Departments, of which I am chairman. Several Government officials have already lodged complaints with my committee, maintaining the report contained many inaccurate statements. I have already placed in the RECORD the answer of those in charge of the school in the Agriculture Department.

In view of the publicity given to this report at the time it was submitted, I feel it is only proper those criticized in the report have their answer given to the public.

Therefore, Mr. Speaker, as part of my remarks, I include letters received by me from the National Labor Relations Board and the Bituminous Coal Division of the Department

of the Interior. The letters, which speak for themselves, follow:

NATIONAL LABOR RELATIONS BOARD,
Washington, D. C., April 24, 1940.

Hon. JOHN J. COCHRAN,
Chairman of the Committee on Expenditures in Government Departments, House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN: Under date of April 12, 1940, R. N. Elliott, Acting Comptroller General, submitted to Congress a report on schools and training courses in Government departments. This report, as you know, was referred to your committee.

The report, as its title indicates, purports to deal with schools and training courses which are being conducted in or by Government departments and agencies. In a subdivision of the report entitled "Teaching by 'Interneships'" there is a discussion of interneship in the office of Abe Fortas, general counsel of the Bituminous Coal Division of the Department of the Interior. Thereafter the report goes on to make the following statements:

"The letterhead of the International Juridical Association, 100 Fifth Avenue, New York City, discloses that its national committee representatives for the District of Columbia are John P. Davis, Thomas I. Emerson, Abe Fortas, Dr. Charles H. Houston, Henry T. Hunt, Joseph Kovner, Joseph Padway, Lee Pressman, Anthony Wayne Smith, Ruth Weyand, Nathan Witt, and David Ziskind.

"A circular letter dated April 27, 1939, published by the International Juridical Association, discloses that efforts were being made to influence consideration of, and possible amendments to, the National Labor Relations Act.

"Nathan Witt and Thomas I. Emerson, mentioned above, are secretary and assistant general counsel to said Board, respectively, as disclosed by the departmental register, 1939, and by the hearings on the National Labor Relations Board, yet being conducted. Witt is listed as receiving a salary of $7,500 and Emerson a salary of $7,000 per annum.

"The names of several members of the International Juridical Association's national committee are to be found on the list recently published by the Committee Investigating Subversive Activities as the alleged list of members of the American League for Peace and Democracy. Among the names on that list are those of Fortas, Witt, and Emerson."

I wish to call your attention to the following matters:

First. The paragraphs just quoted have no conceivable relevance to the supposed subject matter of the report, namely "Schools and Training Courses in Government Departments." Nor, so far as I am aware, do they have any relevance to any matter which the Comptroller General is authorized by law to investigate and report to Congress. Section 312 (a) of the Budget and Accounting Act (42 Stat. 25), under which Mr. Elliott purports to be acting, authorizes the Comptroller General to investigate only "matters relating to the receipt, disbursement, and application of public funds." By no stretch of the imagination does the above discussion of the Board and its officials relate to the "receipt, disbursement, and application of public funds." I can only conclude that Mr. Elliott has made a gratuitous incursion into matters which are none of his business with the deliberate intent to damage the public credit of the Board.

Second. The statement that Mr. Emerson's name appears upon the Dies list of alleged members of the American League for Peace and Democracy is pure fabrication. Mr. Emerson's name does not appear upon that list either as published in the official reports of the Dies committee or in any of the newspapers. Mr. Emerson informs me that he is not now and has never been a member of the American League for Peace and Democracy.

Third, while it is true that Mr. Witt's name appears upon the list of alleged members of the American League for Peace and Democracy, the fact is that he also is not and never has been a member of that organization. Upon publication of the Dies list Mr. Witt immediately denied publicly that he was a member of the league and that denial was carried in many of the newspapers which published the original list. The report of the Acting Comptroller General, however, makes no reference to Mr. Witt's denial and apparently the Acting Comptroller General made no effort to ascertain the truth of the matter prior to the issuance of his report.

Fourth, the implication of the report is that there is something improper in the fact that two officials of the Board are members of the national committee of the International Juridical Association and that the association has expressed itself upon the issue of amending the National Labor Relations Act. The International Juridical Association is an organization of lawyers which publishes a monthly bulletin upon labor law and which otherwise interests itself in various phases of labor law. Its work has been highly praised by Felix Frankfurter, now a Justice of the Supreme Court of the United States; by James M. Landis, dean of the Harvard Law School; by Lloyd K. Garrison, dean of the Law School of the University of Wisconsin, and by other authorities upon labor law. Neither Mr. Emerson nor Mr. Witt had anything to do with the policy of the International Juridical Association upon amendments to the National Labor Relations Act, as could readily have been ascertained if any inquiry had been made into the matter. The fact that they are members of the national committee of the International Juridical Association has no more significance than the fact that I and other officials of the Board are members of the American Bar Association, which has likewise expressed itself upon amendments to the National Labor Relations Act. It is perhaps not out of place to call attention to the fact that Col. O. R. McGuire was extremely active in the American Bar Association and elsewhere in support of the Walter-Logan bill, in fact was one of the chief protagonists of that bill, at a time when he was employed in the General Accounting Office itself.

Finally, I wish to point out that the report was based either upon an ex parte inquiry into the facts or upon no inquiry at all. I am unable to comprehend how any supposedly responsible agency of the Government could undertake to report to Congress upon the affairs of another Government agency without affording such other agency an opportunity even to know that charges were being made against it, much less an opportunity to answer such charges.

We have requested the Acting Comptroller General to rectify the injustice done to the Board and its officials by his report. He has declined to take any action. Under the circumstance I request that this letter be made a part of the official record of your committee upon this matter.

I am sending a similar letter to Hon. FREDERICK VAN NUYS, chairman of the Senate Committee on Expenditures in the Executive Departments. I am also sending a copy of the letter to the Acting Comptroller General.

Sincerely yours,

J. WARREN MADDEN.

DEPARTMENT OF THE INTERIOR,
BITUMINOUS COAL DIVISION,
Washington, April 25, 1940.

Hon. JOHN J. COCHRAN,
Chairman, House Committee on Expenditures in the Executive Departments, House of Representatives.

DEAR MR. COCHRAN: There has come to my attention the report of the Acting Comptroller General of the United States on the subject of Schools and Training Courses in Government Departments, dated April 12, 1940. Since I note that this report has been referred to your Committee on Expenditures, I wish to call your attention to certain errors in this report which affect me and matters within the scope of my official duties.

A segment of the report is devoted to a criticism of the appointment of Tucker Dean as a so-called intern in connection with the legal staff of the Bituminous Coal Division of the Department of the Interior. In the fall of 1939, a member of the Chicago Law School faculty visited Secretary Ickes and expressed a desire to work out an arrangement whereby one or more University of Chicago law students would spend a few months observing and studying the legal work of some branch of the Department of the Interior. The professor was referred to me, and I reported back to the Secretary and recommended that we cooperate in the project. The Secretary agreed to try the project on a limited, experimental basis.

Tucker Dean was the only person appointed or who served pursuant to this arrangement. He was appointed on an uncompensated basis. His appointment was expressly conditioned on the understanding that he was to perform work which would not otherwise be done by regular personnel, but which might be useful in connection with the legal work of the Division. Dean traveled to and from Washington and lived here at his own expense. He was here for a period of about 3 months, occupying a desk which was not otherwise in use, and engaged in studying various public records of hearings, observing public proceedings before the Division, and consulting with members of the staff when they were available, generally at luncheon or after hours. His activities did not cost the Government one penny either in supervisory time, facilities, or otherwise. He completed a memorandum on his work after he returned to Chicago, which surveys various technical problems under the Coal Act. We have found his memorandum to be useful and of high quality. This survey would not and could not have been made by any of our regular personnel, because they are engaged on other and pressing problems.

In his discussion of this matter the Acting Comptroller General implies that the Department was without authority to make this appointment (Rept., p. 41). The Bituminous Coal Act of 1937 authorizes us to "accept and utilize voluntary and uncompensated services of any person" (sec. 2 (a)). This provision clearly authorizes the appointment of Dean on the basis upon which it was made. Assistant Secretary Burlew advises me that he expressly pointed out this statutory authority to the investigator from the General Accounting Office, but it is nowhere adverted to in the report.

The report further states that my name appeared on the "alleged list of members of the American League for Peace and Democracy" published by the "committee investigating subversive activities" (by this I assume the report intended to refer to the Special Committee on Un-American Activities). My name never appeared on this list either in the committee's official report or in any newspaper. I have never been a member of the league, and I have never been connected with it in any way, directly or indirectly, nor has any member of my family.

In any event, reference to this matter and to my membership on the national committee of the International Juridical Association are utterly immaterial and irrelevant to the subject matter of the report. Incidentally, I have never participated in the affairs of the association, and my committee membership is entirely nominal. To the best of my information and belief this is solely and exclusively

a professional organization devoted to the study of legal problems incident to labor relations. The bulletin which it publishes is a recognized legal authority in the field.

I am informed that the Department furnished the investigator assigned by the General Accounting Office a full and complete statement of the Tucker Dean project. The investigator was advised (as is the fact) that this project did not involve the receipt, disbursement, or application of any funds whatsoever. No fees, tuition, emoluments, remuneration, or any funds whatsoever were received by the Government or any official or employee thereof or paid by the Government or any official or employee thereof, directly or indirectly, in connection with this matter. No mention of this fact is made in the report. Indeed, this fact demonstrates, in my opinion, that the General Accounting Office and the Acting Comptroller General were without authority to investigate or to report on the Dean project. Section 312 (a) of the Budget and Accounting Act, under which the report was issued, is limited to matters relating to "the receipt, disbursement, and application of public funds." No such issue was involved, directly or remotely, in the Dean case.

It is perhaps significant that the investigator who looked into this matter is a former employee of the Department of the Interior who was involuntarily separated from the service. After his dismissal, this gentleman filed voluminous charges with the Department which, after careful investigation, were found to be without any basis in fact.

In conclusion, may I say that I would welcome public and congressional discussion and criticism of the modest Tucker Dean project, and of the idea of placing law students in Government agencies for training on an uncompensated, carefully restricted basis. The idea is closely akin to the practice which has been advocated and fostered for many years by the National Institute of Public Affairs, sponsored by the great Rockefeller Foundation, with respect to college (but not law school) students. It has the obvious advantage of building a reservoir of trained personnel from which the Government can recruit lawyers of proven ability and high character, in a field in which the Civil Service Commission is without power under its present statutory authority; and it doesn't cost the Government or the taxpayers a single cent.

Respectfully yours,

ABE FORTAS, *General Counsel.*

Censorship

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

EDITORIAL BY GEORGE E. DUNN

Mr. ANDERSON of California. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following brief but thought-provoking editorial by George E. Dunn, publisher of the Half Moon Bay Review, in Half Moon Bay, Calif. It has drawn widespread attention and comment in my State and is certainly worthy of recognition here in Congress:

[From the Half Moon Bay (Calif.) Review]

(CENSORED)

This blank space represents a thoughtful pause in the lives of all of us. The above is common in European newspapers. It is the opposite of what we cherish: Freedom of speech and the right of peaceful assembly. Censorship means dictatorship, which in turn means a people ridden by hate and fear and violence. See to it that it doesn't happen here.

As the chosen representatives of a free people, it behooves each of us to reaffirm our faith in the ideals of true democracy and traditional Americanism. It is our task to be constantly on the alert against any and all attempts to undermine our constitutional liberties or to take from us our hard-won heritage of freedom.

Embargo Export of Munitions and Matériel of War to Japan—Now!

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

STATEMENT BY HARRY B. PRICE

Mr. COFFEE of Washington. Mr. Speaker, our continuation of shipment of matériel and munitions of war to Japan is very disturbing to all peace lovers in the United States. We are, in fact, participants in Japanese aggression against China. It seems to me to be of the utmost importance that we should embargo the exportation of matériel of war and munitions to Japan, particularly as there may be exigent need for their use by our own Government for defense purposes in the near future. We must ourselves be prepared to resist aggression from outside. A very interesting statement has been issued by Harry B. Price, executive secretary of the American Committee for Non-Participation in Japanese Aggression, which I think would be helpful to all students of this important question, and especially to those who have been following the oriental crisis. Personally, I have introduced a bill, H. R. 5432, which, if enacted into law, would eventuate in the very results sought by those who believe we should cease forthwith directly or indirectly being partners in aggression by the Japanese toward the Chinese people. This bill has had hearings before the House Committee on Foreign Affairs and is somewhat similar in purport and objectives to bills now pending in the United States Senate and which were introduced by Senators PITTMAN, of Nevada, and SCHWELLENBACH, of Washington.

I cannot urge too vehemently the imperative importance of the Congress considering a compromise combination of any of these bills in debate on the floor of both Houses. The statement of Mr. Price speaks for itself, and is as follows:

[From the American Committee for Non-Participation in Japanese Aggression, New York, N. Y.]

NEW YORK, N. Y., April 18.—Japan's large secret naval construction program revealed recently in statements from Washington, has been made possible by plentiful supplies of American materials, especially iron and steel scrap, according to a statement made today by Harry B. Price, executive secretary of the American Committee for Non-Participation in Japanese Aggression.

Based on Department of Commerce figures, the statement points out that from 1934 to 1939, inclusive, American exports of scrap iron and scrap steel to Japan reached a volume of 8,520,811 tons, a total export greater than that to all other nations combined, including Great Britain, France, Germany, Russia, and Italy. The statement follows:

"American materials, especially scrap iron and scrap steel, and American machinery have made possible Japan's huge secret naval construction program, exceeding in some categories that of the United States itself, according to facts made known in Washington recently.

During the 6 years 1934 to 1939, inclusive, Japan obtained from the United States 8,520,811 tons of scrap iron and scrap steel, or 52 percent of America's total export to all countries of 16,498,906 tons. Thus, American exports to Japan of these materials, fundamental for naval construction, have exceeded those to Great Britain, Germany, France, Russia, Italy, and all other countries combined, according to statistics published by the United States Department of Commerce.

"In 1939, 57 percent of all American exports of scrap iron and steel went to Japan.

"In 1938, according to careful studies, Japan obtained approximately 90 percent of her imports of these metals from the United States. The proportion for 1939 was probably higher, although statistics of Japan's imports from other countries in that year are not yet available; with other sources restricted, due to the European conflict, Japan imported from the United States in 1939 an all-time high of 2,022,958 tons.

"During the previous 6-year period, 1928 to 1933, inclusive, Japan's purchases of these metals averaged 216,075 tons per year. In 1934 Japan denounced her naval treaty with the United States and Great

Britain and in that year her scrap iron and steel purchases from the United States more than doubled. From that year onward her purchases of these metals have exceeded a million tons annually, averaging approximately 1,420,000 tons per year, an increase of 527 percent over the previous 6-year period. During the first 2 months of 1940 exports of scrap iron and steel to Japan totaled 210,337 tons, approximately half of America's exports to all countries of 421,173 tons.

"Only a portion of these extensive exports of iron and steel scrap would be needed for the construction of between 400,000 and 500,000 tons of warships in Japan's battle fleet now reported to be completed or nearing completion. The balance has been available for the development of war industries and for the conduct of Japan's war against China.

"Thus the United States has furnished indispensable help, not only for the invasion of China but also for the building up of a navy reported to be almost equaling our own in strength. While this export trade continues, further depleting valuable and strategic American resources, it becomes necessary to impose huge additional tax burdens upon the Nation for naval construction in order to meet the competition which American exports are making possible.

"Pending legislation, introduced by Senators PITTMAN and SCHWELLENBACH, would authorize the placing of restrictions upon those strategic exports, on the basis of American rights and obligations under the Nine Power Treaty."

Amendment of the Wage-Hour Law

EXTENSION OF REMARKS

OF

HON. JOSEPH E. CASEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

ARTICLE BY CHARLES G. ROSS

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Charles G. Ross, published recently in the Washington Evening Star:

[From the Washington Evening Star of April 22, 1940]

BARDEN BILL "FARM RELIEF" RIDICULED—NO MERIT SEEN IN THIS MOVE TO AMEND WAGE AND HOUR ACT

(By Charles G. Ross)

One of the favorite pieces of legislative shenanigan, now, as always, is to wrap up a bill in the guise of aid to the farmer. High-tariff measures have always been put across as panaceas for the farmer's ills. The varied interests that oppose the Hull reciprocal-trade policy take shelter behind the argument that it hurts the farmer. Now it is the Barden bill to amend the Federal Wage and Hour Act which is being pressed on Congress as a measure of farm relief.

Stalled off last year, the Barden bill is scheduled, along with other proposed amendments to the act, to come before the House late this week.

Now the Federal Wage and Hour Act is not sacrosanct. Amendments have been proposed by the House Labor Committee which clearly should be adopted, particularly the amendment which would exempt well-paid white-collar workers from the hours provisions of the act. But the bill of the North Carolina Representative, Mr. BARDEN, proposing the exemption of more than a million workers engaged in the handling and processing of farm products, ought to be given short shrift.

WORKERS ARE LOW PAID

The workers whom Mr. Barden would take out from under the protecting wing of the act compose one of the lowest-paid groups in the country. They perform industrial, not farm labor. They are the people who work at canning, packing, and other processing jobs that intervene between the growing of farm products and the time they reach the retailer's shelves. It would be as logical to exempt shoe-factory employees from the operation of the act, on the ground that they are engaged in preparing the stockman's hides for the market, as to leave out these workers in canning and other processing plants.

What are the provisions from which relief is sought? They have nothing to do with farm labor, which is entirely outside the scope of the Wage and Hour Act. The requirement is simply, so far as the categories affected by the Barden bill are concerned, that there shall be a minimum wage of 30 cents an hour for a 42-hour workweek, or payment at the rate of $655.20 a year. This is the minimum standard that Congress has set for the industrial workers covered by the Wage and Hour Act. It doesn't appear on its face to be a standard calculated to wreck the American industrial system. The question may fairly be asked whether any industry dependent for its existence on the payment of less than $655 yearly wage deserves to survive.

That question, however, may be waived. Congress has fixed the standard. In an effort to protect marginal labor—labor which, by and large, is unable to protect itself through collective bargaining—Congress has fixed a floor for wages and a ceiling for hours. It has done this not only to benefit the individual worker, but to benefit the industrial system—including the farmer—through increasing the buying power of the group at the bottom of the economic heap. Limited control over wages and hours, with these ends in view, is no longer mere economic theory; it is the law of the land.

FAVORITISM QUESTION ARISES

The question, therefore, which the sweeping Barden bill poses for Congress is whether or not this control is to be broken down for the advantage of certain favored employers.

Passage of the Barden bill would not only tear a gaping hole in the Wage and Hour Act, it would be a signal for further powerful drives to gain exemptions. The end could well be a complete riddling of the act. If it is to be knocked out or radically changed, let that result be achieved through an open and aboveboard revision of policy by Congress, not through the adoption of killing amendments at the behest of pressure groups. Meantime the act represents the will of Congress and it ought to be given a chance.

The plea that the Barden bill would help the farmer is wholly specious and should be met with a shattering vote against the bill.

Democratic Convention at Bristol, Va.

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

ADDRESS OF T. B. FUGATE

Mr. FLANNAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Mr. T. B. Fugate at the Democratic convention at Bristol, Va.:

Mr. Chairman, fellow delegates, and friends of democracy, ladies, and gentlemen, I sincerely appreciate the impulses and the splendid motives that have actuated this occasion. "Behold how good and how pleasant it is for us to dwell together in unity."

A very inquisitive little fellow approached his mother with the question, "Where was I born, mother?" "You were born in California, dear." "Where were you born, mother?" "Mother was born in Maine." "And where was papa born?" "His birthplace is England." There was a silence for a moment, during which time the little fellow's face wore an expression of deep study. Finally he remarked, "Isn't it funny how we all got together."

Now, since we have had the privilege of getting together, let us make the most of this gathering.

I am glad to be with you and to be one of you. We have reason to be proud of the great Democratic Party.

The principles of the Democratic Party, as laid down by such men as Jefferson and Jackson, cannot be too often reiterated or too familiar to those who hold the trusts committed to us by our forefathers. It is from the rich legacy of thought that these patriots have left us that we submit a few of the principles upon which true democracy rests.

Thomas Jefferson, with an abiding faith in the average man—a faith of tremendous significance in American history, in his first inaugural address, stated that in his administration he would be guided by the following rules:

"Equal and exact justice to all men, of whatever state or persuasion, religious or political.

"Peace, commerce, and honest friendship with all nations, entangling alliance with none.

"The support of the State governments in all their rights as the most competent administrators of our domestic concerns and the surest bulwarks against antidemocratic tendencies.

"The preservation of the general government in its whole constitutional vigor as the sheet anchor of our peace at home and safety abroad.

"A jealous care of the right of election by the people.

"Absolute acquiescence in the decisions of the majority, the vital principles of republics.

"A well-disciplined militia, our best reliance in peace, and for the first moments of war, till regulars may relieve them.

"The supremacy of the civil over the military authority.

"Economy in the public expenses, that labor may be lightly burdened.

"Encouragement of agriculture, and of commerce as its handmaid.

"The diffusion of information and the arraignment of all abuses at the bar of public reason.

"Freedom of religion.

"Freedom of the press.

"Freedom of the person under the protection of the habeas corpus."

"These principles," said Jefferson, "form the bright constellation which has gone before us and guided our steps through the age of revolution and reformation. The wisdom of our sages and the blood of our heroes have been devoted to their attainment. They should be the creed of our political faith, the text of civic instruction, the touchstone by which to try the services of those we trust; and should we wander from them in moments of error or alarm, let us hasten to retrace our steps and to regain the road which alone leads to peace, liberty, and safety."

Andrew Jackson gave utterance to Democratic axioms during his administration, only a few of which can be given here. He said:

"In every case advantage must result from strict and faithful economy in the administration of public affairs.

"In the adjustment of a tariff for revenue a spirit of equity, caution, and compromise requires the great interest of agriculture, manufactures, and commerce, to be equally favored.

"That the patronage of the General Government, which had been brought into conflict with the freedom of elections and had disturbed the rightful course of appointments and selections by continuing in power unfaithful and incompetent public servants, should no longer be used for that purpose.

"That integrity and zeal of public officers would advance the interests of the public services more than mere numbers.

"That it was the right of the people to elect a President, and it was never designed that their choice should in any case be defeated by the intervention of agents.

"Commerce should be unfettered, free from the restrictions of tariff laws, and left to flow into those natural channels in which individual enterprise, always the surest and safest guide, might direct it.

"Specific tariffs should not be imposed, because, subject to changes produced by selfish motives, they could never be just and equal.

"That proper fostering of manufactures and commerce tend to increase the value of agriculture products.

"He declared in favor of the principle that no money should be expended until first appropriated for the purpose by the legislature.

"The operation of the General Government should be strictly confined to the few simple but important objects for which it was originally designed."

The Democratic Party consists largely of those who live by the work of their hands, and whose political action is governed by their sentiments or imagination.

It results, therefore, that the Democratic Party can readily be molded to the support of reform measures, which involve a sacrifice of selfish interests. Is it any wonder that we are Democrats?

There has never been a time when the human race and the nations of the world needed intelligent, careful, thoughtful common-sense leadership as they do today. Therein lies a challenge to all of us, to bring forth the best, the most substantial traits which we possess, and apply them to the solution of our future problems which are just being opened up by our present situation.

With President Roosevelt conditions continue to improve.

We have climbed out of the mire of the world's worst depression. We are on our way to a dependable prosperity—not the hectic mad period from which we were suffering in 1929, but that which is substantial and dependable.

When the President first assumed his official duties we were on the verge of revolution. Conditions in America were not unlike those that prevailed in Europe before the French Revolution. The citizenship of America was possessed with terror. Businessmen everywhere were fearful of the future. No one knew what tomorrow would bring.

And then a new, powerful leader—courageous, confident—lifted us out of the slough of discouragement and hopelessness. How well we remember how our hearts burned within us as he talked to the Nation on that eventful day in March 1933. His words were like those of the Master when He walked and talked to His companions on the road to Emmaus. They were seared into our consciousness. We heard him gladly and hopefully because he spoke as one having authority, and not as his predecessors. There was a note of sincerity and authenticity in his spoken word that former leaders did not possess, filled with their vanity.

As a nation we were not unlike a man without a head, moving swiftly toward wreckage and ruin, realizing fully the fate that was before us and yet powerless to avoid the inevitable crash.

Every thoughtful, considerate American is grateful to the President of the United States for much of the change that has been wrought in the business status of this Nation. He saved us from national bankruptcy; he saved us from something far worse—for an unorganized people in which there are millions of unemployed would soon have been ruled by gangs and reckless hungry mobs.

Immediate and strong action was necessary to save the Nation from ruin. The closing of the banks proved to the country that we had a daring, self-reliant leader at the helm. The Nation that was wobbling like a chicken with its head off was quickly supplied with an intelligent and powerful directing force. Orderly regulations were substituted for chaotic confusion.

An example of the outstanding efficiency of our Chief Executive was demonstrated in his settlement of the automobile strike. Both business and labor were satisfied with his decisions. The rights of the citizens—constitutional government—were upheld.

The great majority of the American people desire and have determined that there shall be no interruption to the processes of recovery which have brought us so far in the direction of general prosperity.

Our critics will say that this is politics and not economics. Well, politics and economic success at this stage of national progress are inseparable. It was politics to accomplish the retirement of an administration that had miserably failed, and to bring about the election in 1932 of Franklin Delano Roosevelt with a mandate from the people to correct the abuses, that had left our Nation tottering on the brink of catastrophe.

Seven years of constructive leadership have made things immeasurably better. They are not perfect by any means, but industrial and commercial enterprises, large and small, are making money and the total of our well-being is constantly improving. The elements that are fighting the administration are not helping in bringing about this state of affairs. We would be much further on our way if it had not been for the incessant clamor of our political foes, who have fought every detail of our program. Their constant effort is to replace the impulses of faith and hope, engendered by the revival of business activity, with the philosophy of fear.

That has delayed complete recovery, delayed the reinvestment of profits. That is why there are so many still unemployed even in the face of rising markets and increased income.

There are three ways of cooperating. One is to do less than your half of the job, which is really not cooperating at all. The second is to do exactly half, depending on the other fellow to do as well as you. And the third is to do as much more than your share as you possibly can. Then, if the other fellow does more than his share, too, what a cracking good job you will turn out.

Early in life I caught the inspiration of cooperation. I realized full well that if I were to succeed in any great measure, I must necessarily not rely upon my own hands alone. One man can do only so much, but when he identifies himself with others for the accomplishment of a certain purpose, not only does his work become easier but the results more certain.

Membership in any organization means an essential part of the whole. Each member of a society has his individual part to play. If he is the right sort of an individual he is going to realize that the progress of the society may depend on how well he has taken care of his minor part.

In the theatrical world the star that shines the most brilliantly must have the wholehearted support of the other members of the cast. By the production being pronounced a success all have their reward—a satisfaction of knowing that they have performed their parts in such a manner as to assure success.

A good member of a society or organization places faith in the leader and battles for the true principles of his organization.

The Democratic Party is a party that encourages independent thought among its members. If they all thought alike it would be proof conclusive that they did not think at all. Parties exist because parties emphasize the points of difference. Harmony exists in parties because the members emphasize the points of agreement rather than the points of difference. In this Nation the things that the whole people have and hold in common are more numerous and more important than the things on which they differ. Today those who stand for the Democratic Party are able to go before this Nation and give a reason for the faith that is in them.

Let us always remember that coming together is a beginning; keeping together is progress; and working together is loyalty and success.

A house divided cannot stand. Its enemies, the opposition, seek to make divisions so they may enter in. As a party let us be militant, presenting a strong, undaunted front and follow our ideals to victory.

Ladies and gentlemen of the convention, never have I undertaken a duty more pleasing to me than that which I am now endeavoring to perform. Nevertheless, I sincerely regret that this part of the program has been assigned to me. The occasion is deserving the support of much greater ability of speech than I possess.

However, today we are making history. This is a momentous hour in the annals of our State.

We are met to choose a candidate to represent the Ninth District of Virginia in the Congress of the United States, who will uninterruptedly and faithfully carry out the duties and the responsibilities of that important office.

Such a person must have certain qualifications. He must be a real leader. He must be a man who has been trained for such tasks as will confront him. He must be trained in the school of experience.

Moreover, he must be a man of unquestioned integrity and honesty; he must be one who is known as fearless and who is pledged by both word and past service to the faithful enforcement of all laws. He must stand in the open on all issues. The searching light of closest investigation must not reveal compromise with wrong, no effort to shield or bargain with wrongdoers, and no apology for our Constitution and its provisions.

Such a man we must have and such a man I gladly proffer.

He is honored at home, trusted everywhere. There is no need to portray the profound love which goes out to our candidate from

every class and section of this great mountain district. If you would know the heart of the Anglo-Saxon people, free from the conventions and restrictions imposed by urban society, go into the hill country and live with its honest and simple folk. There you will observe the elemental nature of man and his close relationship to Mother Earth. There you will feel the throb of the mountains, the combined heart of its people, beating in unison with the great heart of God. Men of ambition, in such surroundings, inevitably become great. My friend and your friend, the friend of all the people, had as an essential part of his education years of schooling in such an environment.

The immortal spirits whose hands guided the infant steps of this Republic, whose blood consecrated and made this land liberty's dearest shrine, cry out again to each of the million of voters into whose hands the destiny of this Nation is lodged, "Watchman, what of the night?" From the orange groves of Florida to the waving wheat fields of the Northwest; from the nodding pines beyond the Alleghanies across the Great Plains and the Rockies to the slopes by the peaceful sea, men and women with ballot in hand, answer, "The morning cometh," the morning of the Republic's hope.

Thomas Jefferson had the courage to write in the presence of a tyrant and his army, the immortal words: "That governments derive their just powers from the consent of the governed."

Our candidate knows the dangers of monopolies, combinations, and trusts—institutions formed and fostered by privileged groups. His voice has been raised for oppressed humanity. He has charmed the common people with the plain truth of democracy. He is one of the ablest and most eloquent champions of the rights of the plain people.

On our candidate's behalf, I can promise faithful service and the prompt discharge of every duty. Others may have as much zeal for the cause; some may have as long a training for the duties of the office; a few may possibly have as legitimate a claim upon any honors or rewards in your gift; but where can you find in the District a man with such a combination of claims?

Recently, I heard of a rare old hand-written copy of the Bible, the first page of which was beautifully illuminated; a charming design of many-colored flowers and leaves surrounded the record, while the initial letter was embellished with a leaf of pure gold. The gold was not essential to the record or to the charm of the artistically colored decoration which formed its frame, but this added touch of pure gold provided an unmistakable glow and enhanced the importance of the whole. It was a plus sign on the recorded page.

The pure gold of a fine character shines as the morning sun and lends a rare dignity to the achievements of man. It is the plus sign which illuminates the beauty of his record in the theater of life which he adorns.

I nominate one of America's great Democrats as our candidate for Congress from the Ninth District of Virginia—JOHN W. FLANNAGAN, Jr.

Lincoln Group Observes Important Anniversary

EXTENSION OF REMARKS

OF

HON. LAURENCE F. ARNOLD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

ARTICLE BY KING V. HOSTICK

Mr. ARNOLD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by a distinguished son of Illinois and well-known Lincoln student and writer, Mr. King V. Hostick:

LINCOLN GROUP OBSERVES IMPORTANT ANNIVERSARY

(By King V. Hostick)

This writer has been privileged to attend some highly interesting Lincoln group gatherings in various parts of the United States on many different occasions, but one which will stand out in his memory for many years to come was a meeting held in the William Petersen House in Washington, D. C., on the early morning of April 15, 1940. The date was the seventy-fifth anniversary of the day Abraham Lincoln breathed his last, and the place, the house to which his bleeding body was carried after the tragedy at Ford's Theater.

Accompanied by Mr. Bert Sheldon, well-known Lincoln enthusiast and prime mover in the formation of the Washington, D. C., Lincoln Group, we arrived at 511 Tenth Street NW. at approximately 7 a. m., there to be met by several other gentlemen, among them Dr. Stewart McClelland, president of the Lincoln Memorial University of Harrogate, Tenn.; Congressman GEORGE A. DONDERO, of Michigan, himself a devoted admirer of the Emancipator and present owner of the famous Grace Bedell letter written to Lincoln asking him to grow a beard; Randle B. Truett, of the Lincoln Museum of Washington; Carl W. Schaefer, of Cleveland, Ohio, and Robert Lee Kincaid, executive vice president of Lincoln Memorial University.

At exactly 7:22 a. m.—the moment Lincoln breathed his last and became part of eternity—Dr. McClelland stepped forward and asked that we bow our heads in respect to the memory of our Civil War President. After a full minute of silence, Dr. McClelland offered a prayer. Here in the gray morning stillness of a tiny room, nearly a century later, one was acutely conscious of the spirit of this great man among those who had assembled there to do him honor and the memorial service was dignified and touching. Several men's eyes were tear-filled and one gentleman openly wept. Written words fail to describe adequately the emotions of the group who took part in this early morning meeting.

An interesting discovery which came to light was the fact that Mr. Schaefer had been in the same room at the same moment 25 years previous, but at that time only Mr. Schaefer and his friend, Mr. O. H. Oldroyd, the then custodian of the Petersen House, were present.

As this group of some 10 or 12 gathered on this memorable occasion the writer could not help but let his mind drift back to that fatal evening several score years ago when, then too, men had gathered in this room and spoke in hushed tones and on the bed lay Abraham Lincoln, his life diminishing, his spirit waning. Strange that this child of the people who had achieved the heights, who had been born in a small and humble room, should be destined to pass from this world among similar surroundings. What a tragic sight it must have presented. But the world is well aware that Abraham Lincoln did not die that night, nor will his memory ever fade. He has taken his place among history's immortals and the ideals he exemplified shall live forever.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

ARTICLE FROM THE NEW YORK TIMES

Mr. BUCK. Mr. Speaker, we heard a great deal about the damage that reciprocal-trade agreements were doing to the dairy industry of the United States, during the course of the recent debate on the extension of the Trade Agreements Act.

It is refreshing, therefore, to note that statistical proof that reciprocal-trade agreements directly benefit the dairy industry of the United States by stimulating exports of American dairy products is contained in a recent report of the United States Tariff Commission.

The direct export benefits are seldom mentioned. Opponents of the trade-agreements program prefer to make it appear by false implications, fragmentary statistics, and direct misstatements that the program has been nothing but an injury to the dairy industry of this country.

It is a fact that exports and imports of dairy products together are ordinarily almost negligible in comparison with domestic production and consumption. It is a fact that the prosperity of the dairy industry in the United States depends almost entirely upon the level of industrial activity and employment in the United States. Opponents of trade agreements know this. They also know that trade agreements stimulate and maintain industrial activity and employment, thereby creating a bigger and a better domestic market for American farm and factory products. But they ignore these facts, as well as the facts about benefits of trade agreements indirectly facilitating the foreign marketing of American dairy products.

I insert an article from the New York Times of April 23, 1940, calling attention to this direct benefit through increased exports of surplus United States dairy products to countries which, through trade agreements, have granted concessions on these products.

[From the New York Times of April 23, 1940]

TRADE TREATIES LIFT DAIRY EXPORTS—TARIFF COMMISSION COMPLETES SURVEY OF EFFECT OF AGREEMENTS ON SHIPMENTS—CONCESSIONS ARE STUDIED—IMPORTS OF PRODUCTS ROSE TO $14,143,000 IN 1939 FROM $12,095,000 IN 1938

WASHINGTON, April 22.—A substantial increase in exports of dairy products to 11 countries which have granted the United States concessions in trade agreements was reported today by the Tariff Commission.

Figures compiled by the Commission in a survey of the effect of trade agreements on dairy products showed the value of dairy products exported to countries which granted tariff concessions increased from $1,673,000 in 1938 to $2,815,000 in 1939, while exports to countries which have not granted concessions declined from $4,411,000 to $4,321,000.

Total dairy exports to all countries in 1939 amounted to $7,136,000, against $6,084,000 in 1938.

"The value of exports for which concessions have been obtained," the Commission said, using the 1938 figure for comparison, "represented about one-third of the exports of dairy products to all foreign countries. The principal concessions obtained have applied to dried milk."

The Commission said exports of dairy products comprise mainly condensed and evaporated milk, dried milk, infants' food (malted). Three of the countries which granted concessions on these products were the leading markets for the United States.

"Venezuela, by far the largest foreign market," the Commission said, "granted concessions affecting all but a small part of the United States exports to that country. Eight other Latin-American countries granted concessions on about four-fifths of the United States exports to these countries."

The United States granted reductions in duties under trade agreements now in effect to about two-fifths of the total imports of dairy products, the Commission reported.

"More than 95 percent of the imports affected by the concessions have consisted of cheese," the Commission said. "On the basis of imports in 1938, the average reduction in duty on imports of all dairy products was 15 percent. The average reduction on concession products alone was 33 percent."

Figures compiled by the Commission showed the value of imports of dairy products on which concessions have been granted increased from $5,156,000 in 1938 to $6,214,000 in 1939. The value of total dairy products imported in these years was listed as $12,095,000 in 1938 and $14,143,000 in 1939.

The Commission said more than one-half the imports of cheese, including nonconcession items, consists of types "which are of minor importance in domestic production. Cheddar cheese and Swiss cheese are produced in substantial volume in the United States. There is little or no domestic commercial production of the other concession items."

Although duties have been reduced twice in agreements with Canada on imports of Cheddar cheese, the Commission said "imports coming almost entirely from Canada have been irregular recently, but in no year have they exceeded 2.2 percent of domestic production."

The Trojan Horse in Congress

EXTENSION OF REMARKS

OF

HON. JOSEPH E. CASEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

EDITORIAL FROM THE PHILADELPHIA RECORD OF APRIL 22, 1940

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Record of April 22, 1940:

[From the Philadelphia Record of April 22, 1940]

THE TROJAN HORSE IN CONGRESS

If the American people want a first-hand example of the kind of "boring from within" tactics which really menace their interests they may observe the attempt now under way to kill the wage and hour law.

It is not too much to say that the wage and hour law faces a fight for its very life.

Opponents of the measure do not, however, attack it directly. Instead, they pose as friends of the wage and hour law who want to amend it so as to improve it.

How much they would improve it may be estimated from the fact that if the Barden bill—their Trojan horse—should be enacted it would remove wage and hour protection from 1,500,000 workers at one swoop.

That's not our idea of improving the wage and hour law. Our idea of improving that law is to make it apply to more workers, to broaden its scope so the wage and hour levels of the Nation will further increase purchasing power, further increase employment—and by so doing, further increase the volume of American business.

The bill offered by Representative BARDEN of North Carolina, is attractively dressed up. It would "protect the farmer" and "clear up certain ambiguities in the statute." And the actual changes sound quite innocent—until one examines their actual effect.

This bill would not have any effect upon farm labor, despite its pretensions. The wage and hour law does not cover agriculture. But the bill would strip the law's protection from all employees who perform industrial work on agricultural, horticultural, or dairy products—from the time they have left the farm until they have reached the consumer.

Think what that means. That means taking away wage and hour protection from every worker in every cannery, from every worker in milk-processing plants, and even from the men who deliver milk to your door. The provision would drive a mighty wedge into the very heart of all wage and hour protection because, if reaction can get away with this, it will be encouraged to go on to destroy the entire act in its own good time.

To deprive 1,500,000 industrial workers of wage and hour protection simply because they are engaged in factories which process foods is to say, in effect, that no worker has a right to such protection unless he somehow is able to organize to compel Congress to give it to him.

The wage and hour law was enacted to put a floor under wages in our minority of shamefully underpaid industries and at the same time to put a ceiling on hours. In each instance the standards were extremely mild, working no hardship upon anyone. The law, indeed, was generally regarded as only a first step.

And now Congress is asked to retrace at least half that.

The seriousness of the situation is that the proponents of the Barden bill appear strong enough to force their amendments to a vote.

We hope Congress will answer them with an overwhelming rejection.

National Youth Administration in the University of Oregon

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

EXCERPT FROM REPORT BY KARL W. ONTHANK, DEAN OF PERSONNEL ADMINISTRATION, UNIVERSITY OF OREGON

Mr. ANGELL. Mr. Speaker, in proof of the excellent work that is being done under the National Youth Administration at the University of Oregon, I call attention to the following excerpt from a report dated April 19, 1940, which I have received from Karl W. Onthank, dean of personnel administration, showing honor grades of undergraduate N. Y. A. students as compared with total undergraduate enrollment at the university:

You will be interested to know that 15.2 percent of N. Y. A. students in the university last quarter were on the honor roll, as compared with 5.1 percent of the entire student body, and that 33.5 percent of all students getting on the honor roll come from the N. Y. A. group. Of the students making straight A records, 53 percent this last term, 60 percent fall term, are N. Y. A.-aided students; only 0.59 percent of the whole student body earned straight A records. Those figures are much the same as those every term since N. Y. A. aid was started.

The point of this, of course, is not that N. Y. A. aid guarantees high grades, but that N. Y. A. is keeping in the university students who can do outstanding work, and who, with this aid, actually achieve outstanding records.

I presume not all institutions have quite this proportion of N. Y. A. students on the honor roll, but from what I know of the operation of N. Y. A. in other colleges and universities, approximately this situation is relatively common. That is, college aid is not only, at a comparatively small cost, keeping thousands of youth off an already overcrowded labor market but, more important, is helping a great many superior young men and women to carry their education to a point where their superior abilities are more fully developed. This is obviously desirable both for their own advancement and for the public welfare.

A report of honor grades of undergraduate National Youth Administration students as compared with total undergraduates enrollment at University of Oregon, 1937–38, 1938–39, and 1939–40

[Total less auditors and graduates]

Logan-Walter Bill—Editorial Reaction Unfavorable to the Decision of the House

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

Mr. COCHRAN. Mr. Speaker, it is clearly evident from editorials appearing in the metropolitan newspapers that the dangerous precedent set by the provisions of the Logan-Walter bill is now foreseen. Editorial writers are now viewing with alarm the effect of such legislation.

The passage of this bill was clearly due to propaganda. To date over 10,000 bills and resolutions have been introduced in the House and Senate. It is, as we all know, absolutely impossible for Members to examine, let alone carefully study, all these measures. The propaganda that came to my desk in support of the Logan-Walter bill was inspired because, hardly without exception, all letters favored the passage of the bill. My suspicions were aroused when I gave some thought to the source of the propaganda. It was then that I secured copies of the bill and report, as well as the hearings, and I could see the dangers embodied in the provisions of the bill. Some Members have told me their mail indicated it was popular legislation and agreed to support it without careful study.

Editorial writers are now accusing the Congress of shirking its responsibility by providing for a review of administrative decisions, which, of course, will clog the Federal courts and result in Congress being required to create many additional judgeships.

I am not alarmed over the situation even though the bill passed the House by a large majority, which I think was due to the one-sided propaganda, because I am confident that the measure will never reach the archives of the Department of State. Somewhere, either in the Senate or the White House, it will meet its death, as it should.

After the Attorney General's Committee on Administrative Procedure makes its final report, then the question can be properly approached.

The action of the House in passing legislation while such an outstanding committee was thoroughly investigating and discussing the subject is beyond me to understand. For instance, let us put the shoe on the other foot. Assume the Congress was considering some important question and a bill is about to be reported. The President, knowing this and being opposed, having the power under some law the Congress has passed, issues an Executive order which would practically nullify the recommendations made by a congressional committee. Ask yourself how Members of Congress would feel. Would they resent such action by the President? Of course, they would.

During the debate it was insinuated that certain members of the Attorney General's committee were interested in delaying the report because they were receiving substantial salaries. I replied to this insinuation at the time, especially as to the director of the committee, Mr. Walter Gellhorn, and Mr. Arthur T. Vanderbilt, one of the members. It so happens that Mr. Gellhorn is, or was, a St. Louisan, the city I have the honor in part to represent in this body. I have never met the gentleman in my life, but I do know of his activities and of his outstanding ability. I do know Mr. Gellhorn did not seek this assignment, but the Attorney General sought Mr. Gellhorn, because he is recognized as one of the foremost authorities in the country on administrative law.

I further know that before Mr. Gellhorn consented to serve as director, it was necessary for him to make it perfectly plain that, no matter what might be the stage of the work at the time, he could not remain as director beyond September of this year, when he would be required, as he desired, to resume his permanent career at Columbia University, where he is a full professor in the law school.

Several times since accepting the assignment I am advised that he has announced under no circumstances would he remain in Washington beyond the end of the summer. This shows it was foolish to say he was engaged in dilatory tactics in order to preserve a job for himself. It was a reckless statement, to say the least, because I further know those engaged in the work for the Attorney General have been going at a rather uncomfortable pace in an effort to complete a very large undertaking in the space of a single year.

Mr. Speaker, as evidence that editorial writers are viewing this legislation with alarm, I include as part of my remarks the editorial in the Washington Times-Herald of Wednesday, April 24, which follows:

The Walter-Logan bill does not look so good to us.

This is the bill which passed the House of Representatives last week by the heavy majority of 282 to 97, and on which a showdown in the Senate is expected within the next few days.

The bill has had considerable publicity, but it should have a lot more before the Senate votes on it. And if the Senate passes it, we hope the President will veto it.

The Walter-Logan bill, backed by a combination of Republicans and conservative Southern Democrats, is a bill to hamstring a large part of the New Deal.

The background of the story is this:

Ever since there was a Federal Government, Congress has been setting up administrative boards, bureaus, and agencies to handle various branches of the Government's business.

There are, to mention a few of the best known of these boards, the Interstate Commerce Commission, the Federal Reserve Board, the Federal Trade Commission, the Securities and Exchange Commission, the National Labor Relations Board.

The number of these agencies has now passed 130. Some of them are useless and outworn. Some others are tyrranical and Peck-sniffish—the Federal Communications Commission (radio) being an example. Most of them perform necessary Government work.

The Walter-Logan bill seeks to bring these agencies under the control of the courts.

It would do so by permitting appeals from these boards' decisions to any United States Circuit Court of Appeals.

It would also make the rules and procedure used by these boards subject to review and approval of the District of Columbia Court of Appeals.

A few long-established Government boards and bureaus are exempted, among them the Interstate Commerce and Federal Trade Commissions. Practically all the New Deal's new administrative agencies are covered by the bill.

The bill looks bad to us, because we believe this is the wrong way to cure what bureaucratic evils there may be in our Government. They should not be remedied by the judicial branch; that is a job for the legislative branch. The courts should not be empowered to supervise these agencies; Congress should perform its plain duty in proper cases by abolishing the board, or by firing or disciplining the bureaucrats who run it.

To repeat, we think the Walter-Logan bill is a bad one, and we hope it loses out somewhere along the line from the House to the President's desk.

Congress Our Mainstay

EXTENSION OF REMARKS
OF
HON. ROBERT F. JONES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 25, 1940

EDITORIAL FROM THE EVENING LEADER, ST. MARYS, OHIO

Mr. JONES of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial written by Mr. A. C. Buss, editor and manager of the Evening Leader, of St. Marys, Ohio, which was published on April 13, 1940:

CONGRESS OUR MAINSTAY

The people of the United States will soon be called upon to elect a President as well as representatives to Congress. It is proper that they measure well their step, in order that no miscarriage in their cherished notions takes place. The importance of electing a strong Congress is greater than that of electing a President, as it is the former that exercises the will of the people, the bulwark of the Nation's weal. Our Congress has been prone to delegate much of its power to the Executive, and that would mean passing it on to the bureaucrats. This has resulted in government in reverse, in that hirelings essay to point the way, instead of the Congress. Since ours is still a government of the people, by the people, and for the people, interventions of whatsoever sort must have no place and should not be allowed. The President's function is to propose and that of the Congress to dispose. The President may recommend certain legislation, but before adopting any of them, our Senators and Representatives must first take advice with the people back home and follow their edicts in preference to any other. This is not always done, hence the general unrest and dissatisfaction pervading the country.

By some manner of means, the chart and log book in administrative affairs has been molded into an inflexible pattern, not as the dictation of Vox Populi, but by policy-forming agencies, in and out of Congress. The clamor of the people has made no impression on them as if citizens needed no consideration or didn't know or care very much about public conduct. Some were lulled into a sense of complacence by the doling process. Money has poured freely from the Nation's Treasury for purposes of relief, without affecting the forlorn conditions. Private initiative and enterprise have been stymied in the forward pass and the "devil may care" spirit has invaded the arena of activity, until no one really knows or cares less about the outcome. Unless the people awaken from their slumbers and take things really to heart, there will be a story to tell about the decline of American ingenuity and the fading away of American stamina. Lord forbid that this Nation, brought into being by the unflagging devotion of patriots and dedicated to the arts of liberty and freedom, shall forfeit its birthright by contrariwise habits and demeanors.

The peoples' sounding board is the Congress of the United States. There their influence may be applied directly and implicitly. When good men and true are selected for a seat in this great deliberative body the reaction will be good and wholesome, for there is not a Congressman who would deviate very far from the expressed wishes of the people if he knows his business. Popular approval of things done gives authority and power to regimes as nothing else can and drives for continuities of quality-tested programs. In casting our vote for a President we have only a forty-five millionth part, but in casting our vote for a Congressman we have a one hundred and twenty-five thousandth part, which denotes greater influence in the selection of Congressmen than that of a President. Whenever we impress Congressmen with the propriety of consulting the people instead of with bureaucrats hanging around Washington, we will have impounded a force that will be productive of sound legislation and general welfare. There are not many George Washingtons, but there was one who in his first inaugural address did not recommend any particular measure but preferred to pay tribute to the talents, the rectitude, and patriotism of Members of Congress by delegating all legislation to them.

A slogan worthy of adoption would be "list not to executive officials but to the great body of American citizens" if real constructive effort shall be your aim. The real mastership rests with the people, who would not that anything deleterious to the welfare of the Nation be done. Our Congressman comes nearest divining the heart desires of the people he represents and his voice should carry conviction. Strong and righteous men should therefore be sent to Congress that people be served in the highest degree of satisfaction. Now, on the advent of the one hundred and ninety-seventh birthday (which occurs today) of Thomas Jefferson, the author of the Declaration of American Independence and third President of the United States, may be cited his version of the sanctity of our partite form of government, in which he intonated his friendship with Congress and his aversion to usurpation of freedom of judgment and conscientious pursuit of men serving in Congress. Congress may be considered our most formidable mainstay of freedom and solidarity when we elect dutiful and trustworthy Representatives. There our safety and welfare rests.

State Democratic Convention in St. Louis, Mo.

EXTENSION OF REMARKS
OF
HON. FRANK W. FRIES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 25, 1940

ADDRESS BY HON. C. ARTHUR ANDERSON, OF MISSOURI

Mr. FRIES. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by Hon. C. ARTHUR ANDERSON, of St. Louis County, Mo., as permanent chairman of the Democratic State Convention in St. Louis, Monday, April 15:

Fellow Democrats, the Democratic Party stands at the bar of public opinion about to hear judgment pronounced upon it. This is the most important and crucial year in the entire history of our great and beloved party, for we have been at the helm through 8 long years of perilous journey, through a sea that has not been calm for a moment. The people of this Nation are about to pass judgment upon our navigation and take account of our stewardship.

A victory in November will be a vindication of all our efforts and a token of approval from the American people. A defeat may well mean the very end of the Democratic Party. Let's not even think of defeat, but only of the means by which to achieve a glorious victory. But let the specter of defeat lie in the background, and may it stare us straight in the eye if we become lax and lazy in this great campaign. Naturally, none of us believe that we will run second next fall, and I feel confident in predicting an overwhelming Democratic victory in the State and all over the Nation. Nevertheless, now, as never before, our party must present a united front, and the command staff of our forces must act as one with but a single purpose in mind—victory in November.

The enemy will be strong, make no mistake about that, and our chances of success lie solely and completely in our ability to unite under the glorious banner of our great party, and show conclusively to every voter that his Nation, himself, and his family, and his posterity can look forward with security and confidence only if we have a Democratic victory. Our party alone is capable—our party alone is willing—to carry on the great social and economic reforms that have been inaugurated during the 8 years we have held the reins.

No party has ever besought the approbation of the American people with such a magnificent record of accomplishment as we do today. No party has ever achieved so much in such a short time. I know the American people will reflect their knowledge of this fact, and their appreciation of our efforts, at the ballot box next November.

It is the task of our party and all its candidates and all of its devoted followers to see that the accomplishments of our administration are kept constantly before the public eye. Let no one forget that the Democratic Party alone and single-handed brought order out of utter chaos in American banking; it has given the farmer of the Nation his first real chance of parity with the other classes; it has given security to the aged; it has instilled hope in the youth; it has recognized and fortified the rights of organized labor; and it has put the Nation back on the road to recovery. And greatest of all—the Democratic Party has insured peace for all our people.

To you, my friends, in whose hands lies the fate of our party, I say, first educate yourselves in the accomplishments of our party during the past 7½ years. Get a firm grasp of what we have done so that you can present a strong case to all of the people with whom you come in contact. When you are able to point out and reiterate the multitude of achievements made by our party you will then be presenting the strongest and most convincing argument possible for all our candidates from the lowest to the highest.

No political party ever won such overwhelming victories as we have during the past 8 years and yet we have demonstrated time and again that our party puts the national welfare far above and beyond partisan considerations. Perhaps this fact is nowhere better demonstrated than right here in Missouri where our party has made tremendous strides in the interest of better and cleaner

government. In the Federal Government we have broadened and extended the civil service and have placed a strong prohibition against political manipulation in public office by the adoption of the Hatch laws. No clearer evidence can be adduced than these instances which show conclusively that the Democratic Party looks upon the Nation's welfare as its primary consideration. Our record is untarnished by any cloud however small and we can be proud that the Democratic Party has succeeded in bringing about momentous political reforms where our predecessors of the Republican Party failed so miserably.

At a party gathering of this kind it is always well to check back over the record to acquaint ourselves with the facts. Just because we have been "in" for two terms, let's not assume we are "in for keeps." I have already mentioned in broad outline the generally acknowledged achievements of two Democratic administrations. Let us be a little more specific. Let's get the facts in mind so that we can let everybody know about them. If we are able to present the case based on our record, no voter who is conscious of his own and his Nation's welfare will ignore us.

I don't think anybody takes particular pleasure in talking about the condition of our banks prior to the present Democratic administrations. The situation was so bad that we don't like to even mention it. But lest we forget, lest the people forget, what our party did to improve this situation, let's take time to remind them. Today our banks are safe and our deposits are insured against loss. Bank failures have been reduced from more than 6,000 a year to less than 50. This alone is sufficient to enshrine the Democratic Party in the hearts of Americans for generations to come. But we didn't stop there. Among the first major accomplishments of the Democratic administration was repeal of the eighteenth amendment and the Volstead Act which had saddled the Nation for 12 years under Republican rule, giving rise to a powerful criminal element that grew rich out of the illicit trade in liquor.

Today, after repeal by the Democrats, a great brewing and distilling industry has been revived, giving employment to thousands of people, helping the farmers and all forms of transportation. In addition, the Government, Federal, State, and city, reaps immense returns from legitimate taxes upon these industries. It will long be remembered that the Republicans promised repeal but never delivered. The Democrats promised repeal and made their word good within a few weeks of inauguration.

Tremendous strides have been made to save the American farmer from the certain destruction to which the Republican misrule and neglect foredoomed him. Production has been wisely planned in conjunction with a great program of conservation. After more than a century and a half of national existence we have at last seen an administration that recognizes the soil as one of the greatest of all our natural resources and its conservation as one of the greatest needs of our civilization. The accomplishments of the Democratic Party in solving the complex farm problem and in helping the farmer to get back on his feet will live forever in the annals of "democracy in action." No greater calamity could befall the farmer of this Nation than a Republican victory at this time. Only our party can—only our party is willing—to go forward with the magnificent program now well under way. The Republicans threaten and even promise to destroy that program if elected. The welfare of our farmers is of the greatest concern to us all, and if they are neglected now I hesitate to predict the future or its consequences.

The Democratic Party has extended a helping and saving hand to the unemployed and the aged through its vast system of social security and unemployment insurance. History does not record even a simple recognition of the needs of these people by the Republican Party.

We have sought with success to aid the laboring classes by providing a floor below which wages may not fall and a ceiling above which hours of work may not extend. We have recognized and fortified the rights of workers to organize for the purpose of collective bargaining. The only recognizable contribution of the Republican Party in this field was to close its eyes while unscrupulous and avaricious employers defeated every effort of the working classes to help themselves.

They closed their eyes while employers perfected elaborate systems of industrial spies and other devices which are wholly inconsistent with democracy. The Republicans would make much of their sympathy for labor but let the people remember and recognize the fact that the Republican Party has selected as its man to raise its campaign chest and handle its funds one of the most bitter enemies of organized labor in America; a man who steadfastly refuses to recognize labor organizations and who employed every possible means to undermine public confidence in the progressive legislation of the Democratic administrations. The people of America can judge for themselves.

Perhaps there have been a few mistakes along the line in providing for the millions who now depend upon the Federal Government for even the barest necessities of life. But corrections have been made all along the line. Let us remember that the Republican inauguration gift to the Democrats back in 1932 was 10,000,000 unemployed and starving people. Never before had such a problem confronted any administration and in spite of the tremendous task involved we have achieved remarkable success. The great public-works program, including the C. C. C., is proving to be of immeasurable benefit in preserving the faith of our people in our form of government, which was seriously threatened by years of Republican misrule.

It is impossible to consider the welfare of our beloved country today without some mention of the means whereby we hope to remain at peace in a troubled and war-torn world. The Democratic administration has demonstrated its sincere desire to keep us out of all foreign entanglements. We realize, of course, that war in Europe and Asia is a serious blow to American commerce and trade; but in the interest of peace, in the interest of preserving Democracy here in America, we have been willing to make appropriate sacrifices in the certain knowledge that we will survive the tempest only by remaining free of all entanglements.

While resolutely determined to remain free of all wars that do not concern us, the Democratic Party has not neglected the obvious necessity of augmenting our defense system in this world gone mad. This administration has done everything humanly possible to strengthen the national defense consistent with the efficient carrying out of so vast a program. During the years of Republican rule, from 1920 to 1932, our national-defense system was neglected woefully. You cannot hope to defend this vast Nation in this day and age with a conscript Army and Navy built up in a few weeks or months. Modern machines of defense require skilled and scientific handling. Therefore, under Democratic leadership we have given new life and impetus to a well-trained Army and Navy backed up by an excellent system of Reserves and National Guard.

Under Democratic leadership we have been careful to retain for our own protection and defense many scientific devices and weapons which are not known or possessed by other countries.

The leadership of the Democratic Party in these critical days of civilization has been demonstrated, tested, and proven. Wisdom dictates that we stay on the course. The Democratic Party offers the people concrete example and proof. The Republicans offer hollow promises and platitudes.

As Americans, as Democrats, we are sincerely and justly proud of our service to the Nation during the past 7½ years. But we all realize that we have only done what was expected of us. The people of America are entitled to a government that recognizes their needs and problems and does something to help them achieve the full growth of life that this Nation holds out to them. If the Republican Party recognized these things, history does not record the fact. All we know is that they pursued the do-nothing policy unto its bitter end.

So, my friends and fellow Democrats, we can gird ourselves for battle in the spirit of good deeds well done and fortify our beloved party with the record of the glorious victories we have wrought during the years of our stewardship.

The War-Trade Picture

EXTENSION OF REMARKS

OF

HON. J. FRANCIS HARTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

EDITORIAL FROM THE BUFFALO EVENING NEWS

Mr. HARTER of New York. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include an editorial from the Buffalo Evening News under date of April 23, 1940. The editorial forcefully presents the picture of war trade. Buffalo is experiencing an increase in exports and imports. The sad part of it is that the business is war business. The peacetime trade is all too small and at the expense of the American farm and other non-war-making materials with automobile exports the lowest since 1933. Significant in the editorial is the statement that records show the greatest volume of foreign trade in our history comes not during wars but in peacetime. The 1914–18 era and the year 1939 were eclipsed by the peaceful years from 1919 to 1929. Here is what the editorial says:

THE WAR-TRADE PICTURE

The changing character of United States foreign trade and the demand for American products in the markets of a war-torn world is shown strikingly in an exhaustive analysis of this country's exports and imports during 1939, just issued by the foreign commerce department of the United States Chamber of Commerce. The report shows the dislocations and diversions of foreign trade which have resulted from war conditions, as well as an accelerated trend toward exporting manufactured goods and the importing of crude products. Nearly 80 percent of exports by value for 1939 were products of manufacturing industries. Of this amount, 53.4 percent consisted of completely finished manufactures, the largest share reached in more than 50 years by any of the five economic

groups into which American exports are broken down. Exports of crude materials and foodstuffs accounted for only a fifth of the total exports of $3,123,869,000. On the other hand, imports of crude materials and partly finished manufactures for the American industrial plant made up 54 percent of the total of $2,276,294,000.

The report naturally shows heavy increases in exports of aircraft, heavy machinery, metals, chemicals, and similar items related directly or indirectly to the prosecution of the war. Since the outbreak of war last September these exports have increased still more rapidly, at the expense of agricultural exports and other goods whose purchase has been curtailed or diverted to other markets in the effort of belligerent nations to save dollar exchange for cash-and-carry munitions buying. Aircraft exports advanced from thirteenth place in 1938 to third in 1939, and there is no doubt that they will rank first in 1940 on the basis of Allied purchase plans. Automobile sales abroad, in contrast, declined sharply to the lowest point since 1933, though still retaining first place in value.

An interesting local sidelight of the report has to do with Buffalo's place in the improved foreign-trade picture. The Buffalo district showed the second largest increase in exports of the 20 chief customs districts in the United States, namely, 21.7 percent, and the third largest increase in imports, or 47.8 percent. Buffalo ranks seventh in the value of exports handled, totaling $110,000,000 in 1939, and sixth in its imports of $70,247,000. Considering the diversified nature of Buffalo industries, and the increased foreign demand for its aircraft, chemicals, steel, and machinery products, there is good reason to hope for a war boom in this area. However, one sobering thought should be kept in mind. The greatest volume of foreign trade in the history of the United States was not in the war years of 1914 to 1918, nor in the war year of 1939. It was in the peaceful years from 1919 to 1929. Peace and prosperity are a combination which no war economy has ever beaten.

The American people will bear these facts in mind when propaganda greets their eyes and ears with the financed and studied intention of getting Uncle Sam into war. No utterance of any official, whether he be an admiral or a minister of our Government, can change the bald facts that war does not pay. The businessmen and labor of this country know that war profits are fleeting; that peacetime business is the best; and striving to solve our shameful domestic problems, putting our nine or ten million unemployed men and women and the Government-frightened American dollars back to work is our salvation. Accomplishing that, we will be in a better position to help bring about a fairer and more lasting world peace when the war ends and when we are wanted. Americans, study the war-trade picture.

Plain Economics

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

ARTICLE BY JOHN T. FLYNN

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following short article from today's issue of the Washington Daily News, written by John T. Flynn:

[From the Washington Daily News of April 25, 1940]

PLAIN ECONOMICS

(By John T. Flynn)

NEW YORK, April 25.—It is nearly 2 years since Congress ripped the control of our aviation industry out of the Department of Commerce and put it under the independent Civil Aeronautics Authority, with an also independent Air Safety Board.

Many people have forgotten why Congress did that. The President now wants to put aviation back under the Commerce Department. He has proposed his plan to Congress under the reorganization law. Under that law Congress has 60 days in which to nullify any part of the President's proposals. If it does not, the plan will become law.

In the midst of so many alarms, most people will wonder why this proposal has caused such a storm of protest, even from such good New Deal supporters as Mayor LaGuardia. The matter is so serious that this is a good time to recall the story of air control when the Department of Commerce had it, and why the editorial on this subject in the next column is so truly titled "Calamity."

Here is just one sample. I propose to give some more in subsequent articles. Jay A. Mount was an official in the Air Commerce Bureau of the Department of Commerce. He had had long experience in aviation and was appointed superintendent of maintenance of all airways by Secretary Roper. His Department administered safety measures over 22,000 miles of airways. They were protected by beacon lights, radio beams, intermediate landing fields, weather reports, etc.

The Department had authorized pilots to fly by means of instruments alone, guided by radio beams. This meant flying blind save for the instruments. It meant also that radio beams must be accurate. Mr. Mount, who was an aviation engineer, made an elaborate inspection of these radio beams. And late in 1934 he submitted a report to the Department revealing shocking conditions from neglect, inefficiency, incompetence. The radio beams, in fact, he found, despite ample appropriations, were operating at only 50 percent efficiency.

Mr. Mount's report, instead of provoking action, produced deep resentment in the Bureau. His reward was to be subjected to spying, trailing, minute investigation even of his personal life by Government agents. Flimsy charges were made against him to get rid of him.

The personnel committee of the Department heard a trial of these charges and unanimously rejected them as groundless. At the hearing Mr. Mount pleaded with his superiors to heed his warnings about those radio beams. He predicted terrible disaster if he was not listened to. But Mr. Mount had attacked the bureaucrats of the Department—the unforgivable sin—and Secretary Roper and his administrative assistant sided with the bureaucrats.

Mr. Mount was removed from his position, demoted and sent to an obscure post in Georgia. A man who had been recommended for dismissal a few months before by the Director of the Bureau was put in his place.

And—here is the pay-off—only 5 days after the hearing of the Mount charges and his earnest appeal for attention, a plane went down in the West. Five people were killed, eight seriously injured. One of those killed was United States Senator Bronson Cutting. And a Senate investigating committee ascribed the cause of the crash to the very condition Mr. Mount had reported.

The Assistant Secretary of Commerce at the time was Ewing Y. Mitchell, who supported Mr. Mount and was himself later punished for his interest in this and other irregularities in the air service in that strange Department of Commerce. There is plenty more to this.

Dictatorship Rules and Ruins

EXTENSION OF REMARKS

OF

HON. CHARLES A. BUCKLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

Mr. BUCKLEY of New York. Mr. Speaker, about 2 years ago I had the occasion to discuss the deplorable condition of the oppressed and persecuted people in Austria and Germany. I was shocked to see that Austria had become a victim to the menace of nazi-ism, and I set forth the protest of men and women of all religious faiths against such violations of human rights and liberties. I also discussed the problem of refugees and showed the contribution that these people had made to America in the past. I also expressed my opposition to communism, fascism, and nazi-ism, and declared my belief that this country would always remain the respecter of all religious faiths, a place where liberty would always prevail.

The flames of hatred and intolerance, fanned by grasping dictators, have spread so rapidly since then that we stand by in amazement and wonder if it all can be true. At first, it was Czechoslovakia, then Memel in Lithuania fell prey to Nazi domination; and then Poland sliced in two by Germany and Russia, and we all know what happened and is still happening in Poland—a systematic and total destruction, a taking away of all political and economic existence, even their history and culture. The people are treated worse than cattle—massacres, taking away of all property, and, even more, the right of the people to their spiritual guidance and religious beliefs. These people are deprived of every means of moral and material happiness. For them there is only the right to work for their executioners, who give them hardly enough to exist on in order to continue working for their masters.

It is estimated that thousands of Poles have died from starvation, exposure, or were killed since invasion by Ger-

many. Not alone were Jews persecuted, and we know that they are among the first to feel the brunt of persecution at the hands of the Nazis, but there was a deliberate attempt made to destroy the Catholic religion. In January of this year a report from Auguste Cardinal Hlond, primate of Poland, to Pope Pius XII cited many instances of churches being profaned, parish houses invaded, funds stolen, and priests shot and killed; priests and nuns being humiliated, beaten, and maltreated; others deported to Germany and some sent to concentration camps. When I read excerpts of this in the newspapers I wondered whether we were still living in the twentieth century or if I were experiencing a nightmare. The experience of the Protestant religion in Germany was a sad and depressing one.

The flames swept on and then Russia dominates the countries of Latvia, Estonia, and Lithuania. It does not stop here for the Bear sweeps into Finland, one of the most democratic nations in the entire world, and takes it without any semblance of reason. Although valiant in their defense, a nation so small as Finland, necessarily capitulated.

And only recently Denmark and Norway became victims of the same scourge. Poor Norway, through no choice of her own, has now become a bloody battleground for other fighting nations to settle their conflict. Every other nation in Europe wonders when its number is next.

This can all be traced to the beginning of the rule by one dictator and his henchmen some 7 years ago. Hitler and his newly acquired "red" partner, Stalin, in the east, have attempted to plant the seed of their godless philosophies in democratic countries, including our own United States. By means of propaganda of every form and manner they have preached these doctrines of hatred here. But, our people, who are in the main a tolerant one, have quickly seen through their deceit and have stopped them in their tracks.

In the United States we still believe in the principles upon which this country was founded, namely the equality of rights of man, the right to worship as one believes, and the freedom of speech, press, and assemblage. Despite the economic set-back which we have passed through in the last 10 or 11 years, no one can say that these rights were abridged in any way. Our efforts, energies, and moneys are being directed in those channels from which we believe the people of the United States will benefit. Legislation has been enacted in the various State legislatures, as well as by the Congress of the United States, to improve the economic lot of every man, woman, and child of the United States.

While on the subject, I would like to express my opinion on America's position. Although I am in favor of spending funds in strengthening our national defenses, as that seems to be necessary, I am opposed to having the United States embroiled in a war on foreign territory, regardless of where our sympathies may lie. The administration and the people of the United States are opposed to America's entry in any war. We have learned from bitter experience. We do not propose to shed our young people's blood again. The American people will defend our country from attack by a foreign nation but will not allow ourselves to become the spearhead of foreign conflicts.

I can foresee, and I certainly do not put myself up as a prophet, that these iron-fisted pagan rulers and their followers, who believe it necessary to subject people to and practice upon them every known brutality, who spend millions of dollars for useless war materials instead of for constructive improvements for the benefit of mankind, who believe that human rights mean nothing and that God and religion mean less, must meet with ignominious defeat. And let us hope that it will be soon.

There is no room in this country for communism, fascism, nazi-ism, or for any "ism" except Americanism.

And when the cannons will have ceased firing and men will have retired to their homes to heal their wounds and again engage in peaceful occupations, the United States will be an example to the world that only a Nation founded on the principles of liberty, neighborliness, and peace can long endure.

We in the United States will guard our freedom and continue our united efforts in preserving our tolerance and liberty, which we know to be the most priceless possession of mankind.

Production of Rubber in the United States

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

ARTICLE PREPARED BY THE SALINAS, CALIF., CHAMBER OF COMMERCE

Mr. ANDERSON of California. Mr. Speaker, various attempts have been made in the past to interest the Federal Government in the possibilities of producing rubber in the United States. In view of the present chaotic condition of a world at war, I believe it would pay us to take another look at the sources of our present rubber supply.

The bulk of our rubber is now imported from British Malaya and the Dutch East Indies. Under present conditions how can we be sure that this supply will be constant and unfailing? If there is an opportunity to produce domestic rubber at a cost that is in line with current rubber prices, I firmly believe that it should be seized upon at once and developed to the fullest extent.

Hundreds of thousands of acres of idle land might well be used in the producing of a new crop, such as rubber, and land that is now producing surpluses of various agricultural commodities could be profitably withdrawn. Not only that, but thousands of unemployed might well be put back to work and idle capital invested in productive enterprise.

Under leave granted me to extend my remarks, I include the following news article recently released by the Salinas Chamber of Commerce. I urge my colleagues to read it carefully as it contains information of tremendous importance to the entire country:

WAR! RUBBER! FARMERS! SURPLUSES! MARGINAL LANDS! EMPLOYMENT!

The possibility of war in the Pacific, thereby shutting off the rubber supply to America, brought forth the discussion of the development of guayule rubber in the United States at a meeting of chamber of commerce secretaries of California, held at the Administration Building on Treasure Island, Friday.

With increased interest in the Executive, War, and State Departments, and wires from many Congressmen asking for further information, the local chamber of commerce in Salinas is busy gathering together printed matter, pictures, and samples of the guayule shrub to forward to Congressman JOHN Z. ANDERSON. This material was taken to San Francisco and displayed while the matter was discussed before the meeting of the secretaries.

It was brought out that when Arthur M. Free was a Congressman from this district he secured a rider in the Army appropriation bill requiring the purchase of American-grown rubber, but that later this was eliminated from the bill. Five years ago Fred McCargar, secretary of the Salinas Chamber of Commerce, was sent to Washington at the suggestion of Senator McAdoo to confer with Secretary Wallace and members of the Department of Agriculture, but after several days of conference he was told that the administration was opposed to upsetting any of the fixed friendly relation trade agreements with other countries and that if the Government assisted in the development of the growing of rubber in the United States it would upset such friendly relations with the Netherlands and Great Britain.

Ex-Congressman John McGrath again worked on the subject, but was unsuccessful in getting governmental support so that farmers in the Southwestern States could grow rubber. A year ago Congressman JOHN Z. ANDERSON started a campaign to encourage the growing of guayule rubber, either by a tariff on rubber or a direct subsidy to the farmers, guaranteeing them the price of production over a period of 4 years necessary to grow the rubber. Again the administration, through Secretary Cordell

Hull, in a letter to JOHN Z. ANDERSON, discouraged the development on the ground that, "another consideration of importance to Californians is the relationship of rubber imports to our foreign trade. There is a close relationship between our imports and exports, and if we exclude by embargo tariffs the products of other countries the people of those countries will be unable to buy our products. The importation of the large quantities of rubber which we now get from British Malaya, the Netherlands East Indies, and other rubber-producing areas, provides in part the purchasing power necessary to maintain the exportation to the British Empire and other markets of the large amounts of petroleum, lumber, fruits, machinery, and other products of which California is a leading producer."

Following the failure of the American Government to assist in the development of this plant, the American Rubber Producers Co. have gone to Italy and have sold the Italian Government on the proposition. They are planting and arranging to plant in Italy, northern Africa, and Ethiopia 10,000 acres this coming year, under the direction of Dr. W. B. McCallum, botanist and manager of the company at Salinas.

It was explained that the guayule plant is a native of Mexico and has been harvested in Mexico for a great many years, and that over 175,000,000 pounds of this rubber have gone into the manufacture of tires and other American products. The development at Salinas started in 1922, and 6,000 acres have been placed in production in the Salinas, Santa Maria, and San Joaquin valleys, and in Southern California. It has been proved conclusively that they can produce rubber as cheaply in the United States as in the Orient, even with the difference in labor costs, because the process of harvesting the guayule rubber consists of plowing the plant out of the ground, grinding it up under water in the pebble-mill process, the same as is used for making cement, the wood fiber becoming a silt and going to the bottom, and the rubber being lighter than water, floating on top where it can be skimmed off. This is contrasted with the harvesting of tree rubber which consists of tapping a tree every day and boiling down the juice.

It also was brought out that any light, sandy soil suitable for raising beans, barley, or similar crops could produce good rubber. It requires 8 to 10 inches of rainfall in the rainy season, but this can be augmented in drier areas with irrigation during the rainy season. The rubber requires a dry, dormant summer; therefore there are potentially millions of acres suitable for raising rubber in the Great Valley of California, in southern California, in Nevada, Arizona, New Mexico, and Texas. The use of these acres would lower the quantity of many crops that are now being produced by the farmers at a loss and put into production thousands of acres not now growing crops of any kind. It would give employment to thousands of unemployed on farms and many more people in manufacturing plants to make the machinery necessary in the planting, harvesting, and milling of the guayule rubber.

By cross-breeding and developing of the guayule rubber plant itself the new weight of rubber in the plant has been increased from 5 to 10 percent as in the native plant to over 25 percent in the improved shrubs. The tonnage per acre has been increased from less than a thousand pounds per acre to an average of 1,800 pounds per acre at the end of 4 years, and over 2,500 pounds per acre at the end of 8 years. This would indicate that the rubber can more than pay its way in storage costs by leaving it in the ground. Dr. McCallum reported that in all of the acreage in and near Salinas and the Santa Maria Valley the average production for plants that were in the ground 5 years was 1,852 pounds per acre, that production for plants in the ground 10 years was 3,434 pounds per acre. With the present price of about 20 cents per pound for rubber, one can figure the gross income. The cost of production is very low, because it is a simple process of setting out the plants, cultivating them a few times the first year or two, and then plowing them out any time after 4 years and up to 30. It would, therefore, be a source of rubber in case of an emergency, and could remain in the ground as long as 30 years. It was also explained by Dr. McCallum that in case of an emergency the plants could be harvested at the end of 2 years with a small amount of rubber, but that this would be less than half of the amount the 4-year plants could produce.

McCargar was assured the support of the secretaries of California in an endeavor to secure the planting of guayule rubber on marginal and submarginal lands and on those lands now producing surpluses and causing losses to the farmers.

Amendment of the Wage-Hour Act

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

Mr. THOMAS F. FORD. Mr. Speaker, I am unalterably opposed to this rule. It is first of all an example of the usurpation of power by the Rules Committee that is unprecedented in the legislative history of this House. It is a glaring example of vaunting ambition overleaping itself, and I sincerely hope that the House will, by voting it down, administer to the majority of that committee the rebuke they so richly deserve.

If these gentlemen are desirous, and I believe they are, of repealing the Fair Labor Standards Act, popularly known as the Wage and Hour Act, why in God's name do they not bring in a repeal resolution and openly and honestly show their colors as advocates of sweatshop-labor standards in the mill, mine, factory, and farm—that would be the honest, decent, frank course—instead of coming in here with a group of camouflaged amendments intended to accomplish their purpose by trick and device?

This resolution, vicious to the core, should be voted down.

Outline of Social Problems in Puerto Rico

EXTENSION OF REMARKS

OF

HON. BOLÍVAR PAGÁN

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

ADDRESS BY MISS ANA MARIA O'NEILL

Mr. PAGÁN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following speech of Miss Ana Maria O'Neill, of the University of Puerto Rico:

Ladies and gentlemen, in accepting Miss Brainerd's invitation to speak here today I expressed my rejoicing that women as a group were going to look into the problems of Puerto Rico, because, as I said to her in my letter, the problems of Puerto Rico have become so intricate and so pressing that it takes a mother's heart to see into them.

When you consider that to live in an island is to be marooned, that you have to depend on the outside for transportation services at least; when you consider that for these services the shipping companies will charge what the traffic will bear and more; when you hear from the economists here that every cultivated square mile of land in Puerto Rico must support 1,300 inhabitants; when you hear these economists discuss the unemployment caused by the enforcement of the quota restrictions, the reciprocal-trade agreements and the wage and hour law; when you realize further that there is no unemployment compensation and no direct relief in Puerto Rico, you will realize why I said that it takes a mother's heart to see into the problems of the island.

Someone has said that eyes must be washed in tears in order that they see. I do not know if it is tears or what that is required, but something must happen to the physical eyes so that they see into relationships, and something must happen to the physical ears so that they hear meaningfully. The eyes that see and the ears that hear are the eyes and ears that have been touched by love, and love is nothing but the maternal spirit manifesting.

In American history this maternal spirit has fought and won the two noblest of the social battles. It was the maternal spirit flowing through Harriet Beecher Stowe that freed the slaves of this country. You know what her weapon was: A child's book, Uncle Tom's Cabin. And if men had not interfered with a war about it, the slaves would have been freed without the resentment and the unadjustment which still lives on. It was the maternal spirit manifesting through Helen Hunt Jackson that gave the Indians their Emancipation Proclamation. Again she used a book as a weapon. She called it a "Century of Dishonor."

And it is this maternal spirit which will make you see the suffering of girls and boys and men and women behind and beyond the statistics of the economist, behind and beyond the statistics of the social worker.

It is to that maternal spirit that I am addressing myself today.

Some time ago I read somewhere an article written by a woman. The article is about a boy which she and her husband had adopted. The couple, as I remember, had two other children. As the adopted child grew he began to show signs of maladjustment. As the boy's maladjustment became noticeable this woman decided that she would sit with the boy and, in the fashion of a psychoanalyst, try to explore his soul. She heard him with her heart, and she discovered that the boy's maladjustment was due to his acute sense of not belonging. Someone had been telling him that he was a child casually picked up from an orphan asylum, that he did not really belong in the family with whom he was living. When the boy finished his exposition, then the lady told him these words:

"James, there is no question about your belonging. As to Mary and John we had no choice. They came and we had to take them. But with you it is different for we went out deliberately to get you."

Had this situation been handled by her husband he might have gone to the wife and told her that they probably made a mistake in adopting this child; that the child really did not belong, and that it was better to face the fact as it was. And if after that the child showed a desire to leave the home he might even have turned the child loose in the streets without a single penny in his pocket.

The turning of the child loose without any sort of provision for his making any kind of a headway. Such, ladies, was the independence bill for Puerto Rico, which was presented by two gentlemen of Congress. When you hear of unrest in Puerto Rico, remember the story of the adopted child and his acute sense of not belonging

And remember that Puerto Rico's sense of not belonging must be much stronger than that of the boy, because Puerto Rico has repeatedly asked Uncle Sam this question: "Uncle Sam, do I belong?" And Uncle Sam, who is usually such a charming person to talk to, has sat very stiff on a judge's chair and has delivered speeches about the Constitution following the flag or not following the flag.

Many times the answers to the child's question are not at all pertinent. To the question, Do I belong? the answer has sometime been something which in spirit is this: "Child, why you don't talk like us. You say Puerto Rico while we say Porto Rico." I have over-simplified for brevity and for clearness.

I enjoy listening to American speech. I am fascinated by the liquidity of your l's, the softness of your t's, and the combination of your long and short vowels. I love to hear an American say, for instance, Anita Naldi, or even say my name. But I cannot get my l's and r's and t's as you get them. However, children from Puerto Rican parents here in the States get them as you do. The secret why they can and I cannot is because English is the language of their play life, while in my case Spanish was the language of whatever play life I had. It is only when a language is the language of play that you can get the r's and l's and t's and short and long vowel sounds in their places. The language of play can do more than simply making it possible to get all the elemental sounds in place. It can displace and replace the mother tongue. All the children I know in the States, from Puerto Rican parents, even when these children were born in Puerto Rico and started with Spanish as the mother tongue, all these children use English in preference to Spanish, and gradually the language of the child becomes the language of the household. The play life is the psychological key to the vernacular. For us in Puerto Rico to be able to get the l's and t's and r's and short and long vowels straight, English would have to become the language of play, but as play is not play without the playmates, you would have to provide the playmates; American children in sufficient quantities to outnumber the Puerto Rican children and make English the language of their play. The language of play, let me repeat this statement, is the psychological key to the vernacular. Whatever the ultimate political destiny of the island shall be, don't let anyone entangle this very simple fact, the language of play is the vernacular.

In this brief outline of the social problem of Puerto Rico I must stress the language question because language is the social tool, and because the language question lends itself to a great deal of misunderstanding. For instance, I remember the case of an American teacher in the high school where I taught. One day she got furious at her class, dismissed them, rushed to the principal's office and reported that her pupils refused to learn English. You know how much news value a thing like that can have and how much it can be exploited by people anxious for political capital.

She happened to speak to me about this, and then I asked her: Was not that the same class you were so enthusiastic about last semester? I remember you said to me that they did much better work in English than your pupils in the States. "Yes," she answered, "that same group did excellent work in Julius Caesar." When did the change come about? I asked her. And she said: "As soon as we started the Lady of the Lake." Do you want to know the secret? I asked: Shakespeare uses a latinized diction, English words with Latin roots. We Puerto Ricans are at home in Shakespeare. But Sir Walter Scott uses the Anglo-Saxon words for which we have no other key than the dictionary. And, of course, when you have to look up too many individual words in the dictionary you lose track of the context. It is a case of the trees not letting you see the woods.

When you hear that groups of Puerto Rican children do not want to learn English, remember this teacher. All Puerto Ricans want to learn English for very obvious reasons. What you will find is a great deal of disagreement as to the methods of teaching it. Many conscientious people in Puerto Rico believe that to make a language the medium of instruction is not the best way to teach that language. When a language is used as the medium of instruction all the emphasis falls on the subject for which this language serves as channel, and not on the language itself, and the constant practice in errors which of necessity follows perpetuate these errors, they insist. Besides teaching French, for instance, through English to Spanish people, unnecessarily increases the burden of teaching and learning French, to use just one example.

The best way to learn English is for the educators to determine, not for the politicians. Make it a specific aim of your active program for Puerto Rico to permit no further political tamperings with the language question.

The last one to find fault with our English was my much-admired President Roosevelt. He said that we do not have a mastery of English. Well, very few Americans have a mastery of English. He, of course, has it. But even at that, let President Roosevelt enter a contest in essay writing in English, a written contest where the "l's" and "r's" and "t's" and the long and short vowel sounds will not count in his favor; let him enter a contest with us where his beautiful radio voice will not be an asset, and he may find himself defeated by an obscure Puerto Rican. There are many aspects to the mastery of a language. And Puerto Rico has as much a right to a peculiar local accent as Kentucky or Maine or New York.

I have started at the parlor end of the social problems of Puerto Rico. I call it the parlor end because it touches only that privileged 50 percent of our population for whom we have schools. For the other 50 percent of our population we have no schools, either public or private.

Let us now leave the parlor end and go to the kitchen end of the problems of Puerto Rico—the family budget. Mrs. Frances Adkins Hall, from the Bureau of Social Welfare in Puerto Rico, writing in the Health Bulletin of Puerto Rico for July 1939, says that she finds a gap between the income of the Puerto Rican family and its ability to buy adequate food.

How wide is this gap? Let us measure it. The school of tropical medicine is authority for the statement that a family of five in Puerto Rico must spend $11.45 weekly in food in order to receive an adequate diet. That is, a person must spend at least 33 cents daily in food in Puerto Rico in order that he will get an adequate diet. But you will hear from the economists here today that if the total income of the island of Puerto Rico is divided by the number of its inhabitants, each inhabitant will receive 17 cents daily. Mind you, that everyone would receive 17 cents if income in Puerto Rico were equally divided and if there were no absentee ownership.

But you know that income is not equally divided. To use just one example: When the sugar growers were paid for not planting sugar the workers thrown out of employment were not paid for not working. Great inequality in the division of income and absent ownership make the gap, which Mrs. Hall points out, much wider. It is so wide that many people consider it miraculous that the masses exist. One day I heard a preacher preach a very beautiful sermon in which he called attention to the fact that the miracle of the loaves and the fishes was being repeated in Puerto Rico every single day of the year.

But sometimes the loaves and fishes will come via the garbage can. For instance: "Gumersindo sleeps in passageways and habitually reaches into the garbage can of the streets for something to eat." This is not an imaginary case. It is case No. 152 of the census of abandoned children published by the Department of Education of Puerto Rico in March 1938.

So, in the gap which Mrs. Hall noticed, there is hunger. What else is there in that gap? There is the violation of a child's inalienable right to grow: "Casimira is 16 years old, but she looks like 10. * * * She lives with a woman owner of a cheap eating place who illtreats the child and makes her work beyond her strength. She does not provide either shoes or clothing for the child, and Casimira walks about barefooted and in rags" (case No. 203).

What else is there in that gap? There is disease and death. Diseases of the digestive organs kill off the greatest number. Physicians call these diseases enteritis and other technical names. Men, whether in the profession of law or that of medicine, enjoy technicalities. But it is all very simple. The stomach is a sac which was made to put food into, and if you try to pack this sac away it will in turn try to pack you away. The next disease in importance is tuberculosis. If the child succeeds in inducing his stomach into acting as though it had received real food, he may not succeed at cheating the whole organism. Consumption awaits him. Consumption takes its greatest toll in the years from 24 to 35.

Tuberculosis can be cured, but tuberculosis requires for its cure plenty of room—that is, of air—plenty of wholesome food, and plenty of rest.

In a study of 757 consumptive individuals taken at random by the antituberculosis centers in Puerto Rico it was found that 49 percent of the families of these patients had weekly incomes of $1 or less. A weekly income of $1 or less for a family of five. And 82 percent had a weekly income of $3 or less. How far from the $11.45 budget below which the School of Tropical Medicine considers diet inadequate.

But what about their opportunities of recovery through rest? It was found that of these 757 patients, 48 percent were they themselves the breadwinners. And of these that are themselves the breadwinners, 70 percent receive weekly incomes of $1 or less.

In the gap that separates income from purchasing power we have found hunger and starvation and disease and death. Is there anything else in that gap? There are prison doors opening upon youths.

Ladies, man does not live by bread alone; but how important bread is!

Commenting the report of abandoned children, the commissioner of education for Puerto Rico says: "Although it may seem utterly incredible, there are children in Puerto Rico who have not found even a provisional dwelling. * * * Some of them * * * are struggling honestly to earn a piece of bread with the sweat of their brow; other * * * not so fit for the struggle follow the line

of least resistance—stealing, begging, gambling, filling up gradually our jails * * *."

These boys should know very well the difference between mine and thine. They should know very well that mine means privation and thine means comforts. But sometimes, as the commissioner of education reminds us, sometimes they forget it. Once two of these boys stole two pairs of trousers from a wealthy home—two pairs of trousers costing about $5—and got a prison term of 15 years. They had forgotten that difference between mine and thine before. The relapse explains the 15 years for $5. I am quoting this case from memory and there might be some slight inaccuracy. Fifteen years' imprisonment for $5. Such is technical justice, ladies.

We women have contributed very little along the line of invention in this world, but at least we have not invented technical justice. Technical justice is a thought-saving device. Justice becomes as easy to apply as playing Chinese checkers.

The Commission of Education informs us that some of these children try hard to get out of this situation. If they do, they must have left the fingerprints of their efforts in our statistics, and here they are: We have schools for only 50 percent of our population of school age. So normally only 50 percent of our young people should be able to read and write. Yet 90 percent of the children of from 15 to 19 in cities and 80 percent of those in the country are able to read and write.

Our youths show themselves to be deserving of help. And title IV of the Social Security Act would come in handy to help them. Title IV is for dependent children. Under this title we would receive $58,000 yearly from the Federal Government if we could contribute $175,000, but as we could not, we got nothing. In other words, we were too poor to receive aid, too poor to be helped. Technical justice, ladies.

Laws are not made with Puerto Rico's ability to pay in mind, and because they are not, Puerto Rico, which needs more Federal aid than any other part of the United States, has received a per capita Federal aid of $26.51, while the average for the States has been $68.41.

In general, laws take too long to travel to Puerto Rico if they get there at all. This is especially serious in the case of those laws, like for instance, the social-security law, which are intended to serve as Red Cross for the casualties created by other measures like the quota restrictions and the wage and hour law. The tardy application of titles V and VI of the Social Security Act to Puerto Rico deprived the island of much needed help. By the late application of title VI alone it was deprived of more than $1,000,000. And in his last report the Governor of Puerto Rico comments on the speed at which the Highway Act traveled. He says it took 20 years to get to Puerto Rico.

Puerto Rico is only 3½ days away from the United States. Do not permit legislators to put it 20 years away from your hearts.

It seems to me that if the Puerto Rican Representative had a vote, this condition would be improved. I should say, rather, that his condition would be improved if we had a Representative in Congress. A Representative is not really a Representative unless he can vote. And depriving a Representative of the vote is like depriving a worker of his bargaining power.

The reason for not giving the Puerto Rican Representative a vote is based on a false premise and a wrong conclusion. The false premise is distance. Americans think that Puerto Rico is as far away as the farthest star. Puerto Rico is only 1,300 miles away. As far away as Miami. The wrong conclusion is that because we are 1,300 miles away, we are not informed on your affairs. But how inconsistent men are. If a distance of 1,300 miles makes it impossible for us to vote intelligently on American issues, how dare they vote on our issues, and not only vote on them but decide them without even the vote of our Representative? One thousand three hundred miles is always 1,300 miles, whichever way you measure it.

Make it a specific aim of your active program for Puerto Rico to give the Puerto Rican Representative his vote. A Representative must have a vote, otherwise he is a guest. Of course, giving our Representative his vote requires amendment of the organic act. But, ladies, will He have to be born again to repeat that the Sabbath was made for man and not man for the Sabbath? Will He have to be born again to say to legislators that laws are made for men and not men for laws?

There is no royal road to the problems of Puerto Rico. Ours is the hard way. We can no longer function on technical justice. We need a justice from the heart. And this justice from the heart will lead you to a many-sided attack on the problems of Puerto Rico. It is not a case of one solution but of many solutions.

For instance you will hear our economist speak of the importance of coffee to Puerto Rico and of the present state of the industry due among other things to the lack of a tariff protection like that enjoyed by sugar. Perhaps you can never get a tariff protection for our coffee, but you can get for it a social protection. It will do just as well. Make Puerto Rican coffee fashionable. North and south and east and west make Puerto Rican coffee the coffee of your luncheons and teas. Begin with tomorrow's luncheon. There is no better coffee in the world than Puerto Rican coffee. You will find it in this market under the name Cafe Rico.

And above all there is the question of the Puerto Rican personality. More important still than helping the Puerto Rican is helping the Puerto Ricans to help themselves. It is doing things for themselves that give individuals that much-needed sense of their importance. People learn to help themselves by the formation of consumers' cooperatives. If you go to Nova Scotia and if you succeed in making Father Tompkins, that self-effacing figure which lies behind this great movement, say something, he will tell you to look for the intangible elements behind the obvious social and economic change that has been brought about by cooperation.

I saw those intangible elements in the personalities of fishermen and miners, and in fact, of all workers. Observing at close range the workers of Nova Scotia, listening to them, I felt this: I felt that Christianity was coming back to this world, Christianity as it first spoke to man in words whose spirit is this: Bondsman, hold up thy head, thou art the equal, nay, the brother of thy emperor.

Let it be a specific aim of your active program for Puerto Rico to make the island a cooperative commonwealth. Get after the Federal Government to give you back for Puerto Rico that difference between the $26.51 per capita which the island has received and the $68.41 which it should have received. Or let Uncle Sam make up for this difference in some other fashion. And see that this money is used for the teaching of cooperation in Puerto Rico. And please try to convince Consumer Distribution Corporation to give Puerto Rico a share in that fund for the development of cooperatives which was left by the late Mr. Edward A. Filene, a millionaire Boston merchant. The address of Consumer Distribution Corporation is 420 Lexington Avenue, New York City, N. Y.

Ladies, when Americans went to Puerto Rico 40 years ago they were received with flowers. Flowers is the language of love, and we said it with flowers. But flowers have a special meaning in Puerto Rico. They are the message of children for the Three Wise Men. As children, on the eve of the Epiphany, we placed at the altar freshly cut flowers for the Three Wise Men, and these flowers were changed by the holy touch of the Three Wise Men into our heart's desire: candies and toys. Flowers can be transmuted. Flowers are miraculous.

The flowers thrown at the American soldiers 40 years ago have not behaved miraculously because they were not thrown at wise men. Otherwise they would have been transmuted into the wisest of social legislation for the better adaptation of the adopted child.

Ladies, I have come here today to ask you in the name of the children of Puerto Rico to perform the miracle of transmuting these flowers. I have come to present Puerto Rico to you as child, not as country. It is a country of children—more than 40 percent of our population are children under 15 years of age.

The child has turned to you, and is asking you through me today his old question. But now it has become: Mother, do I belong?

And when you have your answer ready for the child, let one woman in Puerto Rico hear that answer first. Her name is Beatriz Lasalle, head of the Social Welfare Bureau in Puerto Rico. She is our own Jane Addams.

Transportation of Prison-Made Goods in Interstate Commerce

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

Mr. ANDERSON of Missouri. Mr. Speaker, our distinguished colleague Mr. SUMNERS of Texas, has introduced a bill (H. R. 8853) entitled "A bill to make unlawful the transportation of convict-made goods in interstate and foreign commerce." Unquestionably, the fact alone that our distinguished colleague's name appears on this bill as its author carries a great deal of weight in this House, for no man in the history of this body commanded a wider respect and admiration than our friend from Texas, Judge SUMNERS. We are all aware of the many splendid contributions made by our distinguished colleague to the system of law under which we live and work.

At the present time there is pending H. R. 8853, introduced by the gentleman from Texas, Judge SUMNERS. This bill is a milestone in the solution of a serious problem that has confronted the Federal Government and the governments of the States for many years; namely, competition between prison-made goods and the output of free industry.

As far back as 1886 the gravity of the problem was apparent. In that year the Commissioner of Labor Statistics began the first study and survey of the competition that

existed between convict-made goods and the output of free industry. Periodical surveys have been conducted on the average of every 10 years since 1886, with the last complete and exhaustive study being completed in 1932.

Having in mind these competitive conditions the Congress and the legislatures of the several States have made a fruitful, if not altogether successful, effort to minimize the economic inconsistency of this situation. Notable among the first victories are the Hawes-Cooper Act of 1929 and the Sumners-Ashurst Act of 1935.

The Hawes-Cooper Act divested prison-made goods transported in interstate commerce of their interstate character and thereby permitted the States into which such goods entered to establish regulatory measures regarding the disposition of prison-made goods irrespective of their place of origin. Thus, the States were no longer hindered in their efforts to reduce competition with their industries resulting from the glutting of their markets with convict-made goods from outside.

Since the passage of the Hawes-Cooper Act more than one-half of the States of this Union have acted to prohibit the sale of prison-made goods upon the open market.

In an effort to reduce competition still further in 1935 Congress passed the Sumners-Ashurst Act requiring all prison-made goods flowing in interstate commerce to be labeled to indicate their prison-made character.

As another step in that direction and in the direction of a sounder national economy, the gentleman from Texas, Judge SUMNERS, introduced in this House on March 10, 1940, H. R. 8853, making it a crime against the United States "to transport convict-made goods in interstate commerce." I feel that we as a nation have progressed to a point where passage of such a law is our conscientious duty and obligation to free industry which we have tried so strenuously these last few years to revive and keep alive.

In considering legislation on this highly controversial subject, it is only fair to recognize the fact that it is impossible to prevent completely and in every instance competition between the products of the prison and those of free industry and labor. So long as convicts are employed in any kind of useful work whatsoever, their products will, in one way or another, actually be in competition with commodities of a similar nature made outside by free industry. Almost nothing which prisoners do or make might not be done or made instead by free labor and industry. In the last analysis, this is true even of the prison laundry, kitchen, bakery, farm, and so on. The real economics of the problem are to reduce this competition to the lowest point so as to affect the products of free labor and industry as little as possible. That is all we can possibly hope to attain.

Despite the fact that more than half the States of the Union have restricted or prohibited the sale of prison-made goods on the open market, and despite the efforts of the Federal Government represented in the Hawes-Cooper Act and the Sumners-Ashurst Act, millions of dollars' worth of goods are still produced in prisons and sold on the open market, in direct competition with the products of free industry and labor.

From the last full study of the problem by the Commissioner of Labor Statistics in 1932 it is shown that the value of prison-made goods for that year was $75,369,471. These figures do not include such prisoners as are assigned to ordinary prison duties, such as laundry, cleaning, and cooking. The extent of this competition was clearly indicated in the days of the N. R. A. when the cotton-garment industry was seriously and in good faith undertaking the establishment of a 36-hour workweek. Members of this industry, as one of the strongest reasons for their inability to comply with the 36-hour standard, pointed out the extensive competition they were receiving from convict-made goods. It is unquestionably true that substantially the same condition exists today under the wage and hour law.

Recognizing the justice of the defense thus raised by industry, the President appointed the Prison Industries Reorganization Board, with wide powers to conduct, in cooperation with the States, surveys of industrial operations and allied activities carried on by State penal institutions and to formulate and recommend remedial measures. This Board was faced with the formidable task of devising ways and means to relieve free industry and labor of competition from prison-made goods and, at the same time, assist in the establishment of a program to eliminate idleness and to provide an adequate and humane system for the rehabilitation of the prison inmates. One can readily appreciate the formidable nature of the problem, especially when we stop to consider that our conception of a prison requires us to make every reasonable effort to aid the offender to embrace the proper mode of life upon release, as well as to punish him for his transgression.

No fair and just consideration of the problem at hand can be undertaken without some reference to the prison inmates and their future welfare, which very often involves our own future welfare.

Great progress has been made in prison administration in this country. Under the able and intelligent leadership of men imbued with foresight and conscience. We have come to realize that the prison serves not only to punish the offender for his transgression against the laws of society but also as a place to teach and point out to the unfortunate men and women within the walls the proper way of life; and to show them that, by acquiring a trade, a skill, or other qualification, they can conform to the laws of God and man and live a decent and useful life after leaving the "big house." The success of our prison rehabilitation program has been far greater than many people realize, much less appreciate.

In making a success of the rehabilitation program, inmates have been schooled in the proper exercise of their ability and resourcefulness. In this course of training the inevitable result has been the production of commodities that must be disposed of. This is part of the price our Nation pays each year as part of the annual crime bill. But our zealousness to aid in rebuilding the character of those who have strayed from the path should not blind our eyes to our obligation to those who have remained on the course and who have not sinned. Ours is the problem of providing useful work for prison inmates and yet keeping down to the lowest possible minimum the competition between the products from within the walls and those produced outside by free labor and free industry.

We have progressed to a point now in the administration of prisons and penal institutions where the inmates can be put to useful work, work which will pay dividends upon release, but at the same time keeping the products of the prison off the open market. Therefore, I feel that the time has come for Congress, in its wisdom, to pass the bill introduced by our distinguished colleague, the gentleman from Texas [Mr. SUMNERS] and prevent altogether the transportation of convict-made goods in interstate commerce. We owe this to free industry and to free labor.

William I. Sirovich

MEMORIAL ADDRESS

OF

HON. M. MICHAEL EDELSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

Tribute by Senator MEAD on the life, character, and public service of Hon. WILLIAM I. SIROVICH, late a Representative from the State of New York

Mr. EDELSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks by the Honorable JAMES M. MEAD, United States Senator from

New York, in memory of the late Honorable WILLIAM I. SIROVICH, a distinguished Member of the House of Representatives:

The death of the Honorable WILLIAM I. SIROVICH came as almost a tragedy to his army of friends and admirers. Here was a man who felt that the greatest stake in life was the accumulation of friends. A man of science, of culture, and of the higher attainments, he enjoyed nothing more than serving his fellowmen. He was a true public servant in every sense of the word.

Dr. SIROVICH remained a figure in the public eye from the day he graduated from public school in the populous lower East Side of New York. He entered the City College of New York and, subsequently, graduated from the College of Physicians and Surgeons of Columbia University with the degree of doctor of medicine. At this point he accepted membership on the school board of the fifth district of Manhattan, and he remained there as chairman and member for nearly 25 years. During this time he devoted himself constantly and unselfishly to the public service. He did much valuable work with the hospital commission, the State prison commission, the State charities conference, and other bodies which framed the workmen's compensation laws and which inquired into the subject of adequate pensions for widows and orphans.

By 1918 he had become vice president of the child welfare board of the city of New York; he had been superintendent of the People's Hospital since 1910; he had lectured extensively on educational problems; he had been appearing at large hearings in Albany to advocate social and economic improvements; he had established himself as a leading figure in the pursuit of public improvement.

Vigorous, courageous, intelligent, and liberal, Dr. SIROVICH was an outstanding Member of the House of Representatives. His speeches in the Congress were literary and intellectual gems, and his foresight commanded legislative attention and respect.

I felt a deep personal loss in the death of this friend and adviser. He made service in the House pleasanter and easier and more fruitful for us all. Keen of wit, lovable of personality, and ever forceful in character, his name and his memory are deeply engraved in the hearts of all of us who knew him.

Chester C. Bolton

MEMORIAL ADDRESS
OF
HON. J. WILLIAM DITTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. CHESTER C. BOLTON, late a Representative from the State of Ohio

Mr. DITTER. Mr. Speaker, the Honorable CHESTER C. BOLTON, our late colleague from Ohio, was in many ways a most unusual man. He was in the public service, not for financial reasons or necessity, but because he believed that any American who possesses wealth and ability and culture owes much to the Nation in which he has been able to achieve such wealth and ability and culture. CHESTER BOLTON was a man of extensive wealth, very great ability, and very fine culture.

At one time he most ably fulfilled a function which it is now my privilege to exercise—chairman of the National Republican Congressional Committee. In his dealings with his colleagues he had every opportunity to win their friendship—or their dislike. He won their friendship. CHESTER BOLTON left a career which will always be the greatest monument that could be erected to his memory. His high standards of public service, his fine principles of government, his civic pride and generosity, his social consciousness, all were such as to mark him as a genuinely fine legislator and a really great man, one whose friendship was well worth while, indeed.

Our friend had a varied experience in his career. Modest, quiet—almost shy—in his contacts with his fellow men, he took responsibility very seriously. In peace or in war he wanted to serve his home city, his State, and his Nation by giving the best he had. Not only was he willing to give generously to philanthropy and the arts, but he also wanted to be a worker, and as a consequence he was a leader. It is said of him that there was hardly an institution in his home city of Cleveland but that recognized in him a friend who could be called upon at any time and one who would never fail to answer. Back in 1916 he was at the first citizens' training camp at Plattsburg, N. Y. Later, because of his wide business experience and great ability, he was on the first War Industries Board when we entered the World War. Later he was an aide to The Assistant Secretary of War. But he was not satisfied with service in the Capital at Washington. He therefore entered the Army as a field officer, rising to the rank of colonel, and becoming assistant chief of staff of the One Hundred and First Division.

Being a wealthy man, CHESTER BOLTON might have disdained service in the Ohio State Legislature, but he did not. He was a State senator of great ability and conscientiousness, and was president pro tempore of the senate while he was a member of it. He was a member of the State senate which effected the last great reform in the Ohio tax structure.

He was elected to Congress first in 1928 as successor to that great statesman, Theodore E. Burton, and it is to the credit of our late lamented colleague that he proved himself wholly worthy of the great man who preceded him in his seat.

I shall not endeavor at this time to list all of the virtues and the outstanding services rendered by this able and conscientious man to his city, his State, and his Nation. It would require more space than the CONGRESSIONAL RECORD affords, because only in a book could the achievements, the ideals, and the excellent work of this able Ohio legislator be adequately set forth in detail. Suffice it to say that wherever he found duty, he performed it well; wherever he thought duty might lie, there he went, eager to give the best that was in him for his constituents. He was one of the hardest workers in the Congress of the United States, and I am one of those who find it in my heart to wish that he might have worked less strenuously, that he might have conserved his strength a little more, so he could have remained with us longer.

No words that we may utter here can add to his stature. We can only voice our deep respect for him, we can but put into words the pleasure each and every one of us knew in our associations with him; and we can confidently trust to history in the future to accord him his rightful place, which he so richly earned by his unselfish and devoted efforts throughout his life to render service to his fellow men.

John Andrew Martin

MEMORIAL ADDRESS
OF
HON. LAWRENCE LEWIS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

Tribute by Senator JOHNSON of Colorado on the life, character, and public service of Hon. JOHN ANDREW MARTIN, late a Representative from the State of Colorado

Mr. LEWIS of Colorado. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following tribute to the memory of our late colleague, JOHN A. MARTIN, by Hon. EDWIN C. JOHNSON, Senator from Colorado:

Truly JOHN MARTIN'S remarkable and singular qualities not only have distinguished him among men, but have destined the void bequeathed by him to go unfilled. His letters and his speeches bore a peculiar, simple, and eloquent style that required no other mark to identify them as his work. He was author and sincere student, historian and genial companion, orator and patient listener, soldier and sympathetic humanitarian, patriot and idealistic philosopher—these were the paradoxical qualities of his nature and talent. Forthright in his convictions, he held no malice and was quick to overlook the untoward thought and act. He reverently communed with the spirits of his country's great in the shadows of the old historical landmarks of colonial America and never ceased to be thrilled to the depths of his responsive soul by their patriotic implications. JOHN MARTIN found perfect contentment in the quiet fullness of his home, a good book dealing with the tribulations and hopes of his people, his cherished pipe and tobacco, and above and beyond all, the devoted companionship of his loving wife and family. The inspiration of his wholesome personality lives, vibrant and strong.

Carl E. Mapes

MEMORIAL ADDRESS
OF
HON. J. WILLIAM DITTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. CARL MAPES, late a Representative from the State of Michigan

Mr. DITTER. Mr. Speaker, in each session of the Congress there comes that day when it is our somber privilege to pay tribute to those colleagues who have passed over into that mystical realm to which death is the vestibule.

It is with a heart saddened by a sense of parting from a dear friend, a much respected colleague, an able legislator, and a real patriot, that I pay my humble tribute today to our cherished colleague, who has passed over to the other side, the late CARL E. MAPES, of Michigan.

I think no eulogy, whatever its length, however many its words, could better describe CARL MAPES, the man, and CARL MAPES, the legislator, than a simple sentence—"His conscience was ever his guide." That was the outstanding characteristic of the distinguished gentleman from Michigan who but lately left us. Quiet, firm, unwavering, he stood fast, not only in his friendships as an individual, but he stood fast to his principles as a Member of the Congress for 27 years.

For a long time dean of the Michigan delegation, and in the present Congress acting assistant minority leader of the House, CARL MAPES was unfailingly courteous, always kindly, never moved by impulsive emotionalism, but always exercising a calm, cool judgment based on logic.

In these days of peril this Nation can ill afford to lose a man like Representative MAPES. Since, however, death waits on no man and consults the wishes and needs of neither nations nor individuals, we must bow in submission to that fate which has overtaken our respected and esteemed colleague, as it must overtake all men, and rest in the hope that infinite wisdom has raised him to a higher plane to continue his work, and that he and we shall meet again.

Harry Wilbur Griswold

MEMORIAL ADDRESS
OF
HON. BERNARD J. GEHRMANN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. HARRY WILBUR GRISWOLD, late a Representative from the State of Wisconsin

Mr. GEHRMANN. Mr. Speaker and fellow Members, the greatest shock I received during my years in Congress was when on the evening of July 4, 1939, I happened to turn on the radio and the announcer stated that Congressman GRISWOLD, of Wisconsin, had died suddenly an hour or so ago while driving his car in the city of Washington. I will never forget that feeling, because only on the day before we had visited and talked about things that happened while we were both members of the Wisconsin Senate.

HARRY GRISWOLD was one of my very best friends long before either of us served in public office. He was one of the outstanding farmers and breeders of purebred Guernsey cattle of southwestern Wisconsin. I was associated with his father for several years as an extension worker for the college of agriculture in farm institute work. That is how I first met Harry and learned to admire him and respect his views. Later, as members of the Wisconsin Senate we worked very closely together on all agricultural problems. While we did not always agree politically, that fact never interfered with our friendship, each respected the other's views, and I never once questioned HARRY GRISWOLD's honesty and sincerity on any political controversy.

The people of Wisconsin and the Nation have lost a true American and a public servant that never shirked his duty. My sincere condolence goes out to his wife, son, and daughters who will have a hard time forgetting the love and devotion of a husband and father.

Cassius C. Dowell

MEMORIAL ADDRESS
OF
HON. J. WILLIAM DITTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. CASSIUS C. DOWELL, late a Representative from the State of Iowa

Mr. DITTER. Mr. Speaker, it is indeed a sad privilege that we who remain in the House have on this memorial day to pay a brief tribute to our departed colleagues.

One of those departed Representatives was a man for whom I had a very deep respect and a very great esteem. The Honorable CASSIUS C. DOWELL, of Iowa, was a quiet, conscientious, industrious, able legislator, who came from humble beginnings, who was one of the common people, and who in his kindly simplicity achieved the distinction of being one of the ablest Members of this House without saying much about it.

Our lamented friend, CASSIUS DOWELL, performed his duties and pursued his way with little agitation or acclaim. He was a faithful servant of his people. He was a sincere and able representative of his constituency. That fact is, I think, exemplified in his record. He was a Member of the United States Congress for 23 years; previous to that, a member of his State legislature for 12 years. That is a long period in the human span for a man to be returned, election after election, to serve his people. Only those who have gained the deep confidence and the undying affection of their neighbors and friends and fellow citizens in their own States ever achieve the distinction of such a long and able career as was granted to our colleague, CASSIUS DOWELL.

He had one pleasure and privilege during his career which most of us never have. When CASSIUS DOWELL came to Congress, he was an advocate of good roads. He had envisioned a system of highways for this Nation that would bring the farm nearer to the city; that would give to those living in the rural districts easier access to the cultural and spiritual values found in the cities, towns, and villages; he envisioned highways that would make it easier for neighbor to visit with neighbor, easier for the boys and girls of the rural districts to get to schools; the kind of highways that would for all time eliminate for the citizens of his country the laborious effort of traversing hub-deep mud, drifted snow, or overflowed roads in their necessary journeys.

CASSIUS DOWELL lived to see his vision come true. As chairman of the House committee having most to do with roads, he worked unceasingly for the highway system which now blesses this Nation. He did as much, perhaps, as any one individual to make his dream a reality. And no more unselfish dream was dreamed by any man, because CASSIUS DOWELL could get from a good-road system for himself and his loved ones no more than could any other citizen.

The distinguished gentleman from Iowa did his work well. He performed his duties faithfully. His country is better because he lived. His fellow citizens, including his associates

in this House, gained much from their association with him. And I think we are fully justified in indulging in the hope, from the very depths of our souls, that CASSIUS C. DOWELL has gone on to a higher work, a nobler activity, and a greater happiness.

Harry W. Griswold

MEMORIAL ADDRESS
OF
HON. LEWIS D. THILL
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. HARRY W. GRISWOLD, late a Representative from the State of Wisconsin

Mr. THILL. Mr. Speaker, months have passed since the death of our friend and colleague, HARRY W. GRISWOLD. But the passing of time cannot erase the memory of his sincerity and legislative sagacity; of his kindness and sympathetic understanding; of his simplicity and unostentatious behavior. HARRY GRISWOLD championed a cause only when it was right. He supported legislation only when it was sound. The CONGRESSIONAL RECORD contains a number of his speeches which demonstrate the care and study he gave to a legislative problem. We who knew HARRY GRISWOLD will cherish his friendship and our memories of him.

Bert Lord

MEMORIAL ADDRESS
OF
HON. J. WILLIAM DITTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. BERT LORD, late a Representative from the State of New York

Mr. DITTER. Mr. Speaker, it is a privilege I shall cherish so long as memory remains with me to be able to recall that I have served in this body with our late esteemed colleague, the Honorable BERT LORD, of New York.

It has been said of him that Representative LORD knew his people not only as groups but also as individuals; that he knew the veteran and the veteran's widow and the veteran's orphan; that he knew the farmer, the wage earner, and the businessman of his district. This meant, of course, that Representative LORD knew the problems, the hopes and the fears, the ambitions, and the visions of his constituents in these different walks of life; and I think it is entirely accurate to say he never passed an opportunity to aid in any reasonable and proper way the aspirations of his constituents.

It was a pleasure to serve in the House with BERT LORD because of his fine, genial personality. Not only was he a good legislator; he was a good friend. Not only was he congenial as a Member of the House but he was congenial as an individual in his social contacts.

None of those who knew him questioned for a moment the fact that he was a conscientious and valued public official; his personal qualities were such as to win him the warmest friendships.

His professional, business, and social relations were always marked by geniality and a consideration that made both personal and official contacts with him always more than ordinarily pleasant.

Representative LORD was always faithful to his duties. He was a good citizen, a good legislator, a real patriot, and the type of citizen the Nation can ill afford to lose.

Edward W. Curley

MEMORIAL ADDRESS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

Tribute of Senator MEAD on the life, character, and public service of Hon. EDWARD W. CURLEY, late a Representative from the State of New York

Mr. LYNCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks by the Honorable JAMES M. MEAD, United States Senator from New York, in memory of the late Honorable EDWARD W. CURLEY, a distinguished Member of the House of Representatives:

The death of the Honorable EDWARD W. CURLEY was a saddening event. I held him in warmest esteem, both as a true friend and as an indefatigable legislator. He was one of those rare examples of men who work with ceaseless energy, and with an apparent untiring strength. No man in Congress was more devoted to his constituency, nor more exacting in the performance of his duties.

Born in Easton, Pa., he moved to the great city of New York and established himself as an outstanding citizen in the Bronx. After his graduation from the College of the City of New York, he engaged in the building industry for a quarter of a century. In 1915 he was elected a member of the Board of Aldermen for the City of New York, and he served in this responsible position with ability and distinction for nearly 20 years.

In 1935 EDWARD W. CURLEY was elected to the Congress of the United States. Many of us had known him previously, for he had become a leader in civic, legislative, and political affairs in his home district. In the House he served on the Committee on the Civil Service and Labor, and, while his health permitted, he was an active force in the work of those committees.

His prestige and popularity among the voters of his district carried him back to Congress by splendid majorities, even when he lacked the physical vigor to mount the platform and give an account of his stewardship.

Truly, the State and the Nation suffered with the passing of this outstanding public servant. His zeal, his tolerance, and his wisdom gave him the qualities of statesmanship. As one who came to love and admire him, I find it difficult to pay him the tribute he so richly earned.

Thomas S. McMillan

MEMORIAL ADDRESS
OF
HON. MILTON A. ROMJUE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. THOMAS S. MCMILLAN, late a Representative from the State of South Carolina

Mr. ROMJUE. Mr. Speaker and Members of the House, when I heard of the death of Hon. THOMAS S. MCMILLAN, Member of Congress from South Carolina, it was with great sadness and regret.

While I have not served on any committee in the House in company with him, I enjoyed his long friendship and acquaintance and many personal conferences with him. He was truly one of the solid, substantial, level-headed Members of this body.

He was not given to exhibition or show, or display, but was sincere at all times in his labor and undertakings.

He served for some time on one of the important committees of this body and always gave a good account of his time, and rendered a most valuable service to his State and to our country in general. His elevation to this body left him plain, considerate, and friendly and always anxious to be helpful when he could possibly do so.

It is indeed a great loss to the people of his district, his State, and the Nation that he should be called away at a time

when he was just in the prime of life and when he was rendering such distinguished and valuable service as he was doing at the time of his passing.

He was a fine and loyal servant of the people and will long be missed by the membership of this House.

A prince once said of a king struck down:
"Taller he seems in death."
And the word holds good, for now, as then,
It is after death that we measure men.

Strange and mysterious are the ways of Providence as we look at them from the mere human standpoint; but when the Master uttered that sentence he opened up before us a new significance to life. We are told of the patriarch Abraham that when he was called on to lead his country and go into a land to which he was a stranger, he went out not knowing whither he went. And so it may seem to us as we think of life and its problems, its manifold necessities, and the grave duties which confront us along each step of the way.

Thank God that in the mystery of these years there was the unfolding of character. Thank God that those who knew him best will speak the highest concerning him. We drop our tears; we wonder what it all means; but, friends, Whittier was right when he wrote that sentence:

I know not where His islands lift
Their fronded palms in air;
I only know I cannot drift
Beyond His love and care.

J. Will Taylor

MEMORIAL ADDRESS
OF
HON. J. WILLIAM DITTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. J. WILL TAYLOR, late a Representative from the State of Tennessee

Mr. DITTER. Mr. Speaker, while the passing of a relative, a friend, or a colleague is always an event that strains the heartstrings and opens the wellsprings of grief, yet there is a consolation that always remains to us. Gone though our colleagues may be—among them the Honorable J. WILL TAYLOR, of Tennessee—yet the memory of our long association with them, like a melody, lingers on. As someone has well put it, their personalities remain to us in memory as the fragrance of roses that are faded and gone.

J. WILL TAYLOR was an able man. He was a quiet man. He was a forceful man. He was a fighting man among fighting Tennesseeans. It is a fact, however, that he never fought for anything except that which he believed in; he always fought fairly; he carried no rancors in his heart against his fellow men because of the legislative battles through which he passed.

He is gone now from our councils to the realm beyond the grave. He is not alone, of course, because those of us who at this moment live on this earth are as but a few as compared to the myriad men and women and children who have passed over throughout the long history of man.

J. WILL TAYLOR was not only an able legislator, he was an able lawyer. He did not choose to employ his talents as a representative of any special interests. He did not attempt to parade his powers as a statesman; but he possessed an ability with which few are blessed. He was honored by being repeatedly elected to office, because his constituents—his people—had full confidence in him. They knew that in J. WILL TAYLOR there was no shadow of turning. He was generous, hospitable, and tender in his affections. He always sought an opportunity to benefit and help his fellow men; he never failed to stand by a friend, to support a cause, or to defend a principle he believed in.

It seems to me, Mr. Speaker, that the most fitting thing we can say of a colleague like J. WILL TAYLOR is that we who knew him well loved him much, and we shall never cease to miss him from our councils.

Wallace E. Pierce

MEMORIAL ADDRESS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

Tribute by Senator MEAD on the life, character, and public service of Hon. WALLACE E. PIERCE, late a Representative from the State of New York

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks by the Honorable JAMES M. MEAD, United States Senator from New York, in memory of the late Honorable WALLACE E. PIERCE, a distinguished Member of the House of Representatives:

I pay respectful tribute to the memory of the Honorable WALLACE E. PIERCE, Member of Congress from the Thirty-first Congressional District of New York State, whose death came as a shock to his many newly found friends in the Congress. We served together only a short time, but I recognized his fine ability, his splendid talent, and his unquestioned integrity.

WALLACE E. PIERCE was born in Black Brook, Clinton County, N. Y., and grew up in the vast northern area of the Empire State. He served as a legislator in New York State and won high honor in the pursuits of law.

Lawyer, legislator, and statesman, he was well known and beloved in the city of Plattsburg, which he claimed as his home. He was elected to the House of Representatives in 1938, succeeding the Honorable Bertram Snell who had retired, but unfortunately, Representative PIERCE'S career at Washington was brief. However, during his service here, he collected many friends in both political parties and established himself as a man of great character, superb qualities, and earnest ability.

Needs of the Navy

EXTENSION OF REMARKS
OF
HON. DAVID I. WALSH
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, April 26 (legislative day of Wednesday, April 24), 1940

RADIO ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a radio address delivered by me last night over a Nation-wide hook-up of the Columbia Broadcasting System on the subject The Needs of Our Navy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

What are the needs of our Navy? I prefer to state the question in another way. What are the needs of the Navy to assure our security and to prevent invasion of America by any nation or group of enemy nations? First, let me emphasize certain views that I think should underlie our naval policy. I am decidedly of the opinion that America should not be drawn into the European war and we should not consider our naval needs with this objective in view. I cannot see how we could possibly accomplish anything worth the sacrifices of human lives, of resources, and possible loss of our free institutions, that will be demanded of us by participation.

Neither am I of the opinion that we can bring peace to the world by engaging in the war in Europe, nor do I believe that

we should interfere in trying to settle the problems in the Far East. Our naval experts agree that the only possible way we could be certain of a military victory in the Far East would be through cooperation of the British and French fleets and, obviously, any such military alliances are contrary to our American traditions.

In my opinion, we could not act effectively in the absence of adequate naval bases in the Pacific in the event—which I strongly oppose—that we became involved in a war with Japan over the Dutch East Indies. In my opinion, any war waged by us in the Far East would be fraught with very serious consequences as to the outcome and would be extremely costly. I am speaking now of our offensive military operations in the Far East, not of defensive operations against threatened invasion of any of our possessions.

Nor do I see any possibility of any of the belligerents now waging war in Europe obtaining a position at the end of this war when they can assail us so long as we maintain an adequate navy. The belligerents who some allege might attack us would have to have command of the ocean. To be a menace they would have to transport their armies across the sea in ships, or have them flown across the ocean and operate from bases in this hemisphere. Our naval strength must make this impossible.

But let me say again and with all possible emphasis the determination of our naval needs rests chiefly upon a national-defense policy based upon coping with any possible aggression and repelling any possible invader. So far as my voice and vote are factors it rests solely and exclusively upon this consideration. This in itself is a stupendous task without planning for or engaging in the wars of other nations.

It is my confident belief that the American people do not desire to maintain naval or other military armaments for purposes of aggression or conquest. Our uppermost thought in these momentous and tragic days in world affairs must be the high resolve to keep our country out of the conflagration now devastating Europe, come what may.

But one cannot look out upon the world at large without witnessing ruthless violation of treaties and international good faith, greed, oppression, terror, and madness. We are forced, unfortunately, to conclude that under existing conditions our safety lies in the power and might of our armaments, in order that we may face any future eventuality with the assurance of our own ability to repel any attack from any quarter—indeed to be so prepared and fortified that no attack will be attempted.

These basic considerations—noninvolvement in war, no aggression, no conquest, and no role of international policeman—should underlie our naval policy and should relate directly to the question of our naval needs.

Our Navy is solely for our national defense, but that means a navy equal to the task of meeting and defeating the enemy—any enemy—at sea. Then only may we rest secure in our knowledge that we are safe from invasion from overseas.

A navy adequate to our needs of national defense is a larger navy than ever before in our history. We are in a world dominated by brute force. Treaties afford no security. As respects limitation of naval armaments, all treaties to that effect expired 4 years ago, and the race in naval armaments is on in every part of the world today.

We know of the enormous expansion of naval construction in England and in Japan, and which is continuing at a feverish pace. We know Italy and France have been progressively enlarging their navies. We know Germany has dreamed of a day when it will be a great naval power and has laid its plans to that end. We cannot close our eyes to these realities.

It became apparent some years ago that unless we accelerated and expanded our new ship construction and our naval aircraft the United States must face the prospect of being outmatched in naval strength, must discard a policy of naval parity with Great Britain and a ratio of 5 to 3 with Japan, must be content to maintain an inferior navy and circumscribe our activities and take the risks that such a policy involved. To be frank with you, the overwhelming evidence before the Congress is that, except for the efficient and able personnel of our Navy, we are woefully weak in naval power compared with the present and building naval program of the other powers. While this is a revelation to most Americans, it is not entirely discreditable. It is due to the fact that our confidence in other nations to stop expanding their navies had been misplaced. Not until a few years ago did we awaken to the gradual steady inferior place in naval strength into which we were drifting.

The view which I have maintained for many years during my chairmanship of the Senate Committee on Naval Affairs with respect to the yardstick of our naval needs was admirably expressed in the testimony before our committee a few days ago by a well-known expert in this field—Maj. George Fielding Eliot. Let me quote his words:

"The military policy—using the word 'military' in its broadest sense—that our country should adopt," he said, "is one that will give this country entire freedom of action under any and all circumstances. No one can foresee what is going to happen in the next 2 or 3 years. If we attempt a policy which would enable us to command the sea approaches to the Western Hemisphere, we shall have freedom of action, without being under foreign compulsion or foreign threats, so that our Government from time to time can pursue a course of action without being threatened, without being bullied, without being pushed around."

Major Eliot in the course of his testimony gave expression to another statement of sound truth and profound importance. He said:

"In my judgment, the view sometimes expressed that we ought to fight now while we have allies is a complete fallacy simply from the cold, plain, military point of view. Our military power can always be exercised more effectively and to much better advantage and effect within a reasonable radius of our shores than it can by fighting on the continent of Europe, thousands of miles away, with an improvised army, as we did the last time, because we always have to improvise when it is necessary to hasten the expansion of our forces."

I subscribe most heartily to that declaration. I view our Navy as in the nature of an insurance policy—an insurance against war and against invasion. We have had to increase the amount of the insurance in view of circumstances and conditions beyond our control. Our risks have increased and with them the cost of our insurance. So, too, the premium which we are paying for our protection has been and is likely to be further increased.

We have materially expanded our naval program and the end is not in sight. We increased the authorized limits of our naval strength in a bill passed by the Congress 2 years ago and since that date have been engaged in translating these ships from blueprints into realities just as rapidly as our physical facilities permitted. We thought in 1938 that the limit then set measured the extent of our naval needs. Events since then have proved otherwise. Congress at the present time is moving to increase the authorized strength of our Navy by approximately 11 percent and by what is referred to as a 2-year program. It is not claimed that the present bill measures the full extent of our needs. It measures rather the full extent to which, as a practical matter, we can proceed with the building program during the coming 2 years. In approving the present bill and in making the present appropriations we are proceeding in the light of present circumstances.

The American people have the will to build whatever size Navy is needed. They are prepared to make the enormous monetary sacrifices. Congress understands and appreciates this sentiment and will grant the necessary authority. In the last analysis, it is up to our naval experts to give us, in detail, the naval program necessary to protect our homes, our lives, and our free institutions.

What our naval needs will be in the years to come is not within the range of present prophesy. We can only say, in framing our naval policy, that the lives, and the homes, and the happiness of 130,000,000 Americans are at stake and that no price can be put upon their safety.

The Farm Credit Administration

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, April 26 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM THE WASHINGTON POST

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from today's Washington Post relative to the Farm Credit Administration.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Post of April 26, 1940]

EXPLANATIONS IN ORDER

Secretary Wallace recently issued a statement harshly criticizing the credit policies of the Federal land banks under the former independent management and asserting that the Department of Agriculture "now is taking steps to place the credit policy of the Farm Credit Administration on a sound basis."

Following his indictment of past policies, Mr. Wallace outlined a plan of action for the future calling for lower interest rates to farmer-borrowers, the placing of responsibility for losses entirely on the Federal land banks, and the elimination of the requirements that borrowers acquire stock equal in amount to 5 percent of their loans.

This statement, together with a covering letter from Governor Black of the F. C. A., was sent free of charge through the mails to over 600,000 farmer-borrowers from the land banks.

Every one of the three proposals listed by the Secretary as a basic need is authorized under the Jones-Wheeler bill, now before the House Agriculture Committee. There are strong reasons for concluding, therefore, that the chief purpose of the official circularization was to secure farmer support for this measure which had previously been endorsed by Secretary Wallace. That belief is strengthened by the closing paragraph of the Wallace memorandum expressing confidence that "when farmers understand what is going on, they and the organizations which represent them will support moves for sound credit and away from soft credit."

This, of course, is Secretary Wallace's way of replying to critics who, for good reasons, insist that the Jones-Wheeler bill would

destroy existing safeguards against unsound loans and encourage "soft credit" policies. However, the merits of the pending legislation have no bearing upon the charges of unauthorized lobbying which have brought an invitation to Messrs. Wallace and Black to appear before the House Committee on Agriculture. The committee wants to know whether their communications to farmer-borrowers constitute a violation of the Antilobbying Act, as well as the law forbidding dissemination at public expense of documents designed to influence legislation, except on request.

If the existing antilobbying legislation does not cover the activities of the Secretary of Agriculture and the Governor of the F. C. A., it should assuredly be amended specifically to forbid the kind of indirect pressure employed in the present instance. Whatever the verdict of the House committee may be after listening to the explanations of these two officials, it is obvious that the spirit, if not the letter, of the Antilobbying Act has been violated.

Since the Department of Justice has made no effort to suppress official lobbying, the House Committee on Agriculture is performing a much-needed service in asking Messrs. Wallace and Black "under what authority" they distributed their thinly veiled endorsement of a pending bill.

The Navy

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, April 26 (legislative day of Wednesday, April 24), 1940

ARTICLES BY SENATOR NYE AND SECRETARY EDISON

Mr. REYNOLDS. Mr. President, recently there was conducted through the columns of the Washington Daily News, issue of Saturday, April 20, 1940, a forum by Mr. Theodore Granik, director of the American Forum. The question pertained to our Navy.

In making announcement of this forum, participated in by the Senator from North Dakota [Mr. NYE] and the Secretary of the Navy, Mr. Granik said:

With the spreading of the European war and the reports of major naval engagements in Scandinavian waters the eyes of the Nation are focused on America's first line of defense—the Navy.

I take issue with Mr. Granik, in that I am of the opinion that today America's first line of defense is not the Navy, but is the airplane; and particularly will this become more true and more thoroughly appreciated if and when we have been sufficiently farsighted to acquire for ourselves certain island possessions in the Atlantic and in the Pacific upon which we can establish air bases, thus providing a greater area for the purpose of protecting American shores and prohibiting enemy forces from ever landing upon continental United States, so that if we ever are so unfortunate as to become engaged in enemy combat none of the fighting will take place upon the soil of the United States.

I ask unanimous consent that there be published in the Appendix of the CONGRESSIONAL RECORD the views of my colleague, the Senator from North Dakota [Mr. NYE], and those of the Secretary of the Navy, Mr. Charles Edison.

I have observed in reading the statements of these two eminent gentlemen that Secretary Edison states that he believes with John Adams that "naval power is the natural defense of the United States." John Adams never heard of an airplane; and I believe that if he were here today to witness the phenomenal development of air power he would agree with me that our first line of defense lies in air power.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

"NO," SAYS NYE

(By GERALD P. NYE, United States Senator from North Dakota)

What the United States needs in naval preparation is a navy sufficient, in cooperation with our land forces, to keep the strongest potential foe from successfully invading our country.

There is a long way from meaning that we must have a navy second to none. We don't need any such navy to accomplish the stated purpose.

These times of conflict abroad perhaps challenge us to a larger preparation in our Military Establishment, though it is worthy of suggestion that by the time the foreign powers have spent themselves in their present wars we are going to need considerably less of preparation against attack than has been true in the past. But perhaps we're not supposed to view our needs these days with any degree of sanity, and should instead get on the band wagon and whoop it up for the world's mightiest war machine, as some Americans are already doing.

Perhaps we should follow that American leadership which seems to ascribe no value whatsoever to the mightiest fortifications the world has ever beheld, namely, two great oceans with an expanse of thousands of miles, one on each side of us, each separating us from potential enemies.

Some foreign powers would lay down their annual national income several times over for possession of equal fortifications, while we are quite expected to forget them, go crazy on a naval-expansion program, and frame our minds fearfully to accept Orson Welles' dreams of possible attacks against us.

We have no need for a navy second to none to afford ourselves an adequate national defense. All we need to accomplish that is a larger preparation in the air and enlargement upon our defensive preparation on land. Of course, that isn't going to be enough to let us go bullying and bluffing and swinging a club at other parts of the world, but it will be enough to insure us very adequately against the chance for any power, or group of powers, to start running over our lawns and cluttering ordinary traffic in our streets or on our highways.

Cabinet Secretaries and Assistants talk about the need for navies second to none, armies second to none, the time it will take to equip an Army of 1,000,000 American fighters, and in general about our utter lack of preparedness (even though the bill for preparedness annually is about seven times as much as it was before we went into the last war to end war, destroy militarism, save democracy, and raise hell for generations to come). Preparedness for what, let's ask. Preparedness for what?

I fear that many voices in leadership in our country today are having their wishes dictated by voices like those of our Minister to Canada and the Provincial Attorney General in Canada, whose doctrines would put and drag us into Europe's wars.

What is this call for an army of a million men, a navy second to none, greater preparedness? Preparedness for what?

Preparedness for what may result from Presidential scoldings being administered frequently across the Atlantic and Pacific—scoldings that may be followed by desire to administer spankings instead?

Preparedness such as will enable us to fulfill assurances or insinuated commitments by our Bullitts abroad?

Preparedness to strengthen the arm of the modern Colonel House in his speed journeys to and through Europe?

Preparedness to make stronger its force when Jimmy Cromwell "tells" the world what we should and ought and shall do?

Preparedness for that day which Attorney General Conant, of Ontario, declares must be brought about, the day we move into Europe's war?

Of course, if it is preparedness for our participation in Europe's newest war over who shall be the powers in Europe and where the border lines shall be for the next 20 years, then we need not only a navy second to none but a navy at least equal to the combined navies of all the world multiplied by 8 or 10.

Of course, if we are going to practice dictating how the rest of the world shall live and behave, then we need a navy second to none, and then some.

Of course, if we are going to launch our country into participation in the hates and jealousies of other lands, if we are going to try to maintain one imperialism as against another, by all means we must have more and ever more of a navy than we've got or ever expect to have.

But if we will but pursue that course which the overwhelming millions of Americans are asking and praying for—the course of minding our own business, of which we have so much to mind—we don't need to be breaking our national back and neck in the building of a navy that is second to none.

We would instead be content with a navy which, in conjunction with our land forces and machinery, would be enough to repulse surely any foe that ever undertakes that hopeless job of attacking and conquering the United States or any of its neighbors.

The two oceans are the equivalent to any second-to-none navy the world knows today. Can't we be content with what we've got and can quickly have if and when need arises? We had better be.

"YES," SAYS EDISON

(By Charles Edison, Secretary of the Navy)

I believe in a navy second to none, and I believe in a navy strong enough to back up the will of the people as expressed in laws and approved policies. I believe with John Adams that: "Naval power is the natural defense of the United States."

The subject of a navy second to none is not new. It is the will of the majority of the people that we have a navy second to none, and so approved in the naval bill of August 29, 1916. In 1922, in the greatest gesture ever made to the cause of peace, the United States by the Washington Limitation of Armament Treaty scrapped 755,380 tons of ships. The cost of these vessels scrapped, after deducting the value obtained by the sale of scrap, was $277,695,944.

We were given by that treaty the right to build a navy second to none, or a 5–5 ratio with Great Britain. Money was never appropriated by the Congress to build this navy, but Congress never disputed in the majority our right to parity with Great Britain. That principle remains as a yardstick and is favored by most of our citizens.

Our course for sea power cannot be charted without taking into account world conditions and world morality. We, of this country, have been reluctant to admit unpleasant facts about the structure and the workings of international society. We are now disillusioned and alive to the fact that the importance and security of a nation are measured directly in terms of her ability to defend her interests.

We believe in democracy; we have fought to perpetuate our democratic institutions, and if we are not strong, our interests, our treasured liberties, and our wealth are almost certain to be targets for nations that may show no regard for treaties or what we consider national integrity.

With a navy second to none forceful notice will be served on all possible aggressor nations that the United States intends to protect itself and its interests in the most powerful and effective manner.

Today wars are seldom declared: International alinements are speedily and secretly made. The protection of our great Nation cannot be based on wishful thinking. We must be realists, and a navy second to none will give us reasonable strength for our first line of defense with a fair security margin.

We require a navy second to none because of the following national policies:

1. The United States would support an international agreement for naval limitation, but it is the policy of our Government to maintain the 5–5–3 ratio.

2. A recognition that the United States has vital interests in the Atlantic and Pacific that can only be protected by sea power.

3. The United States intends to maintain a navy capable of defending its Territories and its vital interests, wherever they may be, and that this defense shall include outlying bases, such as Hawaii, Alaska, Panama Canal, Puerto Rico, and the lookout posts in the Aleutians, Midway, Wake, Johnston, Palmyra, and the Virgin Islands. If the Congress should decide to provide an outlying lookout post at Guam, our defensive position in the Pacific would be greatly strengthened.

4. The United States proposes to maintain the Monroe Doctrine. This means that any change in the status quo which would involve a threat to flank our trade routes to South America or to establish new foreign bases in the Americas, controlled in fact though not in name by non-American nations, would be resisted.

The United States Navy has the following tremendous task that requires a navy second to none and possibly one larger than any:

First. The positive protection of the continental United States and its possessions. (The United States has the largest coast line of any naval power—3,860 miles.)

Second. The possibility of joining with the other American republics in preventing any hemispheric invasion or penetration.

Third. Sufficient naval strength to maintain and defend our commerce.

Fourth. Insurance of the uninterrupted flow of strategic raw materials.

Fifth. The maintenance of our neutrality at a time when intelligent men realize that only force maintains neutrality.

Woodrow Wilson said: "There is no navy in the world that has to cover so great an area of defense as the American Navy * * *."

The sanctity of treaties has been violated. Nonaggression pacts are more honored in the breach than in the observance. Power politics is the rule of the day. Great wars rage in Europe and in Asia. The rights of neutrals are flagrantly violated. Fundamental principles of our civilization are at stake. What is the answer for us?

Preserve our peace with honor. That may be done with adequate military and naval strength. That means a navy second to none.

War is not a mathematical set-up. Every possibility must be studied. If our fleet is weaker than the combined naval force of our potential enemies, then our fleet is too small. Viewed from that angle, we consider it too small and have so reported to the Congress. The recommendations of the Navy Department are now being thoroughly investigated and considered by the Congress of the United States, and it is our hope that it will authorize a sufficient increase over the present tonnage.

I feel that the majority of the American people are of the opinion of Theodore Roosevelt when he said:

"The United States Navy is the best guaranty the Nation has that its honor and interests will not be neglected; and, in addition, it offers by far the best insurance for peace that can by human ingenuity be devised."

Senator McNary and the Republican Presidential Nomination

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, April 26 (legislative day of Wednesday, April 24), 1940

ARTICLE FROM THE RICHMOND (VA.) TIMES-DISPATCH

Mr. TRUMAN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article from the April 26 issue of the Richmond (Va.) Times-Dispatch on the mock Republican convention held by the students of Washington and Lee University at Lexington, Va., April 25.

The Democrats are very happy over what happened. We think coming events cast their shadows in advance.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Richmond (Va.) Times-Dispatch of April 26, 1940]

MCNARY WINS 'NOMINATION' ON SEVENTEENTH BALLOT

LEXINGTON.—Senator CHARLES L. MCNARY, of Oregon, won the Presidential "nomination" of the Washington and Lee mock Republican Convention yesterday on the seventeenth ballot.

The "dark horse" walked away with the nomination with 624 of a possible 877 votes after many southern delegations in the miniature convention switched to the Senate minority leader.

Senator STYLES BRIDGES, of New Hampshire, was chosen on the third ballot for Vice President.

Westerners' six-shooters and southerners' yells resounded through the hall as the break in the 3-day-long meeting came with the shift of votes to MCNARY.

COMPROMISE DEVELOPS

The stage was set for a dark-horse winner when the contest among the students over Senator Robert Taft and Thomas E. Dewey developed a "compromise" movement that all but landed Senator Arthur Vandenberg, of Michigan, in the banner-carrying position. He received 439 votes, a majority of one, on the fourteenth ballot, but a delegate's claim that his vote was "coerced" and its subsequent withdrawal wiped out the momentary "nomination."

There were 16 "favorite son" nominees placed before the convention.

Washington and Lee students have been holding similar mock conventions each Presidential election year, except one, since 1908. It has been the custom to hold the convention of the party out of power.

There was one harmonious theme throughout the 3 days of nominating speeches, parliamentary maneuvering and backstage politicking—Keep out of war.

American Defense Society

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, April 26 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address which I delivered in New York City on April 13, 1940, under the auspices of the American Defense Society.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Please know that I deem it a privilege to be provided the opportunity to speak with you today concerning the subject of national defense because we are all equally interested in providing an adequate national defense for our country particularly at a time when the world is in such a chaotic condition attributable most largely to the unfortunate wars that are raging today in both Europe and Asia.

And may I say that it is my hope and certainly I may presume to the extent of saying that I am sure it is your hope that these wars will not spread to such an extent as to engulf us in the flames of hatred and destruction of millions more of human lives.

I wish to speak to you concerning an adequate national defense, with emphasis upon the word "adequate." As to an adequate national defense there is, in my opinion, two phases. The first interests itself in providing a defense adequate to protect ourselves against an attack and an invasion by an enemy or enemies from without; the second interests itself in an adequate national defense in respect to the matter of defending ourselves against the enemy from within.

Surely at this hour when the most powerful nations of the earth are exhausting and depleting themselves in actual warfare which will take as its toll, unfortunately, millions of lives, we should now devote an equal amount of attention to matters of defense within the confines of our country.

In considering a program that is genuine we should take into consideration the actual facts that make up the conditions that exist in our country today, as well as in every other country. This dual national defense program must be based on the thinking, fears, and desires of the masses of the people for in the end we must agree with Thomas Jefferson (the third President of the

United States, whose birthday this is, April 13) to the extent that governments derive their just power from the consent of the people.

Our peacetime expenditures for war, as you know, are greater today by far than at any time in our history.

In support of our present policy we have vastly expanded this defense spending in recent years. In 1934 a total of five hundred and seventy millions were spent on the Army and Navy. Last year cash outlays for defense aggregated one billion two hundred million, and in the current fiscal year approximately one billion five hundred million is being spent. In the fiscal year, which begins next July 1, it is proposed to spend about two billion. The question arises, Can this Nation reduce its present defense program and still make good its tacit offer to defend the Western Hemisphere? Or should we prepare to spend more for defense purposes?

As ranking member of the Military Affairs Committee of the United States Senate, I recall that our Regular Army now consists of 227,000 men, with an addition of officers to the extent of 13,500. This force is fortunately backed by our National Guard to the extent of 242,000 men, a Reserve Officers Corps of 110,000, and, in addition, an Army Reserve of about 26,000 men. In all, therefore, the United States has a trained fighting force of approximately one-half million men.

These enormous expenditures which I have just cited give rise to another important question. Is it necessary that we continue to spend billions in strengthening our national defense when our potential enemies are daily being weakened economically and physically by the wars they are waging throughout the world?

I am strongly in favor of an adequate national defense for defense purposes only. War in Europe and in Asia has made the world a dangerous place in which to live. The fate of Austria, Czechoslovakia, Albania, Poland, Finland, Denmark, and Norway stresses the need for adequate armed forces to defend national interests against all possible attacks by an enemy or enemies.

I am equally as strong against the development of our armed forces for the purpose of attacking any other country in the world. I favor only such development of our armed forces as will insure our success in case we should be attacked by a foreign enemy. I am opposed to the development of our armed forces with a view to attacking any other country or participating in the quarrels or wars of other nations of the world to the extent of sending our boys to foreign shores.

I am firmly of the opinion that the great majority of the citizens of our country share this view. I am absolutely certain that the mothers of America, who would be called upon to furnish the fodder for the cannon, are unalterably opposed to their sons participating in any wars beyond the borders of our country. It is therefore the duty of our Government to make it clear to our own citizens and to the people of the world that we are not going to send our soldiers across the seas to settle the disputes of other countries.

The United States is the most powerful nation in the world today. Our geographical position makes us safe from attack. No nation or group of nations can successfully attack us. This is not an exaggeration. No military man of any rank will sign a statement saying that this Nation can be successfully invaded.

One great military lesson of the last war was learned by the failure of England to land sufficient troops and establish a permanent base in their attempt to force the Dardanelles. When we know that troops cannot easily be landed on an enemy shore and that a nation cannot be subdued without troops, then, and then only, can we begin to reason without fear of attack. The different processes of getting troops from the ship to the shore leaves them so exposed that a very little military activity can destroy them. The last time the United States went to war in Europe it had a friendly Asia at its back, and it had a safe Atlantic on which to travel. Even so, it took us 13 months to get 500,000 men across, with the aid of the greatest body of naval and merchant-marine force in history.

Those men landed at friendly ports, had friendly lines of communication, friendly supply bases, and safe conduct right up to the line of battle.

The American expedition to France was the most gigantic military maneuver in world history. It could not be repeated except under similar easy conditions.

An army of 500,000 men would be an insignificant force with which to attack the United States. It would take millions of men to make any impression on this country. They could not come as we did, 7,000 at a time, for our ports are fortified and our coast lines are strongly protected; so may I say that I hope you will not permit anyone to excite you to the extent of making you believe that any nation could attack, with success, the shores of this country, even now. As the wars abroad progress, as I have previously stated, those nations at war will be materially weakened, and consequently, there is less likelihood of our experiencing an attack from any country in the world, for many years to come.

If Canada or Mexico permitted an enemy of the United States to establish a base or bases on their lands they would be offering their countries as battlefields, and no government would voluntarily do that in this hemisphere. The American people are determined to pay any price to protect our shores from invasion, but not to wage war in other countries. Permit me to repeat, that I am unqualifiedly in favor of an army for defense purposes only. We should develop our unified defense departments for defense purposes only—land, sea, and air-defense forces.

Let us weld an iron ring around us. Let us safeguard ourselves by the establishment of outposts in the Atlantic, the Pacific, and elsewhere. If we are to be attacked, and if there must be fighting, let's provide for ourselves with such outposts as will successfully bar the enemy or enemies from our shores, thus prohibiting fighting within the confines of continental United States.

Now, as to the Panama Canal. It must be protected in order to provide uninterrupted ship negotiation from the Pacific to the Atlantic, or vice versa. This is extremely important. At Puerto Rico we are spending millions to strengthen our military position in the Caribbean, with a view particularly to defending the Canal which lies to the west. Those defenses at Puerto Rico should be further strengthened to the north and in the south by our acquisition of British and French Islands in the Caribbean, extending from the Port of Spain in Trinidad, just off the coast of Venezuela in South America, northward to Bermuda in the North Atlantic. With the acquisition of Bermuda we would have provided for ourselves the first and only outpost in the North Atlantic.

In the far north Atlantic we should acquire from the French, St. Pierre and Miquelon Islands, just off the coast of Newfoundland. There we could construct valuable air, and, if necessary, naval bases, from which bases we would be in a position to meet any attack from the northeast.

With a view to welding stronger this iron band in the Atlantic, I have but recently introduced a resolution in the Senate of the United States, which authorizes the President to enter into negotiations with Great Britain and France for the acquisition of these island possessions to be credited upon their indebtedness to us, which is about $10,000,000,000.

And in passing, since I have taken occasion to mention foreign obligations as a result of World War No. 1, it is appropriate that I recall to your minds the fact that Italy is indebted to us in the excess of $2,000,000,000. Germany—the people of Germany owe the people of the United States something more than $3,000,000,000. These sums were advanced to aid a stricken nation in its rehabilitation. The indebtedness is represented by various note and bond issues of the German Nation and its subdivisions. This money, intended to rebuild Germany, has largely been used in its giant public-works administration. It has rebuilt railroads, lighting and power plants, their cities and their streets. Today practically all of it has defaulted beyond hope of recoupment. All we received in payment from these debtors has been sneers and expressions of ingratitude. This indebtedness of Germany has no inference to the huge obligations of Czechoslovakia. In that instance, within the last year Germany has seized all assets and confiscated $20,000,000 worth of gold bought with American funds, and really the property of the American people. Nor does it include the tens of millions likewise advanced by Americans after the war to Poland. This vast sum far exceeds the total indemnity paid in money to the Allies by Germany.

To the west, in the matter of outposts in the Pacific for the purpose of protecting the entrance to the Panama Canal, I suggest the leasing of islands of the Republic of Colombia, just south of the equator, and the leasing or purchasing of Goose and Cocos Islands—owned by Costa Rica.

I would also suggest that our Government endeavor to acquire Lower California by peaceful negotiation from our sister republic to the south so as to provide more protection for the Panama Canal, in that if this were done it would be impossible for any submarine or battle cruiser to be sheltered in the waters between the mainland of Mexico and the peninsula of Southern California.

Our fortifications in the Hawaiian Islands are splendidly located as protective outposts in that portion of the Pacific. At Honolulu we have one of the finest and strongest military establishments in the world.

Now, let's proceed further northward to the Aleutian Islands. We purchased these a number of years ago from the Russians at the same time we acquired Alaska and other islands of that far northern country, for a consideration of $7,200,000. At Unalaska, or Dutch Harbor, one of the Aleutian group, we have established a naval air base. These islands extend for more than 700 miles in the direction of Japan and Russia. Attu, the westernmost of the Aleutian group, is only about 2 hours' flying time from Japanese territory, and only a short distance from Russia. A base should be established on Attu Island.

We are now engaged in the construction of a central air base at Fairbanks in Alaska. That is well. Further north at Nome we will eventually find it expedient to erect a military base in view of the fact that Siberia, part of Soviet Russia, is a distance of a mere few hours by boat from American territory. Fact is, the two Diamede Islands near Nome belong to the Russian and American Governments. They are only a mile apart.

North of the Diamedes in the Arctic Ocean lies Wrangell Island. It is about the size of Jamaica. It is located between the mainlands of Alaska and Siberia. As the crow flies it is virtually on a line from the metropolis of New York to the capital city of the Philippines Commonwealth, Manila. As a result of its geographical position it has great potential military value on account of the miraculous and phenomenal development of air power.

The first flag was planted on Wrangell Island by members of the American Jeanette expedition around 1880. It is now occupied by Soviet eskimoes and a few Russian soldiers. Its legal possession is really in dispute (we claim it), and recognizing its potential military value a few days ago I introduced a bill in the Senate of the United States requesting the Secretary of State to ascertain the legal status of this island.

With the acquisition and development of outposts in the Atlantic and the Pacific and the far North where our territory is in the immediate proximity of both Japan and Russia, I believe that the Panama Canal would be secure from attack and that these outposts would unquestionably provide an iron ring so firmly

welded in our portion of the Western Hemisphere that no enemy from foreign shores, regardless of strength, could successfully penetrate this iron band to the extent of waging war upon us, upon our shores.

I believe firmly in air power. Truly one of the most valuable military lessons we have learned from the present European war is the vital importance of air power. With these outposts which I have mentioned, they will have become our first line of defense, and those lines of defense in the Atlantic and Pacific will be carried many miles farther into the two oceans by the utilization of aircraft. Air power has displaced already, to a very large extent, the Navy. Battleships, cruisers, or what not. For instance, it takes a battleship approximately 10 days to proceed from San Francisco through the Canal to New York. A battleship costs around $80,000,000. A fleet of battleplanes, bombers, transporting tons of high explosives, can be purchased for an amount not in excess of the cost of one battleship. A fleet of fast-flying battleplanes, deadly in attack, can negotiate the distance from San Francisco to New York City within a period of 11 hours. Make your own comparison. Ascertain for yourself by comparison the potential value of each—11 days as against 11 hours.

Concerning the enemies within, against whom we must likewise protect ourselves. These enemies are ignorance, illness, unemployment, crime, etc. Then there are alien enemies and potential alien enemies in the form of noncitizens. Aliens who have entered this country legally and have remained here illegally and those who have entered illegally and have remained here illegally. Mind you, I cast no reflection whatsoever upon our friends who have come from foreign shores legally and have remained here legally and are now here legally. I refer only to those who are in our country in violation of our laws. How many there are we do not know. Where they are we are not advised. From whence they came we have not been informed. What they are doing we do not know. But all of that is our business, the business of you Americans who are interested in the safeguarding of your country against the acts of those who are not the friends of America but who, to the contrary, are the enemies of America.

I have introduced in the Senate of the United States a bill calling for the mandatory registration and fingerprinting of all aliens in this country. By the enactment of this bill we could ascertain as to how many noncitizens there are here, when they came, from whence they came, how they came, whether they entered legally or illegally, or whether they entered legally and have remained here legally. Of all times, this information should be available now to governmental officials particularly, and to the American people as a whole.

There should be no objection to the enactment of such legislation. The President and the members of his Cabinet, and every one of the 4,000,000 men in uniform and under arms during our brief participation in the World War were fingerprinted. Every soldier, sailor, and marine of our armed forces is fingerprinted. Millions of high-school boys and girls in the East and the West have voluntarily submitted to fingerprinting, as well as those citizens who have requested that they be fingerprinted for their own protection and benefit. So why should any alien object to subjecting himself to this process of identification?

We are at peace; yet today the Bureau of Investigation of the Department of Justice is receiving daily approximately 240 complaints of espionage and sabotage, while prior to the breaking out of war in Europe on September 3, 1939, only about 240 complaints of espionage and sabotage were received by the Federal Bureau of Investigation annually. Think of it, and at the same time reflect further upon what might be the results in case we were unfortunately sucked into the war that now rages across the Atlantic.

How, therefore, could we defend ourselves against any foreign enemies within unless we knew who they were and where they were. It would be impossible.

In conclusion, may I say that the problem of protecting ourselves against the enemies from within is as great and is as serious as the problem of developing an adequate national defense for the purpose of protecting ourselves against the enemy from without. We are spending billions for armaments for the latter purpose and at the same time we are spending in comparison only a few dollars for the purpose of defending ourselves against the enemies from within. When and if we are attacked the enemy will be observed and located and met by our mighty bombers. Those enemies will be easily located, whereas, on the other hand, the enemies from within cannot. They will be working in the darkness like a lot of termites, and now is the time to enact a registration and fingerprinting law for the purpose of locating all noncitizens, so that if the necessity arises we can locate any alien enemies in the form of saboteurs or spies.

Leagues of Hate

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

Mr. THORKELSON. Mr. Speaker, as I looked upon the picture on the cover of the anti-Nazi bulletin I received the other day, and saw certain persons portrayed as apes, I wondered if the internationalist looks upon Christian gentiles as animals, and if he treats them accordingly when he obtains the power to act without restraint and responsibility. I realize that he is a victim of his own philosophies as expressed in political laws which we mistakenly suppose are his sacred beliefs. I also recognize that the proponents of these philosophies are not in any sense comparable to the clergy as we know it, but they are instead the dispensers of his law and the judges of his own court.

With these things I take no issue, because I grant to all the same rights and privileges which I in my own beliefs consider my right. I have in my travels always held to such opinions and have never taken issue with Shintoism, Buddhism, Hinduism, Mohammedanism, or with the practices of the Parsi, the Zoroastrian Persian refugees living in India. I have, as a matter of fact, broken bread with the Buddhist priests in the temples of India and been received in a private audience at the Vatican. In all these wanderings and contacts with people subscribing to doctrines different from my own I have been treated with the greatest courtesy experiences in my life, to which I always look back with great pleasure.

It is therefore strange to me that I cannot, here in my own home, freely subscribe to our own doctrines and principles without criticism by the internationalist. He appears to look upon himself not only as a person of special privilege but one superior to his host. With this I take no issue until these doctrines become a reality, for he then becomes a part of a minority of misled people who threaten majority rights. It is to preserve these liberties and to protect our rights that I have taken issue with those who are now actively engaged in the destruction of this Republic of the United States.

Mr. Speaker, in the remarks that I have inserted in the RECORD I have confined myself to authenticated or tabulated information obtained from Government sources or from the writings of those whom I have discussed, and I have at no time made accusations that were not based upon such authenticated documents.

During the past month I have received much vicious propaganda, which can be for no other purpose than to create dissensions and hatreds among our own people, and to climax this orgy of hatreds I have now received a document in which the Christian Front—and I take this to represent the Christion people—are caricatured as "Apes of wrath." Ordinarily a person would look upon this simply as an expression of the mentality of those who disseminate such literature, but knowing their philosophy, I realize that this picture is a true expression of the internationalist's real opinion of the American people.

The publication to which I refer is entitled "The Anti-Nazi Bulletin," and it is published by the Non-Sectarian Anti-Nazi League to Champion Human Rights, Inc. This slogan is rather interesting, for, knowing their philosophy, I realize that they look upon themselves as "humans" and upon the Christians as "apes." So this picture should be informative to the American people.

Let us now without prejudice examine these "champions of human rights" and this Non-Sectarian Anti-Nazi League, which was organized by the late Samuel Untermyer in 1933, and in 1939 listed the following officials:

Vice presidents: Mayor Fiorello H. LaGuardia, Rabbi Leon Fram, Bishop Francis J. McConnell, Frank P. Walsh.

Simon M. Goldsmith, acting treasurer; G. Egerton Harriman, executive secretary.

Board of directors: Dr. S. William Kalb, chairman; Michael G. Alenick; Flynn L. Andres; Abraham Cahan; Dr. Edward Spencer Cowles; Prof. Paul Douglass; Dr. B. Dubovsky; Dr. Mitchell Salem Fisher; Jacob Fishman; A. Gallen; Simon M. Goldsmith; Frank P. Granat; Abraham I. Harkavy; Mrs. Mark Harris; Sidney Hillman; Rev. Dr. Harold R. Husted; Rabbi Edward I. Israel; Rev. Dr. Burris Jenkins; Robert G. Jones; Mrs. Samuel Koestler; William Leege; Rev. P. Luecke; Rev. Dr. Victor H. Lukens; Jacob Malmuth; Irving Maness; Bishop Francis J. McConnell; Dr. Nelson P. Mead; Mrs. L. Myers; Judge Henry P. Nelson; Henry Portnow; E. Rabinowitz; Dr. Morris M. Rose; Myron F. Schlater; Dr. Guy Emery Shipler; Prof. Charles E. Skinner; Hon. Rawghlie C. Stanford; Dean William E. Taylor; Charles Tomashek; Frank P. Walsh; Dr. Max Winkler; Max Zaritsky.

This personnel is from one organization in New York City, and there are, according to a letter which I received on May

8, 1939, some 700 of these leagues of hate. I shall now, to make the picture more complete, list the members of the Hollywood Anti-Nazi League for the Defense of American Democracy, and I want you to note that this league is not organized in the defense of our Republic but in defense of democracy, which is, as the name implies, synonymous with a communistic government such as now prevails in Russia.

This letter is addressed to the Library of Congress, Washington, D. C., and is signed by Michael Elkins, chief of investigations. This is also interesting, for what private organization in the United States has the right to maintain an investigation organization or intelligence service to spy upon the American people? This is something that should be investigated and would be if it were not for the internationalistic background of these organizations.

These are the officers:

Donald Ogden Stewart, chairman; Marian Spitzer, vice chairman; Alan Campbell, secretary; Bern Bernard, treasurer.

Sponsors:

Dr. Eric Beecroft, Herbert Biberman, Mrs. Sidney Buchman, Eddie Cantor, John Cromwell, Florence Eldridge, Francis Edwards Farago, Mrs. Bernadine Fritz, Jay Gorney, Oscar Hammerstein 2d, Rupert Hughes, Charles Katz, Senator Robert W. Kenny, H. S. Kraft, Richard Lert, Ernst Lubitsch, Frederic March, A. Calder Marshall, Dr. Rudolf Marx, Edwin Justus Mayer, Ray Mayer, Elizabeth Merrell, Lewis Milestone, Paul Muni, Dudley Nichols, Judge Isaac Pacht, Mrs. Charles Page, Dorothy Parker, Irving Pichel, Frank Scully, Maxwell Shane, Viola Brothers Shore, Sylvia Sidney, Gloria Stuart, Frank Tuttle.

This is one of the leagues on the west coast, and I shall now take you back to New York the center of communism and the home of those who furnish the money for these destroyers of our liberties and rights. In order to complete this picture so that we, "the apes," may have a better understanding of the sort of humanity these leagues sponsor, let me quote from the Joint Boycott Council of the American Jewish Congress and Jewish Labor Committee, 151 West Fortieth Street, New York City, branches all over the world. This is the purpose of the league:

Hitler has said: "We must export or die * * *." By supporting the anti-Nazi boycott you help destroy the greatest menace to democracy and world peace. By refusing to trade with the enemy you aid American industry and American labor. Boycott Nazi Germany.

I wonder what sort of humanity these leagues sponsor when their sole object is to bring about starvation of men, women, and children in order to satisfy an insatiate hatred for one man. Surely this is not the championship of human rights.

In this propaganda of hatreds I have another letter which is rather interesting, sent out by the Jewish People's Committee for United Action Against Fascism and Anti-Semitism. The officers of this league are as follows:

Reuben Brainin, honorary president; William Weiner, president; Ephraim Schwartzman, national secretary; Rabbi J. Greenfield, chairman, executive board; Reuben Saltzman, treasurer; M. Gertner, New York State secretary.

Vice presidents: Rabbi J. Greenfield, New York; Rabbi Judah L. Hahn, New York; Ben Meyers, Chicago, Ill.; Harry Mintz, New York; M. Pizer, New York; Irving Potash, New York; Arthur Rock, Pittsburgh, Pa.; J. Sultan, New York; Charles Zuckerman, Newark, N. J.

The link of connection between these organizations may be found in these statements from this letter:

During the last months you have undoubtedly noticed that an unprecedented wave of anti-Semitism is sweeping the country. It is estimated by the Institute of Propaganda Analysis that there are no less than 800 anti-Semitic organizations functioning in the United States.

You probably have had some personal experience with the activities of some of these organizations, or came across some anti-Semitic literature published by them. Or perhaps you have listened to some of the anti-Semitic utterances of Father Coughlin. Their propaganda is calculated to weaken the foundations of our country by dividing our people and undermining our national unity, by planting race hatred and intolerance, and aiming to substitute fascism for our democratic way of life.

The letters to which I have referred show definitely not only the connection, but the very background of this movement. It is these people who through their leagues of hate have depicted patriots as "apes of wrath," and in this picture appears the Christian Front, which may be assumed to represent all Christianity. I realize that public officials are supposed to tolerate libel and character assassination in loyal performance of their sworn duty. I do not, however, believe it is fair to place in this category a gentleman who served in the United States Army during the World War and was twice honored by distinguished-service citations by Congress. I am positive that there is not even one individual connected with these leagues of hate or their thousand subsidiary organizations, who is more patriotic than General Moseley, who, as I said, has served faithfully in the Army of the United States.

The propaganda pamphlets that I have received are more or less alike, for they deal with hatreds, venom, and falsehoods. This propaganda is misleading, because it would have us believe that certain individuals whom they have designated want to take possession of the United States, when nothing could be more ridiculous or further from the truth. These leagues of hate do not only advocate boycott of one of the belligerent powers but advocate in addition to that the boycott of many industries and businesses within the United States.

The question may be asked, What right has any minority to disseminate such wild and obscene pamphlets, and why should the Postal Department permit such filthy printed matter the privilege of the United States mails?

As I look over this literature I am astounded, for here is a self-elected group that, in order to satisfy its hatred for one person, ridicules, satirizes, and libels each and every one who fails to agree with its viewpoint. If that is not minority attempt to control the very life of the majority, I stand to be corrected.

What does the Anti-Nazi League shout? Well, let us see: When it was first organized its motto was "Nazi Germany is the enemy of civilization. Refuse to trade with the enemy." In addition to this the Non-Sectarian Anti-Nazi League made the plain statement on its propaganda matter that it has been fighting nazi-ism since 1933.

I shall also call attention to the fact that at this time the league is, in a sort of half-hearted manner, including communism with nazi-ism. Now what are the facts? The fact is that these very leagues and their proponents are the sponsors and creators of socialism and communism. Let us make no mistake about this: It was the internationalists from the United States and Europe who promoted and financed the Russian revolution. This is clearly documented by Ambassador Frances and Ambassador Edgar Sisson. Let me quote from one of the documented intelligence reports:

DOCUMENT NO. 64

STOCKHOLM, September 21, 1917.—Mr. Raphael Scholan (Schauman) Haparanda.

DEAR COMRADE: The office of the banking houses M. Warburg has opened in accordance with telegram from president Rhenish-Westphalian Syndicate an account for the undertaking of Comrade Trotsky. The attorney (agent) purchases arms and has organized their transportation and delivery up to Luleo and Varde. Name to the office of Essen & Son, receivers, and a person authorized to receive the money demanded by Comrade Trotsky. J. Furstenberg. Note. This is the first reference to Trotsky and connects him with Banker Warburg and Furstenberg. Luleo and Verde are Swedish towns, the former near to Haparanda, which is on the border of Sweden and Finland.

I have tried to complete this step by step, and you now find that the House of Warburg is connected with the Rhenish-Westphalian Syndicate, a German concern.

I have, of course, called attention to this in previous remarks, and shall not repeat too much at this time, but I do want to call attention to the fact that it was the internationalist in Germany who controlled the banks and controlled the imperial army during the World War. Do not forget that an army cannot fight unless it has gold, and gold was in the control of the internationalist.

It was the same financiers who furnished money for the Russian revolution, and it is the same financial group, with a few changes, that is now furnishing money for communism in the United States.

In order to complete this picture, I shall now quote again from part I, The German-Bolshevik Conspiracy:

DOCUMENT NO. 1

[Very secret]

PEOPLE'S COMMISSARY FOR FOREIGN AFFAIRS,
Petrograd, November 16, 1917.

To the CHAIRMAN OF THE COUNCIL OF PEOPLE'S COMMISSARS:

In accordance with the resolution passed by the conference of People's Commissars, Comrades Lenin, Trotsky, Podvoisky, Dybenko, and Volodarsky, the following has been executed by us:

1. In the archives of the Ministry of Justice from the dossier re "treason" of Comrades Lenin, Zinovieff, Koslovsky, Kollontai, and others, has been removed the order of the German Imperial Bank, No. 7433, of the 2d of March 1917, for allowing money to Comrades Lenin, Zinovieff, Kameneff, Trotsky, Sumenson, Koslovsky, and others for the propaganda of peace in Russia.

2. There have been audited all the books of the Nia Bank at Stockholm containing the accounts of Comrades Lenin, Trotsky, Zinovieff, and others, which were opened by the order of the German Imperial Bank No. 2754. These books have been delivered to Comrade Muller, who was sent from Berlin.

Authorized by the Commissar for Foreign Affairs.

E. POLIVANOFF.
F. ZALKIND.

Note by Edgar Sisson.—The Russian Council of People's Commissars was dominated by the president, Vladimir Ulianov (Lenin); the then foreign minister, Leon Trotsky, now war minister; and the ambassador to Germany, A. Joffe. The marginal endorsement in writing is: "To the secret department. B. U." This is the fashion in which Lenin is accustomed to initial himself. The English equivalent would be V. U., for Vladimir Ulianov. So, even if there existed no further record of German Imperial Bank order No. 7433, here would be the proof of its contents, and here is the link connecting Lenin directly with his action and his guilt. The content matter of the circular exists, however, and herewith follows:

Order of the 2d of March 1917 of the Imperial Bank for the representatives of all German banks in Sweden:

"Notice is hereby given that requisitions for money for the purpose of peace propaganda in Russia will be received through Finland. These requisitions will emanate from the following: Lenin, Zinovieff, Kameneff, Trotsky, Sumenson, Koslovsky, Kollontai, Sivers, and Merkalin, accounts for whom have been opened in accordance with our order No. 2754 in the agencies of private German businesses in Sweden, Norway, and Switzerland. All these requests should bear one of the two following signatures: Dirshau or Milkenberg. With either of these signatures the requests of the above-mentioned persons should be complied with without delay.

"7433, IMPERIAL BANK."

I have not a copy of this circular nor a photograph of it, but Document No. 2, next in order, proves its authenticity at once curiously and absolutely. Particular interest attaches to this circular because of Bolshevik public denial of its existence. It was one of several German circulars published in Paris in the Petit Parisiene last winter. The Petrograd Bolshevik papers proclaimed it a falsehood. Zalkind, whose signature appears not only here but on the protocol (Document No. 3), was an assistant foreign minister. He was sent in February on a mission outside of Russia. He was in Christiania in April, when I was there.

Have photograph of the letter.

DOCUMENT NO. 2

[Secret]

G(EAT) G(ENERAL) S(TAFF), INTELLIGENCE,
(NACHRICHTEN) BUREAU, SECTION A, No. 292,
February 12, 1918.

To the CHAIRMAN OF THE COUNCIL OF PEOPLE'S COMMISSARS:

The Intelligence Bureau has the honor to inform you that there were found on the arrested Capt. Konshin two German documents with notations and stamps of the Petersburg secret police (Okhrana) which show themselves to be the original orders of the Imperial Bank, No. 7433, March 2, 1917, concerning the opening of accounts for Messrs. Lenin, Sumenson, Koslovsky, Trotsky, and other active workers on the peace propaganda, by order No. 2754 of the Imperial Bank.

These discoveries show that, at the proper time, steps were not taken to destroy the above-mentioned documents.

For the head of the Bureau: R. Bauer.

Adjutant: Bukholm.

NOTE.—Observe the thoughtfulness with which Bauer, a careful man, set down exactly what was in the document, thereby permitting the contents to rise again from the ashes to which perhaps he committed the damaging paper. He admits that the documents found were truthful originals. The world will thank him and Germany will not.

I have the original letter. It bears marginal endorsements: "Referred to the Commission for combating counter revolution. Demanded documents. M. Skripnik"; and an illegible comment by N. Gorbunoff, Lenin's other government secretary. The letter is directed to Lenin. Did Skripnik get the documents? I do not know.

The letter is remarkable otherwise, for the arrested Captain Konshin mentioned is a German officer; Lieutenant Otto, who appears elsewhere as an agent in the German double-crossing intrigue in the Ukraine. What was behind the mystery of his arrest? What was his fate?

This, in brief, is a part of the intelligence report turned in to our State Department during or shortly after the Bolshevik or communistic revolution in Russia. It establishes beyond doubt connection between the international financiers of the United States and the Imperial Government of Germany. This same group, by withdrawal of gold from Germany, brought about the inflation that destroyed the German currency system. These internationalists have, since the advent of Hitler, shouted Nazi at every patriotic American who has taken issue with subversive activities, as they are now trying to divest themselves of communism, but like the shirt of Nessus, it will cling to them to the bitter end.

The question now arises, Who are the progenitors of socialism and communism? To this question, I shall let a most distinguished and learned gentleman, the president of the University of Jerusalem, reply in his own words, spoken shortly after Lenin and Trotsky succeeded in destroying the Russian Government:

[From an address delivered by Dr. J. L. Magnes at the opening session of the first Jewish Labor Congress, January 16, 1919, at Yorkville Casino, New York City]

The Jewish people, traditionally and through its experience, knows the meaning of internationalism, and it must apply the method of internationalism to its own national life as well, sharing the destiny of every people, free and oppressed, in freeing the world in order that it itself may be free. * * * When they become captains of industry or international traders and financiers, they are apt to go to first principles to help in the development of their great enterprises and become, among other things, stanch, conservative upholders of the existing status quo. Jews are closely identified with the beginnings of capitalism in its development from the feudal state. It was Friedrich Julius Stahl, a born Jew, who laid down the classical theory of the German Nationalstaat based upon * * * the politics of power. It was Benjamin Disraeli who is the father of the latter day Tory democracy of England. Just so, when the Jew gives his thought, his devotion, his spirit, to the cause of the workers and of the dispossessed, of the disinherited of the world, the radical quality within him there, too, goes to the roots of things, and in Germany he becomes a Marx and a Lasalle, a Hasse and an Eduard Bernstein. In Austria he becomes a Victor Adler and a Friedrich Adler; in Russia, a Trotsky.

Just take for the moment the present situation in Russia and in Germany. The revolution set creative forces free, and see what a large company of Jews was available for immediate service. Socialist Revolutionaries and Mensheviki and Bolsheviki, majority and minority Socialists—whatever they be called; and I assume that it is not a question at all at this moment of agreeing or disagreeing with any one of them—Jews are to be found among the trusted leaders and the routine workers of all those revolutionary parties. * * * Suppose anti-Semitism does lift its ugly head in Germany and the Jews there and here and everywhere be made to suffer because of the prominence of Jews in the glorious German revolution. * * * This is not a new principle in the Jewish tradition. Among the world's great revolutionaries and servants and dreamers of new heavens and a new earth are the Hebrew prophets.

May I call your attention to the fact that it is this people that proposed the League of Nations and that now proposes a world union, or international state. Read that closely, and you will find that they contemplate domination of this state. Let me now finally call your attention to the fact that the gentleman I have quoted actually brags of their having established nazi-ism, or the present national socialistic state of Germany, which he calls Nationalstaat. The question now arises, Why should these people, after having established the present regime in Germany, namely nazi-ism or national socialism, cry out against their own monstrous creation?

Air Safety Board

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

LETTER FROM DAVID L. BEHNCKE

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the president of the Air Line Pilots Association:

AIR LINE PILOTS ASSOCIATION,
Chicago, April 24, 1940.

Hon. HOMER D. ANGELL,
House of Representatives, Washington, D. C.

DEAR MR. ANGELL: On April 16 I wrote you voicing the unanimous protest of the men at the controls of the Nation's airliners against reorganization plan No. IV calling for the abolishment of the Air Safety Board and the new Air Authority, and placing the independent duties of the entire C. A. A. back under the Department of Commerce.

In this letter the pilots pointed out that during the years that civil aeronautics and air transportation were regulated by the Department of Commerce 473 lives were lost in air crashes of which number 146 were line pilots. We contrasted this with a world's safety record of no air-passenger fatalities in this country for 12 months and no pilots killed for 16 months. By the time you receive this letter the record will be no passenger fatalities in 13 months and no pilot fatalities in 17 months. This adds new emphasis to the argument, why not leave well enough alone.

In view of the fact that reorganization plan No. IV calls for the abolishment of the Air Safety Board the question naturally arises, what has this agency done, since assuming its independent duties of investigating crashes and making air-safety recommendations, to prevent recurrences? In a little more than a year and one-half the record shows that the Board has investigated 2,947 air crashes, the large majority of which occurred in so-called miscellaneous flying not on the airlines, 268 of which resulted in fatalities. As a result of these investigations, the Air Safety Board has transmitted 115 air-safety recommendations to the Authority, pointing out what should be done to prevent recurrences. This will give you an idea of the amount of work that has been accomplished by the Air Safety Board in a remarkably short period of time, in addition to all the other work of getting organized under the new law, etc.

Obviously, it would be impossible to describe all of the air-safety recommendations that have been made, but I would like to tell you about just one, so you will have an idea as to just how important the work of this Board is to the preservation of human life in air travel.

On March 26, 1939, a crash occurred on one of the air lines which, incidentally, was the last crash since the Air Safety Board and the new Authority took over, that resulted in loss of life either to passenger or crew. Twelve persons were on board this ill-fated airliner. Eight were killed outright or burned to death in the wreckage. Four were thrown clear when the plane struck the ground. All were injured. The pilot is still convalescing and, unless a marked improvement takes place shortly, one of his legs will have to be amputated. The Air Safety Board made an immediate investigation, which revealed, among other things, that the plane was not equipped with the latest, safest type of propellers, commonly referred to as the full-feathering type. This new type of propeller is controllable from the pilot's cockpit, and when something goes wrong with a motor the pilot in a flash of a second can, by touching a control in the cockpit, turn the blades parallel to the line of flight of the plane. This has two immediate effects: First, it stops the propeller on the disabled engine from rotating, bringing all moving parts of the crippled motor to a standstill, and thereby eliminating the terrific vibration which usually develops under such conditions when the aircraft is equipped with the older type two-position or constant-speed propellers. The vibration has on several occasions resulted in loss of control of the airplane, further structural failures, and in some cases fire in the air. Second, when a propeller is feathered, head resistance is reduced to a minimum and the performance of the airplane with one engine dead is greatly increased. The Air Safety Board not only found that the airplane involved in this accident was not equipped with the safest type propeller, but that the propeller-control mechanism for the type propeller employed was obsolete and inadequate to meet safety requirements under the circumstances. If the airplane involved in the accident I have just described had been equipped with full-feathering propellers, there can be no reasonable doubt that the accident would never have occurred.

Just how many crashes have been caused for the same reason is, of course, unknown, but it is felt that the number is quite substantial. Immediately after investigating the crash in question the Air Safety Board recommended to the Authority that it require all airliners to be equipped with full-feathering propellers. This is just one concrete example of what has been done to make air travel safe. There are many others.

It is argued that abolishing the Air Safety Board would save a few top salaries. What these savings really amount to are the salaries of the Air Safety Board members. There are three and they receive $7,500 a year each, making a total of $22,500 annually. Assuming that this amount is saved is an error because if reorganization plan No. 4 is approved someone connected with the Federal Government must still investigate accidents and they must be paid so, in reality, the savings are really zero unless a much lower type of personnel is used for this highly important work of preserving human life, which certainly would not be wise.

Let us contrast this with what air crashes have cost the air lines and the Federal Government during the period from the late twenties to 1938 when the Air Safety Board and the new Authority took over. It costs the Federal Government because air transportation is a subsidized industry and in the final analysis this subsidy which comes from the public fluctuates with the earning power of the industry. During the period the Department of Commerce controlled air transportation and civil flying there were 130 fatal air-line accidents. It is well known that the cost of one air-line accident is, conservatively, $150,000 to $250,000, representing the loss of equipment and the cost of damage suits, death and injury claims, etc., to say nothing of many more thousands of dollars lost because of loss of patronage resulting in the fact that a crash-scared public does not patronize air travel. This has been proven. We have only to multiply the cost of 1 crash which we will conservatively estimate at $200,000, by 130, the total number of fatal air-line crashes during the period that the Department of Commerce controlled air transportation, to give us the startling figure of $26,000,000. Properly to evaluate the situation there must be added to this figure the amount of money lost in patronage to the air lines due to the public being afraid to ride during the period that the Department of Commerce regulated air transportation. Of course, it is not possible to estimate what this figure really is but obviously it amounts to a staggering sum.

Safety is the axis around which everything vital to the success of air travel revolves. People were not born with wings but they have learned to use them and the extent to which this use will reach is limitless, depending only on one factor, and that is the safety factor. People have traveled on the surface of the earth and on water since the beginning of time. To get them to take to the air depends entirely on the psychology of self-preservation which is again the one and same thing—safety. The ultimate question, as far as the public is concerned, is, Is it safe? This question must be answered conclusively in the affirmative and stay answered if air travel is to succeed.

When Congress created the Air Safety Board and the new Air Authority it had a twofold effect. First, it destroyed the psychology of fear of air travel on the part of the public. Second, it replaced this fear with confidence in the safety of air travel.

The history of politically involved and perfunctory control of air transportation under the Department of Commerce is well known. The startling number of terrible crashes that occurred during this perior involved the loss of thousands upon thousands of dollars and 473 lives. The price of present safety standards has been high. It must not be in vain. We must go forward. It is a question that is vital and far-reaching to the Nation, and it is vital to the Nation's defense, because the best security that our people can have as a reserve to our air fighting force is an extensive, highly developed, and well-patronized air transportation network. The record since the Air Safety Board and the Authority took over under the Civil Aeronautics Act of 1938 definitely proves this can be done. We must not go back to the old order.

Nearly all of us fly and, therefore, this is not only the problem of the pilots but the problem of all of us as well.

Briefly, this is once more a fight to save an industry and to save human life.

Again, the pilots that fly on the most extensive civil air network in the world earnestly and respectfully appeal to you for your support to set aside the President's proposal to abolish the Air Safety Board and the new Air Authority.

Respectfully,

AIR LINE PILOTS' ASSOCIATION,
DAVID L. BEHNCKE, *President.*

Colorado-Wyoming Water Rights

EXTENSION OF REMARKS

OF

HON. EDWARD T. TAYLOR

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

OPINION OF THE SUPREME COURT OF THE UNITED STATES

Mr. TAYLOR. Mr. Speaker, for many years there has been a very active controversy between the State of Colorado and the State of Wyoming concerning the respective amounts of water that each is entitled to take for irrigation purposes from the Laramie River, an interstate stream.

Those States have litigated in the United States Supreme Court their respective contentions for many years and that Court has rendered numerous decisions on the subject.

On the 22d of this month the Court rendered another decision which is quite important to both States. The opinion of the Court was delivered by Chief Justice Hughes. The Court did not determine the controversy between Colorado's Governor, Ralph L. Carr, and Attorney General Byron G. Rogers, as to the authority of the Governor or the rights of the attorney general to represent the State in this matter holding that question was not necessary for decision in the case.

The most important question determined by this decision to both Colorado and Wyoming, as well as all other Western States, is that the Court does specifically recognize the exclusive authority and right of each State to determine the question of priority rights and the respective rights of the citizens to the use and apportionment of the waters within its boundaries; and that there is no violation of the rights of an adjoining State so long as the aggregate amount of water taken from the interstate stream does not exceed the total amount to which that State is entitled by the decision of the Supreme Court.

That is a principle that is very vital to all of the Western States and because of this specific recognition of that right of local self-government, I feel that the decision should be placed in the CONGRESSIONAL RECORD, where it may be permanently available to irrigators throughout the arid region of the West.

The decision is as follows:

[Supreme Court of the United States. No. 10, Original.—October Term, 1935.—*The State of Wyoming, Complainant* v. *The State of Colorado, Defendant.* April 22, 1940]

Mr. Chief Justice Hughes delivered the opinion of the Court.

The State of Wyoming sought leave to file its petition for a rule requiring the State of Colorado to show cause why it should not be adjudged in contempt for violation of the decree in this suit, restraining diversions of water from the Laramie River (259 U. S. 419, 496; 260 U. S. 1; 286 U. S. 494; 298 U. S. 573).

In response, Colorado asked that evidence be taken to determine the amount of return flow to the Laramie River from the diversions at the headgates of meadowland ditches and that Colorado have credit therefor. This matter had been considered by the Court in framing its decree (298 U. S. pp. 581, 582) and the motion was denied. Leave was granted to Wyoming to file its petition and Colorado was directed to show cause accordingly.

Two returns have been filed on behalf of Colorado, one by the Governor of the State setting forth his executive order directing the withdrawal of the appearance of the attorney general and appointing special counsel to represent the State, and another return by the attorney general who challenges the authority of the Governor to supersede him. In the view we take of the material matters presented, we find no such differences between the two returns as to require us to determine the question of authority.

Wyoming charges that from May 1, 1939, to June 18, 1939, Colorado diverted from the Laramie River 39,865.43 acre-feet; that is, somewhat in excess of the total of 39,750 acre-feet allocated to Colorado by our decree; that thereupon, and on June 19, 1939, Colorado closed the headgates of the various ditches involved; that on June 22, 1939, in violation of the decree, Colorado opened the headgates and permitted the diversion, between June 22, 1939, and July 11, 1939, of 12,673 acre-feet in excess of the 39,750 acre-feet allowed; and that in particular, with respect to meadowland ditches, Colorado permitted the diversion, between May 1, 1939, and July 11, 1939, of 24,775 acre-feet above the 4,250 acre-feet (measured at the headgates) specifically allowed for the meadowland appropriations (298 U. S., p. 586).

In defense, Colorado contends that the meadowland diversions in excess of 4,250 acre-feet were in accordance with Colorado law and were not inconsistent with the decree of this court until a diversion by Colorado from the Laramie River for all purposes reached the allocated total of 39,750; that the diversion of an amount greater than that total during the period above specified was with the acquiescence of Wyoming; and that Wyoming has not been injured.

Colorado pledges that hereafter its officials will administer the flow of the Laramie River in that State in accordance with Colorado laws and adjudication decrees until a total amount of 39,750 acre-feet, measured at the headgates, has been diverted, and when that total has been reached in any year Colorado can and will close the headgates and keep them closed during the remainder of the irrigation season.

In support of the contention that the diversion of more than 4,250 acre-feet for the meadowland appropriations should not be regarded as a violation of our decree, if the aggregate diversions in Colorado do not exceed the total allowed, Colorado presents a declaratory judgment of the district court of that State for the county of Laramie, entered February 2, 1939, in the suit of *Adelrick Benziger* v. *The Water Supply & Storage Co. et al.* That suit was brought on behalf of the meadowland appropriators in Colorado, and the defendants were the other appropriators in that State whose respective appropriations had been the subject of consideration in the suit in this court. Our rulings were examined by the State court, which concluded that they were intended to, and did, determine only the relative rights of the two States to divert the waters of the Laramie River and its tributaries and that it was not our purpose to withdraw the appropriations and water claims in Colorado from the operation of its local laws or to restrict the utilization of the waters in any way "not affecting the rights of the State of Wyoming and her water claimants." Accordingly the State court held that the fixing in our decree of the meadowland appropriations was intended only to bear upon the relative rights of the States and was not intended to be an adjudication of the relative rights of the decreed appropriations in Colorado; hence, that so long as the aggregate of the water diverted in Colorado does not exceed the total of 39,750 acre-feet accredited to the Colorado appropriations, as stated, they are subject to the laws of Colorado. In that view the court adjudged that the meadowland appropriators and the defendant appropriators were entitled to divert according to their respective priorities until they reached the amount of 39,750 acre-feet, and that when that amount had been diverted "all headgates are to be closed for the balance of the season."

A review of our decisions confirms the construction thus placed upon them. Suit was brought in 1911 to prevent a proposed diversion in Colorado of the waters of the Laramie River, an interstate stream. Voluminous evidence was taken, the case was thrice argued, and a final decision was rendered in 1922 (259 U. S. 419). After an elaborate consideration of the physical features of the region and the principles applicable to a determination of the rights of the respective States, the Court concluded that as both States had adopted the doctrine of appropriation, it was equitable to apply that doctrine and to determine their respective rights according to the rule of priority. The Court examined the evidence with respect to the flow of the stream, its variations, and other relevant matters, and found that the available supply—288,000 acre-feet—was not sufficient to satisfy the Wyoming appropriations and also the proposed Colorado appropriation. The Court found that there were some existing Colorado appropriations entitled to precedence over many of those in Wyoming. These included 18,000 acre-feet for what was known as the skyline ditch and 4,250 acre-feet for meadowland appropriators. These were not to be deducted, as the 288,000 acre-feet was the available supply after they were satisfied. The proposed Colorado appropriation which was in controversy in the suit was that known as the Laramie-Poudre Tunnel diversion, a part of an irrigation project known as the Laramie-Poudre project. The evidence showed that the Wyoming appropriations, having priorities senior to the one in Colorado, and which were dependent on the available supply above specified, required 272,500 acre-feet. Deducting that from the available 288,000 acre-feet, there remained 15,000 acre-feet which were subject to the proposed appropriation in Colorado. Accordingly a decree was entered enjoining the defendants from diverting more than 15,500 acre-feet annually from the Laramie River through the Laramie-Poudre project. The decree provided that it should not prejudice the right of Colorado, or of anyone recognized by her as entitled thereto, to continue to divert 18,000 acre-feet through the skyline ditch and 4,250 acre-feet through the meadowland appropriations (259 U. S. pp. 496, 497). Soon after this decree was modified so as not to prejudice a diversion by Colorado for the Wilson supply ditch (260 U. S. 1), a diversion which amounted to 2,000 acre-feet (298 U. S. p. 580). In this way the total allowed to Colorado amounted to 39,750 acre-feet.

In 1931, Wyoming brought another suit in this Court, alleging that Colorado was permitting excessive diversions and seeking the protection and quieting of Wyoming's rights under the former decree. Wyoming asked provision for accurately measuring and recording the quantities of water diverted and also an injunction re-

straining excessive diversions, if it were held that the former decree related only to the diversion by the Laramie-Poudre Tunnel appropriation. Motion to dismiss the bill was denied. We held that the former decree should be taken as determining the relative rights of the two States, including their respective citizens, to divert and use the waters of the Laramie and its tributaries; that the limited injunction did not warrant an inference that it marked "the limits of what was intended to be decided," but that the decree did define the quantity of water which Colorado and her appropriators might divert "from the interstate stream and its tributaries and thus withhold from Wyoming and her appropriators" (286 U. S. 494, 506–508).

Final hearing was had and the case was decided in 1936 (298 U. S. 573). Wyoming contended that while the decree fixed the amount of the diversions under the meadowland appropriations in Colorado at 4,250 acre-feet, the actual diversions had ranged from 36,000 to 62,000 acre-feet. Colorado answered that the greater part of this water was returned to the stream through surface drainage and percolation and that the part actually consumed did not exceed the amount which the decree allowed. The Court said that the amount of 4,250 acre-feet had been fixed as the measure of the meadowland appropriations because it was deemed sufficient for that purpose "when the water is rightly and not wastefully applied." The Court referred to the wasteful process that had been used. It was said that when water is so applied a considerable portion ultimately finds its way back into the stream, but that it was also true "that a material percentage of the water is lost by evaporation and other natural processes and there is no way of determining with even proximate certainty how much of the water returns to the stream." The Court then held that the decree referred to the water taken from the stream "at the point of diversion, and not to the variable and uncertain part of it that is consumptively used." As it was plainly shown that diversions were being made under the meadowland appropriations in quantities largely in excess of the amount fixed in the decree, an injunction issued forbidding further departures from the decree in that regard (id., pp. 581, 582).

With respect to the request for an order permitting Wyoming to install measuring devices for the purpose of determining the amount of water diverted in Colorado, the Court recognized that the problem of measuring and recording the diversions was a difficult one and the hope was expressed that the two States by cooperative efforts would find a satisfactory solution. Leave was granted to Wyoming to make a later application if the States were unable to agree (id., pp. 585, 586). It seems that measuring devices have been installed.

While an injunction was thus granted with respect to diversions for the meadowland appropriations in excess of 4,250 acre-feet, this was manifestly upon the assumption that Colorado was otherwise using the total amount of water allocated to that State. That it was not intended to restrict Colorado in determining the use of the water of the river, according to Colorado laws and adjudications, provided the diversions did not exceed the aggregate amount of 39,750 acre-feet to which Colorado was entitled, is clear from the ruling upon another branch of the case. It appeared that the diversion for the Skyline ditch had been above the amount allowed therefor, but that other diversions were less, so that, eliminating the excessive meadowland diversions, the aggregate allowance to the State would not be exceeded. Hence the Court found that it must consider Colorado's contention "that, consistently with the decree, she lawfully may permit diversions under any of the recognized appropriations in excess of its accredited quantity, so long as the total diversions under all do not exceed the aggregate of the quantities accredited to them severally" (id., p. 583).

The Court noted that in both Colorado and Wyoming water rights were transferable, and that the use of the water may be changed from the irrigation of one tract to the irrigation of another, if the change does not injure other appropriators; that these rules were but incidental to the doctrine of appropriation, prevailing in both States, upon which the decree had been based. The Court observed that it was not its purpose "to withdraw water claims dealt with therein from the operation of local laws relating to their transfer or to restrict their utilization in ways not affecting the rights of one State and her claimants as against the other State and her claimants." It was found that the diversions through the transmountain ditches had been made with the consent of the owners of the water rights and with the full sanction of Colorado, and hence the situation was not different from what it would have been if the owners of other claims had formally transferred parts of their water rights to the skyline owners. The Court said: "But the skyline owners are now permitted by the owners of the other claims and by Colorado to take and use part of the waters included in those claims. Wyoming and her claimants are in no way injured by this. No departure from the decree is involved. The thing which the decree recognized and confirms is 'the right of the State of Colorado, or of anyone recognized by her as duly entitled thereto, * * * to divert and take' the water included in the designated appropriations." The Court concluded that in the circumstances shown the skyline ditch diversions did not constitute an infraction of the decree (id., pp. 584, 585).

It is plain that the principle of this ruling, as applied to the transmountain appropriations which diverted the water of the Laramie River to another watershed, would certainly also apply to the meadowland appropriations within the same watershed, where part of the water diverted may find its way back to the stream. The limitation of the meadowland appropriations to 4,250 acre-feet was to keep the diversions in Colorado within the amount allowed to that State, not to prevent the distribution of the water thus allowed, according to Colorado laws, where there was no infraction of the rights of Wyoming and her water claimants.

We conclude that the decree is not violated in any substantial sense so long as Colorado does not divert from the Laramie River and its tributaries more than 39,750 acre-feet per annum.

In 1939, however, Colorado diverted more than that total amount. Apparently no question had been raised by Wyoming as to the diversions in 1937 and 1938. It is undisputed that when the diversions in 1939 reached 39,865.43 acre-feet on June 19, Colorado closed the head gates of the various appropriations within that State. But Wyoming alleges that Colorado wrongfully permitted the head gates to be reopened on June 22 and to remain open until July 11, thus permitting the diversion of 12,673 acre-feet in excess of the aggregate amount allowed to Colorado, despite Wyoming's protest. That there was this excessive diversion is not controverted.

Colorado insists that Wyoming has not been injured. But such a defense is not admissible. After great consideration, this court fixed the amount of water from the Laramie River and its tributaries to which Colorado was entitled. Colorado is bound by the decree not to permit a greater withdrawal and, if she does so, she violates the decree and is not entitled to raise any question as to injury to Wyoming when the latter insists upon her adjudicated rights. If nothing further were shown, it would be our duty to grant the petition of Wyoming and to adjudge Colorado in contempt for her violation of the decree.

But Colorado insists that the diversion of more than the allocated total during the season of 1939 was with Wyoming's acquiescence. That is the sole available defense. To support it, Colorado has presented affidavits showing communications between an association of meadowland appropriators and the special hydrographer of Wyoming and also stating that at a conference in the office of the Governor of Colorado on July 1, 1939, the officers of Wyoming said that they had no objection to continued diversions being made through the meadowland ditches for the reason that a great portion of the water so diverted returned to the Laramie River to be used downstream by Wyoming appropriators. Wyoming presents affidavits to the contrary, setting forth her demands. It is unnecessary to review in detail the points in controversy. In the light of all the circumstances, we think it sufficiently appears that there was a period of uncertainty and room for misunderstanding which may be considered in extenuation. In the future there will be no ground for any possible misapprehension based upon views of the effect of the meadowland diversions or otherwise with respect to the duty of Colorado to keep her total diversions from the Laramie River and its tributaries within the limit fixed by the decree.

For the reasons stated, the petition of Wyoming is denied, the costs to be equally divided.

It is so ordered.

Provisions of Reorganization Plan No. IV Affecting Civil Aeronautics Authority and Air Safety Board

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

Mr. HOUSTON. Mr. Speaker, the record of the Civil Aeronautics Authority since its establishment by the Congress in 1938 has been an enviable one, and in my remarks of April 11, 1940, I referred to the recent celebration of a new achievement in the progress of air transportation—the completion of more than 87,000,000 plane-miles and about 815,000,000 passenger-miles flown without a single fatality.

I stressed in that speech the need for enactment of my bill—H. R. 9049—which would authorize $125,000,000 to be expended by the Civil Aeronautics Authority for the development of landing areas, because it is my belief the Federal Government must participate to a greater degree in the development of a national airport system to keep abreast of the rapidly growing needs of air commerce and national defense and to retain leadership in world aeronautical affairs.

It was with great astonishment that I read of the President's proposal to transfer the Civil Aeronautics Authority

to the Department of Commerce and consolidate the functions of the Air Safety Board, which would be abolished, with the functions of the Civil Aeronautics Board.

Prior to the creation of the Civil Aeronautics Authority, the record of the old Bureau of Air Commerce, under the Secretary of Commerce, was intolerable—there was crack-up after crack-up, deficits of air lines were mounting, expansion and development of air transportation was at a standstill, the loss of lives and equipment was appalling, and the traveling public actually feared air transportation. There can be no justification under the name of reorganization, or any other, for a return to anything that remotely resembles the chaotic conditions prevailing at that time.

As far as can be learned, there has been no demand from the public, the air lines, the Civil Aeronautics Authority, the Department of Commerce, or in the Congress for this sudden and unheralded reorganization plan. The C. A. A. has gone ahead with its work without fanfare, but with exceptional efficiency, and a model agency is the result.

It is my opinion that we simply cannot afford to risk a change in the regulation of air transportation, but the opinion of the trained and efficient air-line pilots, who are in much better position to positively know whether or not anything would be lost or gained by the proposed reorganization, should be given more serious consideration.

Housing Program in Peoria, Ill.

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

Mr. DIRKSEN. Mr. Speaker, the city of Peoria is a thriving, aggressive middle western city in the heart of Illinois, with a population well in excess of 100,000. It was one of the first cities to take advantage of the housing legislation enacted by the State legislature by setting up a Peoria Housing Authority to deal with the problem of slum clearance and large-unit housing construction.

It was therefore possible for the United States Housing Authority to make an award of funds to the Peoria Housing Authority for the construction of an approved low-cost housing unit. This project is in most competent hands, and has been advanced with skill and vigor.

A recent staff report from the Peoria Housing Authority indicates that 1,093 units are presently under construction for a total contract cost of $3,616,700. The construction cost per unit is 12 percent below the estimated average for comparable units being built in that area by private industry and, therefore, compares most favorably. The project is moving ahead of scheduled time and it is interesting to observe that so-called credits and extras which so often run up construction costs, have not been approved up to the present time.

One of the difficulties often encountered in the razing of old structures to make way for a housing project is that of rehousing tenants without undue complaint. It would appear that every tenant who was dispossessed as a result of the demolition of existing old structures has been rehoused with little or no complaint.

About 82 percent of all labor and material which is being supplied by the general contractor on this project is being obtained from local sources and serves as a stimulant to local business. This project has no doubt served to stimulate private building in the residential field because the volume of residential building permits for the first 3 months of 1940 has exceeded the number of permits in any year for the last 10 years. Truly this is a compliment to the progress of the city; to the alertness of builders and developers; to the growing need for housing in Peoria and to the aggressiveness of this great city in moving forward.

It is reported that during the last year the combined efforts of the Housing Authority and the city health board has resulted in the elimination of more than 600 substandard structures. It is an indication of what can be done to improve housing standards throughout the country.

There has been a fine degree of cooperation between local banks, business enterprises, realty firms, social agencies, and public officials in giving support to the present housing program in Peoria. This is a fine testimony to the confidence reposed in the competency and integrity of those who constitute the Housing Authority and of the staff which drew the plans and is supervising the work.

The Bonus Army Rides Again

EXTENSION OF REMARKS

OF

HON. JOHN M. COSTELLO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

ARTICLE BY STANLEY HIGH

Mr. COSTELLO. Mr. Speaker, under the permission to extend my remarks in the Record which I obtained today, I wish to insert an article which appears in the current issue of the magazine American Mercury. I believe that the article will be of particular interest to the Members of the House in view of the fact that it indicates what we may anticipate in the way of veterans legislation in the event that the bill, H. R. 9000, is passed by the Congress. Not only does this article appear in the American Mercury, but Readers' Digest likewise prints the article in condensed form in the May issue. The article by Stanley High is as follows:

[From the American Mercury for May 1940]

THE BONUS LOBBY RIDES AGAIN

(By Stanley High)

A new tentacle from an old octopus quietly slithered into the Capitol during this session of Congress. If allowed to grow, it will suck from the Treasury of the United States an estimated $35,000,000,000. The money will be sucked from all the people; it will go to a minority who have no honorable claim upon it. That they will get it—the public be damned—seems likely. They will get it, barring the uprising of a public damned too often, because the power behind the octopus is the ex-soldiers' lobby. Between it and the till is only the Congress of the United States, which that lobby, despite the patriotic good sense of the vast body of ex-soldiers for whom it presumes to speak, long ago learned how to cow.

The tentacle itself looks harmless enough. Its first cost to the Government may be no more than $25,000,000 a year. Small change. That sum is for widows and orphans and dependent parents. Gallant gesture. In fact, so plausible has it been made to appear and so quietly has it been maneuvered that its approach has caused none of the outcry which, when it is too late, is almost certain to arise. Close up, the twenty-five million involved turns out to be important, not for what it is but for what it threatens. And the widows and orphans are first, not because of chivalry but as a shield. This particular arm is not operating in front of the women and children, but behind them.

The measure embodying this devious strategy provides pensions to widows and orphans of World War soldiers. The pension will not be confined to widows of soldiers who died because of disabilities incurred in the war. They are rightly pensioned already, none too generously, and nobody begrudges that outlay. Neither will it be limited to widows of men who went overseas. If on the eve of the armistice the Government drafted a young man into the Army, and if for 3 months he served his country in some pleasant cantonment, his widow—regardless of when or how he later died—will be qualified to collect. If she had a child by the former soldier, she will be qualified if her marriage to him took place at any time up to the passage of the measure, though it is 21 years since the war. If childless, she must have been married prior to July 3, 1919, when the war officially ended.

The amount she can collect will be limited, at this come-on stage of the game, to $20 a month, with $6 added for one child and

$4 each for additional children. The unpretentious $25,000,000 first-year cut will increase as time takes its added toll among ex-soldiers of the war. Within a decade the bill may be a billion a year.

If the ex-soldiers' lobby succeeds in getting this pension it is almost certain to be back next year, or some year thereafter, to push through pensions for all widows regardless of when they married. Such a procedure will conform both to the time-tried tactics of the lobby and to the precedents already set for widows of the died-in-bed soldiers of previous wars. At this session, for example, the House Committee has reported favorably a bill to pension, at $50 to $75 a month, widows who married veterans 40 years or more after the Civil War. The last pension-drawing widow of the American Revolution died in 1906. One pensioner of the War of 1812 is still collecting. On such a basis some purposeful young woman who marries a World War soldier late in his declining years will be collecting as a World War widow in the one hundred and twenty-eighth post-war year of our Lord, 2046.

But if history, precedent and the off-the-record statements of the ex-soldiers' lobbyists mean a thing, then it is not pensions for World War widows that are most portentously on the way, but pensions for the World War soldiers themselves. The ultimate, additional cost of that to the American pocketbook will exceed twenty billions. Already, bills to pension World War veterans 60 years old and above are before the House Committee. One, calling for $60 a month, would cost $112,000,000 a year at the outset, rise steadily for 10 years, then dwindle.

II

Soldiers' pensions are not a new American phenomenon. It has been a long-standing assumption that after every war we should have to pay our heroes. The northern veterans of the Civil War were pensioned. Two years ago Mr. Roosevelt signed a bill which granted $60 a month to all soldiers 65 years and beyond of our 100 days' war with Spain. That, said Mr. Roosevelt, was to set no pension precedent for the World War soldiery. "Theirs is a different case." The difference was not because patriotism among the organized soldiers of the World War had no monetary value. It was because Congress, with what proved to be futile foresight, adopted a nonpension plan by which to pay them.

Basic Army pay was fixed at $30 a month. That was twice the pay for the Spanish-American War. To every soldier honorably discharged the Government gave $60. That cost $244,000,000. War-risk insurance policies were taken out on the men in service. Three-fourths of the cost of this came from the Treasury. To date more than $2,000,000,000 has been paid out on those policies. Policies still in force (converted now to straight life insurance) total $2,500,000,000. To help the soldiers in their return to peacetime occupations, the Government organized a vast vocational training program. That cost $645,000,000. All in all, to protect itself against postwar raids on the Treasury, the Government spent $3,000,000,000. It was the fond, patriotic hope that with this unprecedented liberality the ex-soldiers would be satisfied.

They were—for something less than a year. When an American Legion caucus met in May 1919, the delegates rousingly agreed with "Young Teddy" Roosevelt that their objective was "to put something into the Government instead of subtracting something from it." But by November, when the first Legion convention met, the professional veteran had put in his appearance. The patriotism he preached had a golden glow. The convention plumped for the bonus—more palatably described as adjusted compensation. Since then the professional veterans and their supporting minority have had things pretty much their own way. Since 1919 they have bowled over, one after another, the obstacles which stood between the already well-rewarded ex-soldiers and a blanket pension.

The bonus itself was such an obstacle. In the bonus law, forced from Congress by the ex-soldiers—and over the veto of President Coolidge—the men received $1 for each day of service, $1.25 additional for each day served overseas, on the theory that this adjusted the difference between soldiers' pay and the wages of civilians. The grant was made in bonus certificates due to mature in 1945. But the far-sighted professional patriots were aware that by 1945, with the veterans passing middle age, the time would be ripe for a pension drive. They were aware also that such a drive could not very well be staged with the bonus falling due. The conclusion was inescapable; cash the bonus early, give the country a spell in which to forget, and then clear the decks for the supreme clean-up.

Consequently, and over the veto of President Roosevelt, the bonus agreement was broken under duress of the most arrogant lobby this country ever has seen, and the bonus was paid in 1936—9 years ahead of schedule. That cost the Government $3,732,000,000.

But there were other pension obstacles to be cleared. Early legislation had put the veterans actually disabled in the service of their country in a class by themselves. Laws were passed, none of them too liberal, to care for them and to compensate their dependents. The country emphatically approved. The service-disabled soldier was, to the extent of his disability, a just charge upon the Government.

That charge has been grudgingly met. Until 1938, when the amount was raised to $38, a bona fide World War widow—whose husband's death was a result of war service—received only $30 a month. The country undoubtedly would support congressional measures aimed at dealing more liberally with the actual casualties of the war. But since the dead do not vote and the votes of the war-wounded are few, the politicians are likely to continue to economize at the expense of the authentic veterans and open the spigot for the ex-soldiers. The first step in this direction came when the professional veterans began to force acceptance of the assumption that all ex-soldiers, war-disabled or not, are permanently privileged and a charge upon the Government. Part of their maneuvering went on, as at present, behind the widows and orphans. Prior to 1933, a widow could collect monthly compensation averaging $29.21 only if her ex-soldier husband had died from causes connected with the war. That sensible distinction was wiped out.

First, the lobbyists put through a bill which made it unnecessary for the widow to prove that her husband's death had any connection with the war. All she had to prove was that war had inflicted upon him a 30-percent disability. The coffers were opened, regardless of whether that disability had anything whatsoever to do with his passing. But the 30-percent-disability item made too great a distinction between the authentic and wounded veterans and the unharmed millions of ex-soldiers. Consequently, in 1937, the degree of disability necessary to permit the widow to collect—and regardless of the cause of death—was reduced to 20 percent. In 1938, it was further reduced to 10 percent. Last year regulations were further liberalized. The law once provided that the widow could not collect if the soldier's death was due to his own misconduct. That provision was eliminated. The law required that the widow should have had at least one child by her ex-soldier husband. That restriction was likewise removed.

The widows and orphans were the screen for a bigger maneuver. In 1933 Congress, wincing under the screws, decreed pensions to all permanently disabled soldiers regardless of whether or not their disability was traceable to war. Thus, ex-soldiers were lifted into the permanently privileged classification once reserved for the war-wounded. Thus, also, the principle of the Government's permanent obligation to support them was established.

This accumulated partial-pension legislation, up to June 30, 1939, had netted the ex-soldiers and their dependents $3,838,000,000. Then the drive was extended.

III

Immediately after the war the Government instituted a program of hospitalization to care for the bona fide war casualties. Today it is no longer necessary for ex-soldiers to have war-connected disabilities to secure free hospitalization in 84 institutions. In fact, since 1924, 75 percent, or 1,206,966, of all those admitted into veterans' hospitals have been treated for ailments not traceable to the war. The percentage is increasing. Last year it was 92 percent. For good measure, free dental service is also provided. Last year 72,000 ex-soldiers were given free dental treatment, at a cost to the Government of $1,000,000. Likewise, the Government guarantees, up to $100, a hero's burial for every ex-soldier. That, in 1939, cost $220,000 a month.

Thus, in addition to the $3,000,000,000 which the Government spent to provide just compensation and to protect the public till, the ex-soldiers have collected seven billion. And in the process the lobbyists have managed to get the ex-service man about where he needs to be to score his final and biggest killing: on a par with the pensioned war-wounded and with the pensioned dependents of the war-dead. The current measure for widows and orphans will just about complete that strategy. The widow will not be required to show that her husband was in any degree injured in the war, or that he ever got within 5,000 miles of the fighting. What she will have to show is an honorable discharge indicating that her late ex-soldier served, somewhere, for as long as 90 days.

It is already clear that pensions for all are hard on the heels of this proposal. The concluding plank in the current legislative platform of the Veterans of Foreign Wars is this: "Honorably discharged 65-year-old, 90-day World War veterans to receive pensions of $60 a month." Thus, after this long and costly maneuvering, the threat is in the open.

The most important personalities behind the threat are Col. John Thomas Taylor, head Washington lobbyist for the American Legion; Millard W. Rice, head lobbyist for the Veterans of Foreign Wars; and Representative JOHN E. RANKIN, chairman of the House Committee on World War Veterans' Legislation.

Taylor, handsome and husky, has grown gray at his post. The walls of his unpretentious office are lined with bound volumes which contain, as far as it is humanly possible to collect them, every important word that has been spoken on World War veterans' legislation. They will go, after the veterans' lobby has tottered from the scene, to the Library of Congress for posterity to view and marvel at. Almost single handedly, Colonel Taylor has made the Legion's legislative committee what it is today: the Capitol's most fear-provoking lobby. The colonel's friendliness has a hard-boiled undertone. He shrugs off his critics, sidesteps premature commitments, and chooses his words with political discretion. At an earlier period he eschewed "the bonus," preferring instead "adjusted compensation." Nowadays, he does not speak of "pensions." His word for it is "protection."

Millard Rice, of the V. F. W., is short, voluble, and emphatic. He is also less choosy. He "knows" that the Legion, behind the

scenes, is moving toward pensions. "The records show," he says, "that we generally anticipate the Legion's plans by about 2 years." Colonel Taylor, on that point, is suggestively wary. "This year," he says, "we are not pushing for pensions. As for the future, who knows?"

On Capitol Hill Mr. RANKIN swings in his swivel chair, ruffles his thinning but still unruly hair, and views the developing tide without alarm. Tides of this sort do not engulf him. He rides them. In defense of the current legislation which will pension the widows of the 90-day heroes he recently let Congress know that "this great country of ours does not neglect the man who bared his breast to the enemy in time of war." He, like Colonel Taylor, dislikes to speak of pensions. What he prefers to speak of is the necessity of granting "something" to the ex-soldiers at once lest "something bigger" be irresistibly demanded too soon.

When, generaled by this trio, the organized ex-soldiery of the World War get their pensions, they and their lobbyists will have sold patriotism for more money than it ever brought before in all the record of mercenary soldiering. It can be safely assumed that a majority of the World War's ex-soldiers, a majority also of the American Legion, desires no such highly dubious distinction. This developing crisis, as much as that of 1917, is theirs to meet. Only they can stop the threat of this new depredation. Only they can preserve, untarnished, some part of the uncalculating idealism with which their generation went forth to war.

The organization of Disabled Veterans, numbering 50,000, is not supporting the pension drive. The American Veterans' Association, 17,000 strong, is waging a gallant fight against it. But they are not enough. Officers and members of local capital Legion and Veterans of Foreign Wars posts and State organizations should realize what their Washington lobbies are doing in their name and take their stand against it. Many Legionnaires call themselves conservative, protest against Government spending, demand Budget balancing. Here is a chance for them to show their true colors.

The Relief Problem

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

RADIO ADDRESS BY HON. STYLES BRIDGES OF NEW HAMPSHIRE

Mr. DIRKSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of Senator STYLES BRIDGES, of New Hampshire, on the subject, The Relief Problem, April 21, 1940:

Ladies and gentleman of the radio audience: The relief problem is one of the major problems confronting America today. It is not just a cold governmental business proposition. It is a problem dealing with the unfortunate people of this country. It is the problem of seeing that they receive the basic necessities of life—food, shelter, and clothing. Unfortunately, providing relief and assistance to our unemployed has developed into the Nation's biggest business and has become the Nation's worst political football. It has been made so by the present New Deal administration itself.

Under this administration's conduct of relief, the exploitation of relief workers has become a demoralizing national scandal. This is not merely my opinion. The Senate Investigating Committee of 1938, which was composed, with one exception, of Democrats and was headed by an able and conscientious Democrat, MORRIS SHEPPARD, summed up this situation as follows, and I quote:

"The funds appropriated by Congress for the relief of those in need and distress have been diverted from these high purposes to political ends."

The issue to be discussed this evening is not whether we are to provide relief for the millions of unfortunate citizens in this Nation. Of course we are! The need must and will be met, regardless of the political party in power, so let us start off on that basis.

To my mind there are three questions which we are interested in tonight. They are—

(1) What is the most efficient method of providing relief?
(2) What is the most economical method?
(3) How can we eliminate politics from relief?

I believe that the answer to these three questions lies in the return of administration of relief to States. Why do I think this? Because the present centralized Federal administration of relief is clearly not the answer.

Let me discuss in a general way the defects of the present administration of relief and the improvement that would follow if that administration were returned to the States.

It was very necessary that the Federal Government acknowledge its responsibility to the Nation and take the first steps toward providing Federal assistance. But it was not necessary to make a permanent Federal bureaucracy which has lost sight of its primary purpose and has become a political weapon of power and control.

The New Deal has centralized relief as it loves to centralize everything. They have sacrificed initiative, local responsibility, and efficiency much to our national detriment. The more we centralize our Government, the more we remove responsibility from the States, counties, cities, and towns, the more we weaken democracy.

Some new dealers say we cannot decentralize our relief set-up. They say there is too much politics in local government. Why, I could give them national relief scandals all night here and continue indefinitely.

The job the various relief agencies have been doing in the country varies in different States, due to the integrity and efficiency of the State and local administrators. Some have been doing good jobs. They have refrained from political activity as much as possible and still maintain their own jobs. For those administrators I have the highest respect, for I know the conditions under which they have had to work. I know the pressure which has been exerted on them by the political bosses of their State and the Nation.

The President's removal, after the exposure of the W. P. A. scandals in 1938, of Mr. Harry Hopkins as Administrator, and Mr. Aubrey Williams, as Deputy Administrator, as well as lesser henchmen, were good political moves. The need for their services along this line was ended. They had carried out the work of the master faithfully, but with rather poor results. In the last elections, the people awoke. State after State, district after district, as a result of this issue, went against the administration in power.

But still the administration hasn't learned its lesson. The President, in his Budget message, promised that work relief expenditures this year would be reduced $500,000,000. From an economy point of view, I think any reduction in national spending is fine, provided our needy do not suffer by it. But this arbitrary reduction plan was based only upon the President's hope that private business would take up the slack.

And again, Congress is faced with the administration's new plan to appropriate a year's relief money to be spent in 8 months starting July 1. Could the fact that this huge appropriation could be mostly spent just prior to the coming very important national election have anything to do with it? I hope not.

There is no need for me to keep repeating the past sins of the relief problem except for a background for constructive action.

My belief is that our relief system should be decentralized. The responsibility for the administration of relief should be returned to the States, the counties, the cities, and the towns.

My definite suggestions are as follows:

First. That the present Federal relief set-up should be abolished. It has cost $18,000,000,000. It has used all the 26 letters of the alphabet to make a complicated, contradictory, inconsistent, and wasteful bureaucracy. It has dealt with a situation which has not yet been solved, and has tried to do a job that has been only partially done.

Second. The Federal Government must provide funds to supplement those of the local governments. I am not advocating that the States and the communities bear the entire cost of relief. Of course they cannot and I am not suggesting that they should or could. Federal assistance should be in the form of grants in aid to States and the subdivisions thereof, upon a proper basis, upon a definite formula, and as the need arises.

Third. A definite formula can be set up for the apportionment of these funds in order to fairly meet these needs in an American way. They can be met efficiently, without waste, and without political corruption. The formula to meet these needs should be based upon such factors as the number of unemployed, the population, the resources of the State and local units, together with any other factors which measure a unit's ability to meet its own relief problems.

Fourth. The prerequisite to receiving Federal grants should be the establishment of local nonpartisan agencies for the administration of relief, and last:

A Federal agency should be set up limited in personnel, and bipartisan in character, to check the governmental subdivisions receiving grants; to see that the money has been spent for the purpose for which it was granted, and to maintain the minimum standards for the relief program.

In conclusion, ladies and gentlemen, it is my earnest hope that in the years to come the relief problem will become less pressing. But as long as it is a major problem, I believe that we must decentralize and return the administration of relief to the States.

Westover Field, Chicopee, Mass.

EXTENSION OF REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

ADDRESS BY HON. CHARLES R. CLASON OF MASSACHUSETTS

Mr. CLASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech I made at the breaking of the ground for the first permanent building, the laboratory for photography, at Westover Field, Chicopee, Mass., on April 6, 1940:

We have gathered here today for the breaking of ground in preparation for the construction of the first permanent building at Westover Field. This act marks the beginning of another era in the military life of New England and the Northeast.

Three hundred years ago this great reservation was controlled by the people of another race and of another color. In the inexorable march of progress, with the coming of the white race to western Massachusetts, these lands became prosperous farms which the early pioneers developed. Out of the wilderness of those early days a great peaceful farming community developed. For two centuries many generations descended from these early pioneers tilled these fertile acres. Now the Federal Government has found it necessary, in order to provide adequate military defense for its people, to establish huge air bases at strategic points. Chicopee was selected as the site for the northeast air base. This selection was made only after the most careful study and examination of all possible sites for such an extensive airport from Maine to Pennsylvania.

A few years ago the Wilcox bill was passed, which permitted the Secretary of War to select such sites for these air bases as he believed best located and suitable for the purposes of the Army. Because of this legislation it was not necessary for the War Department to secure the approval of Congress for any particular bases which it determined to use. An Army board, consisting of officers believed to be the most expert and able for that purpose, spent many weeks checking on all the information which was placed before it before selecting the location of the northeast air base. Many months ago former Mayor Stonina and Secretary Pimental, of the Chicopee Planning Commission, brought a part of this location to my attention. They furnished me with blueprints. This information I brought to the attention of the War Department, and it was turned over to this board. Thereafter, on several occasions I went to the office of the Chief of Air Corps, Maj. Gen. H. H. Arnold, to bring to his attention some new advantage which had been disclosed about this site. Today Major General Arnold stands out as the foremost authority in the United States on any military matter having to do with the science of military aviation. It is inconceivable to me that any man can be beset with more intricate and difficult problems than confront him. Starting without any adequate historical background, it has devolved upon him in the midst of a great European war to develop and to expand one of the three great branches of our national defense.

The people of the United States are indeed fortunate to have the services of General Arnold in this crisis. With all of his problems, he is, nevertheless, a kindly and a friendly man. Perhaps I might be pardoned if I mention one of the many trips I made to his office. On this particular occasion former Mayor Stonina and Postmaster Kennedy accompanied me. After I had made arrangements for our conference the three of us planned exactly what we desired to learn, if possible, from General Arnold, and what we intended to bring to his attention. When the interview started the Chief of the Air Corps was invariably addressed as major general. As the interview proceeded I recall that Mr. Stonina wanted to know what advantages Chicopee could expect from having the airport in its midst, if this site were selected. General Arnold told us that there would be the advantages of a large monthly pay roll, and also that a large share of the supplies used at the post for food and other purposes would undoubtedly be bought in its vicinity. Toward the end of the meeting General Arnold led the three of us over to a wall map of the United States. He produced a pencil and gave us to understand that in selecting a site for a base of this type there were several different things which had to be taken into consideration. One of them apparently was the distance that a field should be from foreign territory and from the ocean. With his pencil he somewhat hastily drew a line down through the northeastern section of the United States to emphasize the point that the site had to be north of that line. I think the eyes of all three of us were glued intently on the progress of that pencil as it approached the city of Chicopee, and to this day I doubt whether any of us knows whether or not General Arnold drew that line north, south, or through the center of this reservation. At least we felt, as we left the conference, that no other place in Massachusetts would be selected if that was a dominating factor. To my chagrin my constituents had become so interested and so excited in the course of the long interview that they apparently lost their military senses. During the last 5 minutes that we were in the office I would wager that each one of them, not once but on several different occasions, addressed General Arnold either as colonel or major. When they demoted General Arnold to the title of major I discreetly ushered them out of General Arnold's presence, fearful that such a gross indignity as they were inflicting upon him might react unfavorably on our mission. I know that General Arnold enjoyed the situation from the twinkle in his eyes. We certainly had a good laugh over it as we drove away from the War Department. Colonel Speaks likewise spent much time and effort in bringing this matter properly to the attention of the War Department.

At that time it was not possible to determine what efforts proponents of sites in other States were making. I was acutely aware, however, that Congressman CASEY, of the Third District, and Mrs. ROGERS, Congresswoman from the Fifth District, across the borders of whose districts Fort Devens extends, were exercising every effort to have the base located at Fort Devens. I was attending a session of the House when two or three newspapermen called me into the lobby one day to tell me that President Roosevelt had just announced that the Army board had decided that Chicopee was the best site for the northeast air base, having made this fact known at the White House while Congressman CASEY and Congressman MCCORMACK were there to press the advantages of Fort Devens.

From that day on the selectmen of Ludlow, the city officials of Chicopee, former Mayor Stonina and your present mayor, Leo Senecal, the county commissioners, and Governor Saltonstall have attempted in every way to iron out problems which confronted the Army officials in preparing this site for actual construction. That they have done their work well is attested by the ceremonies which are being conducted here this afternoon. Last fall, I first met Major McFadden, who had been placed in charge of the construction at Westover Field. Major McFadden is one of those persons whom you like from the moment you first meet him. In Washington I was told that he is one of the outstanding and coming Army officers in his field. He has already been given the difficult task of supervising the early stages of construction at other important Army posts. A great tribute was paid to his ability by his superiors when they selected him for the similar difficult task at Chicopee and Ludlow. Already we see about us the beginnings of the temporary barracks which will be ready for the use of the enlisted men to be stationed here. We see the results of the arduous labor of many hundreds of men during recent weeks. Shortly, at this spot where we now stand will arise a permanent laboratory for photography, one of the many structures planned to be built in the months to come, until such time as this air post shall become an established unit.

It is with real pleasure, and I am sure it is a source of gratification to all of you who are here, to know that the old and highly respected local construction firm of J. G. Roy & Sons Co. was awarded the contract to construct this building. Members of the Roy family have been leaders in our community for many years, and we all know that this building will typify the high standards which they have set in all the construction work they have carried on.

As a member of the Subcommittee on Aviation of the great House Military Affairs Committee, it was my privilege and duty during last November and December to inspect 18 Army posts, 14 air bases, many coast defenses, and 8 private airplane factories in a trip by air transport along the Gulf States and Texas, at the Panama Canal, along the Pacific coast, and across the central and northern part of the United States. Having Westover Field in mind, it was particularly interesting to me to see the great improvements which have been made in the construction of the later air bases as compared with the earlier ones. I am sure that all of us are going to be astonished at the great military institution which will rise on this national reservation during the next few months. I was also amazed to see the great airplanes of various designs which were under construction in the factories. I was gratified at the precision of our air forces as they maneuvered at different posts and at the accuracy of the bombing tests which I witnessed. Within a short time all of us will see similar maneuvers carried on in Hampden County. From the headquarters established at this point activities will radiate through New England and the Northeast States. Chicopee has already become known as one of the most important aviation centers wherever such matters are discussed.

In closing, I wish to congratulate the Army officials upon the progress which they are making in bringing this air base into being, and I am sure that all of us in western Massachusetts are grateful to them that they have made it possible for this air base to be established here.

The War Department has selected the name of Westover Field for the Northeast Air Base. When I first went to Washington as your Congressman, Maj. Gen. Oscar Westover was the Chief of the Air Corps. I was fortunate in being associated with him on many occasions when matters concerning the Air Corps came up before the Military Affairs Committee and at air events in New York and elsewhere which both of us attended. He was a man of the highest ability, with a very keen interest in his lifework of bringing

the Air Corps to the highest state of efficiency. He was respected as a most sincere man by all who came into contact with him. The people of the United States suffered a great loss when his career was brought to an untimely close in an accident which occurred in the line of his duties. I know that all of us will be proud of Westover Field, not only because of its own merits but because it will always stand as a memorial to a brave soldier and patriot.

More "Spinach"

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

Mr. BRADLEY of Michigan. Mr. Speaker, the President is reported to have said that all arguments against Reorganization Plan IV, insofar as they apply to the contemplated return of aviation to the political domination of the Department of Commerce, are "a lot of spinach."

More "spinach" continues to pour into my office every day from those within the aviation industry and who must, therefore, be justly considered as knowing something about the past and present, and regulation of that great, comparatively new method of transportation, and therefore are justly alarmed about any future regulation.

This morning, as did other Members of this House, I received the following telegram from Mr. Moss Patterson, president of the Southwest Division of the Air Congress of America, now assembled in convention at Tulsa, Okla.:

The directors of the Southwest Aviation Conference, representing New Mexico, Colorado, Texas, Oklahoma, Kansas, Louisiana, Arkansas, and Missouri, in meeting today, unanimously agreed that the Civil Aeronautics Authority has gone far during its existence to justify the faith placed in it by the people of the United States. Therefore, the directors of this conference, in annual session in Tulsa, Okla., with over 500 delegates in attendance firmly believe that the Civil Aeronautics Authority should continue to operate as an independent agency and urge that the Congress of the United States oppose the placement of the Civil Aeronautics Authority and the Air Safety Board under the Department of Commerce. More complete consideration and study of this matter will be placed before the conference for action on Saturday, April 27.

Respectfully.

If this is "spinach," I sincerely recommend it to my colleagues in the House and suggest that they digest it carefully. I am sure that this, and much other "spinach" I have received, if properly digested will give them more than enough strength to vote their honest convictions in opposition to Reorganization Plan IV.

It has been said that the air-line operators have not expressed themselves in opposition to Reorganization Plan IV. Mr. Speaker, one is very often meek and quiet when the sword of Damocles hangs heavy over one's head. Therefore, it seems to me that it is conceivably possible that the fact that these air lines are now indebted to the Government, through its Reconstruction Finance Corporation, to the extent of $11,548,268 may in some small measure at least account for this strange silence.

It was reported to me today by the Reconstruction Finance Corporation that they have outstanding direct loans to the air lines in the amount of $8,260,768, in addition to which, $3,287,500 of R. F. C loans have been taken up by the banks. These latter loans are of two types; one, where the banks agree to make the loans authorized by the R. F. C., with the latter agreeing to buy back a certain part of the bonds, up to as high as 80 percent, if the bank must liquidate the loan; and in the second case it includes those loans where banks and the Corporation each agree to buy up a portion of the bonds.

Mr. Speaker, I also suggest to my colleagues in the House that they carefully digest the "spinach" contained in a letter which many, if not all, of us received today from Mr. David L. Behncke, President of the Air Line Pilots Association, and which has just been inserted into the Record as part of the remarks by my colleague from Minnesota [Mr. MAAS].

The Rankin Bill

EXTENSION OF REMARKS

OF

HON. PIUS L. SCHWERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

ADDRESS BY HON. PIUS L. SCHWERT, OF NEW YORK

Mr. SCHWERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I beg to insert an editorial which appeared in the Buffalo Evening News of April 19, 1940, and my reply to this editorial made at joint installation exercises of Casimir Pulaski Post 1397, Veterans of Foreign Wars, and the ladies auxiliary thereof, on April 23, 1940. Speaking before the above-mentioned joint installation exercises I briefly discussed Veterans' Day at Erie County Fair, the war situation, and the Polish relief measures before the present Congress. Following these items, I took up the matter of veterans' legislation, my remarks being as follows:

Comrades, your invitation asked me to discuss the matter of veterans' legislation before the present Congress. I have sent a brief résumé of this legislation to the commander of every post of the American Legion and the Veterans of Foreign Wars in Erie County. In addition to this résumé, probably the best explanation I can furnish you this evening would be by using the balance of my time in making direct reply to an editorial appearing in last Friday's Buffalo Evening News. In order to do this I read you the entire editorial, as follows:

"SCHWERT FOR PENSION GRAB

"Representative PIUS L. SCHWERT has given his support to the 'pension push.' He has signed the petition to discharge the House Rules Committee from further consideration of the Rankin bill. Under this measure childless widows who married veterans before July 2, 1921, when the war officially ended, would receive $20 a month, those with one child $28, and so on. These are women whose husbands died from no causes connected with the war.

"It is hardly believable that the Rankin bill has the support of a majority of the World War veterans. Most of them must hold that the greatest peacetime service they can render is to throw all their influence on the side of governmental economy and reduced expenditures. The American Veterans' Association says that the Rankin bill is 'an election-year assault on the Treasury adroitly conceived while the attention of the country is focused on European hostilities.' The people of the Forty-second District may well believe that political considerations prompted Representative SCHWERT to sign the Rankin petition for this pension grab."

Taking up the reply to this editorial, I will proceed in an orderly manner from the beginning to the end thereof.

In the heading and in the first sentence the words "pension grab" and "pension push" are the same terms used by the bigger income-tax payers and big business, which have always been opposed to every single piece of veterans' legislation ever passed in this country. Possibly the writer of the editorial is representing this group. At any rate, I doubt if he is a veteran; and the veterans may always expect opposition from these sources.

Replying to the next sentence, I am glad to admit that I signed the petition to discharge the committee from further consideration of the Rankin bill. If the writer of the editorial will contact me at any time he will find that I am not one to alibi for any action taken, and it will not be necessary for him to guess as to the reasons for said action. First of all, a petition to discharge a committee from further consideration of any bill is simply a method used to bring that legislation onto the floor of the House for discussion. A Representative, as a matter of fact, might be opposed to legislation covered by a particular discharge petition; and yet he might deem it worthy of consideration by the entire House membership rather than by an additional small committee of the House. Bringing it before the House membership as a whole for general discussion and debate often results in amendments to legislation covered by discharge petition, said amendments making the legislation more satisfactory; and it is possible to make good legislation out of what might not appear to be exactly what the signers of the discharge petition desired in that particular bill. In this

case we had a discharge petition covering new veterans' legislation. Legislation of similar type was passed in this country at a shorter interval after the Civil War than the time which has now elapsed since the World War. I considered this legislation worthy of further consideration and debate and therefore signed the discharge petition bringing it to the attention of the entire membership, though final passage may not result.

As to what H. R. 9000, known as the Rankin bill covers: The editorial partly covers the measure's contents in the next sentence. May I give the following additional information: The provisions of this bill are more restrictive than similar existing legislation applicable to widows and children of prior wars, and this bill requires a widow to prove dependency under regulations to be prescribed by the Administrator of Veterans' Affairs. The bill provides an income limitation, but from a practical standpoint this will affect solely the rights of children. A further restriction requires that the widow must have been married to the veteran prior to July 3, 1921 (prior to or during the World War). Compensation shall not be allowed a widow who has remarried, nor shall it be allowed in cases where there has not been continuous cohabitation from date of marriage to date of death of the veteran.

Thus, briefly, this measure allows compensation to widows who can prove their dependency, whose marriage to the veteran occurred prior to final ending of the World War, and who can properly satisfy other marital-relationship requirements, in the sum of $20 per month and an additional small allowance for children of these widows up to a limited amount. In my humble opinion, these requirements give us a type of legislation which has been brought to the minimum in every way: (1) Proof of dependence is necessary, and this is not true in veterans' legislation covering previous wars. (2) The widow must have married the veteran prior to the official ending of the World War. This in comparison with recent legislation covering Civil War widows, which allowed marriages 65 years after the Civil War. (3) Continued marital relationship must be proven, and this is a new feature in this sort of legislation. (4) Compensation under this legislation amounts to $20 per month to widows. This in comparison with widows of the Civil War veterans, who have received $40 per month for years; and the last legislation introduced would increase this sum from $40 to $50 per month. Thus, in my humble opinion, from every possible angle, this first bill covering pensions to widows of the World War has been reduced to what we might term an irreducible minimum.

As to the cause of death of the husbands of these widows, practically everyone agrees that legislation pertaining to our older people is necessary. These widows will soon be in that classification. The veterans of the country believe that widows of veterans should be under the care of the Veterans' Administration and not subject to local relief agencies. Such action would afford them all treatment of the same character. A widow in Mississippi would receive the same consideration and compensation as a widow in New York State, and this is not true under present relief agencies. We believe that any veteran's widow is entitled to the same treatment and the same consideration as any other veteran's widow, regardless of place of abode. Let's treat them all alike. At present many veterans' widows are on relief or on W. P. A. rolls. This measure would simply remove this group from those rolls and place them under supervision of the Veterans' Administration. I believe that the widow of a veteran who served his country honorably in time of war ought not to drag his orphan children through the breadline to get something to live on after he has passed away, especially when, as is true in many cases, the disease from which he died or the trouble which caused his death was incurred in line of duty, though he might not have been able to officially prove "service connection." Having served as a member of the review board, I know how difficult it is to prove service connection. This was true as far back as 1933, and it is even more difficult now, due merely to the lapse of time and the inability to procure affidavits necessary to establish service connection.

Now, as to the next two sentences: I believe every veteran favors economy insofar as it is practicable. At the same time they do not favor economy legislation detrimental to the welfare of veterans, their widows, or their orphans. As to the support of the Rankin bill by the majority of the veterans who served in the World War, may I state that having had the privilege of serving on the World War Veterans' Legislation Committee, I know that every possible opportunity is given everyone who desires to be heard on any bill under consideration by that committee. At the conclusion of these hearings and a report from the Veterans' Administration, a bill is drawn up by the committee comprising items satisfactory to these groups. H. R. 9000, referred to in this editorial, was drawn up in this manner, after legislative representatives of the American Legion, Veterans of Foreign Wars, Disabled American Veterans, and other groups and individuals had been heard by the committee. The membership of this committee is almost 100 percent veterans, and the Rankin bill was voted out of committee unanimously. The discharge petition was placed on the Speaker's desk April 15 at about 3 p. m. I had been called out of the House Chamber for a conference at about 2:30 p. m. Returning to the Chamber at about 4:30 the discharge petition was called to my attention. I went immediately to the Speaker's desk and found that in the hour and a half preceding 90 Members had signed the petition and that I was ninety-first thereon. On Wednesday the required 218 signatures had been secured, and when the two hundred and eighteenth signature was placed on the petition 8 or 10 more were waiting to sign it. Much could be said about those who signed this petition. Time does not permit sufficient enlargement thereon. Some of those signing the petition are amongst the strongest-minded economy group in the House. Practically every veteran who had the petition called to his attention signed it. The list of signers included approximately 125 Democrats, 1 representative of American labor, with the balance of the signers being Republicans, including my friend, STEPHEN BOLLES, who recently addressed the Lincoln Dinner in Buffalo, and my friend and colleague from Erie County, the Honorable J. FRANCIS HARTER. This brief statement of facts should show the support the discharge petition had both from the viewpoint of the veteran and from the viewpoint of the House membership generally.

As to the statements made by the American Veterans' Association, the writer of the editorial is probably not aware of the fact that the representative of that organization was expelled from committee hearings during this session of Congress; and therefore that organization would be expected to make just the sort of statement made in the editorial. If the writer is really desirous of obtaining veterans' views I would suggest that he obtain statements from other veterans' organizations—such as the Veterans of Foreign Wars, a unit of which I now have the pleasure of addressing.

And now to the final sentence of the editorial: First of all, I note that immediately following this editorial is another one beginning, "A free press." Under the freedom of press allowed in this great country of ours this last sentence is, of course, permissible. By the proper use of words the writer remains within the law, but he presupposes certain things and thereby puts words or ideas which are absolutely false into the minds of the public. He may believe himself to be a mind reader. If so, this sentence is a poor sample of his ability. On other occasions when the News has desired individual views or information they have sent a representative to obtain them. This is the proper method of handling such items, rather than using the method of presupposing, reading one's mind, or whatever you want to term it, and then publishing false inferences rather than facts. No newspaper representative has ever found me ducking him or being partisan. As a matter of fact, while serving in public office, either as county clerk or as Representative, my actions have been strictly bipartisan and nonpolitical. If the editorial writer would act in like manner he would be better serving his great paper and our excellent community which that paper serves. I believe these statements will explain my position relative to reasons for signing discharge petition on the Rankin bill, and I assure you that I am pleased to have had this opportunity of discussing this subject with the veterans and the Ladies Auxiliary of the Casimir Pulaski Post, 1897, Veterans of Foreign Wars.

Amendment of the Wage-Hour Law

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

TELEGRAM FROM PRESIDENT OF THE AMERICAN FARM BUREAU FEDERATION AND LETTER FROM THE NATIONAL COOPERATIVE MILK PRODUCERS' ASSOCIATION

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram and letter:

WASHINGTON, D. C., *April 25, 1940.*

Hon. JOSHUA L. JOHNS, M. C.,
House Office Building, Washington, D. C.:

Urgently request you support Barden bill amendments to Wage-Hour Act. Unreasonable construction of "area of production" by Wage-Hour Administrator makes amendment of act imperative. Farmers producing perishable and seasonal commodities already receiving less than parity prices and income, cannot stand increased costs in marketing of such commodities.

EDWARD A. O'NEAL,
President, American Farm Bureau Federation.

THE NATIONAL COOPERATIVE
MILK PRODUCERS' FEDERATION,
Washington, D. C., April 25, 1940.

To Members of the House of Representatives:

In the interest of all agriculture our organization, which represents approximately 350,000 dairy-farm families, urgently requests the passage of the Barden bill (H. R. 7133) to amend the Fair Labor Standards Act.

The Barden bill not only clarifies the wage and hour exemption provisions of the law but reiterates and carries out the original intention of Congress to exempt operations of employees engaged in the preparation of farm products for market. While specific exemption of such operations was provided for in the wage-hour

law, the unwarranted and unreasonable definitions given "area of production" and other terms contained in that act by the Wage and Hour Administration have, for the most part, nullified these exemptions and have deprived farmers of their benefit.

Denial of these exemptions results in saddling increased production costs on the farmers. This tends to widen the existing disparity between prices farmers receive and pay at a time when farm prices and income are still below the parity level which Congress in the general farm program has provided as the goal to be reached.

It is vital to American agriculture that the Barden bill be passed. The passage of the bill gives needed relief to agriculture and insures preservation of the specific exemptions which Congress provided in the original wage-hour law with respect to employees engaged in preparing farm products for market.

The bill has the support of the major farm organizations of the country which are sincere in their belief that the wage-hour law has not been administered consistent with the express intention of Congress when it passed the law.

We accordingly respectfully urge that you support the Barden bill, H. R. 7133.

CHAS. W. HOLMAN,
Secretary, the National Cooperative Milk Producers' Federation.

Statement on State-wide Unemployment Insurance Reduction Plan as Provided in Social Security Act Amendments of 1939 (H. R. 6635) as Passed by the House of Representatives

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 26, 1940

STATEMENT

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

The State-wide unemployment insurance reduction plan (so-called McCormack or Massachusetts plan) as passed by the House of Representatives in 1939 (H. R. 6635) provided that any State could make a flat or horizontal reduction in contribution rates if the State law provided certain reserve and benefit provisions. These were as follows:

1. Reserve fund: 1½ times highest contributions or benefits in preceding 10 years.
2. Duration of benefits: 16 weeks or one-third of wages in base year, whichever is less.
3. Minimum: $5 per week.
4. Maximum: At least $15 per week.
5. Benefit rate: 50 percent of earnings.
6. Waiting period: 2 weeks.
7. Partial benefits: Required.

Any State which did not wish to take advantage of this plan was required to maintain contributions averaging 2.7 percent.

It was estimated at the time this plan was discussed by the Ways and Means Committee that all but about five States would have been able to take advantage of the reduction plan during 1940. If these States would have reduced their tax rates to about an average of 2 percent the savings to employers would have been between $200,000,000 and $250,000,000. It is possible that the States might have reduced employers' contributions even more than this amount on the basis of the present favorable employment conditions which have materialized.

Practically no criticism was directed at the benefit provisions included in the plan. In fact, many States have provisions substantially more liberal than those required by the plan. For instance, in six States (Maine, Montana, North Carolina, Ohio, South Carolina, and Tennessee) benefits are paid for a flat duration of 16 weeks. In Massachusetts benefits are payable for as long as 20 weeks. In California, benefits range from 16 to 26 weeks.

It is estimated that the benefit provisions if required of all States would have increased benefits about 20 percent on the average for all States in the country. But the plan was an optional plan and only those States would have had to take advantage of the plan that felt they could reasonably and safely do so.

Since 1939 the State reserve funds have continued to grow. The reserve funds of the States already exceed $1,600,000,000 and by July 1, 1941 (the earliest time any State legislation normally can be effective), it is estimated that the reserves will total about $2,250,000,000 at the present rate of contribution collections and benefit payments. In Massachusetts, the reserve fund is already twice the highest tax collections, while in Wisconsin the reserve fund is over three times the highest tax collections.

The inadequacy of the existing benefit provisions and the growth of the State reserve funds indicate the need for Federal legislation to remedy this paradoxical situation.

As One Editor Sees It

EXTENSION OF REMARKS
OF
HON. J. THORKELSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 26, 1940

ARTICLE FROM APPEAL TO REASON

Mr. THORKELSON. Mr. Speaker, the following article from a paper entitled "Appeal to Reason" is a brief description of the manner in which the rulers of the British Empire operate to satisfy their own greed. This article, I would say, is a fair, unbiased viewpoint, and even favorable to the British Empire, for the writer has not revealed all that could be said about the rulers of England. I have asked to insert this in the RECORD in order that the people throughout this Nation may be informed of the manner in which the internationalists conduct business in the British Empire.

[From Appeal to Reason, Syracuse, N. Y., April 6, 1940]

WHY WE HAVE WARS

First let me admit that I am scared stiff when I think of bringing before our people some of the following explanations of "why we have wars," for being called a "Hitlerite."

Let me tell you emphatically that I am not a Hitlerite.

The foundations and motives of all modern wars are economic. In other words, "trying to get something to eat."

In some countries they get a handful of rice and a bit of dried fish. In another they get pig hockies and sauerkraut, or mutton. In France, horse meat is considered a delicacy, while we in America prefer porterhouse steak, pork, and lamb chops. We have radios and refrigerators and our own automobiles to ride in. The general method of locomotion is very different in France, Belgium, Holland, Denmark, Norway, Sweden, and Germany. In these countries the workers and their families ride on bicycles. But the English still walk.

Why is this a fact when Great Britain has access to all necessary raw materials and food supplies to supply her peoples. The largest metropolitan city in the world is in England and its three outstanding factors are slums, poverty, and unemployment. A most beneficent Lord has blessed London with a perpetual fog to hide its poverty, misery, and squalor. England has never been without its great army of wretched unemployed and the dole. Being blessed with all these raw materials and food supplies from natural resources, England and her vast empire have the lowest standard of living of any of the other modern countries.

During the last 150 years the British Empire has been engaged in 55 wars, with France next on the list, having had 32. Germany, Russia, and Italy have gone to war less than 10 times during that time.

Beginning with the Franco-Prussian War of 1870, Prussia needed the coal and iron deposits in Alsace-Lorraine for the development of machinery and the steam engine. She went to war against France and wound up with Alsace-Lorraine and its coal and iron deposits. "Might having always been right," as so adeptly proven by the British Empire's history, should justify Prussia in this conquest of Alsace-Lorraine because it was an economic necessity to cope with their dire need of iron and coal.

Then came the Boer War of 1900. With it the rape of Transvaal and the Orange Free State in South Africa by England. The reason was again because of economic necessity.

The diamond market is controlled by the Beers Co. through their close control of the rough-diamond market in London. Therefore the price of diamonds is controlled by this company. The principal market for polished diamonds is in Amsterdam, Holland, where two-thirds of the diamonds in the world are cut and polished. The cost of production of a 1-carat stone is about $10, but through the strict control of scarcity the Beers Co. makes them highly valuable.

In the Transvaal and Orange Free State were large sections of diamond and gold deposits. They were of little interest to the Boers because they were a simple people who were content to cultivate their fields. However, the British harbored a fear that other foreign capitalists would gain control and exploit these deposits

that would result in a price war. That is why the British decided to rape these small independent countries.

Having been born in Holland, we were aroused to the heights of emotionalism at that time, as we are today over Finland. While morally Great Britain was not justified in destroying these two Republics, economically she was; by attempting to preserve the price structure of the diamond market throughout the whole world.

In 1905 Japan went to war with Russia of economic necessity in order to gain a foothold in Asia and accomplished this end by acquiring the port of Port Arthur and Korea.

Prior to 1914 Germany had raised her standard of living until it was second only to ours, through her ingenuity, efficiency, technological development, and perseverance. For a country of poor natural resources this was very remarkable and became as a thorn in the side of the British Empire, where the standard of living was so far below the German standard. British jealousy flared and resulted in a campaign of connivance with other countries to promote the economic strangulation of Germany. Germany resisted as best she could by going east with the famous road to Baghdad. Stopped by the British again, Britain allied herself with France through a promise of the return of Alsace-Lorraine, which she fulfilled. Italy came in later with similar promises which were forgotten after the war was over.

The military war ended in 1918 and the economic war started all over again immediately. The German people were promised a just peace if they would get rid of the Kaiser.

They sure gave them a just peace by the usual double cross. Through impossible reparation demands the German people lost their homes, farms, and life savings through necessary currency inflation in order to abolish the national debt of Germany.

The various pressure groups, such as the industrialists, trade-unionists, Catholic clericals, absentee landowners, social democrats, and Communists, made it impossible to resist the economic strangulation by Great Britain.

Then came the beer-hall "putch," and Adolf Hitler. He was a nondescript house painter with a political program and economic system which could be supported by all the German people, including the many pressure groups. In this manner Hitler established a united front and national unity. The first order on the program was the destruction of the Versailles Treaty, and secondly the national planned economy and German rearmament program.

By the Treaty of Versailles three countries were established by Lloyd George and Clemenceau which would be constant troublemakers for Germany. First came Poland. Instead of creating a Poland of purely Polish they tried to assimilate three German provinces with the corridor and Danzig. Poland needed an outlet to the sea was their excuse. The only thing ever to come out of Poland were some Polish hams which were very much needed at home. More than half of Lithuania, including the capital of Wilna, was then included in Poland, White Russia and the Ukraine on the east and Galicia and Bohemia on the south. So we have a Poland consisting of a conglomeration of seven nationalities, languages, and cultures.

In Czechoslovakia we had Czechs, Slovaks, Poles, Hungarians, and Bohemians, as well as Germans. This was another country embracing six different nationalities, languages, and cultures. Both of these are now temporarily liquidated.

Now Rumania is left. Only one-third of the population is properly Rumania. Bessarabia was taken from Russia, Dobrudja from Bulgaria, Transylvania from Hungary, and Bucovina from Poland. Here again we find five different languages, nationalities, and cultures living in one country. Rumania is the next trouble spot which has to be settled, either by force or peacefully.

The reason these three countries we have just mentioned were organized by Lloyd George and Clemenceau in this manner is very plain to see. Both of them did not want any peaceful countries on the east of Germany to exist. They prefer to have continual troublemakers who will hamstring the economic development of Germany by isolating her. Hitler, being smarter than Daladier and Chamberlain, negotiated his famous deal with Russia, which leaves Great Britain with her back against a wall.

It is essential for Great Britain to win this war by next spring or they can never hope to because time will help Germany to organize the economic resources of Russia. Once these are organized, Britain and France can never win a decisive victory over Germany for the simple reason that Germany is going to sit tight on the western front. The Allies would find it impossible to launch an offensive as they would have to have a 3-to-1 preponderance, which they never could obtain. The best that can be expected is a stalemate and which is most desirable because it will be conclusive proof once and for all the uselessness of force. All these assertions that the Allies are going to win the war and strike back blow for blow is just poppycock. In the last World War Russia and Italy were both against Germany. The war lasted 4 years and Germany would have won that war if the United States had not intervened and won it. Therefore, it seems utterly ridiculous that France and England can win this war. The best they can expect is to fight the Germans to a standstill and vice versa.

This funny and phony war is different than all previous wars, because it is primarily a war of economic forces. Any unbiased person, leaving sentimentalism, emotionalism, and wishful thinking in the dog house, must admit that in spite of all the British propaganda passed out by our press and commentators, neither side can win and must not. Joe Stalin does not say a word, and all the barking done by Hitler, Chamberlain, and Daladier is just to put on a show for their citizens. They may be compared to two lawyers representing opposite sides of a case, verbally tearing each other apart to impress the jury and after the case is over walking out of the courtroom arm in arm, or having a few drinks together while bragging about the show they had put on.

The disgrace and futility of our much-touted civilization is shameful when a handful of men can send the bloom of the youth of their countries to war to have their guts blown out. Many come back crippled for life, without having settled anything, either by victory or defeat.

The blubbering of the war aims are so sickening that persons with any reasoning at all must vomit when listening to or reading them. Those Dutchmen in Holland tore off the mask of hypocrisy from "Windy" Churchill as to war aims. "Britain and France, and not the neutrals, have killed collective security."

The war was not started in the interest of civilization, for the rights of small nations, but for a specific purpose. England is not fighting for the Jews, or Ethiopia, Albania, Austria, or Czechoslovakia; neither is England fighting for Poland, but for her own self, her vital rights. What is that specific purpose? The answer is, economic domination of continental Europe. A permanent peace can never exist in Europe unless Great Britain gets the hell out of continental Europe. Britain is whining for a federation of Europe, but she must hold the whip hand and be the big boss.

That would mean that Europe would be condemned to economic slavery by a handful of Tories.

Liberty, freedom, and democracy are empty phrases and a hollow mockery to a person without a job and on the dole or relief.

All the chatter about moral, spiritual, religious, and political regeneration is useless unless we have an economic regeneration first. Instead of blabbering about war aims, why isn't something said about peace aims? Because of an abject ignorance of the economic forces that came with modern machinery and mass production, these have proven to be a curse instead of a blessing to civilization.

With the development of modern machinery and capitalism the struggle for raw materials began. Economic and trade wars came as a necessary evil with it and is bound to culminate in military wars as we had from 1914 to 1918 and is with us today, so why talk about disarmament and peace conferences when they are useless?

To obtain peace, military as well as economic, an economic conference should be organized by the leading nations, such as the United States, Great Britain, Germany, Russia, France, Italy, and Japan. Of these, Germany and Italy, as well as Japan, must be classified as "have not" nations and these nations must be given opportunity to acquire raw materials and markets for their finished products without interference by other nations.

This is the foundation of a permanent peace and none other will do. Resurrection of Poland and Czechoslovakia will be necessary. Territories which were given to Rumania after the last World War must also be returned to the nations from which they were taken.

In order to enjoy a permanent peace other boundaries may have to be rectified, which could be accomplished by the larger nations.

Customs unions must also be organized to insure peace and make it more secure. An economic alliance between China and Japan would settle the Far East difficulties.

Germany and Italy must be given a chance to develop their trade with the Balkan states unmolested, and temporarily with the South American Republics until the economic resources of Russia are organized for the interchange of the raw materials and food supplies for German and Italian manufactured products.

The United States is almost self-sufficient and should be the most powerful force in an economic conference where fair play and justice should reign supreme.

Scheming diplomats and all those with intentions of international intrigue must be ejected and barred from the conference.

This is the only open road to a permanent peace program and insures abolition of the fear of future wars, none other will do.

Safety in Air Travel

EXTENSION OF REMARKS

OF

HON. MELVIN J. MAAS

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

TELEGRAM FROM TED JOHNSON, AMERICAN AIRLINES PILOT

Mr. MAAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

CHICAGO, ILL., *April 25, 1940.*

Hon. MELVIN MAAS,

House of Representatives, Washington, D. C.:

Let's not throw away safety in air-line travel. This is what will be done if the C. A. A. and the Air Safety Board are abolished in

accordance with President Roosevelt's Reorganization Plan No. IV. Under the C. A. A. and Air Safety Board a year of safe aviation has just been accomplished, and it is a fact that many more similar records will be accomplished if the C. A. A. and Air Safety Board are kept intact. Abolishing these two agencies would be abolishing safety in air-line travel, and if there is no safety in air travel, we might just as well not have this quick means of transportation. I respectfully request your aid in defeating President Roosevelt's reorganization plan to abolish the C. A. A. and Air Safety Board.

Pilot TED JOHNSON,
American Airlines, Chicago.

H. R. 9141, Peeler Log Bill—Important to Plywood Industry

EXTENSION OF REMARKS
OF
HON. MARTIN F. SMITH
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 23, 1940

STATEMENT BY HON. MARTIN F. SMITH, OF WASHINGTON, BEFORE THE COMMITTEE ON WAYS AND MEANS

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me April 19, 1940, before the Committee on Ways and Means:

STATEMENT BY HON. MARTIN F. SMITH, OF WASHINGTON, BEFORE THE COMMITTEE ON WAYS AND MEANS

Mr. Chairman and gentlemen of the committee, I appreciate being granted this privilege to appear before your committee this afternoon in support of H. R. 9141, the so-called peeler log bill, introduced by my colleague the gentleman from Washington [Mr. COFFEE].

This is a compromise bill intended to meet some of the objections urged against S. 1108. It changes the log dimensions from 24 to 28 inches in diameter and allows a 5-percent tolerance on exports which would be exempted. I am advised that the bill in its present form has received the approval of the Northwest Loggers Congress, who found fault with the Senate bill. The pending House bill, I am informed, is favored by the American Federation of Labor, Committee on Industrial Organization, Northwest Conservation League, Washington State Planning Commission, Washington Chapter of the Daughters of the American Revolution, and a number of other organizations whose members run into several millions. There is no known opposition to this bill, with the exception of the Department of State.

It is apparent that the Department of State did not have the facts as relating to the timber conservation involved in the export of peeler logs, since the State Department's views are in direct opposition to the testimony given by the Chief Forester of the United States. Furthermore, the Department of State is also in opposition to the views as expressed by the President of the United States in his letter to the Governor of Washington under date of March 18, 1939, reading as follows:

THE WHITE HOUSE,
Washington, March 18, 1939.

MY DEAR GOVERNOR MARTIN: I have personally considered the subject matter of your letter of March 1 dealing with the effect on labor and industry of exporting high-grade Douglas fir peeler logs.

I am very much in sympathy with the idea that exports of high-grade raw forest material, of which our domestic supply is limited, should not be encouraged. The continued existence of wood-using industries on the Pacific coast, particularly of the plywood industry, depends upon an adequate supply of high-quality raw material in the form of standing timber—a supply which is all too limited.

It is hardly necessary for me to assure you that I am in favor of sound proposals that redound to the benefit of American labor and industry. I am particularly impressed with the fact that organized labor is actively supporting the measures which have been proposed to protect its source of raw material upon which the pay rolls of industry are built.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

His Excellency CLARENCE D. MARTIN,
Governor of Washington, Olympia, Wash.

I desire to call the committee's attention to arguments in favor of the bill, based upon facts and data compiled by Mr. Axel H. Oxholm, manager of Pacific export industries, comprising the Douglas-fir plywood mills on the Pacific coast who are engaged in the export business. These arguments are advanced to meet objections from the Department of State.

Every country possessing choice softwood logs suitable for plywood manufacturing purposes has already, through embargoes, export duties, or other restrictions, reserved this raw material for domestic uses. Even Canada has made the exportation of logs from British Columbia and cut on private lands subject to export license.

The proposed embargo on high-grade Douglas fir logs of large dimensions is advocated on the same basis of forest conservation and unemployment relief as caused foreign countries to take the same step. Under the bill all logs less than 28-inch top diameter or logs of any size unsuitable for plywood manufacture in the United States of America may be exported. Since wages in foreign log-importing countries vary from 3 cents per hour (Japan) and up to 40 cents per hour, compared to 62½ cents per hour minimum in the United States plywood industry, it is obvious that foreign countries can afford to use smaller logs and more defective logs than the American mills. The latter cannot afford to repair defective veneer on account of the high labor cost. The embargo would therefore not deprive foreign mills of raw material but would merely effect a fair division of logs reserving the high-quality logs for the American industry unable to utilize small or defective logs.

As far as trade agreements are concerned no country importing American plywood logs has in a single instance been willing to give any concessions in its import tariff covering plywood. As a matter of fact several countries, notably Germany, Australia, Norway, Italy, Japan, and others have years ago practically ceased to import American plywood, because they take our logs, but at the same time they permit the importation of foreign plywood when they are unable to buy logs from the plywood exporting countries.

It is therefore evident that this American log-export trade has counteracted any effort on the part of the Department of State to secure equitable foreign import duties covering American finished wood products produced from these logs.

Conservation: Conservation means wise use and close wood-utilization practice. Plywood is recognized by the United States Forest Service as representing a very high degree of wood utilization. One ton of plywood involves $25 in wages. One ton of logs for export involves $2 in wages. The manufacture of plywood is highly desirable from the point of view of timber conservation since only the thin face veneer must be of high grade, while the interior core and back veneer may consist of low-grade wood. In other words, in the form of plywood by far the largest percentage of wood used is of low-grade quality. The Department of State has overlooked this important point.

The United States Forest Service has recently presented to Congress a proposed plan of public regulation of timber cutting. This matter is of major national importance. The execution of this plan means greatly curtailed production of plywood logs. It is not reasonable to expect that our American plywood mills should willingly submit to this curtailment of their raw material supply as long as foreign countries can buy such logs as are needed by our own industry and which can never be replaced. Recently the national parks have taken in large bodies of commercial high-grade timber areas thereby creating very serious problems for the American plywood industry. It seems incongruous that the United States Government should not compensate these industries for the loss they have sustained by supporting the bill for the embargo of high-grade Douglas-fir logs.

The Northwest plywood industry is the most rapidly growing industry on the Pacific coast. In less than 10 years its annual production has grown from 200,000,000 square feet to more than 1,000,000,000 square feet. The raw material situation is already critical in certain localities. At the same time the demand made by foreign countries for our plywood logs is largely based on their desire to save their own forest resources. When our timber is exhausted our mills will not be permitted by foreign countries to buy their logs.

Reforestation as a private enterprise must be financed through the cutting of high-grade timber, which is the most profitable item of logging. By placing an embargo on the exportation of high-grade logs the remaining supply of high-grade timber will be prolonged and consequently there will also be a financial incentive for reforestation.

From every angle an embargo of peeler logs is an integral part of forest conservation which is so strongly advocated by the administration. Through the exportation of peeler logs an annual pay roll of $1,000,000 is lost to American labor in a district already seriously affected by a large roll of unemployed.

Labor: The Northwest plywood industry is paying the highest wages in the world for such work (62½ cents per hour minimum and 78 cents average). The excellent quality of timber—which has no equal anywhere in the world—is the main reason for this high wage standard. Premature exhaustion of this resource through export of logs will inevitably in time reduce wage and living standards.

Logging industry: The organized loggers and timber owners in the north Pacific have reached an agreement with the sponsors of the bill not to oppose its passage. They realize that their interests are inseparably linked with the building up of our local industries. As far as is known there is no opposition from any organized group to this bill and the Department of State therefore finds itself in the position of being the only organization blocking its passage.

The plywood industry in the Pacific Northwestern States is now joining hands with millions of citizens in a petition to Congress to reserve its most valuable raw material—high-grade timber—for our Nation's own industries, because without this raw material the American industry cannot exist. Already tobacco seed, scrap tin, helium, and other products have been embargoed and every country possessing softwood peeler logs has taken the same action as now proposed.

This entire subject has been covered very fully by Mr. MOTT, Mr. COFFEE, and Senator HOLMAN. I am anxious to have you hear Mr. Oxholm, and also my old friend and neighbor, Mr. Henry B. Steer, economist for the Forestry Department, who spent 15 years out in our region, and who is very familiar with the entire situation as it applies to this legislation. I think he will be able to give the committee some very valuable information.

Mr. Chairman, I want to refer very briefly to the alleged opposition of the State Department. I think that there is no opposition to this legislation from any source of which I am aware, and there is an entire unanimity of support in favor of it, with the single possible exception of the State Department. Personally, I cannot understand why the State Department should be opposed to this legislation.

Mr. CULLEN. If you stay here long enough you may get some information.

Mr. SMITH. It seems to me that it is not in conflict with the trade-agreements program. If I am correctly informed, there is not a single foreign nation which imports peeler logs from the United States which has made any concessions to our country in tariff duties or otherwise in regard to imports of finished plywood or forest products into those very same nations. In other words, they enforce embargoes and duties against us on a finished product and they buy from us without any restrictions the raw material. They buy their peeler logs, and these nations who used to buy plywood from us, I think Australia, Germany, Norway, Japan, and Italy, now import the peeler logs and no longer import the plywood which they used to import.

Mr. CULLEN. That is right.

Mr. SMITH. In other words, this program, Mr. Chairman, is reacting very strongly against the best interests of our country, and I think it is contrary, as I understand it, to the spirit of the trade-agreements program, because it is having the exact opposite effect of what the proponents of the trade-agreements program claim is the main purpose of the trade-agreements program. Of course this has been going on for many years, before there was a reciprocal trade agreements program.

Mr. CULLEN. Does that even go down to the South American republics?

Mr. SMITH. I do not think so, Mr. Chairman, but I think it does apply to all of these nations who are directly affected, that is, those nations who are importing from us peeler logs which we export, and who are manufacturing the finished product over there and depriving us of the employment of labor, and giving us little in return for it.

Mr. KNUTSON. To what extent does it affect your labor situation out there?

Mr. SMITH. I think it affects it very seriously, I will say to the gentleman from Minnesota.

Mr. KNUTSON. Does it affect it to the extent of 20,000 in the two States?

Mr. SMITH. I think that would be very conservative, because there is hardly any business or industry out there in that section of the country that employs as much labor as the plywood industry. It is a highly technical, skilled industry, and it employs a great deal of labor. In some of the plants of which I have some knowledge they employ between 500 and 600 men. Mr. Oxholm will be able to give you all of the details concerning that.

Mr. KNUTSON. I notice in the illustrated booklet that was passed around to the members of the committee there is an illustration here of four men sitting on a pile of plywood, weighing one ton, which represents 1 day's output for four men, and $25 in wages and that there are thousands of skilled American plywood workers who receive the highest wages paid anywhere in the world for such labor.

Mr. SMITH. That is true; the wage scale is the highest paid anywhere.

Mr. KNUTSON. The record should show that.

Mr. SMITH. The record shows it. It seems to me folly and almost criminal, and certainly a dereliction of duty to permit those foreign nations to benefit any longer, as they have been doing many years, at the expense of American labor and American industry, because that is exactly what is happening.

Mr. KNUTSON. Do you not think it is possible to carry this good-neighbor policy too far?

Mr. SMITH. I am in favor of a good-neighbor policy, provided that we get fair returns. That is, if the benefits equal, or nearly equal, the concessions that we make, and there is a fair balance of benefits with concessions and vice versa in our relations with foreign nations and our foreign trade. Then, I think it is a laudable and beneficial program, but not if, as in the case of these peeler logs, and this entire matter we are considering here today, the foreign nations have the foresight to protect their raw materials and we do not, and they take advantage of our neglect, and they import from us the raw materials and deprive us of that employment to labor and investment of capital and business and industrial activity and then they turn around and make no concessions to us, when we leave our door wide open to them. In the case of Japan, I think it can be demonstrated, they have actually shipped finished plywood back to the United States to compete with our own domestic product. That is a deplorable state of affairs and is another emergency that this administration should correct.

Mr. KNUTSON. That is, according to the statements made. It may be that they buy fruit from you folks in sufficient quantities to offset this transaction.

Mr. SMITH. If they do they would buy it anyhow, probably.

Mr. KNUTSON. That was not testified to before, was it? We were told that it was necessary to have a reciprocal arrangement. I am in harmony with this proposal, but I was just wondering what your outlook was, whether you are in favor of this whole program for the rest of us but not for your immediate section of the country.

Mr. SMITH. I am in favor of it wherever it can be justified, and wherever it proves itself beneficial to our Nation.

Mr. KNUTSON. We had a lot of those spot protectionists come before us, and none of them said where they were hit it was justified.

Mr. SMITH. Of course, that is always a matter of opinion, based on the facts and all of the information available.

Mr. KNUTSON. Of course, it makes a big difference whose ox is gored.

Mr. SMITH. Yes, that makes a lot of difference, and when we come to the tariff question, I think we all realize the soundness of the philosophy of Gen. W. S. Hancock, Democratic nominee for President in 1880, I believe, who said, "The tariff question is a local issue," which has become a political axiom.

Mr. CULLEN. Mr. Robertson desires to ask you some questions.

Mr. ROBERTSON. Have you made any examination of the claim made last May by the Secretary of State, that if we put an embargo on the export of our Douglas fir, Canada could supply all the markets that now buy from us?

Mr. SMITH. I will say, in reply to the gentleman from Virginia, that Canada has already put into effect the very terms and philosophy of this legislation, in their own country, in their own behalf. They have made the exportation of peeler logs from British Columbia, cut on private lands, subject to an export license.

Mr. ROBERTSON. Canada would be the principal competitive nation supplying peeler logs, would it not?

Mr. SMITH. I assume so; yes, sir; but their peeler logs are not of as good a quality as ours.

Mr. ROBERTSON. Then if they have an embargo the observation of the Secretary of State last year to the Senate committee that we would not get the employment because Canada would ship logs and the business would go on just the same except that we would lose that export market, would not apply?

Mr. SMITH. I do not think that is accurate.

Mr. ROBERTSON. I would like to know definitely whether or not Canada has an embargo on the shipment of these peeler logs.

Mr. MOTT. Canada has an export license penalty on the exporting of peeler logs purchased on private lands in Canada, but Canada can import peeler logs from the United States and then reexport them to England, Japan, or anywhere else without any penalty.

Mr. SMITH. That is substantially what I said.

Mr. ROBERTSON. The appendix to the Secretary of State's report showed in 1939 there were considerable exports of peeler logs from Canada.

Mr. MOTT. Yes; but they were American logs. You see, Canada does not produce the same high-grade clear logs we do.

Mr. CULLEN. Have you finished, Mr. Smith?

Mr. SMITH. Yes; I am through, Mr. Chairman, and I desire to thank you and the committee.

Mr. CULLEN. We are thankful to you. Who is the next witness?

Mr. SMITH. Mr. Steer.

Postage Rates on Second-Class Mail

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

ARTICLE FROM THE DAILY CALUMET

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article from the Daily Calumet, "How'll you have it—straight or mixed?" which is in answer to the article "Take second-class mail off the dole" from the Philadelphia Inquirer of February 1, 1940. This I included in the RECORD of April 16.

The article is as follows:

[From the Daily Calumet]

HOW'LL YOU HAVE IT—STRAIGHT OR MIXED?

For many moons past, the Philadelphia Inquirer has been trying to make hay crusading for a bill to "relieve taxpayers of footing the stupendous postage bills for newspapers and magazines." Your reading material which comes to you as second-class matter has been on a dole for 89 years, the Inquirer reveals, and then proudly proclaims its own head is ready for the block to end this annual raid on the Public Treasury.

Before we wade deeper into this momentous question, let it be said that the Daily Calumet, too, is willing to pay more postage—or put it another way—we would as soon leave matters as they are and abide by the wishes of the taxpayers themselves.

It won't make any difference to the taxpayer which ever way it comes out. You can keep the newspapers on the public dole—so to speak—which represents a few cents in your annual tax bill, or you may reduce taxes in the United States $27,000,000 per annum and pay more for your newspaper delivery. Too, the mediums will have to up advertising rates a bit, which will be passed right along to the last man in line. So, it's like asking a man "Do you want your whisky mixed or straight?" The alcoholic content is the same.

The Inquirer points out the newspapers and magazines are getting a free ride like this: It costs the Government 8.41 cents a pound to carry and deliver, whereas magazines and newspapers pay only 1.8 cents per pound—a deficiency, you will notice, of 6.61 cents per pound.

Newspapers in America are sleepless sentinels of our free institutions. Theirs is a public service and trust that comes daily to your door at a ridiculously low cost. It would not be asking too much in the light of governmental giving to permit your guardians of liberty to ride the mails free!

We have a feeling, judging by the Inquirer's philanthropical attitude, that its advertising and subscription rates are too high. We'll have to string along with the present rate system, but we don't give a tinker's dam which way it goes—we leave it to you, dear customer—write your own price tag.

Wage-Hour Absurdities

EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's issue of the New York Herald Tribune:

[From the New York Herald Tribune of April 26, 1940]

WAGE-HOUR ABSURDITIES

The Fair Labor Standards Act, better known as the wage-hour law, promises, as written and administered, to rival the Wagner Act in its injury and disruption of the Nation's industry. Its object, as we all know, is to prevent sweatshop conditions in the so-called marginal trades, prescribing for the purpose a minimum hourly wage and a maximum workweek beyond which the employer must pay a premium for overtime. But it is so drawn that, by interpretation of the Wage and Hour Division of the Department of Labor, its administrative agency, it is held to govern all industry, marginal or other, which by any stretch of the imagination can be considered in interstate commerce.

We referred in these columns recently to a test suit brought by the Wage and Hour Division against a loft building in this city to force its proprietors to pay arrears in overtime wages to their employees. Under contract with the building-service employees' union the employer in this instance pays his workers an average weekly wage of $29, far above the minimum required by the Fair Labor Standards Act, in return for which they work, by agreement, 48 hours a week. But the wage and hour law stipulates a 42-hour week. Wherefore its enforcement agency says, "to blazes with the fact that these toilers are not engaged in a marginal industry, that by collective bargaining they have made their own terms, and that they are employed by a purely local enterprise." Some of the tenants of the building may be engaged in interstate commerce, so those who serve them—elevator operators, scrub women, and what not—are entitled to time-and-a-half wages for the extra 6 hours of their week, retroactive to October 1938, when the wage and hour law became effective. Is this contention fantastic or not?

Within a month a field inspector for the Wage and Hour Division addressed an audience of businessmen in Cedar Rapids, Iowa, telling them that investigations in that State had shown 24 instances of violation of the law in 25 cases. Only 1 was willful, the others being unconscious transgressions on the part both of employers and employees. If a local business advertises over a radio station heard outside its State it has been construed to be in interstate commerce within the meaning of this grotesque statute. If an employee, though ordered to quit, insists upon working overtime, his employer, so the bureaucrats have argued, owes him overtime rates. There is really no limit to the absurdities of the law's application.

That it needs amendment to prevent its destruction of free enterprise, including the independence of organized labor, is self-evident. Unfortunately the problem is not a simple one, as the House of Representatives is learning at the moment in its consideration of the Barden bill. This bill, in its main provision, would correct the basic weakness of the act by exempting from its restrictions with respect to hours and overtime all workers receiving "a guaranteed monthly salary of $150 or more." The purpose is perfectly obvious—to make the act apply, as Congress intended it should in the first place, only to sweatshop labor incapable of effecting through organization proper standards of its own devising. But only a small percentage of our working population earns salaries of $150 a month. The bill then would definitely condemn the major portion of the act's strait jacket.

It has other objections, but this one, it seems to us, is fundamental. There can be no solution in an arbitrary salary line, which suggests in turn that there can be none short of a repeal of the act and an approach to its objective either by way of State laws, more responsive as they are to local conditions, or on the order of the British formula. In Great Britain when the government finds that an industry or trade is sweating its workers, it appoints a trade commission which confers with the employers, the employees and what labor organizations, if any, are involved, and after a thorough canvass of the situation, proposes a remedy. This the authorities are empowered to enforce. Absent are the rigidities which under our system threaten the entire industrial fabric.

Philippine Travel Pay Bill

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

Mr. ANGELL. Mr. Speaker, I am glad to have had the opportunity to vote to pass H. R. 289 over the President's veto. I am sure if the President personally knew the underlying facts surrounding this legislation it would have received his approval. It has passed Congress three times, usually unanimously, being vetoed each time. There are some 8,000 veterans, and their widows or dependents, who will participate in the fund provided by this bill, receiving approximately $300 to $400 apiece from an aggregate total estimated to be some $3,200,000.

I recall vividly as a student in the University of Oregon when many of my associates marched away to join the Spanish-American War. We all recall with pride the fine service they rendered to their State and Nation, many of them paying the supreme sacrifice. At the termination of the war, those volunteers in the Philippines were promised that if they would continue in the service, when they were finally discharged they would receive their travel-pay allowance as was paid to all other soldiers mustered out at that time. They relied upon this promise and remained in the service and made it possible for our Government to put down the rebellion on the islands and not be subjected to the heavy expense of mustering into service other men here at home and bear the heavy expense of transporting them to the islands. These men eventually were mustered out of the service but their travel pay was not forthcoming.

As I have stated, the Congress on three separate times has passed a bill providing for this pay. These men who are still living are past well beyond middle life, many of them in need of this small travel allowance. Many of them have passed on and have left dependents who are actually in need. The Government can afford to pay these veterans but it cannot refuse to do simple justice and keep its promise to the veterans who were loyal to their country in time of need. I hope the bill will soon become a law and this injustice righted.

An Expert Analysis of the Economic Crisis

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

LETTER FROM COMFORT A. ADAMS

Mr. COFFEE of Washington. Mr. Speaker, because I believe that the writer of the article hereinbelow appended has presented a factual statement of conditions obtaining today which is worthy of study, I have sought permission to include it in my remarks. Mr. Comfort A. Adams, consulting engineer of the Edward G. Budd Manufacturing Co., is an electrical engineer; was Lawrence professor of engineering at Harvard University from 1914 to 1935; Gordon McKay professor of electrical engineering, 1935 and 1936, emeritus since 1936; dean of the Harvard Engineering School, 1919; fellow of American Academy of Arts and Sciences, American Institution of Electrical Engineers (president, 1918–19), A. A. A. S.; member of National Academy of Sciences, Institution of Electrical Engineers, Verein Deutscher Elektrotechniker, Société Francaise des Electricienes; author of Dynamo Design Schedules and articles on kindred subjects; received first award of Miller medal for conspicuous contributions to the art of welding, 1929.

The letter is as follows:

EDWARD G. BUDD MANUFACTURING CO.,
Philadelphia, Pa., April 17, 1940.

Hon. JOHN M. COFFEE,
House of Representatives, Washington, D. C.

DEAR MR. COFFEE: This is to thank you for the reprint of the article by Benjamin Marsh which I have read with much interest.

A long time ago it was said that "facts are stubborn things." It has seemed to me for a long time that many of our political and economic leaders were either ignoring some of these facts or that they failed to see them as a whole in their proper setting or perspective.

I am an engineer rather than a politician or economist but in the solution of any engineering problem it is absolutely vital to do exactly this, namely, to gather all the essential facts, arrange them in order of importance or in their proper perspective, and then to apply the laws of nature logically for the determination of the desired but as yet unknown relationships which we call a solution of the problem.

After many years of experience in this process, one realizes that such a solution can be sound only under two conditions which are, (1) that the premises or pertinent facts are not only true but comprehensive and (2) that the logic employed in connection with the underlying scientific laws is rigid.

The result of such experience is the realization that no amount of wishful thinking based upon desire, prejudice, or convention will cover up any deficiencies in either premises or logic.

I often wish that this habit of mind prevailed to a much larger extent amongst our politicians, economists, and the Members of Congress.

With this introduction I am presenting below a perspective picture of our present economic set-up, which is the result of what might be called engineering thinking or analysis of the essential facts gathered and sifted throughout an unusually long and active life in very intimate contact with industry and its problems.

My excuse for taking time out of a very busy life to make this presentation is the fact that the following picture is based largely upon the kind of facts presented in Mr. Marsh's article which you distributed as part of the CONGRESSIONAL RECORD. The picture follows:

Over a period of many years during which our abundant natural resources have been largely appropriated by a very small group, we have built up a capital structure which is made up partly of real wealth in the economic sense and partly of claims to wealth sometimes referred to as "water." Few people realize the magnitude of this latter part. In certain natural monopoly groups it has run as high as 75 percent, although at the present time it is probably not much over 50 percent.

The struggle to pay interest or dividends on this top-heavy structure is the source of the instability of our present economic order and also the source of the economic conflict between what might be called the privileged class and the masses.

The way this operates is as follows:

Of the total income of the country under normal conditions, about two-thirds may be classed as wages, including salaries and other direct payments for services rendered, and about one-third in the broad realm of interest. The trouble is due, not primarily to the fact that a part of this is in the form of interest, but rather to two other considerations.

1. A large part of this interest goes to a group so small as to be absolutely negligible as a part of the population.

2. This small group cannot and does not wish to spend any considerable part of their incomes on articles of consumption which are the only ultimate product of industry. That is, they put it back into capital where it calls for more interest.

This leads to the natural division of the total income into two parts, consumption and saving. By articles of consumption I mean anything that one buys to use whether or not it be commonly referred to as durable goods. On the other hand, the savings, unless they be put in a stocking, are always placed as far as possible where they will draw interest.

If at any stage the total savings exceed by ever so little the demand for capital, every dollar of this excess is taken out of the consumer market and reduces the demand for the only ultimate product of industry which means a further reduction in the demand for capital.

If these savings were in small sums by the masses of people, they would immediately go back into consumption in any emergency at least in part, but as such a large part of the total is in the hands of such a small group they simply pile up and create a claim on the earning power of the country which cannot be satisfied since the goose that laid the golden egg is ill or dead.

Another phase of the picture is this which may be likened to the proverbial row of bricks. If depression comes or begins, labor is discharged, consumption drops, more labor is discharged, since labor is the major consumer, and so on until the bottom is reached unless the Government steps in with pump-priming tactics. During the early stages of this same process dividends are maintained as long as possible, but the small group which receives the major part of these dividends not only do not increase their consumption but actually economize and reduce the consumption which simply accelerates the row of bricks. Although if experience permitted I could present plenty of statistics on this point, I can assure you that the picture is unquestionable and that neither the pump-priming process nor anything else short of a radical change in our economic structure can possibly remove its present instability, which has grown to a point so dangerous as to threaten the very foundation of the Government.

All this I have seen for many years. Twenty-one years ago in my presidential address to the American Institute of Electrical Engineers I said, "Unless we are willing to take one at a time and in a peaceful fashion the steps of inevitable economic evolution, we will eventually be forced into a revolutionary stride." The time for that stride is near at hand unless members of our privileged class show more intelligence than they have in the past.

I am not a Communist or a Fascist, but definitely a conservative and an individualist, and I can assure you that our present economic order is not only fatally unstable, but brutally unfair to the masses and that if our present privileged class wish to maintain any of their privileges, including that of independent thought and free speech, they had better prepare to take some of the steps above referred to.

Finally, I am convinced that the only reform which will save any remnant of our present capitalist system is that proposed by Henry George more than 50 years ago.

If you have time, I shall be glad to get your reaction to my point of view, which is very similar to that of Mr. Benjamin Marsh, and to know what you think about the prospects of action by the Government in the taking of steps sufficiently fundamental to forestall serious trouble.

Very sincerely yours,

COMFORT A. ADAMS.

New Deal Lobbying

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

Mr. REED of New York. Mr. Speaker, a letter written and mailed postage free to 630,000 Federal land-bank borrowers by Gov. A. G. Black, of the Farm Credit Administration under date of April 10, 1940, enclosing a memorandum written by Henry A. Wallace, Secretary of Agriculture, to Governor Black was in defiance of two statutes prohibiting political or lobbying activities by Federal officials.

The memorandum from Secretary Wallace to Governor Black, as well as the letter from Governor Black to the borrowers, show on their face that they were a subtle effort to

influence borrowers to bring pressure to bear on Members of Congress in support of the Jones-Wheeler bill, which, among other things, would absolutely destroy the present cooperative farm-loan system, and would place governmental farm loans under control of the Secretary of Agriculture.

I am shocked by these letters. Every proposal contained in the memorandum of Secretary Wallace is embraced in the Jones-Wheeler bill. The letter sent out by Governor Black not only admits that it breaks a precedent but expresses his intention of continuing to do so from time to time by sending out other letters of this character. Governor Black's letter is as follows:

To Stockholders of National Farm Associations:

This letter probably breaks a precedent, but here goes? I know of no better way of stimulating thought and discussion than writing to you. In fact, I plan to send you from time to time pertinent information about the farm-loan system.

Secretary Wallace and I have talked over repeatedly many of the problems confronting the Farm Credit Administration. I take it that you as a borrower and farmer also are interested, so I am passing on to you one of his memoranda in which he asks some very pertinent and far-reaching questions.

I hope this will stimulate your own thought, that there will be discussion of these problems among the farmers, and that many farmers will have things they will wish to contribute to our thinking on the subject.

Sincerely yours,

A. G. BLACK, *Governor.*

The memorandum referred to is as follows:

MEMORANDUM FOR A. G. BLACK, GOVERNOR, FARM CREDIT ADMINISTRATION

DEAR GOVERNOR BLACK: Our discussions of the various problems connected with the administration of the Farm Credit Administration have raised certain questions in my mind which I would like to pass on to you for consideration.

Your outline of conditions that have persisted for some time in the affairs of the land bank system raises some grave questions and I hope the facts have been laid before the borrowers. You say you have some doubts as to whether the borrowers are well informed. I was astounded to learn that more than half of the local national farm loan associations in the United States are insolvent and that only 40 percent of them are sufficiently solvent to be able to accept applications and sell their stock to members. Does this not raise the issue as to whether the stock which farmers have had to purchase in order to obtain loans has not carried a liability much larger than it should have borne? Also, I wonder if the borrowers have always been informed of the exact financial position of the association before they purchased stock?

What is troubling me is that many associations have been operating in territories where there seems to be a good deal of hazard and consequently the borrowers assumed a liability which they should not have been asked to carry. After all, are not the loans made by the Federal land banks and not by the associations, although, of course, they are endorsed by the latter?

If, in the future, loans were to be made without farmers having to buy stock the losses which might be incurred as a result of loans in a particular area would be spread on the books of the bank and not be confined to a single association. Of course, if loans were to be made in the future without requiring farmers to purchase stock, would it not be the equitable and just thing to pay off at par all the stock now owned by borrowers whether or not such stock is impaired?

In looking over the record of the Federal land banks and the so-called Commissioner loans made from the funds of the Federal Farm Mortgage Corporation, I am greatly impressed with the amount of delinquency on the part of borrowers, totaling about 22 percent for the land bank and about 30 percent for the Commissioner loan. We have discussed the very heavy delinquency in some States, but I didn't quite realize the situation throughout the country was as bad as these figures indicate. Part of this condition, of course, is due to long-continued adverse climatic conditions, but that is by no means the only cause.

Interest rates charged borrowers of the land banks have been reduced temporarily now for several years by Congress appropriating from the Federal Treasury and paying to the land banks the difference between the interest rate which the farmers contract to pay and the emergency rate established by Congress. I doubt if this can go on indefinitely. We have discussed many times the cost to the Government of a continued subsidized farm-mortgage interest rate, which is costing the Federal Treasury a good many million dollars a year. As the land-bank system is now set up the banks obtain their funds from the sale of Federal land-bank bonds not guaranteed by the Government. Would it not be worth while to explore with responsible persons the possibility that if the Government should guarantee these bonds, they could be sold at a sufficiently lower rate of interest to give the farmers permanently the same low emergency rates they are now receiving or even, perhaps, lower, without costing the Government the subsidy?

In the current money market I believe a Government-guaranteed land-bank bond would bear a much lower rate of interest than is borne by the non-Government guaranteed land-bank bonds outstanding. Why, then, couldn't the outstanding land-bank bonds be replaced as rapidly as possible with the lower-rate bonds and give the farmers the benefit of the difference in rates?

Since the Farm Credit Administration is now a part of the United States Department of Agriculture and not an independent agency or under a loan board, I personally am particularly impressed with the need for improving the farm-mortgage situation along these lines and not limiting our thinking to the existing system and procedures.

Sincerely yours,

H. A. WALLACE, *Secretary.*

These two letters, when read in connection with section 201 of the Criminal Code, speak for themselves. The statute reads in part as follows:

No part of the money appropriated by any act shall, in the absence of express authorization by Congress, be used directly or indirectly to pay for any personal service, advertisement, telegram, telephone, letter, printed or written matter, or other device, intended or designed to influence in any manner a Member of Congress, to favor or oppose, by vote or otherwise, any legislation or appropriation by Congress.

The second statute, which in my opinion, is involved is section 6 of Public, 160, act of June 30, which states in part:

On or after July 1, 1939, no executive department or independent establishment of the Government shall transmit through the mail, free of postage, any book, report, periodical, bulletin, pamphlet, list, or other article or document (except official letter correspondence, including such enclosures as are reasonably related to the subject matter of the correspondence * * *) unless a request therefor has been previously received by such department or independent establishment.

The real purpose, in my opinion, behind this obviously flagrant disregard of these two statutes is that this letter and other propaganda being disseminated by Secretary Wallace is to build up support for the so-called Jones-Wheeler bill now under consideration by the House Committee on Agriculture. This bill appears to be an effort on the part of Secretary Wallace to distract the attention of the farmers of this country from the fact that the New Deal farm program has failed to give farmers parity prices, or, in fact, income sufficient to enable them to pay even the low rates of interest now being charged on Federal land-bank loans.

Manifestly this action on the part of Secretary Wallace and Governor Black furnishes the best possible argument in favor of the Gillette-Kleberg bill, which would restore the Farm Credit Administration as an independent, nonpolitical, governmental agency. These letters indicate that the temptation for the Department of Agriculture to play politics was too strong to be resisted in a campaign year. It is impossible to imagine a nonpolitical, independent, governmental agency carrying on lobbying activities of this character.

Disaster at Shenandoah, Pa.

EXTENSION OF REMARKS

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

APPEAL FOR FEDERAL ASSISTANCE

Mr. FENTON. Mr. Speaker, on April 16 last I informed the Members of the House concerning the situation caused by mine subsidence at Shenandoah, Pa., emphasizing that we are not only faced with the necessity of providing safety for our miners during actual mining operations, but are now confronted with the problem of safety for the homes of our people. In again appealing for Federal assistance, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter received from Mr. John J. Miller, president of the Shenandoah Disaster Relief League. A petition which

accompanied the letter was signed by 6,327 citizens, and the foreword of the petition follows the letter.

APPEAL FROM SHENANDOAH

SHENANDOAH DISASTER RELIEF LEAGUE

Hon. IVOR D. FENTON,
House of Representatives, Washington, D. C.

DEAR MR. FENTON: We respectfully direct to your attention the attached petition of the citizens of the Borough of Shenandoah, Pa.

The plight of the citizens of this entire community is indeed immediately serious and grave apprehension is felt for their safety and health in the continued subsidence of the earth's surface within the borough.

You will note that the foreword of this petition gives a brief word description of the effects of the disaster. In order that you might become more fully acquainted with the extent of the suffering brought about by this disaster, we earnestly ask that the reports, which have been submitted in connection herewith, be read.

This organization, acting for the citizens of the borough, has applied for Federal aid, under the terms of the Emergency and Disaster Act.

The signers of this petition, as residents of this borough, appeal to your great humanitarian spirit to assist them in their hour of need, and they earnestly solicit the prestige of your high office in a complete effort of cooperation in their appeal for Federal aid.

Respectfully yours,

SHENANDOAH DISASTER RELIEF LEAGUE,
JOHN J. MILLER, *President*,
A. A. FLECK, *Secretary*.

FOREWORD OF PETITION

On March 4, 1940, an earth subsidence devastated one-fourth the total area of the borough of Shenandoah.

Six hundred and forty-one private, industrial, and public buildings were damaged at a loss of several million dollars.

Senior and junior high-school buildings housing 1,350 pupils were closed, placing 85 percent of the total school population on part-time education. These pupils are losing more than 20 percent in time alone, and are deprived of educational facilities such as gymnasium, health rooms, adequate toilet facilities, auditorium, assembly rooms, science classrooms, and other conveniences deemed necessary for the maintenance of a minimum program of education. Children are being deprived of a type of education which many never again will have the opportunity to receive.

Streets and highways, sewers, and water and gas mains have been damaged and destroyed, creating serious health hazards. The present situation is a menace to the life and health and safety of thousands of people in the affected area.

These damages have cost a tremendous loss in wages and have seriously affected the real-estate values in the community. The subsidence is continuing and the area is expanding, defeating all efforts to restore the public morale.

The petitioners feel that failure to receive the aid of the Federal Government in this emergency will eventually bring about the destruction of considerably more real estate by subsidence, and a total break-down in the community of real-estate values, and might conceivably result in the migration of its residents because of fear, panic, or lack of confidence in the future economic life of the borough.

Having made application to the Federal Government, through the W. P. A., for immediate assistance in correcting the present damage and in forestalling future damage, your petitioners through their agent, the Shenandoah Disaster Relief League, respectfully ask you to use the power and influence of your high office to secure for them this urgent and much-needed assistance.

Educational Orders

EXTENSION OF REMARKS

OF

HON. J. JOSEPH SMITH

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

EDITORIAL FROM THE WASHINGTON EVENING STAR OF APRIL 22, 1940

Mr. SMITH of Connecticut. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following editorial from the Washington Evening Star of April 22, 1940:

[From the Washington Evening Star of April 22, 1940]

EDUCATIONAL ORDERS

When the Senate Appropriations Committee begins consideration of certain cuts made by the House in the War Department appropriation bill, it is certain that Army officials will make a determined effort to effect restoration of a little-publicized but all-important item labeled "educational orders." The history of these orders goes back 20 years—to a period when memories were fresh regarding the sorry lack of industrial preparedness which existed at the time of our entry into the World War. Congress agreed with our national-defense experts that steps should be taken to prepare industry as well as the military and naval establishments to respond quickly and efficiently in another emergency. There was born out of this agreement a far-reaching industrial mobilization plan, an important phase of which was to be the awarding of certain orders for military supplies to various manufacturing plants primarily for educational purposes.

Congress placed its stamp of approval on the educational program by authorizing the expenditure of a total of $42,500,000 on the special orders, to be spread over a 3-year period. Of this authorization, $26,000,000 was appropriated for 1939 and 1940. The remaining $16,500,000 was sought by the War Department in its 1941 supply bill, but the House slashed $14,500,000 off the item, upon recommendation of the House Appropriations Committee, which felt that the money could be better used for actual production of ordnance and for equipment needed by the engineers and Signal Corps. But the House committee, in its laudable desire to minister to the immediate, peacetime wants of the Army, apparently lost sight of the original purpose of the educational orders program. This purpose was to prevent a recurrence in any future national emergency of the deplorable confusion, waste, inefficiency, and grave delay which marked the conversion of our peacetime industries into producers of implements of war.

It is said that there are more than a thousand necessities of war, from shells to gas masks, which cannot be turned out readily except in a few factories. The educational orders awarded in 1939 and 1940 have provided numerous plants with valuable experience in producing hundreds of these war materials. Thus, the machinery for manufacturing vital items has been expanded and craftsmen needed in an emergency to man the machinery have been given valuable training. This educational program is just as important to future security as the strengthening of the military and naval branches of national defense. It would be unfortunate if Congress failed to recognize that fact in an era of world history already replete with tragic lessons in unpreparedness.

Safety of Air Transportation

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 26, 1940

TELEGRAMS OPPOSING TRANSFER OF CIVIL AERONAUTIC AUTHORITY

Mr. THORKELSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegrams:

BILLINGS, MONT., *April 23, 1940.*

Representative J. THORKELSON,
Washington, D. C.:

Worth of present Civil Aeronautics and Safety Boards has been definitely proven. Contrasted with old Commerce Department supervision with its many catastrophes is outstanding. Please do your best to retain present set-up.

Capt. FRANK C. JUDD,
Northwest Airlines.

BILLINGS, MONT., *April 25, 1940.*

Representative J. THORKELSON,
Washington, D. C.:

Arguments of penurious economy do not justify present effort to abolish effectiveness of Civil Aeronautics Authority. The real price paid in lives of passengers and pilots must not be lost by such tampering. Depending on you to prevent it.

Capt. EARL HALE,
Northwest Airlines.

BILLINGS, MONT., *April 21, 1940.*

Representative J. THORKELSON: Faulty and politically minded Commerce Department can be blamed for Bozeman and other Montana air crashes. No similar fatalities have occurred under Authority of Civil Aeronautics law and Safety Board. Any tampering with present efficiency of Board will be disastrous and should be strenuously opposed.

Capt. E. J. CORRIGAN.

BILLINGS, MONT., *April 21, 1940.*

Representative J. THORKELSON: Under faulty supervisions of politically minded Commerce Department 3 air-line crashes occurred in Montana whereby 11 passengers and 4 pilots met terrible and fiery deaths. Under supervision of Air Safety Board no fatalities have occurred. Is further proof necessary for your opposition to plan of abolishing Safety Board?

Capt. M. B. CAHILL.

It Can't Happen Here

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 26, 1940

LETTERS FROM MR. FRED S. WILLIAMS

Mr. GEYER of California. Mr. Speaker, the following two letters are of interest to all who believe in preserving the rights guaranteed to all under the Constitution. It appears to us that this is going quite far. We are hopeful that incidents such as this will not occur again. If they do, it may be in order to have an investigation, for this is not the first instance of violations such as this on board ship. The letters follow:

STEAMSHIP "PRESIDENT GARFIELD,"
Boston, Mass., April 22, 1940.

Representative LEE GEYER,
Washington, D. C.

DEAR SIR: I am enclosing a copy of a letter sent to our union paper, The Voice of the Federation, as the incident related directly concerns you.

I am not a student of law and therefore am unfamiliar with the legal aspects of this case but it does not seem right to me or my shipmates that a sea captain should have the right to delay or prevent the sending of, or to censor messages that are addressed to a Member of the House of Representatives or Senate of the United States of America.

In our opinion, it is more reprehensible when you consider that the American President Lines, which owns and operates this ship, is subsidized by, and a big proportion of the stock owned by, the Maritime Commission, a United States Government agency.

If you can use your influence in any way to rectify this situation it will be greatly appreciated, not only by the crew of this vessel, but by all union seamen in the United States of America.

Respectfully yours,

FRED S. WILLIAMS.

STEAMSHIP "PRESIDENT GARFIELD,"
New York, N. Y., April 18, 1940.

EDITOR, VOICE OF THE FEDERATION,
24 California St., San Francisco, Calif.

DEAR SIR AND BROTHER: While at sea, en route from Genoa to New York, on Sunday April 7, at a regular meeting of the M. F. O. W. & W. on the steamship *President Garfield* a motion was passed that a radiogram be sent to one of the California Members of the House of Representatives protesting any change in the Wagner Act.

The following radiogram was drafted by a committee, submitted to the other departments, concurred in by them, signed by the three delegates and filed by myself at the purser's office that evening:

"Representative LEE GEYER,
"*Washington, D. C.*

"Crew *President Garfield* vigorously protest any change in Wagner Act.

"F. WILLIAMS, *Engine.*
"D. GREENBERG, *Deck.*
"L. RANDALL, *Stewards.*"

I was told at the time that the message would first have to be censored by Capt. A. W. Aitkin. An hour later the message was returned with the information that the captain would not authorize its transmission.

The other two delegates and myself immediately went up to see him. We explained to him what the Wagner Act is and how important it is to labor that the act remain unchanged. We suggested that his objection might lie in the use of the word "crew" and offered to substitute the words "unlicensed personnel." He replied that that was not his objection, but that "we do not want any politics on this ship."

We could not persuade him otherwise, and there the argument rested for the time being.

The gang was pretty indignant about the whole thing, and several courses of action were proposed upon our arrival in New York.

Rumors of these proposals must have reached the captain's ear—we made an effort to insure that they would—because, 2 days later, when we again approached him on the subject, his manner had visibly changed. After 15 or 20 minutes' argument about the political rights of American citizens and the status of seamen on ships of a Government-owned steamship company, he finally O. K.'d the message. To save his face, he had us make the change which we had originally suggested—substitution of the words "unlicensed personnel" for the word "crew."

I can understand how he as a "loyal stooge" for the steamship owners, would not desire to see any political action on the part of labor, but to use such dictatorial methods in an attempt to suppress such action savours more of a Fascist country than of the United States of America, where we are all supposed to enjoy equal political rights.

Captain Aitkins' action has directly infringed upon our constitutional rights as American citizens. The Bill of Rights explicitly guarantees us the right to petition Congress and our message to Representative LEE GEYER certainly would be considered as such.

In addition, his action constituted direct interference with legitimate union activity.

The fact that our message was finally sent does not alter the case one whit because for 2 days the captain dictatorially denied us our rights. A delay of 2 days under different circumstances could have made our message useless.

It seems to me that the question raised in this case is very important and especially to the seagoing unions. Our main battle is on the legislative front, not the water front. If practices like this are allowed to continue unchallenged we will be seriously crippled in our efforts to retain our present conditions and to make our future gains.

I believe that this should be taken up by the federation and the several seagoing unions with the steamship companies and our rights to send such messages clearly established. All ship's masters should be instructed that they are not to censor, delay, or stop any crew messages that can be construed as legitimate union business.

I hope that this letter may serve to start the ball rolling and am

Fraternally yours,

FRED S. WILLIAMS,
No. 1040, Delegate, Steamship President Garfield.

Actors and Theater Projects Should Not Be Proscribed

Memorandum requested by Subcommittee on Appropriations on application of Actors' Equity Association to permit the allotment of Government relief funds to professional workers in the theater.

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 26, 1940

Mr. CELLER. Mr. Speaker, the committee requested answers to the following questions:

First. If relief to the theater is to be allowed, how is relief money to be administered, and by whom?

Second. What plans does Actors Equity Association recommend for the use of relief money?

Third. If there are box-office receipts, how are they to be distributed?

I. IF RELIEF TO THE THEATER IS TO BE ALLOWED, HOW IS RELIEF MONEY TO BE ADMINISTERED, AND BY WHOM?

The situation is now entirely different from that existing when the Federal theater project was alive.

If relief projects for the theater are now to be set up there must be a local sponsor and this sponsor must be responsible for approximately 25 percent of the total relief expenditure. These sponsorships will be local, and have full local responsibility and will be a prime factor in keeping the project wholesome and unobjectionable.

Not only will there be local sponsorship, but the Actors Equity Association cannot anticipate that sponsors can be

secured for amounts anywhere near as large as those expended by the Federal theater project.

In matters of administration we have, therefore, the following checks and balances:

(a) The rules laid down by the administration in Washington with the limitations they prescribe.

(b) The responsibility of local sponsors to their local constituency.

(c) Limitation of funds.

(d) Where projects are sponsored locally, administration must be handled in cooperation with local advisory boards and committees composed of persons of experience in the work of the project, and who know what efficiency and economy is—and who are competent administrators.

All of these factors coordinate to secure an administration which will be efficient and economical. They represent the best set-up to obtain proper administrative personnel, to choose for production appropriate plays, to determine economic methods of production.

Equity—and this is important—will cooperate with these groups to certify to the local administration the standing of all applicants for relief; it will on request give the administration full information as to whether the applicants are or are not genuine professionals.

II. WHAT PLANS DOES EQUITY RECOMMEND FOR THE USE OF RELIEF MONEY?

When Equity first took hold of relief administration it started with $28,000 a month. It did such an effective and economical job that continually that appropriation from the city and State of New York was increased. In the end they were distributing several times this amount.

In determining what to do, Equity brought together the very best brains in the theater, and from their experience they now present the following proposed plans:

First. Equity will recommend the revival of its project, successfully carried out by it, of presenting plays approved by the teaching staffs in the high schools of the larger cities in connection with the class work in English and history and other studies which may be helped by visual education. No admission fee charged.

Second. Equity will recommend the continuance of the very successful project of using the traveling theater to bring drama to large audiences outdoors in summer and in large auditoriums in the winter. Admission fee, if any, nominal.

Third. Equity will endeavor to revive its most successful project, unqualifiedly approved by Dr. Fechner, of bringing drama to the C. C. C. camps, with full practical instructions to camp members in organizing community theaters back home. No admission charge.

Fourth. Equity will sponsor the organization of groups of dramatists to write plays, not for Broadway, but of especial value to educational groups. If local sponsors may be secured, groups of dramatists in the several States will be organized to write plays, visualizing State history and local dramatic events.

Fifth. Equity will not endorse productions to be given in competition with regular commercial productions.

Sixth. Consistent with the above, Equity will assist in testing out new methods of production, aiming to bring good theater to smaller communities, such as rotary stock, repeat stock, and so forth.

Seventh. Equity will assist in promoting a children's theater project.

Eighth. Equity will assist in promoting projects to improve the technical experience of younger actors.

III. IF THERE ARE BOX-OFFICE RECEIPTS, HOW ARE THEY TO BE DISTRIBUTED?

The primary idea will be to produce plays for their cultural and educational value and wherever possible to the largest audiences. In most instances admission will be free or at a nominal price. Any receipts will have to be divided according to agreement between Colonel Harrington and the local sponsors. All service contribution by Equity will be free.

STATEMENT OF FACTS—NEED FOR RELIEF

There is no use hiding the fact that employment conditions in the theater are simply brutal. The condition among legitimate performances is about the same as in the other branches, vaudeville, presentation houses, radio, and so forth. In the legitimate field Equity has a membership of approximately 4,200. We have given the number employed a careful count and it does not exceed 800. In another month about 400 of these will be idle and will not have employment worth mentioning until next October. For a year and a half before the Federal theater project was abandoned, Equity maintained a bureau to pass on applications for relief—any kind of relief. Approximately 2,500 members applied, asking for some, any form of relief or help. The terrible fact revealed, outside of unemployment, was that less than 1 percent of these applicants had any bank account, any insurance, or any personal property having any value exceeding $50. During the depression they were stripped of them all.

Our conservative estimate is that more than 75 percent of Equity's membership is without employment of consequence.

PEOPLE OF THE THEATER ARE SUBSTANTIAL TAXPAYERS

In the first place, our product pays an admissions tax, which increases the price and lowers patronage. The Government realizes several million dollars annually through this tax.

Our important people are heavy income-tax payers and pay a larger proportion than successful businessmen. This is because their earnings are concentrated in a few short years, and therefore their surtax is concentrated in these few years.

It is conservatively figured that the tax contribution of all classes in the theater is a minimum of $10,000,000 annually. And yet, under present conditions, our abnormally assessed taxpayers have to support their own unemployed.

THE THEATER MAKES UNUSUALLY LARGE CONTRIBUTIONS IN THE WAY OF PUBLIC SERVICE AND CHARITIES

There is no need to go into this. Everyone knows it. Who sold millions upon millions of Government bonds during the last year? Who is at the beck and call of our foremost charities? Who is always ready to help every educational or cultural effort? The actor.

If it were not for the voluntary services of the actors, hundreds—yes, thousands—of entertainments given every year would be unknown.

EQUITY'S RELATION TO THE INITIAL RELIEF PROJECT

Equity was the sponsor of the first relief project. At the time this project started there was an insistent demand all over the city and State of New York for a part of the relief funds. Equity was promised $28,000 monthly just to pay wages. It was required to raise all other expenses of production, including scenery, transportation, lights, royalties, and so forth. Equity raised the money for this. It culled out 150 actors from 1,500 applicants and had 10 fine plays in rehearsal within 10 days after it assumed sponsorship. Its work was so commendable that the city and State gradually increased its appropriation until within a few months 40 companies were presenting plays in the public high schools, in the camps, and wherever production would have an educational or cultural value.

It turned over to Mrs. Flanagan a marvelous organization administered for and by professionals. Its efficiency and economy were generally and highly commended.

Under point II Equity again urges the adoption of plans formulated and wholly or partially carried out under its administration. Sufficient it is to say that its educational work in New York City secured the unanimous approval of the supervisors and teachers in history and English courses. When put into operation the outdoor theaters, the traveling platform theaters, were patronized by audiences reaching twelve to fifteen thousand, all of whom, through the use of sound amplification devices, were able to see and hear. The

group of dramatists which were gathered together did some outstandingly successful work and were on their way to doing more.

Every one of the projects now being recommended were carefully considered by the best technicians in the business and were all considered to have merit.

CONCLUSION

The theater should play a definite role in the life of the Nation. Assuredly the theater should not be signaled out for proscription. Differences arose last year concerning conduct of the Federal Theater Project. It is hoped that such differences can be cleared up and removed to the satisfaction of all concerned.

The way is now clear for projects with local sponsorship and local contributions to start with a clean slate and do work that in true worth will stand on a par with the other splendid efforts of Equity in matters of charitable and public concern.

Equity, therefore, asks that the subcommittee recommend that the prohibition in the law against the theater be removed, and that the Administration, headed by Colonel Harrington, be permitted to make allotments under proper conditions with responsible sponsors who desire to be helpful to the theater.

Y. W. C. A. Speaks

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 26, 1940

LETTER FROM MRS. ELEANOR C. ANDERSON, INDUSTRIAL SECRETARY

Mr. GEYER of California. Mr. Speaker, the demand for the removal of the poll tax as a prerequisite for voting is spreading all over the country. This tax remains in but 8 States of the Union. The States are Alabama, Arkansas, Georgia, Mississippi, South Carolina, Tennessee, Texas, and Virginia. The reason for the increase in interest is no doubt because the citizens of the Nation are beginning to realize that the votes of Representatives from States where the low-income groups cannot pay the tax as a prerequisite to voting count just as much as those from the States where democracy exists. The eyes of the Nation, the next few weeks, will be watching the votes of us all on the amendments designed to weaken the wage-hour and the Wagner labor laws, but there will be especial attention given to the 78 districts in the 8 poll-tax States, to determine the contribution from each toward bringing a greater measure of justice to our low-income groups. This contribution will help to determine whether or not the poll-tax issue is strictly local or of Nation-wide consequence. If representative government really functions we would not expect much support from these 78 districts. However, all know that in spite of the few voters to benefit by these laws there will be support from those sections.

The letter showing the new recruits to the cause of democracy is printed below.

THE NATIONAL BOARD OF THE
YOUNG WOMEN'S CHRISTIAN ASSOCIATIONS
OF THE UNITED STATES OF AMERICA,
New York, N. Y., April 23, 1940.

Representative LEE E. GEYER,
House of Representatives, Washington, D. C.

DEAR SIR: At a meeting of the National Industrial Assembly of the Y. W. C. A., representing 35,000 industrial workers, held in Atlantic City last week, the following action was taken: "Since the poll tax denies the right of citizenship to individuals in many States, be it resolved that the National Industrial Assembly urge the passage of the Geyer bill and that local clubs be urged to take action in support of this bill."

We shall be glad to have you use this resolution in any way you see fit.

We have been working in our southern groups on this matter for over a year. We will now urge our local units over the country to become active. We would appreciate suggestions from you as to the status of your bill. If there are additional hearings, perhaps we can get people there. I wrote to a good many people in the South, but fear the hearings conflicted with our convention.

Sincerely yours,

ELEANOR C. ANDERSON,
Industrial Secretary, Leadership Division.

Registration of Aliens

EXTENSION OF REMARKS
OF
HON. J. THORKELSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 26, 1940

RESOLUTION BY HAROLD JOYCE POST, NO. 1116, VETERANS OF FOREIGN WARS OF THE UNITED STATES

Mr. THORKELSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas the United States of America has suffered greatly in times both of peace and of war from pernicious activities of insidious groups working under the dictation of foreign interests; and

Whereas it is vital to the protection of this country that such activities be curbed, without, however, infringing on the individual liberties guaranteed by the Constitution and the Bill of Rights of the United States of America, nor on the rights of foreign citizens to protect and advance their interests in this country; and

Whereas protection against anti-American activities requires a knowledge of the groups which may be engaged in such activities: Now, therefore, be it

Resolved by Harold Joyce Post, No. 1116, of the Veterans of Foreign Wars of the United States, That it endorses the action of the congressional committee investigating un-American activities (commonly known as the Dies committee) and urges the adoption of its recommendation for the enactment of legislation to require the registration of all groups having foreign connections and the filing with proper authorities of lists of the names of all persons affiliated in any way with such organizations, together with adequate penalties for failure to comply with said law; and be it further

Resolved, That copies of this resolution be prepared by the adjutant of this post and be forwarded to Chairman DIES and also to Senators B. K. WHEELER and W. R. MURRAY, and to Representatives J. THORKELSON and J. R. O'CONNOR.

James Willis Taylor

MEMORIAL ADDRESS
OF
HON. JOSEPH W. BYRNS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. JAMES WILLIS TAYLOR, late a Representative from the State of Tennessee

Mr. BYRNS of Tennessee. Mr. Speaker, in the passing of the Honorable J. WILL TAYLOR, the Congress sustained a grievous loss. Through his many years of service here Mr. TAYLOR had become one of the most valuable Members of the House, regardless of party. Mr. TAYLOR for years had been one of the colorful figures in Tennessee politics and was unquestionably the most dominant figure in the activities of his party not only in Tennessee but in the entire South. He was essentially a partisan and fought hard but he never struck below the belt, and his regard for personal friendship transcended party politics.

When I first came to the House I took the immediate opportunity of renewing and extending a friendship which had existed between us for nearly 20 years. Prior to the time I came to Congress I never visited Washington without calling to see Mr. TAYLOR and on many occasions he gave me, with the most complete unselfishness, valuable advice and friendly counsel. He was one of the senior statesmen of Tennessee

and I mourn his going. I was very happy that his family requested that I be named on the official committee to attend his funeral and at those exercises I saw men of every political creed and religious faith and there was universal sorrow at the untimely passing of this beloved figure.

Mr. Speaker, I desire to include in these remarks a prayer for those who have been promoted to a higher life, recently made over the radio by the brilliant and eloquent Rabbi Norman Gerstenfeld of the Washington Hebrew Congregation:

God giveth, God taketh away, blessed be the Name of God, blessed be the righteous judge. As we recall the beloved ones who have passed away, these words come to heal the hurt that death has wrought. Our loved ones have answered the summons that sounds for all mankind, for we are all sojourners upon the earth and our times are in His hands. We loose our hold upon the tree of life when our time is come, as the leaf falls from the bough when its hour is done. The deeds of the righteous enrich the lives of men as the fallen leaf enriches the soil beneath. The dust returns to the earth, the spirit lives on with God's eternal years. Like the stars by day, our beloved dead are not seen with mortal eyes, but they shine on in the untroubled firmament of time. Let us be thankful for the companionship that continues in the love that is stronger than death and spans the gulf of the grave. Treasuring their memory let us, in the presence of God, sanctify His name.

Extolled and hallowed be Thy name throughout the world which Thou has created according to Thy will. And mayest Thou speedily establish Thy kingdom of righteousness on earth.

Praised be Thy glorious name unto all eternity.

May the Father of peace send peace to all who mourn, and comfort all the bereaved among us. Amen.

WILL TAYLOR is gone but a Nation which produced him and men like him has nothing to fear from the future.

Samuel Davis McReynolds

MEMORIAL ADDRESS
OF
HON. MARVIN JONES
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. SAMUEL DAVIS MCREYNOLDS, late a Representative from the State of Tennessee

Mr. JONES of Texas. Mr. Speaker, I should like to say a word about SAM MCREYNOLDS, of Tennessee.

I shall not undertake to discuss his record of service in the House of Representatives, outstanding though it was. That will be done by others. I simply want to pay personal tribute to a man whom I knew and admired as an official and loved as a friend.

In all my years of service in the House of Representatives I have never known a man of finer pattern, nor have I known anyone whose character and ability I respected more. Then, too, I knew him as a friend, for whom I had a great personal affection. It seemed that almost everyone in the House felt the same way. Somehow it was always a joy to meet him and to receive his cordial greeting. His very character inspired confidence in everyone. I like to remember him for the bright, worth-while, sterling character that he was.

SAM MCREYNOLDS possessed a rare personal charm that is seldom found in one of his rugged strength of character. That combination would make him a noteworthy man in any company.

No one that I knew was more skilled in the art of legislative service. Artistry in the legislative branch is not built on ability alone. Integrity, loyalty, patriotism, love of country, tolerance, understanding, information, and many other qualities are a part of the make-up of a successful legislator.

A worth-while record is not built just on mechanical things. Behind the mechanical is the spiritual make-up that gives life to the worth-while things and gives understanding to the character and motives of men.

SAM MCREYNOLDS possessed these various qualities to a degree that few men possess them.

I should like to see him again.

Emmett Marshall Owen

MEMORIAL ADDRESS
OF
HON. MARVIN JONES
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. EMMETT MARSHALL OWEN, late a Representative from the State of Georgia

Mr. JONES of Texas. Mr. Speaker, during a period of 20 years' service in the House of Representatives one has the privilege of associating with many Members. Some of them remain but a short time, while others serve for a period of years. As the nature of the work brings us together in a common purpose, the House soon gets the measure of the men who have been selected to serve in that body.

There is an especially close relationship between the Members who serve on the same committee. They not only have their work together in the House but they also meet face to face day after day in the formulating of the terms and purposes of legislation. There both the weak and the strong points of men are frequently brought to light.

It was my privilege to serve a number of years on the same committee with EMMETT OWEN, of Georgia. I learned to know and appreciate the fine qualities of mind and heart which he possessed. Modest, affable, able EMMETT OWEN was a man of deep convictions. At the same time he had the ripe judgment and good sense that made it possible for him to cooperate in a reasonable way in working out the practical phases of legislation.

The men who knew him best were the ones who appreciated him most. He believed in the American philosophy of government, and he had a sense of loyalty that kept him always close to the principles for which he stood. His kindly, generous nature endeared him to everyone whose privilege it was to serve with him on the committee or in the House.

Often in the busy realm of life we neglect to express to people the appreciation and affection we have for them. We grow used to precious things and they seem commonplace to us. Only when we are deprived of them do we have a full appreciation of what they mean to us.

The association with EMMETT OWEN is one of the bright memories of my service in the House of Representatives.

Emmett Marshall Owen

MEMORIAL ADDRESS
OF
HON. MILTON A. ROMJUE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. EMMETT MARSHALL OWEN, late a Representative from the State of Georgia

Mr. ROMJUE. Mr. Speaker and Members of the House, we have met in this body to pay our respects to the memory of a distinguished Member of the House, Hon. EMMETT MARSHALL OWEN, who represented the Fourth Congressional District of Georgia, and who passed away June 21, 1939.

It was not my pleasure to have known Congressman OWEN but a few years, as he had not been a Member of this body but for a few sessions. He rendered to the people of his district and to his country honest, faithful, and distinguished service. Before coming to Congress he had been honored by the people in his State and had served them efficiently and well and with distinction.

He was quiet in demeanor, but loyal and thoroughly dependable to his constituents and his friends.

It is one of the greatest honors that can be conferred upon an American citizen to be elected to a membership in this body. It is the greatest legislative body in the world, inasmuch as it is the greatest law-making body of the greatest government on this earth. It is indeed not only a great honor, but a great privilege. Friendships and associations are formed here which bind us close together and remain with us as long as we live.

EMMETT M. OWEN was a man of right and sound judgment. He thought far more deeply on public questions than that which casual acquaintance might cause to be suspected. He was one of the most considerate and courteous men among our membership, always ready to be helpful when opportunity arose when he conscientiously felt that he could properly do so. He numbered among his acquaintances many warm, loyal, and personal friends, and no one was more loyal to those whom he trusted and could call his friends than was he. He had a distinguished political career and gave good account of his stewardship. He was of that type of man that preferred to help others rather than to have them help him. It can be truly said of him that he was faithful and loyal to his friends and to the official duties assigned to him by his constituents. He was honest, capable, and efficient. He is greatly missed as a Member of this House, as well as by his Georgia constituents. He was not one who desired to seek notoriety or applause, but he was a brilliant advocate, a wise legislator, an able counselor, and a gentleman of high order. He put more into the world of value than he took away, and a man of that type may be said to have been a success. Few men, taking into consideration the time in which he served in this body, have more warm, personal friends who could be depended upon and trusted than did he. He preferred to grant a favor than ask one, and as I think of him as he was these lines come to me:

The best will come in the great "To be,"
It is ours to serve and wait;
And the wonderful future we soon shall see,
For death is but the gate.

Sam D. McReynolds

MEMORIAL ADDRESS
OF
HON. ALFRED L. BULWINKLE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

Tribute by Senator MCKELLAR on the life, character, and public service of Hon. SAM D. MCREYNOLDS, late a Representative from the State of Tennessee

Mr. BULWINKLE. Mr. Speaker, as chairman of the Committee on Memorials, under leave to extend my remarks in the RECORD, I include the following remarks by the Honorable KENNETH MCKELLAR and a letter in memory of the late Honorable SAM D. MCREYNOLDS, a distinguished Member of the House of Representatives:

I first knew the Honorable SAM D. MCREYNOLDS when he was a circuit judge in Chattanooga, more than a quarter of a century ago. He was handsome, courtly, affable, genial, and delightful then and remained all that and more until his death. He was always gracious and friendly to me. I did not serve in the House with him, as he came to that body after I was elected to the Senate, but from the beginning of his career in the House, in 1923, I knew him and his lovely wife very well. Immediately upon his becoming a Member of the United States House of Representatives he took a fine place in that body and became one of the outstanding Members.

Congressman MCREYNOLDS' service on the House Foreign Relations Committee gave him great prominence, and he made a number of trips to foreign lands, all of which broadened his experience and observation and gave him greater opportunity for serving his country.

During the Coolidge and Hoover administrations the Congressman did not have opportunity to show the real stuff of which he was made, but when President Roosevelt took office in 1933 he became one of the President's warmest supporters and was made chairman of the Foreign Relations Committee. As such he enjoyed the esteem and confidence of our great President, who repeatedly honored him.

In addition to the performance of his duties on the floor, Congressman MCREYNOLDS was ever ready to help his constituents, secured positions for many of them, and aided them in all their affairs in which the Federal Government was concerned. He was most attentive to the affairs of his district. He was unrelenting in his labor for the people of his district and enjoyed their fullest confidence and esteem, as his long career indicated.

Congressman MCREYNOLDS' name was frequently mentioned for the position of United States Senator and at one time I am quite sure he could have become the nominee of his party, but he had become very much interested in foreign relations and did not wish to give up his chairmanship of that committee.

The home life of the Congressman was very beautiful. He and Mrs. McReynolds had but one daughter, whom he idolized, and she was lovely. I think I never knew a more charming family relationship than was his.

Personally, SAM MCREYNOLDS was one of the most genial of men and was good company in the cloak room, in conference, at his home, and anywhere else. He loved people and rarely, if ever, spoke unkindly of anyone. His fine disposition made him a favorite with everyone who knew him. Congressman MCREYNOLDS died full of honors, with his loved ones around him, and after a successful and splendid life.

J. Will Taylor

MEMORIAL ADDRESS
OF
HON. ALFRED L. BULWINKLE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

Tribute by Senator MCKELLAR on the life, character, and public service of Hon. J. WILL TAYLOR, late a Representative from the State of Tennessee

Mr. BULWINKLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks and letter by the Honorable KENNETH MCKELLAR in memory of the late Honorable J. WILL TAYLOR, a distinguished Member of the House of Representatives:

The late Hon. J. WILL TAYLOR was an unusual man. When I first met him he was the secretary of former Governor Ben W. Hooper. At that time he was a comparatively young man, ambitious to a degree, intelligent, energetic, vigorous, determined, and never afraid to take a position on any matter. He was then living in La Follette, Tenn. He had a lovely wife and two lovely daughters to whom he was very devoted.

Congressman TAYLOR early became tremendously interested in politics and was thus interested all his life. At that time the Honorable Richard W. Austin was Congressman from the Second District. He was commonly known as "Dick" and was exceedingly popular. When Mr. TAYLOR ran against Congressman Austin very few thought he had a chance to win. Congressman Austin had long been Congressman from this overwhelmingly Republican district, and was regarded as unbeatable. J. WILL TAYLOR made a most vigorous campaign, however, and won. He remained in Congress for more than 22 years. After his election he moved to Knoxville and became Tennessee's most popular Republican leader. He soon was selected as the national committeeman of his party, and during the Coolidge and Hoover administrations absolutely controlled every Republican office in Tennessee. No one could be appointed who did not have his support. He ruled with a strong hand. If members of his party differed with him he fought them in the open and, as a rule, they were beaten and accepted his suzerainty.

Personally, Congressman TAYLOR was a delightful, affable, and accomplished gentleman. If beaten at any time he took his defeat with a smile. If he won he took it as a matter of course. And he usually won.

While adviser to Presidents Coolidge and Hoover, Congressman TAYLOR brooked no interference with his plans. He was an uncompromising Republican, devoted to his party, ever ready to fight for it, but he bore no grudges. Probably no stronger Republican has arisen in Tennessee during my time.

Congressman TAYLOR was devoted to his district and worked strenuously and vigorously for its every interest. At first, he did not think highly of the work authorized by the Tennessee Valley Authority Act, but later on he became one of its vigorous advocates and aided in the advancement of that development.

Although he was an uncompromising Republican and I was and am an uncompromising Democrat, when it came to matters of inter-

est to the whole of Tennessee we frequently joined forces and worked for Tennessee. But there never was an agreement express or implied of any nature or description between us. He was loyal to his party and fought me politically as vigorously as he fought any other Democrat. Personally, we were always friends, even when we differed most widely. He was a natural-born political organizer, and his organization in the State was probably the best his party ever had.

Congressman TAYLOR was very active on the floor whenever his interests were involved. He was a good speaker, a fearless speaker, and a fearless man. I was opposed to him politically but I always honored and respected him personally. I admired his courage and his frankness at all times.

When J. WILL TAYLOR died enormous crowds attended his funeral, and I believe every county in the State was represented.

1940 Liberalism

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, April 29 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. BURTON K. WHEELER, OF MONTANA

Mr. LA FOLLETTE. Mr. President, on April 23, 1940, the senior Senator from Montana [Mr. WHEELER] delivered a very interesting address to the Carolina Political Union at Chapel Hill, N. C., which was broadcast over the Columbia Broadcasting System. The speech is entitled "1940 Liberalism." I ask that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I deeply appreciate your invitation to address the Carolina Political Union. The very existence of such an organization evidences a most commendable interest in national affairs. Your example could well be a guide for American youth—upon whom sooner or later will fall the responsibility for good government.

North Carolina—one of the Original Thirteen Colonies—was one of the last to adopt the Constitution, and then only after inclusion of the Bill of Rights. Having felt the iron heel of the royal governors and executive dictation, you are today the only State to deny your elected Governor the power to veto an act of the Legislature. With cotton fields and textile mills, with acres of tobacco and your cigarette production, you are at once both a leading agricultural and industrial State.

For the farmer you have rich and fertile acres; for labor, the most advanced legislation in the South; for the youth, full-term schools and fine universities; and a visitor like myself is enthralled with the grandeur and beauty of the Great Smoky Mountain Park. North Carolina is truly a most American State. It is the natural cradle for a political union whose prestige and whose liberalism is hailed the width and breadth of our land.

But during these critical times, when the world-wide drift in government is toward a totalitarian state, when a Browder, a Taft, a Dewey, a Willkie, each calls himself a liberal, when ancient and reactionary ideologies are clothed in streamlined robes, all studded with palatable catch phrases and proclaimed as modern liberal principles, then the time has come to ask ourselves, What is true liberalism? In 1923 I was in Europe. At that time you were a liberal if you stood for democracy. Today if you go to Germany, Italy, or Russia and are for democracy you are a reactionary, a Tory, and are living in the "horse and buggy" days.

You and I are Americans. For your ancestors, and for mine, liberalism had only one meaning—democracy. They spilled their blood and sacrificed their all in 1776 that you and I might live in a Republic. To them liberalism meant democracy; and to my mind, in 1940, the very term still irrevocably connotes democracy, political and economic.

The real liberal of today is governed by the same fundamental principles that governed Thomas Jefferson, Charles Cotesworth Pinckney, Henry Clay, and Andrew Jackson. Today as then a liberal would preserve civil rights, democracy, and parliamentary government at all costs. Today as then a liberal would resist and oppose concentration of wealth in the hands of a few.

A liberal believes in a limitation of the power vested in any individual. Any deviation from this basic concept is destructive of democracy and the American way. The trend toward a greater and greater concentration of wealth necessitates greater and greater centralization of government—a departure from democracy and liberalism. Power, political or economic, begets power. A liberal believes in competition and would regulate or control business only to prevent injustice and to protect the weak from strangulation by the strong. He believes there must be equality in economic opportunity.

A liberal loves and reveres each liberty expressed and guaranteed by the Bill of Rights. And with equal force he hates any infringement of civil rights. He believes in freedom of expression. He would maintain a free press, free in the sense that it dares to speak the truth unhampered by Government or economic pressure. A liberal is tolerant. Above all else a true liberal detests intolerance. He knows it is prima facie evidence of ignorance. A liberal welcomes opposing views. He recognizes the democratic worth of disagreement, the right of every person to differ, and a liberal extends and applies this philosophy to the workaday world. Political, economic, religious, racial, or any other form of intolerance is abhorred by those who would bow at the shrine of liberalism.

A genuine liberal did not see German airplanes flying over the Rocky Mountains or U-boats lurking in the waters of Lake Michigan during the last war. He is not swayed by every wave of hysteria that sweeps the Nation. Today he does not believe that Hitler or his ideology will come over here if we have sufficient sense not to go over there—and to devote our energies to domestic problems. In this country a liberal is not pro-French, pro-English, or pro-German; he is pro-American and pro-democratic.

Not by definition but by achievement the United States is the greatest nation in all the world. We are the greatest, not because of any single asset; other nations are possessed of a greater area, a larger population, and even more natural resources; but no other nation has the same combination of assets.

Democratic government, an ambitious and progressive population of diverse origin and talents with an inventive genius unequalled in the history of the world, fertile and productive acres, great forests, rich deposits of gold, silver, and other minerals—all are the factors that have made ours the richest and freest country in the world. These assets permitted us to solve by mass production the problem of food, clothing, and shelter; and with them at our command we can, by the exercise of unselfish intelligence, solve the problems of agriculture and unemployment that today blight our national existence and even threaten our democracy.

Unemployment, anti-social and uneconomic, continues today as it has for a decade. It is a national problem of the first magnitude, and like the farm problem must be solved before this Nation will enjoy a balanced economy or any real prosperity. As a nation we have said that those in need are entitled to adequate relief, but the unemployed who are willing to work are entitled to far more than mere relief; they have a more basic and fundamental right—the right to a job.

There is no single panacea for the unsolved and comparatively untouched problem of unemployment. But this does not mean that its solution is impossible. The leaders of industry, labor, agriculture, government, and, yes, of the church, forsaking their individual or selfish interests for the national welfare, could meet, confer, and hammer out the answer.

The inability of the low-income groups, underprivileged farmers, the jobless workers to consume the products of factory and farm increase the present economic turmoil. Although production is approaching 1929 peaks, fewer workers are required, but the labor supply is increased each year by nearly 600,000 young men and women. The increased productivity of labor has not always brought shorter hours and better wages, the dividends of progress for the worker. Continued and inevitable technological improvements seem to mean less and less opportunity for employment. Labor ever seeks a more equitable division of the wealth it creates, higher wages, and improved working conditions. But these alone are not enough; the national good demands that workers be assured of something more basic, something that transcends good wages and decent conditions—jobs.

Work for the unemployed—the Government must furnish it until private industry does.

Jobs for the jobless and parity for agriculture with industry is the bilateral goal toward which labor, business, agriculture, and government must strive. The welfare of agriculture with its 30,000,000 people directly concerns each of us—worker, doctor, lawyer, manufacturer, educator, and politician alike. This is no theory. Facts speak for themselves. Statistics indicate that our national income over a period of years has increased at the ratio of seven billion to each billion increase in agricultural income. Twenty-five percent of our population is engaged in agriculture, and they receive only 11 percent of our national income, and so long as this is true a balanced economy is impossible. Labor, through organization, has obtained higher wages. Industry has been afforded the protection of tariff walls. In some instances industry has been able to maintain artificially fixed prices, but the farmer, while selling on a world competitive market, buys on this protected and too often noncompetitive market.

There must be either a substantial rise in farm prices or a substantial reduction in industrial prices.

Fair prices for the farmer are essential, but there is something more basic for agriculture, even as an opportunity to work is more basis than relief for labor—and that prerogative for the farmer is the right to have, to hold, and to own his farm.

Ours is a democracy which has its roots in the individual ownership of land by millions of independent farmers. Two rights a liberal holds to be self-evident—the right of every man to own a plot of ground, there to earn his living and rear his family, and the right of every man to a job at decent wages. These two rights are in reality but twin aspects of those sacred, inalienable human rights of "life, liberty, and the pursuit of happiness." The right to own a farm and the right to a job are closely linked one with the other. We cannot drive thousands of farmers from the land and onto the open road without at the same time forcing countless thousands out of work and into the streets of the cities.

Are we today preserving these rights in this land of ours—the hope of all the earth? Have we, the inheritors of this vast land with its untold riches and of the principles to which the pioneers of democracy consecrated it, have we maintained and reaffirmed these rights, as each succeeding generation must? The liberal answers we are failing. We must have the strength and the will to deserve and to maintain democracy. Free institutions and ideals are being stricken from the map of Europe by militaristic gangsterism. They may be stricken here, unless each of our citizens is assured those economic rights which are the promise of American life.

Let us look for a moment at what has been happening on the land, the land from whence comes our strength as a nation. Until recently throughout most of the history of the United States the vast majority of our farmers have owned the land they worked. That is no longer the case. In 1880 about three-fourths of our farmers owned the land they farmed. Today only a little more than half of the Nation's 7,000,000 farmers own their farms. The number of farm tenants increased from about a million in 1880 to over 2,800,000 in 1935. Farm tenancy is not growing in North Carolina. You have checked it, and as a nation we must check and reverse this trend toward a modern agricultural feudalism.

Not only is farm tenancy on the increase, but farmers are being driven from farms. This is dangerous and un-American; it is perilous economically and socially. Foreclosure, drought, and mechanization since 1930 have pushed hundreds of thousands of farm families from the land. These uprooted families have few alternatives. They have taken to the road in a hopeless nomadic search for work; they have swelled the relief rolls. They have added new recruits to the army of unemployed.

Congress would not retard progress, and there is no complete human solution for drought, but there is something that can be done to prevent cruel anti-social and uneconomic foreclosures. Dispossession has been one of the great factors in the creation of a migrant problem that has reared its ugly and monstrous head in California. Farmers dispossessed in Oklahoma or Arkansas or elsewhere, moving from county to county and State to State in a desperate search for economic opportunity, have converged on our Pacific coast.

What is taking shape in our Nation faster than perhaps any of us realize is the creation of a large landless class, mobile and migratory, totally lacking economic security or the equality of economic opportunity that should be theirs.

A farm-credit policy that creates new tenants through foreclosure faster than any Government agency can rehabilitate them must be altered.

A new philosophy of agricultural credit must be adopted—a philosophy whose application will keep the farmer on the farm and afford to him a measure of security hitherto denied him.

Senator BANKHEAD, of Alabama, Senator LA FOLLETTE, of Wisconsin, and I have introduced legislation which would establish lower interest rates on Federal loans to the farmer. Congressman JONES has introduced a companion bill in the House. This legislation would do more than reduce interest rates, it provides a formula for the adjustment of farm debts. It would take the whole problem to the farm, there to attain its solution by giving a farmer the opportunity to remain on the farm and to meet debt obligations adjusted to the productivity and economy of his farm.

This legislation is liberal, it is far reaching, but it attacks a tremendous and shocking evil, one that is dangerous to the American way of life. If agriculture as we know it is to continue, definite and corrective steps must be swiftly taken. Opponents have denounced the legislation as radical, as socialized credit, and as a confusion of money lending and charity. But let me remind those who make such charges that great banks, railroads, insurance companies, corporations, and even cities have enjoyed and utilized the same type of credit. The so-called Wheeler-Jones bill extends the principles of R. F. C. credit for industry to the farmer. We seek to save agriculture, to save homes, lives, and souls, not just giant corporate enterprises.

Failure to take liberal action on the farm-debt problem today will mean drastic action, fascist or communistic, tomorrow.

Liberals who see the Nation's economic and political ills, who have diagnosed the malady, and who can offer sound remedies, are the real conservatives and the real patriots. And those who would do nothing, those who would let the patient limp along, they are the dangerous radicals, for sooner or later the system would crumble and in its stead would come the extreme as it came in Germany and in Russia.

Economic injustice to the underpriviliged in every walk of life has led farsighted people to devote themselves to its correction. During the last few years we have made great progress. We have extended the borders of economic justice. Liberals must continue to devote themselves toward the objective of more and more economic democracy, but in so doing the overwhelming and fundamental importance of political democracy cannot be overlooked. Economic democracy and justice can be attained only through democratic processes.

The youth of today are thinking—thinking in terms of economics and politics—in an effort to determine what fate holds for them. Today you are at military age. To the east and to the west there is war. Today you are about to leave the academic world for the practical and real one. Here depressed economic conditions limit your opportunities. But your fate in a democracy—in the United States—depends greatly upon yourselves. Be realistic, be progressive, be guided by the fundamental concepts of liberalism. Maintain your sanity and thus aid the Nation to keep its sense of balance. Have courage and keep your faith in democracy. We can and we will remain at peace. We can and we will restore economic opportunity.

Problems Affecting the Motorist

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, April 29 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, it is now recognized that vacation travel is a great factor in economic conditions. On April 22 and 23, there was held in Knoxville, Tenn., a regional conference of A. A. A. motor club executives from 11 Southeastern States and southern Ohio. The purpose of this gathering was to appraise travel facilities in the Southeast and to gear travel service machinery to meet present-day demands. It was my pleasure to deliver the banquet address at this conference, and I ask unanimous consent to have it inserted in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am indeed grateful for the opportunity to speak at this conference. When the invitation was extended to me by my long-time friend, Russell Singer, I was informed that your meetings have a twofold purpose: First, to appraise your respective motor clubs in the light of demands in this new era of highway use, and, second, to consider the many problems facing car owners with a view to new and vigorous action.

There are many reasons why your conference is most timely. We are today going through another of those periods of national readjustment. Everyone is thinking in terms of our institutions, our methods of living, and our economic practices in relationship to the future of our democratic system. As never before, our people are seeking to understand the vital forces which affect their welfare, their income, and, in fact, every phase of their day-to-day existence. This new interest may be attributed in part to a better understanding of conditions. The radio and the press are helping our people to become better informed about things which affect them.

Out of it has come a new appreciation for organized effort. Group action is providing leadership in meeting the problems which individuals cannot solve alone. The conference table has become a symbol of American progress. All elements of our economic and social life are becoming well organized. Great benefits are accruing to groups of high purpose and with intelligent leadership. No better evidence of the trend toward organization can be found than the fact that some 20,000 conventions are scheduled for 1940. At these gatherings wil' be discussed problems confronting all our citizens. It goes without saying that public support is readily forthcoming for organizations which are filling an important need and which are rendering real service to the people they represent. Thus it is reasonable to believe that motorists will respond quickly to more aggressive action in their behalf.

The automobile is now an integral part of American life and a vital necessity. Highway use is the very lifeblood of our economic and social fabric. Yet attempts are being made to confuse public thinking on transportation issues. Thus the problems of highway transportation loom large on our "must list" for National, State, and local action. There are, of course, two phases of highway problems—the problems in connection with commercial highway use and the problems which affect private motorists. Involved in the latter is the daily movement of 26,000,000 passenger cars, in the hands of more than 30,000,000 owners and drivers, and over 3,000,000 miles of roads and streets.

Sometimes I fear that too many of us never view our highway transport as a great national industry but rather in terms of the individual automobile. The great mass of our citizens have never appreciated the tremendous advances in the progress of our Nation that are directly attributable to the cheap and flexible transportation offered by the motorcar.

To say that it is the very basis of our national well-being is not putting it too strongly. One has only to consider that the annual retail turn-over in our highway transport system is in the vicinity of $9,000,000,000 a year, or roughly one-fourth of all consumer expenditures, to realize the deep-rooted effect highway transport has on our country. To think of the motor vehicle merely as a speedier substitute for the horse is to underestimate its range.

The invention of the automobile and its wide diffusion has influenced the shift of our population, aided the growth of suburbs, and affected the size of villages; marketing areas have completely changed; the isolation of the farmer has been lessened; our educational system has been revolutionized, with the rural consolidated school replacing the one-room schoolhouse and its limited facilities; highway transportation, along with electricity, has dispersed our factories, with the result that manufacturing is no longer limited to certain regional areas, and, equally as important, the American people have learned to play and now enjoy a new-type vacation.

Travel is today an objective of every man, woman, and child. It is evidence of national restlessness—the urge to go places and see things. We have literally come to the point where "hop in" is more than an expression; it reflects a state of mind.

This new desire for travel is, of course, an outgrowth of individual transportation. Its effect upon attitudes and ideas cannot be accurately summarized. But there is clearly an entrancement of geographic consciousness. The farmer departs from the Kansas wheat field to see the cities, the mountains, and the ocean; the resident of the seaboard leaves home to see the wheat fields and the plains. The New Yorker comes South to see the Great Smokies and the Tennessee Valley. Our residents go northward to see the World's Fair. Except in very isolated sections of our country, it would be difficult to find those persons, quite common a century ago, who had never left the counties of their birth. Today our people from every section are constantly meeting. They are the motorists.

It is of the problems of the motorist about which I wish to speak. He is the one car owner who uses his automobile to go to work, to send his children to school, to ride to church on Sunday, and to take the family on vacation. He was here first. He is the one who looks to the American Automobile Association and its affiliated clubs to assure him maximum efficiency, convenience, and economy in the use of his car. In other words, I want to speak briefly for the motorist.

First, however, let me position myself as regards my right to speak on this subject. Travel has been one of my lifetime hobbies. I was one of the pioneer car owners in this mountain country in which we are now meeting. I enjoyed the thrills and adventures of driving in the roadless era. About 16 years ago I made a trip around the world, visiting many places where the people had never before seen an automobile. I had ample opportunity to gain first-hand information on the vital force of motor clubs in many lands.

As a vice president of our national association for the last 9 years, I have had a chance to see at close range what our organization and its 725 affiliated clubs and branches are doing in behalf of car owners. Since I entered the United States Senate in 1932 I have observed the prestige and influence of our association in official circles in Washington and elsewhere. Five years ago I made a tour covering the broad face of the United States and witnessed conditions affecting motorists in virtually every State. So whatever you may think of senatorial speeches in general, I believe that I can, with pardonable pride, say that I can speak on my subject with a degree of authority.

For the sake of the record, suppose we also position our organization with regard to its qualifications to represent the motorist. It was organized in 1902. There were less than 23,000 automobiles in use at that time. Cranks on cars and "cranks" were yelling "get a horse." It was the A. A. A. which conducted reliability runs to prove the automobile was feasible. These encouraged public acceptance. It was our association which led the movement for good roads, resulting in our progressive plan for Federal aid for highways. It was the A. A. A. which made automobile racing a laboratory for testing machines and materials. It is the A. A. A. which has been in the vanguard of forces seeking constructive motor-vehicle laws and regulations. It has stood as the rallying group for all things designed to improve motoring conditions. In legislative circles it has never been looked upon as a lobbying group, even an aboveboard and constructive association acting for the motorists. All this has been for the common good of the steadily increasing millions of private-car owners. It is in addition to the direct services and protection given to individual members.

Thus our association has over a period of nearly four decades had a constructive part in the development of highway transportation. It has justly earned a place in the hall of fame of organizations rendering a valuable service to the American people. Now what about the future? To my way of thinking the opportunities for the motor club have just begun. There is a new appreciation for the institutions which merit the right to have a part in planning for the future. Merited the right because of distinguished service rendered in the past—because of experience which can be translated into beneficial action.

There are some who contend that the motor club is not as essential as it once was. These people belong in the class with these who believed the automobile would never replace the horse, that planes would be used only by dare-devils, and that radio would never be more than a toy. I am convinced that the motor club is today on the threshold of its greatest opportunity. Its field of service is virtually unlimited. Its experience is needed in attaining the things necessary to assure the full advantages of highway transportation. It is the only organization well equipped to enlist national support essential to advancing the cause of the car owners.

Fortunately, our people seem to be getting a better appreciation of the basic importance of highway transportation. They are more and more visualizing the automotive industry as a user of raw materials and employer of labor. They are getting a new conception of the truck and bus as a necessary utility of service. As individuals travel more, they see the tremendous progress being made in building roads and handling traffic in some sections. It makes them more elert to the advantage of these things in their home section.

What are the contentions of those who think the motor club has outlived its usefulness? They say that we have reached the saturation point in car ownership and use. This is error number one.

Foresighted authorities are already predicting 40,000,000 cars on the roads by 1960. As better cars are built at lower prices, one-car families are becoming two- and three-car families. People are using their cars more and travel horizons are being broadened. Transcontinental journeys and trips to Canada and Mexico are the rule rather than the exception. Thus demands for motoring services are becoming greater. While the luxury and economy of the modern car has made travel easier, it has also made motorists more intelligent and demanding travelers. A map is not enough for the car owner of today. He wants full and complete travel service.

It is contended that with a million miles of paved roads our highway system has been built. This is error No. 2. The job of rebuilding roads for current and future traffic needs is perhaps greater than was the original job of providing roads. Virtually our whole highway system needs to be modernized. Express highways in areas of heavy traffic, divided-lane highways, better sight distances on many existing roads, and many other improvements are needed. Motorists are now realizing that 30-miles-an-hour highways are not sufficient for 60-miles-an-hour vehicles.

Fortunately, highway-planning surveys now under way in 47 States are providing a factual basis for road building. Political expediency and guesswork have no place in modern highway construction. They must go. Having come through the whole motors era as the public defender of the motorists' rights, the American Automobile Association is well qualified to continue leadership in the highway movement.

It is claimed that such things as signposting of highways has been done. This is error No. 3.

Some sections of the country are over-signposted and others are under-signposted. In many areas signs are not properly placed from the standpoint of either facilitating travel or assuring safety of travel. It is often difficult for motorists to know which road leads to where. Federal markers are often left on little-used roads when better and heavier-traveled roads are built. Here community pride must give way to the general good. The motor club has and is doing much to clarify this difficult and confusing situation.

It is said that every State and city now has traffic laws and regulations. This is error No. 4.

Every State and city does have rules governing the movement of vehicles and requirements for operators. But they are as varied as the theories for national recovery. I dare say that a Tennessee motorist driving to New York and following Tennessee traffic rules would violate many hundreds of traffic laws. Full convenience from the use of the automobile demands that States and municipalities standardize basic traffic regulations. It is essential to eliminate confusion and thereby add to traffic safety.

But time does not permit listing all the errors in the viewpoints of those who are blind to motoring needs. I could go on from errors 4 to 400. The simplification of our motor-tax structure, with some degree of equity, is long overdue. The motorist is the special target for tax grabbers who bow to expediency. That goes for the Congress, which has pyramided Federal gasoline taxes on the already topheavy State gasoline taxes. We now have the highly questionable practice of using license-plate issuance as a blackjack to collect other taxes having no relationship to car use. Tremendous sums of motor taxes levied for highways are diverted to other than road purposes.

The motor-tax situation has been well described as follows:

The motorist arises in the morning. He goes to the garage to get his Federal-taxed car. He inspects his Federal-taxed tires. Driving out, he stops to buy some Federal- and State-taxed gasoline. He glances at his mail while waiting and is reminded that he must buy his license plates and renew his driver's license. Two more taxes. Near the office he steers into a parking-meter zone and pays another tax. Then he reads in the paper that a nearby road cannot be improved because the road funds—his taxes—have been diverted. But he gets really mad when his secretary mentions the joys of owning a car as a prelude to asking for a raise.

I could go on indefinitely as regards motoring problems. However, I believe that I have touched upon enough to indicate that stringent and organized action is necessary to safeguard the benefits we

have obtained from the automobile. I have also tried to indicate my confidence in the motor club as an agency of service in this respect.

While I recognize the fact that broadly speaking, highway transportation knows no State lines, I am particularly concerned with the problems of the motorists in the South. They have an important bearing on travel development, a subject in which I am vitally interested.

The South has always been an objective for vacation-bound tourists. As the number of automobiles in the country has increased and as roads have been built, there has followed a steady increase in the tide of southern travel. However, it is only within recent years that our section has become truly alert to the opportunities of travel development. Many States are spending large sums for advertising. New vacation objectives are being created. New emphasis is being placed on the historic areas which have survived from the Old South.

It is now the opportune time for the New South to reap full advantages from promotion of our recreational advantages. This conference, with travel and travel services looming large on the program, has been well timed. It is you men and women here tonight who will meet and serve our visitors. You will be our ambassadors in the travel movement.

There are many reasons why the southern travel outlook is encouraging. President Roosevelt has proclaimed 1940 as Travel America Year. World conditions permitting, the President will shortly dedicate the Great Smoky Mountains National Park. It will focus national attention on this matchless area. Here in the Tennessee Valley has been developed another great playground. It offers recreational facilities and natural and man-made wonders sufficient to challenge the imagination. Closing of the travel gates of Europe has awakened more interest in seeing America. The South has done an extremely fine job of bringing its vacation resources to the attention of the country. All these things mean that the travel urge is running strong and the movement of adventure-bound travelers during 1940 is expected to exceed all previous records.

In appraising travel opportunities and at the same time considering the conditions necessary for full benefits, this conference is on a constructive basis. Travel development places a great responsibility on sections which are catering to vacationists. These sections must keep abreast with the times if they are to maintain a steady and continuing tide of travel.

Over a period of years, I have been intensely interested in every activity having to do with bringing the South's attractions to the attention of travel-minded millions. I have made many travel speeches. While I must confess that on most occasions I have urged people to come to North Carolina, I have not overlooked entirely the great attractions of Tennessee and our sister States. After all, Tennessee was carved from North Carolina and we "tar heels" still feel an obligation for the welfare of our neighboring State.

In concluding my remarks tonight, I want to touch on a phase of travel development which we in the South have partly overlooked. It has to do with the responsibility we owe our visitors. I shall speak frankly because I feel the subject is of vital importance to our section.

At times I have been somewhat embarrassed by some of the questions asked me by people in other States. Such questions as these: Senator, why do some of the Southern States permit cattle to roam the highways and endanger motorists? Bob, why do you southerners permit vehicles with one light to be on the roads at night? Senator, I enjoy going to the South, but why are some of your roads so narrow. I said these questions were embarrassing. They are, because they indicate that we are not as progressive as we should be in tackling some really acute problems affecting both our own people and visitors.

Here is a typical case in point. As many of you know, I am a lawyer. I do not want to appear critical of our system of law enforcement. On the whole, the Southern States have done a fine job of creating and operating highway patrols. They are composed of trained men, alert to the safety of motorists and appreciative of their responsibility. Thus, from this standpoint, enforcement methods have improved. But the situation as regards the motorist who runs afoul of the law is not so good. He can either plead guilty and pay a fine, or not guilty, and is bound over for later trial. A delay of a week or two is necessary. The motorist may live a thousand miles away, and the cost of staying over or returning for trial would be too heavy. Some method should be worked out to give both visitors and residents immediate trial, particularly in minor cases. Any other plan borders on denying a nonresident due process of law. Swift, speedy trial before a judge paid on a salary basis is a primary need in order to give fair treatment to the visiting motorist, and to do away with speed traps, exorbitant fines, excessive costs, and other abuses that grow up when justice operates on a fee basis. The motorist has no alternative to pleading guilty. It is a situation which should be corrected.

It has been a pleasure to attend and participate in this conference. I know that your discussions will be productive of much good in the direction of better motoring conditions. There is no greater opportunity for real public service today. I can pledge to you my wholehearted coöperation in any and all movements to advance the interests of highway transportation. Such undertakings further a cause which has a vital bearing on every phase of our whole national economic and social system.

Senator Wheeler

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, April 29 (legislative day of Wednesday, April 24), 1940

ARTICLE FROM BOSTON SUNDAY POST

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article with reference to the senior Senator from Montana [Mr. WHEELER], published in the Boston Sunday Post, of April 14, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Boston Sunday Post of April 14, 1940]

BURTON K. WHEELER—THE YANKEE FROM THE WEST—YOUTHFUL PIONEERING AND POLITICAL BATTLES OF FAMOUS LIBERAL SENATOR FROM MONTANA, DEMOCRATIC CANDIDATE FOR PRESIDENCY, WHO WAS BORN IN HUDSON, MASS.—HOW HE EXPOSED TEAPOT DOME SCANDAL AND DEFEATED SUPREME COURT PACKING BILL

(By A. Lawrence MacKenzie)

A tall, lean, sandy-haired young man stepped off the train at Butte, Mont. Butte was not his particular destination, but he had only enough money in his pocket for food and a night's lodging, none for further train fare.

The lad was 23 and very far from his Hudson, Mass., home. Butte was a wide-open town in 1905, headquarters for hard-bitten miners and harder-bitten mining companies.

Wandering into an eating joint, the young fellow got invited into a poker game by a slick card sharp named Bill Gadney. He lost what little he had.

That was BURTON K. WHEELER'S introduction to the city that has been his home ever since. It was a good introduction, because it left him entirely on his own, gave him a swift lesson in what was profitless, and left him to use his wits. He did—to the advantage of Montana and BURTON K. WHEELER.

The year before the San Francisco earthquake Marcus Daly had caused another kind of bouleversement in the West. He had sunk a mining shaft only 100 feet and made the name Anaconda magic around the world, started many men on their way to millions by way of gold, silver, and copper, and drew thousands of workers to Montana.

NEEDED 2 DAYS' REST

Young WHEELER'S assets were a law-school diploma from the University of Michigan and plenty of confidence in himself. His spur was a girl he had met in the Middle West, Lulu M. White, of Albany, Ill. The rangy youth had earned that diploma by waiting on tables and selling books; in fact, he had met the girl when trying to sell her mother a cookbook, so he knew from experience that one rarely gets what he wants unless he goes after it.

During his initiation to Butte he had met a lawyer, Billie Meyer. Shrewdly persuasive, he convinced Meyer that it would be good to let him have a table and chair, some space, and the use of law books in Meyer's office until he got a client or so.

With his shingle out, WHEELER waited for a client who could pay. There was plenty of corporation work in Butte in those days, but the young Quaker from Massachusetts had already decided that he was going to be a champion of labor. Not till 6 months had passed did he get his first jury case. He doesn't remember any details of that ordeal.

All he recalls, with a quizzical grin, is that the court officers told him he talked for three-quarters of an hour and that he spent the next 2 days in bed recovering from his nervous excitement.

Democratic candidate for the United States Presidential nomination, Senator from Montana since 1922, BURTON KENDALL WHEELER was born in the typically New England town of Hudson, Mass., on February 27, 1882. His father, Asa L. Wheeler, was not a cobbler, as has been so often reported, but a shoemaker. Both he and his wife, the gentle Mary Elizabeth Tyler Wheeler, came from old Quaker stock that had settled and been persecuted in Massachusetts Bay Colony before the Revolutionary War.

THE WANDERLUST

Young "Burt" led the ordinary life of a country schoolboy. The youngest of 10 children, 8 of whom lived, he wasn't overburdened with home chores, and the family lived in their white-painted farmhouse in quiet comfort.

Not until he had finished high school did he exhibit the wanderlust that was later to send him to the wild and woolly West and to national fame. His first job, after graduating from the Hudson Commercial College, was with a wholesale hardware firm in Boston.

Restless, he shifted twice, first to an optical company, and later to the office of a textile machinery plant. There are shrewd blue eyes behind BURTON K. WHEELER'S rimless glasses. They were shrewd then, and there was ambition in his long, gangly frame.

Two stories account for his going where Horace Greeley advised young men to seek fortune. An apocryphal tale claims that he asked for a $3 raise, was refused, and decided to find more liberal lands far from home. He says that New England climate didn't agree with him, that he was asthmatic, and went to the dry uplands of the West for his health.

In any case, with $750 of savings in his pocket, and the family blessings on his head, he boarded a train for Ann Arbor, Mich., with the intention of entering the law school. Almost immediately he met a discouragement that would have stymied the run-of-the-mine student. He put most of his money in a bank, and the bank promptly folded.

That catastrophe took $500 from his kitty. But WHEELER wanted a law diploma. He got himself a job waiting on table, and while the rest of the undergraduates were out playing ball or having a good time "Burt" juggled a tray from table to table, mumbling to himself the law principles he wanted to memorize.

Summers he combed the rural communities of the Middle West selling cookbooks that would instruct the country marms how to concoct fancy dishes for their hungry men. He had fair success at selling the book but better success at selling himself.

MET "THE GIRL"

Landowner and farmer White of Albany, Ill., had a lovely daughter who was then a student at normal school. Mrs. White, who went to the door to talk to the book agent, was interested but she didn't buy a book. That bothered Salesman WHEELER not in the least. Over her shoulder his eyes met those of her pretty daughter, Lulu, and it was love at first sight.

That was why he particularly wanted to make good when he hung out his shingle in Butte, Mont., a few years later. He won the jury case that had sent him to bed for 2 days and during the following year had sufficient success to make him feel justified in considering marriage.

BURTON WHEELER had a memorable experience when he returned to Albany, Ill. Miss White's father owned quite a territory of land. The homestead lay across the river and could not be reached by train. The expectant bridegroom went down to the ferry and found it crowded with passengers dressed in their best finery.

"Where's everybody going?" he asked a gawky countryman.

"Wall, stranger," the countryman explained, "seems like old man White's daughter is to marry some no account from the West and the old man's right furious. He says the young man don't amount to anything and never will, and we're all getting there to look him over."

WHEELER never has gotten over that.

Ahead of WHEELER lay victories in such battles as the Teapot Dome scandal, the rabid "red" scare of the first World War, and the court-packing bill, battles that were to bring out all the Quaker honesty and all the Yankee fighting power of this adopted son of the West. But how was Papa White to know that?

FOR THE PEOPLE

The young Lochinvar from out both the East and the West took his bride back to Butte with him and settled down to domesticity and hard work. With meager savings they made a down payment on a small frame house and proudly invited friends in to exclaim "how cozy."

WHEELER, with his quick understanding mind, and always an easy man to meet, worked with New England industry and had a fair share of success that first year of married life. Butte was on the boom. Anaconda, producing $1,000,000 a week, shook the State from end to end with mining litigations.

The keen young lawyer threw his lot with the people who worked for the great corporation and also thrust himself into local and State politics, always on the progressive side. Montana was just beginning to appreciate the disadvantages of having powerful corporations control its political affairs, and WHEELER was earning the reputation of being a wild and even radical reformer.

The first shyness at addressing a jury that had sent him to bed with nervous exhaustion had long since worn off. Now a dynamic and persuasive speaker, a champion of the less privileged, the people of Montana sent him to the State legislature in 1911. He took his gloves off there and really fought—for laws to better working conditions in the mines, to compensate victims of mine disasters, for everything he felt would benefit those he defended.

When he was boosted in 1913 to a Federal district attorneyship by President Wilson, mine operators sighed with relief. That promotion came about through his work to elect the redoubtable Thomas J. Walsh to the Senate at Washington. Though many of Walsh's pledged supporters switched at the last minute, WHEELER stuck.

BITTER BATTLE

The sandy haired lawyer-politician, with a growing family and a burning ambition to prove that his father-in-law was as wrong as a man could be, didn't know it but he was to face tremendous trials and tremendous upheavals in his State during the next 7 years.

Shortly after the boots of thousands of German soldiers began raising autumn dust on the roads that lead to Paris, things began booming in the Bonanza State. Orders began pouring in for copper, lead, manganese, and other products from the mines. For the new high explosive shells had to be banded, bullets were needed by the millions and tough steel was more valuable than bread.

Business profits soared, but outside the mining industry the State was not prosperous. A long series of droughts, followed by one of the most severe winters the State experienced in all its history, livestock men had to pay $60 a ton and more for hay. Every day in the courthouses throughout the State sheriffs read long lists of foreclosures while gloomy people stood around and listened.

The people didn't take it lying down. The hard-pressed farmers organized their nonpartisan league and the laborers their unions, and both groups chose as their leader the 39-year-old lawyer, BURTON WHEELER, and nominated him, in the Democratic primaries of 1920, their candidate for Governor.

BURT WHEELER then took on one of the toughest and bitterest battles of his life. The opposition, with oodles of money to spend, an ace organization to carry on its work, took up cudgels against him and throughout the length and breadth of Montana he was denounced as an advocate of free love, a red radical, and a hater of the Government.

Feeling ran so high that at one town he had to be protected by husky guards and hurried out of town in a boxcar. The outraged farmers wanted to tar and feather this man who would ruin their sons and daughters with "pernicious doctrines."

CALLED A "RED"

That fact that he already had a sizable family of his own, was an ideal father, the kind that relaxes with a baseball bat and his own youngsters, a devoted husband, the kind who interests himself in building up a real home about his wife—all this didn't seem to penetrate. All the irate electorate remembered were the propaganda sheets and the evil tales whispered from ear to ear across the State.

He was defeated, badly defeated.

But BURT WHEELER knew how to take it. Several other amazing episodes in his political career showed that the direct-spoken, uncompromising Yankee from the Bay State knew what Henley meant when he wrote Invictus.

Two years previously, as United States district attorney, he had been given the task of finding out the cause of the violent labor conflicts in the mines and why the flow of vital munitions material was being interrupted.

He found out what he thought was the truth but he spoke it too loudly. He reported that the strikes were being provoked by the mine owners as part of a scheme to force the Government to boost the fixed price for copper.

It was the time of the I. W. W. scare and the "red" ogre lurked in every corner of the country. Just as today the epithet "Communist" is irresponsibly flung at many of those who disagree overloudly with existing evils or reactionary political philosophies, the term "red" was one to bait with in 1918.

Voltaire's famous line, "I wholly disapprove of what you say but will defend to the death your right to say it," had fallen into disrepute. Attorney General Palmer, already convinced that the subversive forces were about to take over the Government forced WHEELER to resign.

Few men have survived such political bludgeoning. Out of it came the grim motto that WHEELER coined for himself, "If I don't get them, they'll get me," and a set-jawed determination to battle on.

TEAPOT DOME

For 2 years he relaxed, enjoying home life with his family, indulging one of his favorite hobbies, reading political history and the history of law, fishing in the marvelous trout lakes of his State, and riding horseback through mountain trails.

In 1922 he went to bat again and this time backed by warrior Tom Walsh, knocked a home run. He was elected to the United States Senate and has been there ever since.

Charming, quiet Mrs. Wheeler has been an influential asset in the Senator's Washington career. Remaining in the background of his political life she became from the start one of the Capital City's most popular hostesses. Primarily interested in the problems of bringing up her fine family she has also found time to talk over things with her admiring husband.

Bay State's Senator DAVID I. WALSH, once when discussing WHEELER'S personality, said, "I don't believe I ever talked any matter over with him when he didn't say at least once, 'Now, my wife thinks.'"

Mrs. Wheeler, motherly, sweet-faced, and friendly, is an accomplished musician and many an evening her noted husband for relaxation sits and listens to her play.

Shortly after he took up his duties as Senator, BURTON WHEELER needed that relaxation, all the relaxation he could get. He fired the opening shot in one of the biggest scandals in national history

by presenting a resolution demanding the ousting of Attorney General Daugherty.

Back in his home State the resolution was taken as a joke. Nobody thought there was a chance of Senate approval. But WHEELER is a knock-down, drag-out, two-fisted fighter. His thoughts come with machine-gun rapidity and his invective speech is devastating. Time and again he left the Senate breathless in his Philippics against the most shocking graft and corruption that had been exposed for decades.

THE SAME MAN

The story of how he drove the infamous "Ohio gang" in disgrace from Washington is now fairly well known history. The name of Jess Smith and "the little green house on K Street," and "the little black bag," are all a remembered part of that amazing looting business known as the Teapot Dome scandal.

THE FRAMERS

The gang fought back. WHEELER was charged with failing to report a fabulous fee for his part in a smelly deal, a set-up framed by the "gang." The Senator demanded an immediate trial but the "gang" held it up. WHEELER was nominated for Vice President on the La Follette Progressive ticket, running against Cal Coolidge and "Hell-and-Maria" Dawes. On the day of his first campaign speech the Department of Justice called for his trial.

WHEELER had to ask for a continuance, which was just what the "gang" wanted. Not till the following April was the alleged testimony against the Montana Yankee presented. Ten minutes later the jury brought back a verdict of acquittal.

His next great battle was a cleaner one, one that involved differences in logical ideas rather than moral. That was the fight he led against the so-called Court-packing bill of Franklin Delano Roosevelt.

After one of his speeches during that 1937 revolt the wife of one of Montana's very wealthy and very influential citizens elbowed her way to his side.

"Let me congratulate you, Senator, on your fight against that man," she gushed. "Now that you have changed, you are our candidate for President."

Senator WHEELER turned to look at her and his clear, cool voice was incisive.

"I haven't changed, Madame," he said. "You may have changed, the times may have changed, but the WHEELER you now want to put into the White House is the same WHEELER you wanted to put in jail a few years ago."

That is WHEELER, liberal and dynamic. He doesn't change in his essential principles because they are a part of him. They were bred in him by his New England ancestors who first conceived the ideal that Lincoln put into immemorial words when he said "government of the people, by the people, and for the people."

NO WAR FOR US

Characterized by all who know him as able, fearless, and a master of congressional procedure, Senator WHEELER has become, during his 17 years of service in the Senate, a widely known national figure.

One of the most pressing problems that faces any legislator or Chief Executive these days is the war in Europe and its effect on us. WHEELER has expressed himself on that issue with all the forthrightness a man could summon.

"If we must hate," he said, "let's not hate each other. If we have to make war, let's not fight each other—let us make war on poverty.

"We must never lose sight of the fact that our entry into war cannot be measured in terms of lives lost and dollars spent. The price would surely be the loss of democracy and Christianity.

"Our problem is to solve our economic difficulties at home and not the politics of Europe. Our problem is to preserve American democracy and not the balance of power or the boundaries in Europe. To my mind, the most heroic qualities, the most noble emotions, the highest glory come not in wars won or lost but from wars prevented.

"I will never vote to send a single American boy across the water to fight on foreign soil. Neither will I approve of a single step that in my judgment may lead this country down the road to war."

Wheeler is well acquainted with the peace and tranquility of American home life. Both he and his wife have always been closely associated with their six children, Marion, the youngest; John, a lawyer in Los Angeles; Edward, in a law firm in Washington, D. C.; Dick, a junior at Dartmouth; Elizabeth (Mrs. Edward Colman) lives in Milwaukee, and Francis, in San Francisco.

MAKES OWN BREAD

Mrs. Wheeler, an excellent cook, still makes her own bread because the family won't eat any other. She is a pretty fair golfer and gets up to play nine holes with the Senator before he goes to the office.

On Sundays they go to the Methodist Church. Mrs. Wheeler is an interested Bible student. The Senator belongs to two men's organizations, the Masons and the Elks.

In Washington they live in a simple white clapboard house and are rated by those on the street as "very good neighbors." In Montana they have a lodge at Glacier National Park and a home in Butte, where guests enjoy the whole family.

Further down the list of presidential possibilities you will find names of other notables whose chances are considered slimmer than those whose stories have been so far told.

Perhaps first on this list is United States Attorney General Robert Houghwout Jackson, often spoken of as President Roosevelt's choice as a Democratic dark horse. Jackson's political career is only 5 years old. Before that he was an executive and counsel for traction, utility, and banking interests in Jamestown, N. Y.

The 48-year-old Attorney-General was born in Spring Creek, Pa. Graduating from the Albany Law School in 1913 he was admitted to the bar and has been practicing ever since. He maintains a large model farm at Jamestown and his hobby is breeding and training horses. He is married and has two children.

Another Democratic possibility, if the convention goes haywire with its welter of candidates, is slim, loose-jointed, 6-foot, 41-year-old William O. Douglas, Justice of the United States Supreme Court.

"Bill" Douglas, who first saw New York with 6 cents in his pocket, became "the Nation's outstanding law professor," after working as a farm hand, newsboy, junk dealer, and janitor to pay his way through school. After establishing a successful practice, he taught at Yale and Columbia Law Schools. He is one of those calm, rapid workers, who never notice the time; often works 16 hours a day. Roosevelt appointed him to the S. E. C. to "boss" Wall Street in 1937 and later to the Supreme Bench.

When he finds time, he enjoys golf, fishing, tramping, bridge, and poker. In 1923 he married his boyhood sweetheart, Mildred M. Riddle, of La Grande, Oreg., and they have two children, Mildred, 10, and William, 8.

OHIO'S OTHER CANDIDATE

Ohio has another candidate besides "BOB" TAFT, if BOB doesn't make the nomination. He is Republican Governor John William Bricker. A big man, in his late forties, Bricker made a name for himself as a lawyer in his native State. He went to the Ohio State University and a year after graduating entered the United States Army for the war as a first lieutenant.

Married, he has one son (John Day Bricker), and the family lives in Columbus.

In New England the candidacy of Senator H. (for HENRY) STYLES BRIDGES, of New Hampshire, is mentioned. Good-looking Senator BRIDGES, in his middle forties, is a native of Maine. He graduated from the University of Maine in 1917 and began his career as a teacher at Sanderson Academy, Ashfield, Mass.

One of the young Republican liberals, his chief platform is to put recovery ahead of reform and to trim Government expenditures to an equitable limit. He served as Governor for his State, 1935–37 and was elected to the Senate for the term that expires in 1943.

Married to Sally Clement, of Concord, N. H., in 1928, they have three children, all boys.

Supreme Court Justice Owen Josephus Roberts, big, grim-faced, and 65 years old, won his great national fame for prosecuting the wrongdoers in the Teapot Dome and Elk Hills oil reserve scandals for President Coolidge.

Republican Roberts held his first public office when, in 1901, he was made first assistant district attorney in Philadelphia County. In 1904 he married Elizabeth Caldwell Rogers, of Fairfield, Conn. They had one daughter.

Large boned and muscular, he is one of the most robust men on the Supreme Court. He has a full thatch of gray hair that was once black. During the war he was an assistant United States attorney in charge of enforcing the Espionage Act.

Democratic and modest, he dislikes the formalities and pretensions of Washington life. His hobby is his 700-acre farm, Bryncoed, in Chester County, just outside Philadelphia, over which he loves to ride on his favorite horses.

Democratic possibility BENNETT CHAMP CLARK, husky and jovial Senator from Missouri, and son of the redoubtable old James Beauchamp Clark, who made the name "Champ" famous, came out of law school in 1912 and went to the House in Washington. An A. E. F. veteran, he is one of the men who helped found the American Legion in Paris.

Also mentioned are Massachusetts famous Democratic Senator, DAVID I. WALSH, one-time Governor, who has been going down to Washington since 1919 [Senator WALSH'S rise to prominence from his newsboy days are now well known to every Bay Stater]; youthful, handsome, Senator HENRY CABOT LODGE, the Republican junior Senator, and Republican Governor Leverett Saltonstall.

The race is on. Who will receive the two nominations, the second greatest political honor that can be given a man in these United States, depends much on what happens between now and the conventions.

Predictions and prophecies are futile because the riddle of this, the most disconcerting Presidential campaign in all our history is not yet solved. That is: Will President Franklin Delano Roosevelt run for a third term?

If President Roosevelt runs, many a Democratic star that has risen high in the political skies will abruptly fall. If President Roosevelt runs, it will mean a whole new realinement of the Republican forces.

The Church—Democracy's Safeguard

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Monday, April 29 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. EDWIN C. JOHNSON OF COLORADO

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the conference brotherhood banquet held in the vestry of the Augustana Lutheran Church, Washington, D. C., on April 27, 1940, in connection with the Seventieth Annual Convention of the New York Conference of the Lutheran Augustana Synod of America. The topic of the address is The Church—Democracy's Safeguard.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Insofar as I am concerned, the text of my address might well be Democracy—the Church's Safeguard, for one is the safeguard of the other, even though they be two completely separate and distinct institutions.

I do not know which came first, the hen or the egg, but I do know that without both you can have neither, and I am convinced that unless we have the Christian church and a courageous democracy working side by side we will have neither for very long. To be impressed by that fact we need but to read current history. A democracy provides a fertile field for the growth and development and the progress of the Christian church, and the Christian church, proclaiming the principles of brotherhood and cooperation, instills in man the proper attitude and the necessary discipline to meet the responsibilities incumbent upon him as a citizen of a democracy.

THE RELIGION OF DEMOCRACY

An Italian statesman with great truth once said: "Whosoever shall discover the religion of democracy will have found what is required to make democracy work." The religion of democracy was discovered by the Three Wise Men in the lowly manger in Bethlehem, 2,000 years ago; and without the assistance of the church founded upon that religion and serving as its safeguard, I am convinced that no democracy will ever prove to be a permanent institution.

ANCIENT GREECE FAILED

Ancient Greece had a democracy that flourished for a time, but that democracy had no opportunity to become permanent because the religion of democracy had not yet been discovered, and so it presently passed into the dust of oblivion. The democracy of ancient Greece had as its great objective not the unselfish principles of the brotherhood of man and the Golden Rule but the ultra-selfish personal gratification growing out of the perfection of art, culture, and learning. Under the benign influence of powerful government these three reached the golden age of their development, but art, culture, and learning even at their best cannot rise to the sacred sphere of a religion, much less the religion of democracy, and when evil times came upon Greece, its art, culture, and learning founded upon paganism were blotted out overnight. Let me point out that learning is not necessarily wisdom and there was no deep religious inspiration in the hearts and souls of the people to keep the passion for liberty alive until it might take root again.

ANCIENT ROME FAILED

Later on the Roman Republic came into being. It had no opportunity to succeed, either, because THE religion of democracy still was unknown. The Roman Republic was builded around utility. Everything was sacrificed for efficiency, and more and more efficiency became the passion of the populace. Anything in Roman art, culture, and learning which did not contribute to efficiency was rejected with disdain and contemptuously discarded. The Roman passion for utility strangely enough was the direct cause of the fall of this glorious Republic. When the Romans discovered that greater efficiency could be had under tyrants, dictators, and aggressors, they promptly changed their form of government to a personal standard and gave up their liberties without a struggle. Utility and efficiency and art and culture and learning are all very desirable and serve fairly well as a goal toward which human beings may strive, but as a religion of a people they have never proved sufficient.

A DEMOCRARY WHICH WILL SUCCEED

I would now call your attention to the third great experiment in democratic government—the experiment in which the people of the United States have the privilege and honor to participate. Now, for the first time in the world's history, in my opinion, a democracy has a good chance to become a permanent institution, because today this Republic is safeguarded by the true religion of democracy, the Christian religion. America and her colonies did a lot of floundering around before the Christian church asserted her influence and caused the new nation to arrive at a sound basis upon which to build a mighty republic.

The responsibility of the citizens living in a democracy is very great. They must be cooperative by nature; they must be unselfish; they must have a broad outlook upon life and its purposes; they must be patient and tolerant; they must be courageous and intelligent; and they must be deeply religious with the highest of ideals if the democracy is to succeed. The Christian church and the Christian religion intelligently promote all of these things. Three great institutions have made it possible for this Nation to have experienced stability and balance. The Christian church, the great fraternal orders, and the education of the masses each have played an important role in the success of our democracy. The basic principle of our great fraternities is brotherhood and is, therefore, closely allied with the Christian doctrine. Another important pillar of the Christian religion is the education of the masses, for ignorance and Christianity do not work well together. It takes a well-educated man to comprehend Christianity. It was discovered by wise men and it must be perpetuated by wise men. A stupid fellow cannot grasp its intrinsic values, therefore education is a counterpart of Christianity. Broadly speaking, then, these three institutions are more or less merged into one and act as a single manifestation of a most vibrant human influence. It is true that no reference to the Christian church is to be found in the Constitution of the United States, but it is nevertheless also true that the Constitution of the United States is founded upon the broad, cooperative, and unselfish principles of Christianity.

PROPER RELATIONSHIP BETWEEN CHURCH AND STATE

Since the day the star of stars shined so brightly over Bethlehem much difficulty has been experienced by mankind in his groping for the proper relationship to be maintained between the government as an institution of his and the Christian church as an institution of God. The Christ realizing the confusion that habitually creeps into man's mind to plague and harass him laid down a simple formula and one easily understood, completely disposing of the whole controversial subject, but man would not listen. The great teacher directed that the citizen "Render unto Caesar the things which are Caesar's and unto God the things that are God's." Had governments and their citizens accepted in all sincerity that simple rule, all of the unspeakable torture of the centuries visited upon human beings by men who were trying to adjust the operation of the Christian church to the operation of civil government could have been avoided. Christ's formula is so vital in this respect that without its complete application the church is neither the safeguard of democracy nor any other wholesome thing, but to the contrary despoils government and causes man to be more beastly.

PILATE'S MISAPPREHENSION

Pilate, the Roman judge, did not understand Christ's simple rule and he sentenced the Saviour to death on the charge that he was a threat to the supremacy of Caesar and that he was attempting to set himself up as a rival to challenge the authority of Caesar. There was no evidence whatever to support that suspicion or that charge, but Caesar was so jealous of his authority and so fearful of any uprising against his will that executions were ordered on the faintest kind of suspicion. If the mob desired to have anyone destroyed the expedient charge was to make it appear that the authority of Rome was involved. Pilot could not have been expected to understand that Christ was promoting God's kingdom which had nothing directly to do with Caesar's little temporal throne. A good Christian automatically is a good citizen.

NERO DIDN'T UNDERSTAND

Nero and the other tyrants of Rome did not comprehend this point either, nor were they wise enough to grasp the fact that the Christian church if left strictly alone would contribute more to law and order and the stability of government than any other influence affecting the passions of man. Christians were fed to the lions on every festive occasion and on every holiday, and Christians burning at the stake illuminated the streets of Rome. They were hunted down in the catacombs like wild beasts, tortured, burned and dragged behind chariots because the Christ was thought to be a threat to Roman authority. One of the mighty Roman emperors noting the meekness of his Christian victims, their courageous acceptance of his most terrible vengeance, their utter lack of resistance to his brutality, and the completeness of their beautiful faith which did not desert them as they suffered torture and death at his hands cried out, "Thou hast conquered, Man of Galilee, and yet I despise thee."

UNION OF CHURCH AND STATE

Time moved on and new centuries were added to man's experience, and the Christian church, in the most difficult circumstances, continued to make progress and gain in strength and favor with God and man. New kings, wiser than the Caesars, decided that since they could not very well stamp out this doctrine which had such a strange hold upon mankind, they might better utilize it to their own ends and accordingly they made themselves the head of the church. Christianity under their instruction was taught with the sword, and heathens were forced to subscribe to its tenets upon the penalty of death. One would naturally think that now the Christian religion would reach the heights, and that government compelling the practice of the blessed sacraments would give mankind a most beneficent regulation. Strange as it may seem, the

contrary is true. History records that in this unholy alliance between church and state, the Christian religion reached its lowest ebb, and government sank to the very depths of demoralization and degeneracy, and mankind, instead of becoming kindly and full of love, became possessed of the most bitter hatred and developed a frenzied cruelty which he gleefully visited upon all who disagreed with him. Conversion with the sword is completely out of harmony with God's plan to give each of his creatures freedom of choice. He has ordained that one may accept Him or that one may reject Him. When mere man attempts to improve upon God's plan only disaster can follow.

ROGER WILLIAMS

The early colonists in America, following the custom in vogue in Europe, tried to impose upon everyone their own particular conception of the correct form of religious worship. Ears were chopped off, noses split, faces branded, men pilloried, whipped, and banished to compel them to subscribe to some particular Christian church form. Roger Williams was banished in the dead of winter into a wilderness infested by savages and wild beasts because he dared to preach that church and state should be kept separate. God was with this courageous minister of the gospel, however, and old Chief Massasoit, the heathen savage with more humanity than his civilized Christian brethren possessed, gave him land for a colony at Providence. Others driven from their habitations by Christian zealots for having a true conception of Christ's law to "Render unto Caesar the things that are Caesar's and unto God the things that are God's" joined Roger Williams, and a successful colony was established. We should be very grateful in America for Roger Williams and his accurate conception of the proper relationship between the Christian church and the state, because without that conception America never could have reached the heights. In due time the Rhode Island system, which is the true application of Christ's law, was adopted by the whole United States of America.

I love to stroll through Statuary Hall in the Capitol Building and visit the statue of Roger Williams holding in his hands a book upon which it is written "Soul Liberty 1636," for America never produced a greater statesman. When the State of Rhode Island placed his marble statue in the Hall of Fame it honored itself and showed a proper appreciation of this devout man and his great contribution to the cause of religion and government.

BRUTE FORCE OR COOPERATION

Either brute force or the rule of reason is common to all governments, and when the rule of reason is based upon a conception of the fatherhood of God and the brotherhood of man the basis for a successful democracy is at hand. No one can be a student of the spiritual implications of Christianity and the philosophy of democracy without being impressed by the contribution each is capable of making to the other. Christianity teaches and espouses the highest ideal of human cooperation and democracy depends for its very existence upon such a practice. The Golden Rule must of necessity be the first law of a democracy.

THE MODERN DICTATOR HATES GOD

The modern dictator marching in Europe today hates God because he is jealous of God and he hates the Christian church and would supplant it with atheism because its doctrine is in direct conflict with his evil purposes and designs. Il Duce Benito Mussolini, in a recent speech to his cheering black shirts, deliberately spoke these savage sentiments: "What are the three words which form your dogma? Believe, obey, fight! * * * No matter how things go, we wish to hear no more about brotherhood, sisterhood, and such other bastard relationships because relationships between states are relations of force and these relations of force are the determining elements of their policy." "The Italian motto," Il Duce continued, "must be more cannon, more ships, more airplanes"; and now this significant warning: "Woe to the weak." The motto of a democracy and the Christian church, on the other hand, is more charity, more humanity, more cooperation, and better protection for the weak and the lowly. I am not criticizing Mussolini. I quote him to emphasize the fundamental differences between his despotism and democracy. He has made a very frank, honest statement. He is not a hypocrite. He has given to the world in forcible, understandable language a true description of the nonreligion of the totalitarian system of government. Under that severe disciplinarian despotism Italy may become rich for a brief time in material things, but what shall it profit her if she "gain the whole world and lose her own soul?" Italy has many desperate problems with which I do not pretend to be familiar, and desperate problems sometimes require desperate methods. It is not for me to choose Italy's form of government; it is enough for me to strive with all my might to keep such a system out of America. I do not want America to quarrel with Mussolini or go to war with him over the political philosophy and the political system which he has every right, with the consent of his own citizens, to adopt, but I do want Americans to realize their own good fortune, and I do want to predict that America, if we cling to our democracy, will make more permanent progress than will any land under the sword of a dictator.

DEMOCRACY BEGINS IN THE HEART

We should learn from a study of the historical experiences of men that a preparation has to be made in their hearts before the kind of government to which we are so wholeheartedly devoted can exist. It is idle to believe that either Christianity or democracy can be spread throughout the world by the sword or that it can be bestowed upon a people by any outside influence. If there be not an overwhelming desire in men's hearts for these things, if they do not have a religious fervor for their virtues, and if they are not willing to devote thought and time and energy to them, and if need be, die for them, then of their own weight both must fall.

If one be a believer in the democratic processes as applied to the practical functions of government, he must necessarily have faith in his fellow man, an intense interest in his welfare, a genuine respect for his ideals, a willingness to accept the verdict of the majority and a firm conviction that spiritual things are far more to be desired and sought after than material things, and above all, he must have a passion for truth which carries with it the conviction that honesty and square dealing establish the proper foundation for all harmonious human relationships. The Christian church instructs its membership with all the energy it possesses in each and every one of these imperishable truths. The good church member is the good citizen, and the more devoted he is to his church the better he serves his country.

DEMOCRACY IS NOT AN END BUT A MEANS

I desire to make it perfectly clear in this discussion that democracy is not an end in itself, but rather that it is a means to an end. Neither is the church nor the Bible, for that matter, an end in themselves; each in fact is a vital means toward a great purpose. The end which both democracy and the church so devotedly serve is the salvation of the human soul by bringing it into complete harmony with the purposes of the Creator. Under a democratic form of government, wisely undertaken political, religious, and economic liberty may be experienced by its fortunate citizens; and liberty, if it be understood by man, will inspire and promote his faith in his God because without God there can be no liberty. God has decreed that man shall have complete freedom of choice without divine interference, since the whole theory of the development of the human soul, is based upon the principle of the "soul liberty" espoused by Roger Williams.

THE UNFINISHED MURAL

I love to visit the rotunda in the Capitol Building and in that beautiful and sacred place study and examine in minute detail the many works of art which appear there. About halfway up on the inside of the dome a band of murals encircle it. In those murals are depicted the complete history of our country from the landing of Columbus to the present hour. Its industrial, its economic, its technological, its social, and its political development are pictured there. The last event depicted is a mural of the World War, but the circle is not complete. A small space is left to illustrate some future important event in our history. As one looks upon the vacant space yet remaining he cannot help but wonder what will one day be written there. Will it record the conquest of this country by some aggressor? Will it record the overthrow in a great revolution of this Government by communism or some other subversive "ism"? Will it record there that this great democracy voluntarily abandoned the safeguard of the Christian Church; that its citizens turned their backs upon God and floundered and failed? Will it record that the people of this great Nation became so imbued with art, culture, and learning that they made these things their god, and permitted their spiritual ideals to wither and die from dry rot? Will it record that Americans became so devoted to efficiency and utility that we adopted a personal government like ancient Rome and abandoned our liberties? Or, will it record that we set up a golden calf to worship and lost our souls in our passion for material things? I do not know what will be written in that small space yet remaining, but I love to think that the golden age of mankind will be depicted there; that peace, cooperation, brotherhood, the Golden Rule, and universal happiness will be carved into that empty space. I love to think that the last unit of this great mural will depict the millennium of human experience, lighted and warmed by the everlasting glow of Christian love—the safeguard of democracy.

The Postal Service

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, April 29 (legislative day of Wednesday, April 24), 1940

ADDRESS BY POSTMASTER GENERAL FARLEY AT MONTGOMERY, ALA.

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. James A. Farley, Postmaster General of the

United States, at the State convention of the Alabama Branch of the National League of District Postmasters, held at Montgomery, Ala., on Saturday, April 6, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a privilege to meet with you in Montgomery tonight, and I am grateful to your national officers and to the officers of the Alabama Branch of the National League of District Postmasters for the invitation. Permit me to congratulate you on the fine attendance here and to thank you for coming. I also want to congratulate your host, Roy Nolen, a real fellow who has been most attentive to his job, as his record in the Department will show.

We are most fortunate in being permitted to share in the management and in the operation of the United States Postal Service. I feel that each and every one connected with the Department has a justifiable pride in our accomplishments. Few people realize the tremendous influence asserted by the Postal Service in the daily lives of our citizens.

According to reports of the Comptroller General the Postal Service is operating an $8,000,000,000 business. By that I mean that the total money handled, the financial turn-over in the post offices of the Nation, amounts to more than $8,000,000,000 annually. This is more than all of the money in circulation in the United States, exceeds the total appropriations made for the maintenance of the combined agencies of the Federal Government, and amounts to more than $60 per year for every man, woman, and child in America.

The ordinary postal revenues; that is, the money derived from the collection of postage and other incidentals, broke all records last year for the third successive year and reached the all-time high of $746,000,000. The income received so far during the current fiscal year indicates a further increase of approximately $10,000,000 in the fiscal year 1940. This means that for the fourth successive year postal gains will exceed the revenue of any previous year in history.

During the fiscal years of 1937 and 1938 the increases in postal business came largely from the smaller cities and towns. We were lagging somewhat in the great industrial centers. However, during the fiscal year 1939 and the present year business has picked up materially in the large cities and we are still going along all right in the smaller communities. Therefore, I can say to you that there has been no business recession insofar as the Postal Service is concerned, and our revenues are ordinarily accepted as a pretty accurate barometer of business conditions. The mail volume is increasing daily, weekly, and monthly when compared to the same periods last year.

We have kept pace with this increased volume by adding additional employees. We now have on our rolls and at work in the post offices more people than have ever been employed at any previous time in the history of the service. Working conditions are better. The average salary of postal employees in the field is greater than the average salary in other Government establishments and certainly higher than the average income of employees in private industry. This indicates a steady gain in business, confidence on the part of the people, and shows that the patrons are taking advantage to a greater extent than ever before of the wonderful facilities of the United States Postal Service.

I am indeed proud to be able to make this report to you, and I honestly feel that you as public officials are pleased to know and accept this report as evidence of the progress that is being made in this Nation. This report clearly indicates that the American people are increasing their business activities, that they believe in their Government, and that they are living up to the good-neighbor policy. This is definitely indicative, for when postal business is increasing in the smaller cities and towns a good part of the national postal revenue comes from the ordinary social correspondence carried on between families and friends. So I say to you in all sincerity that, while we could do better, we are getting along all right in America.

The Post Office Service has been generally improved during my administration as Postmaster General, and I want to give credit where the credit is due—to the postmasters, to my most efficient staff in the Department, and to all of the postal employees.

The Postal Service has been the most respected of all Government agencies for many, many years. Before we were born postal officials and employees, thousands of them, had devoted the best years of their lives and their best efforts to the development of this Service. All praise to my predecessors and your predecessors, and to the loyal army of workers that has given, and is continuing to give, such a fine example of courage, loyalty, and efficiency. We make but one claim—that we have accepted our positions as a public trust. We have one important objective—that in the administration of this public trust we shall at all times safeguard the interests of the people and pass on to our successors an improved service in keeping with the progress of the Nation.

Our greatest asset is good will—good will of the patrons and good will of the employees. I am happy to say to you that all reports coming to the Department concerning postmasters and postal people show that we are reaping the benefit of our many campaigns to encourage courteous and efficient service. I hear many expressions and receive a number of letters commending postal people on their industriousness, their tactfulness, and their courtesy. I want to thank each and every one of you for this and urge that you continue your efforts along the same lines.

Eternal vigilance is required if we are to meet our obligations and attain our objectives. We in the Department feel that the need for politeness is more pronounced in the post office than in most any other public service. We operate a monopoly, at least in the transmission of letters. A citizen has no choice but to deal with us. Consequently it is fundamental that we exercise great care and painstaking effort in dealing with our customers, who are in reality our employers.

May I suggest that you as postmasters constantly strive to secure the cooperation and good will of the employees in your office? Make each and every person in your establishment feel that the part he plays is an important part. Be firm when necessary and always point out in private the mistakes made by your subordinates. Let them feel that they have an individual responsibility and encourage them to assume that responsibility. Keep before you always the fact that authority should never assume the privilege of transgressing the laws of common courtesy of man to man. Be sure that your supervisors are properly trained, and regardless of the circumstances do not permit humiliating incidents to occur to any employee in maintaining discipline.

Let me also suggest that you give personal attention to the matter of training employees for their tasks. The importance of this part of your job cannot be overemphasized. Adequate and understandable instructions should be furnished to all newly appointed employees and such instructions should be repeated occasionally. For even those who are presumed to thoroughly understand their work are often helped by having their minds refreshed on some important point. The average postal employees want to learn more and more about this business, and if proper instructions are given in an effective manner they will do much in quickening the purpose and energy of our personnel.

It is important to recognize good work. When some member of your staff has caused favorable comment on the part of a patron let him know that you are pleased with his work. It does not take long to pat him on the back and commend him. To do so urges him to continue his efforts along that line. I feel very strongly on this matter of tact and courtesy and shall appreciate your continued cooperation.

We in the Department have no direct contact with our customers but leave that most important privilege to you. In the final analysis, therefore, no matter how high our purpose may be, unless we can secure the enthusiastic support of the field forces we cannot be successful.

I think that these meetings offer us an opportunity to have a better understanding. For this reason, I encourage the administrative officials in the Department to attend them whenever possible. At your meeting here you have had others from the Department and post-office inspectors available for counsel and advice concerning your service problems. Postmasters have responded in an enthusiastic manner to every appeal that has been made to them by the Department. They have given freely of their time and in some instances have been out of pocket personally in performing extraordinary tasks. Your work in connection with Air Mail Week several years ago will be of lasting benefit to the Department. We still notice the effect of increased air-mail poundage. Last year the Department inaugurated a program of actively publicizing the Postal Service and it has proved beyond a doubt to be not only an effective method for increasing the use of postal facilities but it has also created a national spirit of good will.

Experienced postmasters who have served faithfully should be permitted to continue in that service. For that reason the Congress has by law discontinued the short term for postmasters. This undoubtedly enables the postmaster to take his place as an important individual in the business and social life of his town or city. I trust that you will continue to serve for many years to come.

I regret that other engagements, principally my scheduled appearances at other State meetings, prevented me from being with you earlier during your convention, and I hope that I will have an opportunity to meet with you again. In conclusion I want to assure you again of my sincere appreciation for the fine work you are doing.

Air Safety Board

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, April 29 (legislative day of Wednesday, April 24), 1940

TELEGRAM FROM MOSS PATTERSON

Mr. JOHNSON of Colorado. Mr. President, at the request of the Senator from Nevada [Mr. MCCARRAN], I ask unanimous consent to have printed in the Appendix of the RECORD

a telegram addressed to him by Moss Patterson, president of the Southwest Division of the Air Congress of America.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

TULSA, OKLA., *April 26, 1940.*

Senator PAT MCCARRAN,
Senate Office Building, Washington, D. C.:

The directors of the Southwest Aviation Conference representing New Mexico, Colorado, Texas, Oklahoma, Kansas, Louisiana, Arkansas, and Missouri in meeting today unanimously agreed that the Civil Aeronautics Authority has gone far during its existence to justify the faith placed in it by the people of the United States. Therefore, the directors of this conference, in annual session in Tulsa, Okla., with over 500 delegates in attendance, firmly believe that the Civil Aeronautics Authority should continue to operate as an independent agency and urge that the Congress of the United States oppose the placement of the Civil Aeronautics Authority and the Air Safety Board under the Department of Commerce. More complete consideration and study of this matter will be placed before the conference for action on Saturday, April 27.

Respectfully,

MOSS PATTERSON,
President, Southwest Division, Air Congress of America.

Salvage of Hurricane Timber in New England

EXTENSION OF REMARKS
OF
HON. WARREN R. AUSTIN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Monday, April 29 (legislative day of Wednesday, April 24), 1940

LETTER FROM J. F. CAMPBELL

Mr. AUSTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter to me from J. F. Campbell, Acting Director of the Northeastern Timber Salvage Administration, relating to the salvage of hurricane timber in New England. It contains valuable information affecting the future conduct of operations, and I should like to give it publicity in this way for the benefit of those who are interested in the future transactions of that Administration.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES DEPARTMENT OF AGRICULTURE,
FEDERAL SURPLUS COMMODITIES CORPORATION,
Boston, Mass., April 25, 1940.

Hon. WARREN R. AUSTIN,
United States Senate, Washington, D. C.

DEAR SENATOR AUSTIN: We are very desirous of keeping you informed as to the progress being made in the salvage of hurricane timber in New England so that you may, in turn, pass on whatever portion of the information you wish to any of your constituents.

As you know, the program got under way in December 1938. Records show the following log receipts, the majority of which is white pine, for Vermont:

Receipts from beginning of project to Mar. 30, 1940

White pine	29,906,366
Other softwood	8,954,259
Hardwood	10,624,801
Total	49,485,426

We feel that we have accomplished the first two points in our salvage program objective, namely—

1. To bring to the owner of down timber the maximum amount in conformity with good business practices.

2. To offer to purchase any and all logs which meet our specifications, and establish the price of logs, and prevent speculation.

It is now evident that the majority of logs the project expected to receive has been delivered, and the average delivery and the merchantability have fallen off to the point where it is not economical to maintain receiving stations with scalers in attendance. Private industries are purchasing an increasing amount and should easily consume the major portion remaining after our stations close down.

With this in mind, all active vendors have been advised by letter that the receipt of logs will cease on April 30. However, in a few cases, because of poor hauling conditions near the end of this month, some logs and pulpwood which have been prepared to our specifications will still remain in the woods. To take care of such scattered cases, the following procedure has been adopted:

1. All timber-purchase agreements were executed to be completed by April 30, 1940, and no new agreements will be written.

2. Extensions beyond that time may be granted upon written request of the vendor and will not be issued until an authorized agent of the Administration has made an on-the-ground inspection to determine the approximate volume of material which will be accepted under the extension and the date of final delivery. This provision is made so that vendors who really have logs or pulpwood cut but were unable to complete delivery because of hauling conditions will not be put to expense without an opportunity to realize on the expenditure. It also gives us an opportunity to check on deliveries and determine how soon a receiving station can be closed.

3. Under no conditions will deliveries be accepted after May 29, 1940. This sets a definite dead-line date on all deliveries and again gives us an opportunity to control our costs of scaling, etc. Logs will start to stain shortly after this date.

4. In allowing any extension the Administration further reserves the right to indicate the receiving station to which delivery is to be made. There may be cases where only one vendor who has been delivering to a particular station has logs to be delivered after April 30. This provision will give us an opportunity to concentrate deliveries.

A field check indicates that there will be very few vendors who will ask for an extension of time beyond April 30.

We trust that the above information may be of assistance to you in answering any inquiries you may receive. We shall be glad to answer any questions that may occur to you.

Very sincerely yours,

J. F. CAMPBELL,
Acting Director.

Addresses in Honor of American Artists Who Contributed Toward Decorations in Federal Buildings

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, April 29 (legislative day of Wednesday, April 24), 1940

RADIO PROGRAM OVER N. B. C. NETWORK, APRIL 25, 1940

Mr. THOMAS of Utah. Mr. President, it is indeed refreshing and reassuring in times like the present to turn on one's radio and listen to a program dealing with those fundamentals which contribute so basically to the advancement of culture and, therefore, of understanding in our troubled world.

On the night of April 25, over the National Broadcasting Co.'s network, there was given a program in honor of the American artists who have contributed toward the decorations in our Federal buildings. Those taking part on the program were Mr. Edward Bruce, Section of Fine Arts, Public Buildings Administration; Prof. John Dewey, department of philosophy, Columbia University; Secretary of the Treasury Henry Morgenthau, Jr.; Mr. John M. Carmody, Administrator of the Federal Works Agency; Under Secretary of State Sumner Welles; and our colleague the senior Senator from Wisconsin, Mr. Robert M. La Follette.

Because of the universal interest in this program, I ask unanimous consent that it may be inserted in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY EDWARD BRUCE

I should like to begin this broadcast by thanking my old friend General Harbord and the National Broadcasting Co. for another friendly act in the interest of American culture in giving this time to a program honoring American painters and sculptors. I presented the plan for this broadcast to General Harbord on my own initiative and so the responsibility is mine.

Some 20 years ago I took advantage of an opportunity I had to try to carry out a boyhood ambition to become a painter. To do this I went to Italy to live and stayed there for a number of years studying art and traveling through that country. I came to realize far more than I had ever before what an enormous enrichment art can be to a country.

When I reached Rome and visited the Sistine Chapel painted by Michaelangelo I had an overwhelming feeling of the last contribution a great artist makes to a nation. In these paintings I saw the evidence of one of those periods of high achievement which comes to nations over the centuries.

There is another side of the story, however, for during the years I lived in Italy I spent most of my time in a very beautiful little hill town in the Sabine Hills, and while I was there I saw the growth of the Facsist regime. With my own eyes I saw a group of simple young peasants beaten to insensibility. I saw one of them fatally shot. Their only crime had been their failure to fall in with the Fascist regime. Quite simply the significance of the Bill of Rights and the civil liberties our ancestors fought and died for came to me to have an overwhelming meaning. Certainly when I got back to America it was a vast pleasure to me to hear a man cuss a politician without having his jaw broken for doing so.

The conviction was born in me, perhaps unconsciously, that if the time ever came when I could help to restate in this country the meaning of the Bill of Rights I would feel compelled to do all in my power to do so. When the Secretary of the Treasury was kind enough to invite me to organize a program to decorate Federal buildings I saw in this project a means of proving the democracy of art.

I believe that every American artist who wishes to share in the work has the right to have his qualifications judged by a jury of his peers through absolutely honest, anonymous competitions. As a result of 5 years of work, the Section of Fine Arts has held anonymous competitions for 724 projects in decorating 1,043 Federal buildings, and the artists have submitted over 14,000 designs. In every one of these competitions the artists have been asked to send in their designs with the only identification mark sealed in an attached envelope. These envelopes have never been opened until a jury of artists has selected what they regarded as the most suitable design for the decoration of the proposed building. In looking back over this work it seemed to me in the beginning, and it still seems to me, that Secretary Morgenthau offered me the opportunity to do as useful a service as I would ever be able to render.

Time does not permit this evening for a discussion in detail of the quality of the work which the Section of Fine Arts has achieved, but through the courtesy of General Harbord there will be a subsequent program on painting and sculpture to be discussed from the viewpoint of the artists creating them.

Nobody could have worked as I have worked with the artists of America for the last 5 years without being deeply impressed by the superb effort they have made to create something that will become a permanent contribution of distinction to this country. They have responded to our call for competitions with an almost religious enthusiasm, realizing to their fullest the superb opportunity which this country of ours has given to its artists in commissioning them to decorate with murals and sculpture the buildings used by the Federal Government.

To anyone interested in the development of our native art and the amazing growth of the interest in the art of America, it must certainly be a source of satisfaction now to be able to travel through the country and find here and there blossoming throughout the breadth of the land little spots of beauty which are contributing to the charm and the cultural taste of America.

In many cases these decorations in post offices are the only original works of art available to the entire community. Many postmasters throughout the country have appealed for decorations in their post offices and for instructions how to proceed in order to procure them.

I do not know how much the Pope paid Michelangelo for painting or sculpture, but we all recognize that whatever the amount it was a good investment. In the program of the section, 1 percent of the total limit of cost of a building may be reserved for its decoration; this in itself is a modest sum and reflects a kind of decent thrift of which we may be rightfully proud.

It interested me to learn that 1 hour of war costs England more than the 5-year peace program of the Section of Fine Arts costs us. The enthusiasm with which the American artist has accepted the challenge to do his best work for his country and his people has resulted in work of so high a standard that the amount paid for it is unquestionably surpassed by its actual value and its value for future generations.

Our artists, through their fine work, have brought about a new appreciation of this great country of ours, and this in turn speaks of a new and deeper patriotism.

Tonight one of the nicest groups of people in the world has gathered to pay tribute to the artists of America and to congratulate them for the work which they have done over the last 5 years in decorating Federal buildings.

This country's most cultured citizen has graciously consented to come out of his retirement to join this tribute to the work of the artists of America, and I have a very deep sense of my privilege in being able to introduce to you Prof. John Dewey.

ADDRESS BY PROF. JOHN DEWEY

During the early years of the depression, when I was crossing the Atlantic, I fell into conversation with a fellow passenger. She was a gracious white-haired woman, and in telling her plans she said that since she had lost a great deal of her money because of bank failures and bad stock investments, she was now going to buy herself something nobody could take away from her—she was going to Athens to see the Acropolis and the Parthenon. She knew what too few persons know—the difference between an investment in physical things that are perishable, at the mercy of external accidents, and an investment in something that is imperishable because it enriches personal life and becomes a part of one's very self.

But the incident has another face—a face which has a real bearing upon the cause that has brought us here together this evening. It was the art of Greece which was taking this woman on her pilgrimage—just as the cathedrals and public buildings, the paintings, statues, and literature of Europe have taken countless thousands of Americans there. The art, the vision of which was an enrichment of her personal life, is that which has given Greece her enduring glory among nations. Material acquisitions and possessions have by themselves never given any people a sure place in the memory of mankind or an assured place in history. It is by creation of the intangibles of science and philosophy, and especially by those of the arts, that countries and communities have won immortality for themselves after material wealth has crumbled into dust. What has been true of other peoples will be true of our own. Creation, not acquisition, is the measure of a nation's rank; it is the only road to an enduring place in the admiring memory of mankind.

There is a good reason why achievement in science and art is the criterion by which a nation's place in civilization is finally judged. In the case of material things possession by one excludes possession, use, and enjoyment by others. In the case of the intangibles of art the exact opposite is the case. The more the arts flourish, the more they belong to all persons alike, without regard to wealth, birth, race, or creed; the more they flourish, the less they are privately owned and the more they are possessed and enjoyed by all. This is what is meant when we say that art is universal—more universal than is that other intangible, science, since the arts speak a language which is closer to the emotions and imaginations of every man.

Accordingly, whether we like it or not, even whether we believe it or not, the question whether this country of ours is to be narrow and provincial, or whether it is to attain to that which is universal, will be finally decided by what we do and what we are capable of appreciating and enjoying in those intangible things of which the fine arts are the outstanding examples. It is on this account that I esteem deeply and gratefully the opportunity to be here this evening and to express as best I can not only gratitude as a citizen to Edward Bruce for initiating and conducting the Section of Fine Arts in the Public Buildings Administration, Federal Works Agency, but also my sense of the great significance of this work in the development of a worthy American civilization.

The work is significant both as a symbol and as an actual force in inspiring and directing activities which will extend as time goes on far beyond what is done in post offices and other public buildings. As a symbol it is an acknowledgment from official sources, with the active encouragement of persons high in the Government, of the importance to our Nation of the development of art and of ability to enjoy art products.

Ned Bruce has shown me a letter from the postmaster of one of the smaller towns whose public building now has a mural upon its walls. In his letter of enthusiastic thanks for what has been done for his town, he included a sentence which might almost be a motto of the whole project: "How can a finished citizen be made in an artless town?" How, indeed, can an all-round and complete citizenry be developed without that development of creation and enjoyment of works of art to which the Government itself must contribute? Our public buildings may become the outward and visible sign of the inward grace which is the democratic spirit, while too often, especially in municipal halls and county courthouses, they have not even been kept clean. As a symbol, the work carried on by the Section of Fine Arts is a service to democracy so important, even in its present comparatively limited scale, that to starve it or allow it to lapse would be a defeat for democracy as genuine as one taking place on a physical battlefield.

For the same reason, this governmental activity is more than a symbol. Hundreds of thousands of persons all over this broad land now have opportunities to see and enjoy works of art which they had not before. They are developing within themselves germs that were part of their being but which never had a chance, because of lack of nourishment, to grow. If the arts come forth from museums to which they have retired, if they become a living part of the walk and conversation of the average man, and thereby parts of the legitimate heritage of a democratic people, a great debt will be owed to the stimulus provided by this governmental section in the buildings which belong to the common people and where they daily assemble.

Old World countries have been able to develop the fine arts by means of the patronage of the nobility and the wealthy. Their healthy development in our country will depend upon the active response of the civic consciousness of the common people. For this reason I do not want to close without mentioning a fact which I could bring home to you only if television were at my command. For if you could see for yourselves reproductions of the murals which are now found in public buildings from Maine to the Gulf, from the Atlantic to the Pacific, you would see that the paintings combine the values of the arts which nourish the human spirit with

the accomplishment of our past history which strengthens that legitimate pride which enables one to say, "I am an American citizen." Secretary Morgenthau, Mr. Carmody, and Mr. Bruce, may your work go forward to even greater triumphs.

Mr. BRUCE. Thank you from the bottom of my heart, Professor Dewey. Your noble statement of the ideology of art will make the hearts of our artists sing and lead them all, I know, to finer things.

Five years ago Secretary Morgenthau called me to his office and outlined to me the program which he had in mind for setting aside 1 percent of the cost of Federal buildings for their decoration with painting and sculpture. He proposed to create a Section of Fine Arts to be in charge of this work.

Secretary Morgenthau specified that our duty was to secure, by a thoroughly impartial method, the best American art for our Federal buildings.

He introduced me to Mrs. Morgenthau and told me of her great interest in the project and said he felt sure she could help me. I found Mrs. Morgenthau a delightful and inspiring associate. She was so inspiring, in fact, that I often succumbed to the temptation to telephone her in the early mornings to discuss the problems of the Section of Fine Arts. This happy system worked wonderfully until one day Secretary Morgenthau told me that he hadn't had one uninterrupted shave since the Section of Fine Arts began.

The enthusiastic and wise collaboration of the Secretary of the Treasury and Mrs. Morgenthau with the Section of Fine Arts guided us through the early formative years of the program. Their help in the frequent administrative problems which are inevitable in making a place among the regulations of Government procedure where artists would feel at home has been unfailing. They have been partisans of the artists' point of view and have defended it through situations that would otherwise have been difficult. It is a great regret to me that Mrs. Morgenthau cannot be with us this evening but I have the honor to introduce the Secretary of the Treasury, the Honorable Henry Morgenthau, Jr.

ADDRESS BY SECRETARY MORGENTHAU

I am afraid Mr. Bruce gives me much greater credit than I am entitled to, although I would increase rather than lessen the importance he gives to the establishment of the Section of Fine Arts in the United States Treasury. There is a man in the picture who deserves the glory of a great accomplishment but it is not myself. It is Mr. Bruce. There is a woman in the picture, too, and the tribute Mr. Bruce has paid to her I will let stand.

But in the case of everybody concerned I believe it is a matter of having wrought more wisely than they knew. I doubt if anybody actually realized the greatness of the task they had set themselves when the Section of Fine Arts was created.

Everybody knows that art is an eternal source of enjoyment and enrichment, that art is a great force in education, and a true measure of civilization's progress.

It is one of those things we know historically, yet do not fully understand in our own time. The Romans built their great aqueducts to live throughout the ages, but it is not the aqueducts that have survived—it is the sculptured art of that same period and it tells us more of Roman civilization, perhaps, than the writing of the period. Buildings which the Greeks expected to live forever are outlived by Greek masterpieces of sculpture.

So it may be with us and the art being produced in America today.

The importance of the Fine Arts Section lies in the fact that it provides the means of fostering and developing creative art in America—an all-important element in our lives that was threatened a few short years ago with starvation through the collapse of our material prosperity. The genius of Edward Bruce was revealed when he turned this threat of disaster into a triumph of the ideas he had long held. What might have been, if not the end of American art, at least a long period of stagnation, has become instead the period of its greatest development, the period of recognition of its value by the American people, a period in which an enduring foundation has been laid for all time.

The Treasury's part in this has been a simple and a natural one. For 100 years the Treasury had built the greater part of our Federal buildings. We were coming to appreciate more and more how much the painter and the sculptor could add to the work of the architect and builder. This resulted—and if I have any cause for pride it is that it resulted in my time—in the setting up of the Section of Fine Arts, with Mr. Bruce as its chief.

I am one of those benighted persons who sometimes say, "I don't know much about art, but I know what I like." And I like art that enriches the life of the community. That is the chief purpose of the Section of Fine Arts, and I truly believe it is fulfilling its purpose.

In the absence of Mrs. Morgenthau, who was not able to come here tonight, although she had counted on being present, it is now my great privilege to read a letter to her from Mrs. Roosevelt:

THE WHITE HOUSE,
Washington, April 20, 1940.

DEAR ELINOR: I am so happy to have been at the first meeting of the Public Works of Art Project, which has since accomplished such great things. At that time I said "It is unbelievable that a great nation could fail to utilize the services of its creative talents to the fullest." I have never wavered in this belief, and now feel that we have shown that we can use these creative artists. They have contributed greatly to the general education of the Nation, and to the appreciation of the arts.

Very sincerely yours,

ELEANOR ROOSEVELT.

Mr. BRUCE. Thank you very much, Mr. Secretary. I also want to thank Mrs. Roosevelt for her wonderfully kind letter. The artists of America owe much to Mrs. Roosevelt. She has never failed to be constructive when the opportunity offered. We are very disappointed not to have Mrs. Morgenthau with us here tonight.

When the Secretary of the Treasury announced the organization of the Section of Fine Arts, we of the Section sat back with a comfortable feeling that men may come and men may go, but that we would go on forever. But, at best, man proposes and God seems to dispose, and so one day Congress passed a reorganization plan whereby we sailed out into the cold world minus the Treasury Department.

However, in our new home in the Federal Works Agency, we found an old friend who has followed our work with interest since the early days of the program. I have the great pleasure of introducing to you the Honorable John M. Carmody, the man who has the biggest construction job in the world as Administrator of the Federal Works Agency.

ADDRESS BY JOHN M. CARMODY

I am not an artist. I am a layman. I was born on a farm. It was a hill farm. My grandfather and grandmother had cleared much of the land. The farm buildings were those customarily built by local workmen and neighbors a generation ago. At five I trudged a mile along a country road to a one-room, drab schoolhouse. It was devoid of art of any sort whatsoever.

At seven we moved into a small town, population 700. The name is Dushore, Pa. Try to find it on the map. I hope the situation has changed, but at that time the only traces of art were in the church, with the exception of the unforgetable Home Sweet Home with the dark frame found in every home. Music was not wholly neglected, but the one thing about me that appeared to win complete approval of my boyhood friends was my neglect of my piano lessons. Boys might sing in the choir, but beyond that, no art.

We moved again. This time to a medium-sized city. The horizon widened. Choirs were better. Church art was better. One of my seat mates in school was an embryo cartoonist.

One of my teachers, a man, was actually and boldly taking painting lessons. Once a year a metropolitan symphony orchestra came to town. I always went. I began to notice variations in architecture. The richest banker in the city collected works of art. His collection was open to the public for a day or two twice a year. I never got up enough courage to go. It was a beautiful home, but somehow it looked forbidding, and except on those exhibit days I never saw anyone about it. The art that really intrigued me was the art of baseball and football and boxing.

In spite of that, I grow up. I am on my way. I find a job in a Pittsburgh steel mill. What a revelation! Work and smoke, yes; but the Carnegie Institute of Art. Open Sundays, too. World-famed artists. Sculpture from the ages. An art school. The Pittsburgh Symphony Orchestra, under the direction of Paur, recently from the Boston Symphony. The beginnings of a new architecture, too. And then Chicago and another job in another steel plant. The Chicago Museum of Art, open Sundays and free. More paintings and more sculpture. Lorado Taft at the height of his fame. Theodore Thomas at his peak, and the precise Frederick Stock coming into his own. Choice bits of architecture. Sullivan was still alive to inspire young men, and Daniel Burnham had not burned himself out in spite of the World's Fair. I began to notice excellent paintings in larger measure in restaurants and private homes.

But here, as in Pittsburgh and in Elmira, and in my old boyhood home in Dushore, public buildings were bare of any semblance of art. They were characterized by not very clean floors, ugly desks or tables, dry inkwells, and broken pens, and by walls that were bare except for sales notices and two-view pictures of some criminal citizens were urged to identify and apprehend. Art of a sort, perhaps, but not especially inspiring as we stood about to get our mail or transact other business.

On some other occasion, perhaps, Mr. Bruce, I shall tell you about the impressions made upon me by similar observations during the years I lived in Detroit and Cleveland and Havana, Cuba, and in New York City. I realize how superficial this is, but remember the beginning. Remember the hill farm. I was a lucky country boy. All of this has been incidental to my pursuit of a living.

It was available to me and to others only because men and women possessed of wealth fostered the arts and brought artists and their work into large centers. Millions of our people cannot or do not care to live in these larger centers. The arts must be taken to them. They deserve not only to see and hear the best but opportunity must be presented to them to participate in the creation of beauty. One step is the wholesome decoration of public buildings.

I end as I began. I am not an artist but I have discovered that millions of plain people like myself on the farm and in small towns

love beauty. They should see it inside our public buildings as well as outside. And now, thanks to our artists, they can.

Mr. BRUCE. Thank you very much, Mr. Carmody.

No department of the United States Government has had a more distinguished succession of executives than the Department of State. On this Department rests the delicate and weighty problems of international relationships. For many years the Department of State has recognized the importance of encouraging between countries an understanding of each other's accomplishments in education and the arts.

We have with us this evening a gentleman who clearly recognizes the significance of cultural relations between countries, and one who occupies in the great tradition of the Department of State a position of acknowledged distinction. I refer to the Honorable Sumner Welles, Under Secretary of State.

ADDRESS BY HON. SUMNER WELLES

With the single exception of music, art in Europe today is a complete black-out. So far as I know, every gallery in Europe is closed. Paintings and sculpture, tapestries, and objects of art have been hidden to escape the damage of destructive war. The causes which have brought about this temporary cutting off of the life of art in the countries at war affect every civilized human being, whether he lives in the Eastern or the Western Hemisphere, in North or South America.

Deep as is every American's sympathy for those citizens of other countries, who would only too gladly continue their creative activities if they could, we cannot be satisfied unless we do more than sympathize. When others are forced to take up arms rather than to create art or music or literature, it becomes all the more our duty to keep alive the culture of the world.

Tragic as conditions are in those portions of the world which in the past have contributed so richly to the culture of America, we ourselves will be truer—both to ourselves and to our inheritance—if humbly and gratefully we do our best to continue the cultivation and stimulation of the art of our country.

Art knows no national prejudices. It crosses all frontiers, and everyone capable of receiving the artist's communication is enriched by it. We can go into our great museums and see paintings and sculpture by Germans, French, Italians, Scandinavians, Russians, and British—indeed the art of all peoples. Looking at these masterpieces, we shed our prejudices and are conscious only of the highest form of communication which one man can bring to another.

We go to symphony concerts and hear the music of other nations, and if at that time we are more conscious of our prejudices than of the music, we are unworthy of our good fortune. So when we find that we have the good fortune to be able to continue to use, uninterrupted by the miseries of war, our libraries, our concert halls, our museums, we should not be proud—we should be quietly and deeply thankful.

As other nations have given to us abundantly from the deep wells of their cultivation, let us hope that we shall do all in our power to prepare a gift for them during the days of their unhappiness.

The more we create of literature and art and music, the more frontier-crossing communications we can make to the peoples of other countries. I can think of no better method to carry out these ideals in their application to art than through the continuance of the Section of Fine Arts.

The Secretary of State regrets that he is unable to be here this evening to participate in this program. From him I bring to Mr. Edward Bruce, and to the other members of this program, a message of appreciation for the work which the Section of Fine Arts has accomplished during the last 5½ years. It is his hope and it is my hope that this work will continue. For not only is it a source of pride to the American people and stimulation to the American artists; it is also a power to encourage communication in its most civilized form between our people and the people of other countries.

Mr. BRUCE. Thank you very much, Mr. Welles. I have a hunch that you feel more at home tonight than you have at times recently.

Feeling as I do so deeply about the significance of civil liberties and the Bill of Rights, it was inevitable that in my early days in Washington I should come to know and admire that gallant gentleman and learned legislator, the Senator from Wisconsin, Hon. ROBERT M. LA FOLLETTE. He is a leader among those people who stand for the rights that we, as a Nation, hold most dear. I know that every artist in the country would like to ask Senator LA FOLLETTE one question. The question is: "What is the attitude of Congress in reference to the program of the Section of Fine Arts and will the program be continued?"

ADDRESS BY SENATOR LA FOLLETTE

Thank you, Mr. Bruce. The last time that I spoke over the radio in connection with the Section of Fine Arts was at the Corcoran Gallery of Art last autumn. At that time, I quoted a phrase from a letter addressed to Mr. Bruce by President Roosevelt. That phrase is: "At this time it is essential to emphasize the arts of peace."

I would like now to point the meaning of this phrase beyond the obvious physical destruction of war. Censorship is one of the essentials of modern war. Art is not only the enemy of censorship, but it is also its victim. Or worse, it becomes the tool of propaganda. In art it is the free spirit that counts above everything else. The artist whose rights are prescribed, whose expression is stunted by imposed ideas, loses his stature, both as an artist and as a man. In the past the little artist has always been the conformist. The whims of royal courts or private patrons have dictated his art. But the great artists have always led the way as they saw it—often a lonely struggle financially and spiritually. In our democratic system the artist should be free to express himself to the fullest capacity of the understanding of his audience. In a democracy the artist must be free to express democracy.

The Section of Fine Arts, by its democratic method of selection of artists, reaches the many as well as the expert. The Section works on the assumption that art is not a mystery, it has only to be seen to be understood. This Government-commissioned work, representing contemporary art in all its variety, finds an audience numbered in millions.

Art that belongs so wholly and impartially to the people must be judged without political partisanship. I am happy to announce that Senator CHARLES L. MCNARY, of Oregon, the able leader of the Republican minority in the Senate, shares this feeling about the work of the Section of Fine Arts. He has asked me to state that he, too, believes that the support of the work of the artists of America should be proudly shared by all, regardless of political affiliations. I think his statement should answer your question, Ned Bruce.

Mr. BRUCE. Thank you very much, Senator LA FOLLETTE. Such a message coming from you and Senator MCNARY must be a reassuring note to the artists.

I would be ungracious to conclude this program without expressing to President Roosevelt my very sincere belief that in all history the artists of a country have never received from a nation a wiser nor more democratic patronage. It is to me a proud boast that any artist may demand the right to receive a commission which the Government has to give if judged worthy in the opinion of a competent jury of artists. That plan, in my opinion, is an accomplishment in democracy of which a nation may well be proud, and for this wise cultivation of our artistic talent, we have to thank President Roosevelt.

To my fellow artists, I would like to say that I am deeply grateful for the fine sportsmanship you have shown. To decide which artist's work shall win in a given competition is a close question and you, the artists, have accepted the decisions of our juries in the spirit in which they were made. I can solemnly assure you that the integrity of the decisions of the Section of Fine Arts is a sacred thing to all of us. And so, to you my friends, the artists, I say good night and good work.

Civic Education Program

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, April 29 (legislative day of Wednesday, April 24), 1940

STATEMENT OF COMMISSION ON AMERICAN CITIZENSHIP

Mr. LA FOLLETTE. Mr. President, I send to the desk a statement of the civic education program of the Commission on American Citizenship. I have the honor to be one of the members of the Commission; and I ask that the statement may be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The Commission on American Citizenship sponsored by the Catholic University of America is a group of representative Americans, organized for the purpose of fostering good citizenship. It is composed of more than a hundred men and women—Catholics, Protestants, and Jews—joined in the common purpose of maintaining the American Nation as an effective agent of democracy. The immediate aim of the Commission is to prepare a civic education program for the Catholic schools of America which will broaden the scope and enrich the spirit of their existing curriculum.

This program, made necessary to fortify the new generation against false and subversive theories of government, will correlate religious teaching with civic living. It will further develop in the Catholic children of the Nation a deep and abiding consciousness of their moral obligation to live as good Americans and good Catholics.

From the time of the establishment of the colony of Maryland in 1634, Catholics have been integral factors in the building of American citizenship. With their fellow-Americans, Catholics took part in the War for Independence, signed the Declaration of Independence and the Constitution of the United States, voluntarily enlisted in our wars of defense, blazed trails in the geographical and industrial wilderness, and generally assumed those duties and responsibilities which have been the basis of American progress.

Since it is good Catholic doctrine as well as good American doctrine that all men are created free and equal and therefore entitled to certain fundamental civil rights, the Catholics of the Nation have consistently labored to uphold the standard of an honest, responsible, moral citizenship consonant with basic American principles. In the period of our Nation building great bishops of the Roman Catholic Church—John Carroll, John England, John Ireland, John Lancaster Spalding, James Cardinal Gibbons—pushed forward the frontiers of American democratic thought as well as the frontiers of their Catholic faith.

The industrial revolution, transforming the western world economically, created civic problems which have unquestionably been the cause of many of our modern social and political conflicts. The great social encyclicals of the Catholic church have challenged all thoughtful men and women to give consideration to means of improving the social system.

In direct line with this consciousness of the need of moral affirmation of civic attitudes the late Pope Pius XI in September 1938, a few months before his death, addressed a letter to the American Catholic bishops, in which he condemned "any civic philosophy which would degrade man to the position of a soulless pawn in a sordid game of power and prestige, or would seek to banish him from the human family or set him at the throats of his fellows in a blind, brutish class struggle for existence." Warning of the errors of totalitarianism and the immorality of the doctrine of race supremacy, the Pope urged American Catholics to formulate "a constructive program of social action, fitted in detail to local needs, which will command the admiration and acceptance of all right-thinking men."

The American Hierarchy in response to the Pope's appeal instructed The Catholic University of America to prepare a program of civic education based on ethical principles; for ethical principles alone, the bishops held, "would make men respect their own rights and the rights of their fellow citizens."

To sponsor this program of good citizenship the Commission on American Citizenship was organized by the Catholic University under the presidency of the rector of the university, Bishop Joseph M. Corrigan. Among those invited to join the commission were citizens of many different racial, religious, and social groups, whose otherwise diversified interests were united in a common desire to improve our American democracy.

The Commission as of March 15, 1940: William H. Albers, Edward C. Bailly, S. A. Baldus, Mrs. M. C. Banning, Mrs. G. H. Bradford, Joseph I. Breen, Mrs. George E. Brennan, Louis Brownlow, John S. Burke, Nicholas M. Butler, Thomas H. Cannon, Mrs. H. F. Chadeayne, Dennis Chavez, Eugene A. Clark, Elbridge Colby, J. V. Connolly, Ralph Adams Cram, Walter J. Cummings, Mrs. Anna R. Downes, Miss Mary C. Duffy, H. P. Drought, John Elbeck, Charles W. Elliot II, James A. Farley, Mrs. Herbert F. Fisher, Mrs. Mary P. Fischer, Miss P. J. French, Mrs. Anna D. Gamble, Hugh Gibson, William I. Green, Miss May Haverty, Miss Mary G. Hawks, Carlton J. H. Hayes, Will H. Hays, Sidney Hillman, Miss Jane Hoey, Frank J. Hogan, Miss Anne S. Hooley, Herbert Hoover, Mrs. Margaret A. Hull, William Jeffers, Miss Elizabeth Jordan, F. P. Kenkel, Louis Kenedy, Joseph P. Kennedy, Joseph E. Kerrigan, Mrs. Frances P. Keyes, Miss Mary A. Kinsella, R. M. La Follette, Jr., Miss K. F. Lenroot, John L. Lewis, Breckinridge Long, Miss E. W. Loughran, Francis Maloney, Mrs. C. B. Manning, Francis P. Matthews, Patrick McCarran, Mrs. J. W. McCollum, Edward F. McGrady, John Steven McGroarty, James M. Mead, Miss Mary V. Merrick, J. P. Michalski, Mrs. Emma G. Miller, Henry Monsky, Mrs. Arthur M. Mullen, Frank Murphy, Philip Murray, Miss Agnes Nestor, Miss A. M. Nicholson, Mrs. Mary T. Norton, Herbert R. O'Conor, Joseph C. O'Mahoney, Frederick D. Patterson, J. J. Pelley, Martin Quigley, John J. Raskob, Miss Agnes G. Regan, Richard Reid, Charles H. Ridder, Leo S. Rowe, Miss Vida D. Scudder, William H. Siefen, Leonard Simutis, Alfred E. Smith, A. A. Sprague, Foster Stearns, Harold W. Storey, Roger W. Straus, John J. Sullivan, Daniel J. Tobin, Thomas W. Turner, Mrs. Allen L. Vories, Robert F. Wagner, David I. Walsh, James E. West, Burton K. Wheeler, Miss Helen C. White, Ray Lyman Wilbur, Thomas F. Woodlock.

The following fraternal organizations also have endorsed the Commission's aims and program: American Lithuanian Roman Catholic Federation; Ancient Order of Hibernians in America; Ancient Order of Hibernians Ladies' Auxiliary; Catholic Central Verein of America; Catholic Daughters of America; Catholic Knights of St. George; Catholic Order of Foresters; Catholic War Veterans, Inc.; Daughters of Isabella; International Federation of Catholic Alumnae, Knights of Columbus; National Council of Catholic Men; National Council of Catholic Women; Polish Association of America; Women's Catholic Order of Foresters.

The Commission has opened offices on the campus of the Catholic University of America and recruited a staff headed by Robert H. Connery, Ph. D., as director, and Mary Synon as editorial consultant. Direct supervision of the program rests with the executive committee consisting of Msgr. Francis J. Haas, Rev. George Johnson, and Robert H. Connery.

Aiding the executive committee is the advisory committee consisting of: Herbert C. F. Bell, professor of history, Wesleyan University; Franklin Dunham, educational director, National Broadcasting Co.; Charles G. Fenwick, professor of political science, Bryn Mawr College; James L. Hanley, superintendent of schools, Providence, R. I.; F. Ernest Johnson, professor of education, Columbia University; Jerome G. Kerwin, professor of political science, University of Chicago; David A. McCabe, professor of economics, Princeton University; Florence Stratemeyer, professor of education, Columbia University; Henry C. Taylor, director, Farm Foundation; Howard E. Wilson, professor of education, Harvard University.

To be successful this project must be the cooperative undertaking of the whole Catholic educational system in America, aided by the best advice obtainable from other sources. Consequently diocesan superintendents of schools, religious community supervisors of teachers, and Catholic college faculties have been consulted on the proper scope of the program in terms of educational needs. Many of these consultants have submitted extensive and thought-provoking memoranda.

Upon the basis of these suggestions the program of the commission has gradually taken shape. A statement of philosophic principles in regard to civic education, courses of study and text materials are in process of preparation. Teacher education is also recognized as an important factor. Consequently round tables in connection with teachers institutes, summer schools, and study clubs will be held whenever practicable. In its larger sense the program will deal with many different phases of education and should be of direct value to the whole educational system in the United States.

Air Safety Board

EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, April 29 (legislative day of Wednesday, April 24), 1940

ARTICLES AND A TELEGRAM FROM VARIOUS SOURCES

Mr. CLARK of Idaho. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD several editorials and a telegram relative to the recent reorganization order of the President.

There being no objection, the editorials and telegram were ordered to be printed in the RECORD, as follows:

[Editorial from American Aviation of May 1, 1940]

BOMBSHELL

(By Wayne W. Parrish)

The lightning invasion of Denmark and Norway by Germany a few weeks ago was no more startling to the civilized world than was the President's Reorganization Plan IV to civil aviation in the United States.

In a world in which stability and tradition are being thrown to the winds, civil aviation in the United States has learned that it, too, is subject to lightning upheavals. The constructive permanence which aviation believed had been ingrained within the Civil Aeronautics Act of 1938 has proved to be but a mere hope. The marching orders are out again.

For 5 long years civil aviation waited while Congress carefully studied and considered aviation's knotty legislative problems. For 5 long years the constructive elements within aviation bided their time until the Government's promotional and regulatory agency could be removed from the sorry political plight in the Department of Commerce.

There was a feeling of relief when the Civil Aeronautics Authority was created in that summer of 1938. Tension relaxed. The battle had been won. At last civil aviation had come into its own with its own agency through what was hailed then as a model piece of legislation.

But not for long. Two years to the month that Congress voted the new agency into existence the President would shift the Civil Aeronautics Authority back into the politically ridden Department of Commerce. Two short years of respite. And now the battle lines are forming again. Congress has but 60 days to disapprove. If it does nothing, the Civil Aeronautics Authority in June becomes a mere puppet bureau within a Government department. It is a difficult task this time, for the President does not seek the approval

of Congress to effect a reorganization. The order goes into effect unless both Houses of Congress on their own initiative disapprove.

Why, in the midst of an election year, should the President suddenly decide to destroy the independent Civil Aeronautics Authority? What are the motives behind a move which all Washington knows may be political dynamite just at this time? The answer, apparently, is simply that in the background of governmental maneuvers there looms the plans for a single transportation agency to regulate all forms of carriers, and the shift of aviation's agency is the first step in a series of moves to bring about one governmental unit to regulate all transportation.

It may well be that Congress is becoming disturbed at the prospective loss of its legislative prerogatives. For it is not Congress, the people's legislative agency, which is bringing about far-reaching changes within government. The changes are coming, piece by piece, through Executive orders, in a manner which might well raise the eyebrows of lovers of democracy. Civil aviation is bewildered by the intricacies and political manipulations in our National Capital, but civil aviation has been bewildered before. It is learning now, as it has learned before, that civil aviation is the guinea pig, the line of least resistance, in the curious, mysterious fantasy which comprises government in a vast democracy.

He who believes that civil aviation will retain an independent status within the Department of Commerce is naive indeed. He who thinks that civil aviation can hold its head high and find an important place in the sun while dominated by the Department of Commerce is an optimist indeed. The day the Civil Aeronautics Authority is transferred to the Department of Commerce, civil aviation becomes again fair prey to all of the multifarious political machinations about which it remembers much. Regardless of whatever good intentions the President may have in asking for this transfer, it is worth every ounce of energy civil aviation can expend to fight to the last for independence. Railroad, truck lines, waterway operators—none of these wants a Government coordination of transportation into a single unit. And neither does air transport. Neither do the aircraft manufacturers want to face again the costly red tape with which they struggled in the miserably incompetent Department of Commerce. Neither do the pilots and the fixed-base operators want the headaches, the sorry inspection system, and the unconstructive regulation of the old Commerce Department.

It won't be "going back" to the old conditions, the President's workers say. Ah, no? What an illusion. There is one evil of all Government departments which is never absent—and that evil is the specter of politics. The Civil Aeronautics Authority came the closest to being a nonpolitical institution that Washingtonians ever expect to see. Such agencies come too rarely to have them overthrown so quickly.

The marching orders are posted again. All civil aviation has been drafted to fight again. Stronger in Congress than ever before, strengthened by all that is right and constructive, civil aviation looks to the people's representatives to defend it from the inroads of insecurity, red tape, costly inefficiency, and politics. Let the people's representatives know how you feel.

[From the Christian Science Monitor of April 15, 1940]

AIR SAFETY AND ECONOMY

President Roosevelt's reorganization order proposing to do away with the Air Safety Board and leave its functions to the Civil Aeronautics Authority seems to have stirred up a small hornet's nest. Actually it presents one of the questions which reduction of Federal bureaucracy often presents.

Assistance to aeronautics and regulation of air transport are among the more recently added functions of the Federal Government, and the agencies charged with these duties have expanded rapidly in personnel and expenditures. If economy can be achieved by consolidating bureaus and centralizing responsibility, this mushrooming field would seem a place to apply the precepts. This apparently is what the President has done, saving a couple of top salaries.

But is that all there is to it? A few weeks ago Senator ROBERT A. TAFT posed a query as to whether the National Advisory Council on Aeronautics, among a number of other Federal agencies, was a necessary institution. Mr. Roosevelt immediately came to the defense of the council by saying that it fosters research which contributes enormously to the development and safety of air travel.

If this is true of the Council, it seems just as strikingly true of the Air Safety Board. Some years ago when the Aeronautics Division of the Department of Commerce was its own investigation agency, a rather bad situation arose, represented in a series of crashes. The Air Safety Board was set up with independent authority to investigate such occurrences and to place the responsibility where it might belong, whether on the operating company, the plane manufacturer, the pilot, or on the Government units supposed to maintain airway aids, to test airworthiness of planes, or to make flying regulations.

On these various points the Board has made some significant reports. Men who fly the ships believe its presence has had something to do with the magnificent safety record of air lines in the United States during the last year. Once more economy presents the question, How far do Americans wish the Government to curtail new functions?

[From the Annalist of April 18, 1940]

NATIONAL GOVERNMENT: NEW DEAL SEEKS TO REGAIN POLITICAL CONTROL OF AVIATION

(By Kendall K. Hoyt)

WASHINGTON.—Government Reorganization Orders Nos. III and IV have plunged the administration into new controversies. Transfer from the Department of Agriculture of the Food and Drug Administration to the Federal Security Administration and the Weather Bureau to the Department of Commerce will meet with resistance. The President did not take the further step of shifting the Forest Service to the Department of the Interior and thus avoided one point of congressional attack. But the change in status of the Civil Aeronautics Authority from an independent agency to a subsidiary of the Department of Commerce has outraged Members of Congress interested in aviation.

This is important because it is a blow to the progress of one of our few expanding industries which has given great promise of contributing substantially to economic recovery. It is important also because the C. A. A. was intended as a pattern for the so-called Government reorganization plan of administrative control over all quasi-judicial agencies. The Reorganization Act specifically exempted such regulatory and control agencies as I. C. C., the Civil Service Commission, and the General Accounting Office, which are not wholly under the thumb of the White House, and were aimed at in the original reorganization bill, which failed to pass. But the proposed exemption of C. A. A. lost out last year by a close vote. In last week's message the President favored reenactment of the present law, expiring January 20, 1941, with no agencies exempted from the President's power to reorganize. Meanwhile here is what happened to C. A. A.:

Order No. III made internal shifts to strip the five-man board of C. A. A. of almost all powers except rate making and rule making in the air-transport field. It concentrated the powers in the hands of the Administrator, whom the President can remove, and therefore can control. This idea of all-powerful administrators subservient to the White House, rather than the old plan of bipartisan boards with some degree of independence to perform their judicial functions, is the primary aim of reorganization rather than increased efficiency, which the New Deal claims, and economy, which the New Deal admits is slight under its merger plans.

Order No. IV shifted the whole C. A. A. set-up under the moth-eaten wing of the Commerce Department, hungry for the restoration of functions which it had lost through the grossest maladministration. Further, the order destroyed the independent three-man Air Safety Board of C. A. A. and put a single administrator in its place.

Senator PAT MCCARRAN of Nevada, father of the Civil Aeronautics Act of 1938, has filed resolutions whereby Congress can disapprove the two orders by a majority vote of both Houses within 60 days. There is a good chance that the Senate will pass the McCarran resolutions. Considerable support is developing in the House. But the lack of a majority in either Chamber will allow the orders to take effect within 60 days unless Congress adjourns meanwhile.

The air-transport industry would be forced back into the dark period of political control from which it has but recently emerged. The story of the political cancelation of the air-mail contracts, after a smearing investigation by a committee headed by Senator Black; the banishment from the industry of the executives who had pioneered aviation; the flying of the mail by the Army Air Corps, with the consequent death of 13 pilots and the return of the air mail to the reorganized air lines is well enough known. But the public is little aware of what happened in the next 4 years.

Under the Air Mail Act of 1934 the air lines were placed under the divided jurisdiction of three Federal agencies. The Post Office handled the air mail and thus wielded despotic control. The development of new air routes and additional trips on existing routes was frozen within a limited mileage of mail flights. The Post Office had a way of making the air lines carry a large part of the mail almost free. So the domestic air-mail "subsidy" finally became no subsidy at all since the Government was breaking even on the service. The Interstate Commerce Commission was empowered to adjust rates, but the Post Office, holding "kangaroo court," often ignored its findings.

Air safety was under the old Bureau of Air Commerce of the thoroughly political Commerce Department, under the benign rule of Uncle Danny Roper as Secretary, and "Rowboat" Johnson as Assistant Secretary. The Department was in charge also of maritime safety. One remembers the series of terrible ship fires, among the most disastrous in history. There were frequent air crashes, too. The Bureau was never responsible. It investigated the accidents and laid the blame on weather conditions or on the dead pilot. Safety is of vital importance to the air lines. After every accident there was a sharp drop in passenger traffic.

Yet the industry was afraid to fight. Under the thumbs of two political departments, any line that dared criticize New Deal policies could easily be squeezed into silence. Bound against expansion, the

air lines operated at heavy losses. Investors shunned the industry. Some of the lines were on the verge of bankruptcy by 1938 when the C. A. A. took over.

Two years have brought great changes. New routes have been opened. Passenger and express service has increased by leaps and bounds. For more than 12 months there has not been one fatality in the scheduled services of the air lines.

The credit should go to Senator McCarran, who was a Member of the Senate investigating committee in 1933, saw the injustice that was being done, and fought for years to place aviation under fair public regulation so that it could expand and become a great industry. McCarran proved himself a statesman by refusing to compromise with principle. His present fight to prevent the destruction of his work is among the most important issues of the session both in its effect on a growing industry and in its broader implications as to New Deal control of the Federal agencies which regulate American enterprise.

The C. A. A., as now constituted, is not perfect. But it has done its job and can stand on its record, as few Federal agencies can. The unexpected order to break its independence and place it under the Hopkins regime in the Commerce Department would inaugurate another period of strangulation of the air transport industry. This whole intolerable story makes it hard to believe that the New Deal is not trying deliberately to wreck the private-enterprise system.

[From the Washington Times-Herald of April 21, 1940]

AIR SAFETY BOARD ENDED PUBLIC FEARS, GREEN SAYS—A. F. L. CHIEF URGES CONGRESS TO REJECT TRANSFER OF AVIATION CONTROL

William Green, president of the American Federation of Labor, last night joined the fight against the proposed transfer of the Civil Aeronautics Authority to the Commerce Department and the abolition of the Air Safety Board.

Green said:

"I am deeply concerned about the part of President Roosevelt's Reorganization Plan No. IV in which he proposes to abolish the Air Safety Board and the new Civil Aeronautics Authority, and to place the control of civil aeronautics and air transportation back into the Department of Commerce. Surely, we all well remember what the record of civil air regulation by this Department was.

DISTRESSING PERIOD

"The air-line pilots of the Nation are affiliated with the American Federation of Labor. That period between the late 1920's and 1938, when the new Civil Aeronautics Act was passed, was a distressing one for the pilots and the air carrying companies that were struggling to build a new industry.

"Because of the high death rate of the pilots and their passengers, there was created a genuine fear on the part of the public to use air travel. Frequent crashes emptied the passenger seats in the planes from which the carriers derived their revenue. The public could not be blamed for this, especially when it is remembered that 473 lives were lost, of which 146 were air-line pilots.

"The air-line pilots are a brave lot. They never complain. I often worried about their high death rate. Even the president of their organization who was an air-line pilot almost lost his life in an air crash during the period that the Department of Commerce controlled air transportation.

FOUGHT AGAINST POLITICS

"Pilot leaders discussed the situation with me personally many times. They pointed out that air transportation could be made safe and the loss of life was needless and could be stopped. They said that first politics must be swept clean from any civil air regulatory agency before real air safety could be achieved.

"They went further and pointed out that the functions of regulating civil flying and investigating accidents would have to be separated and made entirely independent of each other. In this way those making the regulations would not be sitting in judgment on themselves when something happened.

"Several years ago the Federation of Labor and the air-line pilots joined hands in a Nation-wide fight to increase the safety of air travel. Federation representatives testified before congressional committees and pointed out in unmistakably clear terms what the situation was. They stated that air transportation could not possibly hope to succeed financially unless confidence in the safety of air travel was first established.

WANTS PLAN REJECTED

"Congress took heed and established a new law, the Civil Aeronautics Act of 1938. They also established an Air Safety Board, independent of the regulatory functions of civil flying. Today it is a different story. Instead of blazing headlines telling of another terrible air crash involving wanton destruction of human life, only a short time ago we saw the headlines 'World Air Safety Record Established.' During the last 12 months America's air-line pilots flew 87,325,145 plane-miles and carried 2,028,817 passengers without a single fatality. Why not leave well enough alone?

"The American Federation of Labor is making a special appeal to all Congressmen and Senators to set aside Reorganization Plan No. IV, which proposes to abolish the Air Safety Board and the new Civil Aeronautics Authority."

[From the Cincinnati Enquirer of April 14, 1940]

ALONG AVIATION LANES WITH BOB HELMER

PRESIDENT CRITICIZED FOR REVAMPING MOVE TO PUT C. A. A. IN COMMERCE DEPARTMENT—AGENCY'S EFFICIENCY IS APPLAUDED

Some folks can't leave well enough alone. And President Roosevelt will fall into that meddlesome class, so far as airmen are concerned, if he succeeds in carrying out another reorganization program he set in motion last week.

Among other things, in order to save a paltry $300,000 annually—and that's a paltry figure compared to some we've seen tossed about up Washington way—he proposes to bury the 1½-year-old Civil Aeronautics Authority in the somewhat lethargic structure of the Department of Commerce.

The C. A. A. shift is one of four proposed. Unless both branches of Congress defeat the President's plans, the Weather Bureau and two other agencies, which may or may not be functioning efficiently, also will be affected.

Airmen are in accord that the C. A. A. has been doing a good job.

Among programs initiated by the C. A. A. is the Nation-wide college-youth pilot-training program, which will graduate 10,000 new flyers this June. If it did nothing more, the agency at least accomplished a major point of its objective—to foster the growth of aviation.

In addition, President Roosevelt ordered the abolition of the Air Safety Board, a C. A. A. agency, and a transfer of its function of investigating airplane accidents to the Civil Aeronautics Board.

Last month the commercial air lines completed a full year of operation without death or serious injury to any passenger or crew member. During that period passenger traffic for the first time exceeded 2,000,000 persons, an increase of 600,000 passengers above the patronage of the preceding 12-month period.

The C. A. A. and its Safety Board were as much responsible for that remarkable achievement as the air lines. It isn't just luck that such a record was established.

Two years ago aviation leaders from over all the Nation convened in Cleveland to plan for the future of aviation. The confab was termed "the First National Aeronautic Planning Conference."

One of the first things the airmen agreed upon was that aviation control should be lifted out of the jurisdiction of the Commerce Department; that a separate agency be set up to permit aviation to grow naturally. They wanted a fast-acting, independent agency to keep pace with aviation's growth.

Although the idea of a separate agency long had been fostered by Senator Pat McCarran, Democrat, Nevada, the first to present the argument in its behalf at the Cleveland confab was Herman A. Bayless, chairman of the aviation committee of Cincinnati's Chamber of Commerce.

The C. A. A. subsequently was established. It differed from similar agencies, such as the Interstate Commerce Commission, in that it consists of an independent Administrator as well as a Commission. The Administrator is responsible to the President and exercises all the agency's executive authority. The Board is responsible to Congress and its duties are confined to quasi-judicial and legislative actions.

But it has had a hard row to hoe ever since. Politican bigwigs, apparently disgruntled because the new agency is competently carrying out its program, have been attempting to wreck the agency and send it back into the Department of Commerce.

Just why the President ordered the changes was not fully explained in Washington dispatches, except that he claimed "more effective service" would result. C. A. A.'s outstanding record should be enough evidence that it is operating efficiently. Yet, unless both branches of Congress intervene, the C. A. A. and the other agencies will be scrapped.

There is one thing in the C. A. A.'s favor. That is the second National Aeronautic Planning Conference is slated to be held May 27, 28, 29 in Washington. It's a safe bet that the unannounced program will have among its objectives the retention of the C. A. A.

[From the Washington Star of April 17, 1940]

THE CAPITAL PARADE—STREAMLINING OF AERONAUTICS CONTROL PRODUCES BITTER GOVERNMENT ROW

(By Joseph Alsop and Robert Kintner)

The President recently issued two Executive orders streamlining the Civil Aeronautics Authority. He transferred much of the power of the bipartisan five-man Board to a single individual, the C. A. A. Administrator. He abolished the previously independent Air Safety Board and he placed the revamped Aeronautics Authority under the Commerce Department.

There is obviously much to be said, both in favor of and against the plan. Its proponents argue that the reorganization will produce clear-cut responsibility for the first time. Its opponents see the possibilities of political control of aviation. But, ignoring the merits, the hubbub at the C. A. A. gives an amusing, though somewhat tragic, insight into the workings of Government.

DEMON PLOTTER

The hubbub revolved around two men, Robert H. Hinckley, the Board chairman, and Clinton M. Hester, the Administrator. Hinckley was a successful Utah automobile dealer when he was drafted into Government in 1933. A year or so ago he was named C. A. A. Chairman. He sponsored the civilian pilots' training program and is generally conceded to have done a good job. Hester is a Gov-

ernment career man of some years who earned promotion from the Treasury after he helped draft the Aviation Act. He is a close friend of James Rowe and William H. McReynolds, two of the White House "secret six," and of Louis Brownlow, the President's adviser on Government reorganization. Hinckley and Hester have gotten along well enough except for some natural jealousy.

But in Government everyone holds on to his power with dear life, and the President's first Executive order had hardly reached Congress before a real feud was touched off at the C. A. A. A very circumstantial and rather convincing story was soon circulated, picturing Hester as a demon plotter determined to increase his own power. Hinckley was vacationing in Utah and his sympathizers were honestly convinced that Hester had seized this advantage. As they pictured it, through good friends Rowe, McReynolds, and Brownlow, Hester had gotten White House entree to persuade the President to better his own position.

Hester protested that he knew nothing of the order, but his denial was taken with several grains of salt. Hadn't Hester visited a Board member shortly before the order; hadn't he reported a rumor that the White House would decrease his own authority; hadn't he even threatened to resign if this happened? True, the President's order had the reverse effect, but Hinckley's friends were convinced that Hester's rumor was merely a cover-up for the plot. There was much strong talk at the C. A. A. on both sides. At least one Board member threatened to resign. Representatives of the industry heard the story and naturally became concerned that the C. A. A. was about to be made a political football.

A SILLY BUSINESS

If the people who actually worked with the President on the orders are to be believed, Hester had nothing to do with them. And, in fact, it was the President's own wish that no one at the C. A. A. be consulted. Some months ago when the White House received reports of friction at the authority, Budget Director Harold Smith sent in experts from his administrative management section. They reported that the law did not make a clear demarcation of power, and recommended that there be a reshuffling to give the administrator all "administrative" activity and to confine the Board to purely "quasi-judicial" functions. They also recommended the abolition of the Air Safety Board.

Smith took the plan of the experts to the President, who was impressed by their reasoning, perhaps because he has long felt that the independent agencies should be more directly responsible to the White House. The plan has this effect since the Board members are appointed for fixed terms while the administrator can be removed practically at the will of the President. To the experts' plan, the President added an idea of his own, the transfer of C. A. A. to the Commerce Department. Neither Rowe nor McReynolds knew the details of the order, and were not consulted. Brownlow was shown the plan at the last moment, and objected to its main feature, the transfer to Commerce.

No doubt the ruffled feelings of everyone will soon be calmed. In fact, Hinckley's prestige was somewhat restored on the second order transferring the Aeronautics Authority since his great and good friend, Edward I. Noble, is Undersecretary of Commerce. But the whole episode remains a silly business.

[From the New York Sun of April 13, 1940]

ACROSS THE SKYWAYS—WHAT IS BEHIND MOVE TO SWITCH THE C. A. A. INTO DEPARTMENT OF COMMERCE

(By Sherman B. Altick)

The possibility that civil aviation may again become a political football in the hands of the New Deal caused no little concern today as the aeronautical industry studied President Roosevelt's reorganization plan killing the Air Safety Board and transferring the Civil Aeronautics Authority to the Department of Commerce.

In flying circles the plan to restore regulation of civil aviation to the Commerce Department is called "the biggest double-cross" of the present administration. Both air-transport officials and aircraft manufacturers fear the worst if the industry goes back to the highly political Department headed by Harry Hopkins.

EFFECTIVE IN JUNE

According to the Reorganization Act, the plan which the President sent to Congress on Thursday will become effective in 60 days unless the two Houses during the intervening period pass a concurrent resolution against it.

Members of the C. C. A., Administrator Clinton M. Hester, and the Air Safety Board were so stunned by the plan that they could not speak. It was said that none of them had any idea about the movement to put the independent C. A. A. under the domination of Secretary Hopkins. Senator PAT MCCARRAN, who fostered the legislation that took the administration of civil aviation away from the Commerce Department, has launched a fight against the plan, but it is believed here that he will be able to accomplish very little, especially during an election year.

Important resignations from the C. A. A. are expected if the plan becomes effective, and if these take place, the Government organization of civil aviation may be broken. In aviation circles it is believed that C. Stuart Guthrie, former general counsel of the C. A. A., and a protégé of Tommy Corcoran, who now is in the Department of Commerce, is one of the prime movers to put control of aviation in the Hopkins domain. It also is believed that Edward J. Noble, former Chairman of the C. A. A. and now Under Secretary of Commerce, also may be one of those working behind the scenes.

WHAT IS BEHIND MOVE

While the air lines are concerned mainly with the high factor of safety made possible by the political-free C. A. A., the aircraft manufacturers fear that they again will be faced with the licensing grief that cost them a fortune under the old Bureau of Air Commerce set-up.

Since the C. A. A. made a splendid record and accomplished much toward making air travel safe in the United States, experts believe that the delay of the Bureau in handling new air-line route and route-extension cases may have been responsible for the new move. A lot of pressure has been brought to bear on political leaders in Washington for new routes by the various lines.

Most of the requests have been shelved, and very few new route certificates granted. All of the lines now are fighting for new places to go. American, T. W. A., United, Eastern Air, Braniff, Pennsylvania Central, Canadian-Colonial, and Northwest Air Lines all have applications before the C. A. A. for extensions of service. Some of the routes encroach upon those now being flown by some of the other lines, and it would take a Solomon to make a fair decision.

For example, United and T. W. A. have applications to enter the Boston territory, which now is exclusively American's. American, in retaliation, or what have you, has applications for new routes which cut into the territory now served by the other lines.

All of the lines are kept busy lobbying in Washington for Government favors. The C. A. A. seemingly has turned a deaf ear on the pleas of the lines, and it may be that the move to shove the entire Bureau over into Mr. Hopkins' domain is just another way of giving C. A. A. members a good spanking.

There also may be something in the fact that this is election year. It may be that some of the vote getters want some action on the air lines, and if that is the case there will be wholesale granting of new route certificates to the favored air lines if Senator MCCARRAN is unsuccessful in halting the transfer.

Everyone in aviation knows why the Air Safety Board is being killed. There has been friction between the Board and the C. A. A. ever since the former stepped into the Boeing-307-crash picture and gave out its own findings for the plunge of the big plane which was being tested for licensing by the C. A. A. They were at variance with the findings of the licensing agency.

WASHINGTON, D. C., *April 23, 1940.*

Senator PAT MCCARRAN,
Senate Office Building, Washington, D. C.:

As president of one of the country's small and independent air lines which owes its continued existence and stability to a nonpolitical agency of Congress, I voice the earnest hope that no reorganization plan will be permitted to destroy the complete independence of the Civil Aeronautics Authority. Any plan which places this Authority under the direction of an Executive department, whether as to procurement or personnel or otherwise, must weaken the detachment and absolute freedom of decision so necessary in such a body. Air transport in particular should be entirely free of any trace of political influence or control. There can be no greater safeguard against the destruction of free enterprise in this young industry than the assurance of protection for all companies, both large and small, which resides in an independent Authority. I have seen the need for this protection through the years and have witnessed its achievement in the Civil Aeronautics Act of 1938. I trust it may be maintained inviolate.

CARLTON PUTNAM,
President, Chicago & Southern Air Lines.

Ethyl Patents Decision

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, April 29 (legislative day of Wednesday, April 24), 1940

ARTICLE FROM LABOR

Mr. LA FOLLETTE. Mr. President, I send to the desk an article from the April 2, 1940, issue of Labor, relating to the decision of the Supreme Court in the so-called ethyl patents case. This article refers to one phase of the very interesting work which has been conducted by the Temporary National Economic Committee under the able chairmanship of the senior Senator from Wyoming [Mr. O'MAHONEY]. I ask that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Labor of April 2 1940]

HIGH COURT CURBS USE OF PATENTS TO CREATE MONOPOLY—DECISION IN ETHYL CASE IS HELD THE MOST IMPORTANT ON SUBJECT EVER MADE—WEAPON FOR GOVERNMENT—STARTLING DISCLOSURES OF O'MAHONEY PROBE SHOW IRONCLAD CONTROL OF INDUSTRY

The Supreme Court ruled this week that a patent monopoly cannot be used to fix prices and control an industry all the way down the line, from producer through middleman, to the consumer.

The decision was hailed as the most important one on the use of patents ever issued by any court. It is expected to aid the Government in its war on numerous monopolies based on patents.

The court ordered the Ethyl Gasoline Corporation, owned by the Standard Oil Co., of New Jersey and other big oil concerns, to stop its system of licensing jobbers who distribute gasoline treated with the patented product Ethyl. The licenses, the court held, have been used to control the prices at which the jobbers sold the gasoline to dealers and the public.

FAR-REACHING SIGNIFICANCE

The far-reaching significance of this decision can be better understood by recalling the constitutional provision under which Congress created the patent system long ago, and some disclosures made by Senator O'MAHONEY's Monopoly Committee at its December 1938 hearings on patents.

The Constitution says that the purpose of granting patents is "to promote the progress of science and the useful arts, by securing to inventors exclusive rights to their discoveries."

In other words, patents are to encourage and reward inventors, not to enable great corporations to monopolize whole industries and rob consumers.

DIVERTED FROM PURPOSE

How far the patent system has been diverted from its real purpose was revealed by several examples explored by O'MAHONEY's probe. One example was the huge glass container industry, which levies tribute on the pocketbook of every man, woman, and child who buys milk, preserves, perfumes, or anything else that comes in a glass jar or bottle.

The committee found that this industry is controlled from top to bottom by one corporation, the Hartford-Empire Co., through its ownership of more than 700 patents on machinery which makes glass jars and bottles automatically.

CONTROL IRONCLAD

So ironclad is the control of this monopoly that its profits steadily increased throughout the depression, when almost all other industries were losing money. In 1937 Hartford-Empire's profits reached the fabulous height of 67 cents on each dollar of investment.

O'MAHONEY summed up the testimony on Hartford-Empire in these words:

"Here is an industry where patents have resulted in a sort of private N. R. A., controlling production and prices. Through refusal to grant licenses, persons desiring to enter the industry have been barred out. By litigation producers have been eliminated from the business, thus limiting the number of producers.

CONTROL INDUSTRY

"Those in control of the patents issue or refuse to issue what amounts to a 'certificate of convenience and necessity' to those who desire to enter the industry. The original intention of patents, to promote the progress of science and the useful arts, has been obscured."

As a result of these disclosures, the Government began prosecution of the glass container monopoly on charges that it is violating the antitrust laws. This suit is pending in a Federal court at Cleveland, and its decision may be influenced by the Supreme Court ruling in the Ethyl case.

A Dissenting Opinion of Mr. Justice Story Enacted As Law Within 36 Days

EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, April 29 (legislative day of Wednesday, April 24), 1940

ARTICLE FROM THE VIRGINIA LAW REVIEW

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the RECORD an article written by George Stewart Brown, entitled "A Dissenting Opinion of Mr. Justice Story Enacted as Law Within 36 Days." The article is reprinted from the April 1940 Virginia Law Review.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the April 1940 Virginia Law Review]

A DISSENTING OPINION OF MR. JUSTICE STORY ENACTED AS LAW WITHIN 36 DAYS

(By George Stewart Brown)

There has been much discussion as to the value of dissenting opinions. There are those who contend that, except in cases of close divisions among the judges, they should not be filed at all. It is claimed that they weaken the prestige and authority of the court without accomplishing anything substantial; further, that they express a form of judicial egotism better suppressed than exhibited. It is urged that unless the subject matter is of vital importance to the future Government structure, which is seldom the case in ordinary constitutional or statutory construction, lone dissenting judges should refrain from expressing their individual views and go along with the majority of the court.

On the other hand, others contend to the contrary that dissenting opinions are often extremely valuable and necessary. They assert that, in the struggle for law under changing conditions in society, dissenting opinions have frequently become the entering wedge which has finally resulted in a complete change in the prevailing judicial construction of particular constitutional or statutory provisions; again, that they frequently, and incidentally, point out or suggest necessary statutory changes of a remedial character, which the legislature has subsequently adopted, amounting to a very important contribution and aid to subsequent legislative policy. They thus, it is contended, call attention in a vivid fashion to needed changes in the law which are subsequently adopted.

Frequent instances can be pointed out where positions taken in dissent by distinguished judges, the first time a question arose, have finally, after further discussion and more elaborate debate in subsequent litigation, become the settled view of all, or nearly all, of the judges of the Supreme Court.

Mr. Justice Brandeis in a most illuminating marginal note in Burnet against Coronado Oil & Gas Co.[1] has a list of cases, startling in the number of instances cited, where the Supreme Court has changed its mind upon an important question of construction. In this list there are many instances where a vigorous dissent subsequently became the majority view of the Court.

Dissenting opinions indicate another thing which is of public importance. They show that the Court where they are filed is not a "one judge court," i. e., that under the pressure of business and the give and take of modern life in such circumstances the Court has not left the case, by a division of labor, entirely to one of its members, with the remaining members giving scant attention to the principle involved or to the factual details, often of a complicated nature. In other words, sharply divided opinion, and even small minority dissents, tend to show that each and every member of the Court is performing his full duty, by study and research, in the cases which come before the Court. This is something which is little appreciated by the general public. While lawyers often complain about "one judge courts," the public is apt to scoff at 5-to-4 or 6-to-3 decisions as indicating something wrong about the Court or its members. As just pointed out, exactly the contrary is true. The public should welcome that evidence that each and every member of the Court is fully performing his duty in every case and not dividing up the work and responsibility by common consent and acquiescence.

Mr. Justice Story, however, seems to be the only judge to whom was to be accredited the very remarkable honor of having his dissenting opinion in Cary against Curtis[2] become the law of the land before the volume which noted it as a dissent was published.

In 36 days Congress passed, and President Tyler signed, the Declaratory Act of February 26, 1845, which recalled the majority ruling in Cary against Curtis and made Judge Story's opinion the law of the land. When we consider the ordinary delays in legislative procedure, that was accomplished in the shortest possible period of time—as nearly instantaneous action as could well be performed. The entire credit in this matter is not due to Justice Story as Justice McLean also filed a less elaborate separate dissenting opinion supporting Justice Story's position. The decision in Cary against Curtis was rendered on January 21, 1845, as the records of the Supreme Court show.[3]

Previously importers had always enjoyed a full judicial review of all questions of fact and law involved in the decisions of the collector of customs in classifying imported merchandise. As Mr. Justice Lurton says in Louisiana against McAdoo:[4]

"There have always been remedies by which an importer may recover an excess rate of duty exacted from him by a customs collector, either by common law action against the collector, as in *Elliott* v. *Swartwout* (10 Peters 137), or by statute, section 2931, Revised Statutes, act of June 10, 1890; Act of August 5, 1909."

When the collector of customs was sued individually at common law he withheld the duties which the court might compel him to

[2] 3 How. 236, 252 (U. S. 1845).

[3] The writer obtained this date by letter from the Clerk of the Supreme Court of the United Ssates. The Howard reports did not give the dates of the decisions at that time, only indicating that they were of the January term, 1845.

[4] 234 U. S. 627, 632 (1914).

repay instead of turning them over to the Treasury. Some collectors defaulted and did not account for the accumulations. To prevent this, Congress passed a rider to an appropriation bill which compelled collectors to pass the money over to the Treasury as soon as collected. A majority of the Supreme Court in Cary against Curtis held this destroyed the common law remedy. Congress did not establish a new statutory remedy but promptly recalled the decision by a new act[5] declaring in so many words that nothing contained in the appropriation rider—

"shall take away, or be construed to take away or impair, the right of any person or persons who have paid or shall hereafter pay money, as and for duties, under protest, to any collector of customs, or other person acting as such, in order to obtain goods, wares, or merchandise imported by him or them, or on his or their account, which duties are not authorized or payable in part or in whole by law, to maintain an action at law against such collector, or other person acting as such, to ascertain and try the legality and validity of such demand and payment of duties, and to have a right to a trial by jury, touching the same, according to the due course of law."

Thus Congress immediately restored a full judicial review of all questions of fact as well as all questions of law involved in customs taxation.

In De Lima against Bidwell[6] a common law action brought by Coudert Bros. in the Supreme Court of New York State for a matter falling outside the customs administrative act, Mr. Justice Brown, speaking for the entire court, reviewed what had happened in the following language:[7]

"An act was passed in 1839 requiring moneys collected for duties to be deposited to the credit of the Treasurer of the United States, and it was made the duty of the Secretary of the Treasury to draw his warrant upon the Treasurer in case he found more money had been paid to the collector than the law required. It was held by a majority of this court in *Cary* v. *Curtis* (3 How. 236), that this act precluded an action of assumpsit for money had and received against the collector for duties received by him, and that the act of 1839 furnished the sole remedy. It was said of that case in *Arnson* v. *Murphy* (109 U. S. 238, 240): 'Congress, being in session at the time that the decision was announced, passed the explanatory act of February 26, 1845, which, by legislative construction of the act of 1839, restored to the claimant his right of action against the collector, but required the protest to be made in writing at the time of payment of the duties alleged to have been illegally exacted, and took from the Secretary of the Treasury the authority to refund conferred by the act of 1839.'"

The Supreme Court were sharply divided on the merits of the so-called insular cases of which De Lima against Bidwell was one. They were all of one mind on the proposition that where there was no statutory remedy the common law remedy revived. After discussing the common law remedy which had been invoked, they said:[8]

"We are all of opinion that this action was properly brought." They had previously said:[9]

"Conceding then that section 3011 has been repealed, and that no remedy exists under the Customs Administrative Act, does it follow that no action whatever will lie? If there be an admitted wrong, this court will look far to supply an adequate remedy."

Lowell, C. J., a distinguished Massachusetts Federal judge, in *United States* v. *Schlesinger*[10] described this interesting bit of legal history as follows:

"In *Cary* v. *Curtis* (3 How. 236), the Supreme Court modified this rule by holding that a public officer who was absolutely bound to pay into the Treasury every dollar which he received, so that he could not protect himself in case of suit, was not liable to an action. Congress, then in session, approved of the dissenting opinion of Story and McLean, JJ., in that case and promptly reversed this decision by St. 26, February 1845 (5 Stat. 727). This statute gave no new rights. It simply removed the obstruction of *Cary* v. *Curtis* and left the importer to his remedy at common law."

Mr. Justice Cardozo, in *Moore Ice Cream Co.* v. *Rose*,[11] an income-tax case, also mentions the matter:

"As the law stood before later statutes, the taxpayer's protest was notice to a collector that suit was about to follow, and was warning not to pay into the Treasury the moneys collected. * * * Statutes first enacted in 1839 and progressively broadened made it the duty of collectors to pay the money over to the Government, whether there had been protest or no protest. At first this was thought to have relieved them of personal liability (*Cary* v. *Curtis*, 3 How. 236), but later acts of Congress established a different rule, though maintaining the duty to make remittance to the Treasury."

In view of the remarkable circumstances of its immediate approval by Congress this dissenting opinion by Judge Story is probably the most important dissenting opinion ever delivered by a justice of the Supreme Court. This is also true because it protected and preserved the fundamental right of a taxpayer in a free country to compel his government to deal honestly with him in the levy of taxes. Ever since that time this right of the customs taxpayer has been protected by Congress with meticulous care.

The present statutory judicial review in customs taxation which has succeeded the common law action covers a complete review of the facts involved as well as the construction of the law.[12] The judicial review in income taxation is equally broad. The latter suit may be brought if desired in the appropriate United States District Court with an optional jury trial of the controverted facts[13] or, in the alternative, without paying the tax, before the Board of Tax Appeals.[14]

The gist of Judge Story's dissenting opinion which so impressed Congress and caused it to act so quickly to insist on the continuation of the broad judicial review in customs taxation on both questions of fact and law, which position Congress has consistently adhered to ever since, is as follows:[15]

"I know of no power, indeed, of which a free people ought to be more jealous than of that of levying taxes and duties; and yet if it is to rest with a mere executive functionary of the Government absolutely and finally to decide what taxes and duties are leviable under a particular act, without any power of appeal to any judicial tribunal, it seems to me that we have no security whatsoever for the rights of the citizens. And if Congress possess a constitutional authority to vest such summary and final power of interpretation in an executive functionary, I know no other subject within the reach of legislation which may not be exclusively confided in the same way to an executive functionary; nay, to the Executive himself. Can it be true that the American people ever contemplated such a state of things as justifiable or practicable under our Constitution? I cannot bring my mind to believe it; and, therefore, I repeat it, with the most sincere respect for my brethren, who entertain a different opinion, I deny the constitutional authority of Congress to delegate such functions to any executive officer, or to take away all right of action for an admitted wrong and illegal exercise of power in the levy of money from the injured citizens. I am further of opinion, as I shall endeavor presently to show, that Congress never had contemplated passing any such act, and that the act of the 3d of March 1839 (Chap. 82, sec. 2), neither requires nor in my humble judgment justifies such an interpretation.

* * * * * * *

"An action for money had and received being then the known and appropriate remedy of the common law, applied to cases of this sort, to protect the subject from illegal taxation and duties levied by public officers, what ground is there to suppose that Congress could intend to take away so important and valuable a remedy and leave our citizens utterly without adequate protection?

"It is said that circuitously another remedy may be found. The answer is that if Congress have taken away the direct remedy, the circuitous remedy must be equally barred. But in point of fact no other judicial remedy does exist or can be applied. If the collector is not responsible to pay back the money, nobody is. The Government itself is not suable at all; and certainly there is no pretense to say that the Secretary of the Treasury is suable therefor. Where, then, is the remedy which is supposed to exist? It is an appeal to the Secretary of the Treasury for a return of the money, if in his opinion it ought to be returned, and not otherwise. No court, no jury, nay, not even the ordinary rules of evidence, are to pass between that officer and the injured claimant to try his rights or to secure him adequate redress. Assuming that the Secretary of the Treasury will always be disposed to do what he deems to be right in the exercise of his discretion, and that he possesses all the qualifications requisite to perform this duty among the other complicated duties of his office—a presumption which I am in no manner disposed to question—still it removes not a single objection. It is, after all, a substitution of executive authority and discretion for judicial remedies. Nor should it be disguised that upon so complicated a subject as the nature and character of articles made subject to duties grave controversies must always exist (as they have always hitherto existed) as to the category within which particular fabrics and articles are to be classed. The line of discrimination between fabrics and articles approaching near to each other in quality or component materials or commercial denominations is often very nice and difficult, and sometimes exceedingly obscure. It is the very case, therefore, which is fit for judicial inquiry and decision, and falls within the reach of that branch of the judicial power given by the Constitution where it is declared 'that the judicial power shall extend to all cases in law and equity arising under this Constitution, the laws of the United States, and treaties, etc.' If, then, the judicial power is to extend to all cases arising under the laws of the United States, upon what ground are we to say that cases of this sort, which are eminently 'cases arising under the laws,' and of a judicial nature, are to be excluded from judicial cognizance and lodged with an executive functionary?

"Besides, we know that, in all revenue cases, it is the constant practice of the Secretary of the Treasury to give written instructions to the various collectors of the customs as to what duties are to be collected under particular revenue laws, and what, in his judgment, is the proper interpretation of those laws. I will venture to assert

that, in 19 cases out of 20 of doubtful interpretation of any such laws, the collector never acts without the express instructions of the Secretary of the Treasury. So that in most, if not in all, cases where a controversy arises, the Secretary of the Treasury has already pronounced his own judgment.

"Of what use, then, practically speaking, is the appeal to him, since he has already given his decision? Further, it is well known, and the annals of this Court as well as those of the other courts of the United States establish in the fullest manner that the interpretations so given by the Secretary of the Treasury have, in many instances, differed widely from those of the courts. The Constitution looks to the courts as the final interpreters of the laws. Yet the opinion maintained by my brethren does, in effect, vest such interpretation exclusively in that officer.

"These considerations have led me to the conclusion that it never could be the intention of Congress to pass any statute by which the courts of the United States, as well as the State courts, should be excluded from all judicial power in the interpretation of the revenue laws, and that it should be exclusively confided to an executive functionary finally to interpret and execute them—a power which must press severely upon the citizens, however discreetly exercised, and which deeply involves their constitutional rights, privileges, and liberties.

"The same considerations force me, in all cases of doubtful or ambiguous language admitting of different interpretations, to cling to that which should least trench upon those rights, privileges, and liberties, and a fortiori to adopt that which would be in general harmony with our whole system of government."

This brilliant opinion by Judge Story is seldom quoted by lawyers in their briefs, and by judges in their opinions, probably because of the conventional report of it as a dissent, although it would often be appropriate authority in cases dealing with the intent and purpose of Congress in establishing a statutory judicial review in matters of taxation, in substitution for the common-law remedies. This is probably because the legal incident, the subject of this paper, through the prompt action of Congress, which made it the law of the land so soon after being filed, is not generally known. Certainly a dissenting opinion which thus immediately became the law is sound authority to quote.

The original common-law remedy for the recovery of taxes illegally collected was so broad and all inclusive upon both questions of fact as well as questions of law that to give a narrower, less inclusive construction to the present statutory remedies would seem to be inadmissible as in degradation of the common law. Statutes giving a right to sue the Government where no remedy existed before, such as many matters coming before the Court of Claims, are, of course, subject to a strict construction. The converse, however, is true about statutes which perfected and improved and made applicable to modern conditions, an ancient common-law remedy which had always existed, to protect the citizens' elementary right not to be taxed illegally.

There is a widespread and spirited discussion now going on in the law reviews over what is called administrative law, governing suits between the Government and its citizens. The particular phase of administrative law now being extensively debated is how far, that is, to what extent, should there be a judicial review of administrative governmental action. Mr. Justice Story in the quoted opinion presents seemingly unanswerable arguments that, so far as taxation is concerned, which may be in a class by itself, such judicial review of administrative action must necessarily include a review of the facts as well as the law in order to be effective and to establish complete justice between the citizen and his government.

GEORGE STEWART BROWN.

NEW YORK CITY.

Walter-Logan Bill

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, April 29 (legislative day of Wednesday, April 24), 1940

ARTICLE BY ERNEST LINDLEY

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mr. Ernest Lindley, entitled "Ironic Sequel," in which he discusses some phases of the Walter-Logan bill. The article is published in the Washington Post of today, April 29, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of April 29, 1940]

IRONIC SEQUEL

(By Ernest Lindley)

WHERE CRITICISM IS DUE

For 7 years one of the commonest lines of attack on the New Deal has been: Its objectives are good. But it has tried to achieve them through hastily drawn unworkable legislation. And it has floundered in poor administration.

Obviously, there is much ground for this criticism. Extenuating circumstances can be pleaded. Haste was necessary, especially in the critical days of 1933–34. No great new venture, such as social insurance, or the regulation or minimum wages and maximum hours, or supervision of the securities markets, can be laid out perfectly in a single law. Experience will always reveal the need for amendments. And no new agency can be organized and put into operation without a certain percentage of inefficiency and error.

Those are explanations, not denials, of the core of truth in the indictment.

Now, however, has come a strange, and ironic sequel: The Walter-Logan bill, which passed the House by a 3-to-1 vote last week and is now before the Senate. The purpose of the Walter-Logan bill is indisputably noble. It is to protect the citizen from the arbitrary or unfair exercise of power by administrative agencies. Its original sponsor was a committee of the American Bar Association, and endorsements of it have come from a host of State and local bar associations, and other organizations, ranging from the American Federation of Labor to the American Coalition of Patriotic Societies.

The ordinary citizen would presume that with such backing this bill was carefully written and considered. But the opinion of the few qualified experts who have really examined it is overwhelmingly to the contrary. It is doubtful whether in all 7 years of its existence the Roosevelt administration has presented to Congress a bill so poorly drafted to achieve a noble purpose as the Walter-Logan bill is. The administrative errors or deficiencies of the Roosevelt regime are nothing beside the havoc which, in expert opinion, this bill would create in the machinery of Government. Not in decades, if ever, has Congress seriously considered a bill which, in the view of qualified experts, would so seriously disrupt the Government of the United States.

The bill has been condemned not only by experienced men in the Federal Government, but by such conservative leaders of the bar as John Foster Dulles and Alfred Jaretzki, Jr., of the New York firm of Sullivan & Cromwell.

In drafting the bill, lobbyists for the American Bar Association seem to have relied heavily on the research work done by F. F. Blachly, of the Brookings Institution, for Senator BYRD's Government reorganization committee. But Mr. Blachly rakes the bill from stem to stern as wholly incompatible with his findings, unworkable, destructive of efficient government, and possibly unconstitutional.

Louis G. Caldwell, formerly general counsel for the old Federal Radio Commission, was cited by Representative WALTER as one of the original drafts of the American Bar Association recommendation. So he was. But Mr. Caldwell, a highly conservative Chicago lawyer, has denounced every important feature of the Walter-Logan bill.

Here in brief summary are some of Mr. Caldwell's comments:

Section 1, dealing with definitions, is so hazy as to "require a lot of judicial interpretations before it makes sense."

Sections 2 and 3, dealing with rule making by Federal agencies, subjects "the rule-making process to a very heavy burden, whereas, so far as I know, there is no evil calling for so drastic a measure."

Section 4, dealing with procedure in Government agencies, is in some respects "a step backward and not a step forward from the point of view of bringing order out of chaos in administrative law." No existing evil in any independent agency would be cured, and many agencies already have procedures superior to those which would be imposed on them by the Walter-Logan Act.

Section 5, providing for judicial review of proceedings, adds little or nothing to the protection of the individual already available.

Contrary to the claims of its proponents, the bill "does not promote uniformity to any serious degree."

It exempts certain agencies, without rhyme or reason, except that they "protested loudly enough" to the American Bar Association.

Why, in the face of the opinion of experts, to the right and to the left, that it is a monstrosity, has the Walter-Logan bill been able to muster support among bar associations and in Congress? There are, I think, two reasons. One is ignorance of what it would really do. The other is the feeling that something ought to be done to give the citizen greater protection against high-handed actions by Government agencies.

There may be a third reason: it would create a lot of business for lawyers. One analyst estimates that it would produce from 150,000 to 200,000 lawsuits per annum.

There may be still a fourth: that powerful interests believe that in this way they can nullify the Federal regulatory power.

There is no emergency justifying the enactment of a half-baked, destructive bill. By passing it the House has jolted the complacency of some of the New Deal agencies. After the next election it may be possible to deal with the question intelligently. If the Senate is not carried away by sheer emotion it will defeat the bill or recommit it for further study.

Logan-Walter Bill

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

ARTICLE BY DAVID LAWRENCE

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, from the Washington Evening Star of April 29:

[From the Washington Star of April 29, 1940]

LOGAN BILL PASSAGE HELD VITAL—JUDGE'S OPINION CITED AS SHOWING ITS IMPORTANCE

(By David Lawrence)

People who say they can't understand the Logan-Walter bill which passed the House of Representatives by a 3-to-1 vote and is now pending in the Senate, and people who say they don't know what is meant when citizens insist on a fair hearing before administrative boards, commissions, and agencies may have some light thrown on the subject by reading a rather remarkable opinion which has just emanated from a United States court for the western district of Missouri.

Strangely enough, the opinion which was written by Judge Merrill E. Otis, is a dissent which upholds Secretary Wallace's ruling and declares that the wording of the statute in question is such that the courts now must affirm rulings even though they know there is a denial of justice in them.

What Judge Otis says is an explanation, incidentally, of why so many courts are upholding the National Labor Relations Board these days. According to Judge Otis, the courts really have no alternative. The language of the law is so binding that it is what the commissions and boards and bureaus declare to be a finding of fact that the courts must uphold. Judge Otis, who has been on the bench since 1925, in a sense twits his two colleagues who overruled Secretary Wallace's position recently in the F. O. Morgan sheep commission case, which was turned back by the Supreme Court of the United States to the district court for retrial.

CALLS IT "FORM"

Says Judge Otis:

"My colleagues, I think, have not been able to accept a certain new philosophy—nor do I accept it, although I recognize it, and I bow to it when Congress incorporates it into a valid statute—a philosophy that exalts the administrative agency and correspondingly lessens the powers of courts of justice. Congress has said that, on judicial review, findings of fact made by such an agency, if supported by evidence, shall be conclusive. And so the judicial review becomes largely without significance. It looks not to substance, but to form.

"The overwhelming weight of the evidence—the testimony of 20 witnesses—may support one finding, a minimum of substantial evidence. The testimony of a single witness may support the opposite finding. If the administrative agency, actuated by pique or prejudice or class interest or a consideration of the number of votes to be gained by 'the party' finds against the weight of the evidence the reviewing court is helpless.

"And if, under compulsion of law, the reviewing court affirms the agency, it is proclaimed to the world that the United States District Court or the Circuit Court of Appeals or the Supreme Court of the United States has endorsed and approved what the agency has done, it is not unnatural that judges should look with disfavor on such a consequence.

"COMPARED TO A COURT

"How superficial it is to compare such an arbitrary, possibly even dictatorial, fact-finding power with the fact-finding power of a jury. The jury is constantly under the supervising control of the judge. The judge excludes evidence that is irrelevant, immaterial, or otherwise incompetent. He reviews and sums up the case. He inspires the jury at the hour of its final functioning with the high ideals of justice and truth. And he may set aside whatever verdict the jury has returned.

"I think my colleagues have not been able to accept the new philosophy seen in another aspect. To them the 'full hearing' which the law requires an administrative agency to give the parties means a hearing comparable in all important details to the historic judicial hearing, a hearing in the solemn and dignified atmosphere of a courtroom, where the testimony received under the time-tried rules of evidence is presented orally to a trained judge, to an impartial judge (the parties may have him removed for bias and prejudice if he is deemed not impartial), to a judge who hears the arguments of opposing counsel and thereafter decides the issue.

THE CONTRAST

"It is a far cry, my colleagues think (and so think I), from that kind of hearing to such a hearing as that contemplated by, for example, the Packers and Stockyards Act, where the testimony is taken by an examiner (who may also be in fact active counsel for one of the contending parties), where the deciding power is vested in an official who never sees a witness, where the ultimate authority cannot practically read the evidence (although he may be compelled to say that he has done so), where there is no satisfactory way under heaven to dislodge a biased and prejudiced agency and secure another, and where the decision of the agency, so functioning, as to every issue of fact, if supported by any evidence (however defiant of the weight of the evidence), is made as conclusive as the command of a despot. My colleagues find it difficult to see 'due process of law' in such a medley of ritual and form and shadow. I honor and respect them for their steadfastness."

PASSED BY REPUBLICANS

The law under which the case was decided was passed by a Republican Congress. It is like many another statute passed in the days when scant attention was given to the growing economic complexities of governmental regulation. That's why the Walter-Logan bill seeks to revise the procedure for all the major Government commissions and boards which do not already have fair system of procedure to protect the citizen against despotic powers and arbitrary rulings. That's why, too, the House is about to consider the giving of a fair hearing to employer and employee in connection with the pending Smith bill to amend the procedure under the Wagner Labor Relations Act.

The New Deal bureaucrats are fighting hard to prevent the passage of these amendments and revisions. This is understandable. They want no curb or check on their own powers at all. The bureaus and commissions and boards, however, must bow to the will of Congress, which is the only elected body really intended by the Constitution to make the laws governing the exercise by the citizen of his rights. If Congress abdicates to the bureaucrats and such measures as the Walter-Logan bill are ultimately vetoed by the President, the people will have a real issue this coming campaign—fair play and a fair deal for all citizens. The issue touches the heart of the democratic process which has heretofore been extolled as a protection of the minority against the excesses of intolerant majorities.

Administrative Procedure

EXTENSION OF REMARKS
OF
HON. SHERMAN MINTON
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Monday, April 29 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM LOUISVILLE COURIER-JOURNAL

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Louisville (Ky.) Courier-Journal of April 24, 1940, entitled "Object and Effect of Walter-Logan Bill."

There being no objection, the edtiorial was ordered to be printed in the RECORD, as follows:

[From the Louisville (Ky.) Courier-Journal of April 24, 1940]

OBJECT AND EFFECT OF WALTER-LOGAN BILL

If Congress fails to pass the Walter-Logan bill, or if the bill is vetoed, Frank Kent assures Republicans they will have been "furnished with one very sound plank and one fairly good issue."

That is a challenge the national administration might not be loath to accept. It would add to the piquancy of the campaign if we could have this issue debated by Mr. Kent and Supreme Court Justice Felix Frankfurter, who has given us the best reasons for defeating the Walter-Logan bill.

Justice Frankfurter, to be sure, wouldn't debate it on Kent's erroneous statement of the purpose and effect of such a law. Kent said it will "impose a decent restraint on members of regulatory boards" by "providing for judicial review of acts and decisions of these boards which appear based on unfair or illegal procedure. It will protect individuals from arbitrary and prejudiced disregard of their rights. It will enable a man who has been treated unjustly and without proper hearing or consideration of the facts to appeal to the courts."

It is sufficient answer to these allegations and their implications to say they are refuted by court records. The right of appeal on the grounds he enumerates not only exists but has been exercised against the ruling of every board to which the law would apply. Moreover, the specific exemption from the bill's provisions of the I. C. C., Federal Trade Commission, Federal Reserve Board, and lending agencies proves that these constitutional rights are not involved. The bill is

aimed at such regulatory bodies as the S. E. C., which protects investors from stock and bond market rigging, the Wage-Hour Administration, the Labor Board, and T. V. A.

The Walter-Logan bill would permit the transfer of the business of these agencies to court at any stage almost from the initial step. That would do precisely what Justice Frankfurter said should not be done, reduce regulatory boards to the status of inferior judicial tribunals. Successive appeals could suspend a board's procedure by litigation for years. The brief, stormy career of President Taft's commerce court, supervising the I. C. C., and the ultimate acquiescence of parties in the settled practice before the I. C. C., confirm the reasoning of Justice Frankfurter in the Federal Communications Commission case.

The Justice said the functions and jurisdictions of administrative agencies and courts differ, with methods of procedure adapted to the purposes of their respective functions. Citing the fact that Anglo-Saxon jurisprudence underwent a long process of development, he made it plain that he believed the development of administrative technique should be unhampered by judicial assumption of the responsibilities entailed.

These agencies, beginning with the I. C. C., were created because law courts and their procedure were found not to be adaptable to administrative functions.

Increase of Corporation Profits

EXTENSION OF REMARKS

OF

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, April 29 (legislative day of Wednesday, April 24), 1940

ARTICLE FROM NEW YORK TIMES

Mr. BROWN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news item from the New York Times of April 28, showing that the first 250 corporations to report for the first quarter of 1940 had average profits 50 percent greater than in the same period a year ago.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of April 28, 1940]

TWO HUNDRED AND FIFTY CORPORATIONS RAISE PROFITS 50 PERCENT—FIRST-QUARTER INCOME UP TO $272,291,000 FROM $181,375,000 A YEAR BEFORE—ALL MAJOR GROUPS GAIN—RAIL EQUIPMENT, OIL, AND STEEL PRODUCERS LEAD IN SURVEY BY ASSOCIATED PRESS

Profits of the first 250 corporations to report for the initial quarter of 1940 were 50 percent greater than in the same period a year ago, a compilation of their statements disclosed today. Net income of the group amounted to $272,291,000, compared with $181,375,000 in the first 3 months of 1939.

Excluding the American Telephone & Telegraph Co., whose large earnings weigh heavily in the total, first-quarter profits went up 60 percent.

All major industrial groups for which comparisons could be made showed larger incomes than a year ago. The biggest gains were recorded by manufacturers of railroad equipment and by the petroleum and steel industries.

Food and finance companies, public utilities, and manufacturers of business machines showed the smallest improvement.

BACKLOGS RAISE EARNINGS

A large backlog of unfilled orders from late 1939 enabled nine railroad-equipment companies to report earnings of $4,365,000, compared with $906,000 in the first 3 months of 1939.

Eight petroleum companies more than quadrupled last year's results, showing net income of $13,269,000, compared with $3,256,000 in the March quarter last year. Heavy demand for heating oils, plus good profit margins, made it an excellent quarter for the petroleum industry, making the climax to a year of steady improvement in earnings from a relatively unsatisfactory level a year ago.

Twenty-six steel companies rolled up profits of $25,134,000, against $6,865,000 a year ago, despite the decline in operations since November.

Fourteen food companies, on the other hand, increased their first-quarter net income only slightly from $17,091,000 to $17,656,000. Several companies in the group showed smaller profits than a year ago as prices of wheat, corn, and other raw materials rose faster than prices obtained for manufactured food products.

PAPER AND PULP PRICES UP

Earnings of pulp and paper manufacturers reflected the higher prices prevailing since the war jeopardized shipments from the Scandinavian countries. Profits of seven companies made a total of $2,544,000, compared with $1,267,000 a year ago.

First-quarter earnings of other industrial groups compare as follows:

	1940	1939	Percent gain
15 chemical companies	$43,836,000	$30,230,000	45
13 auto accessories	7,280,000	4,372,000	67
12 public utility	17,073,000	15,821,000	8
11 metal mining	6,958,000	5,387,000	29
10 building material and equipment	3,908,000	2,384,000	64
8 railroads	13,767,000	6,141,000	124
7 finance	8,672,000	8,002,000	8
7 coal	1,366,000	386,000	
4 business machines	3,732,000	3,458,000	8
4 electrical equipment	16,548,000	9,884,000	67
85 miscellaneous	84,373,000	66,059,000	28

In Fairness to Those Who Feed America

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

Mr. MUNDT. Mr. Speaker, in all probability, some time this week this House will have an opportunity to vote on the agriculture appropriations bill. The biggest question to be decided at that tme is whether the Government is to continue making the so-called parity payments to American farmers. It is in behalf of these payments that this talk is devoted.

The question of whether or not the present farm program of restricted production and Government checks is wise or unwise is not involved as we make our decisions on the matter of voting these payments to American farmers. The simple fact remains that the present farm program is the law of the land and that unless these payments are forthcoming under the existing program, our farmers will be driven into bankruptcy. I happen to be one of those who believe that there is a better approach to the American farm problem than the existing program, but until and unless the basic formula of our present program is changed to bring a greater degree of independence and prosperity to the farmer, it is essential that Congress follow the example of the Senate in this connection and approve the appropriation bill for agriculture with the parity payments included. To do otherwise would be to drive the dagger of despair into the back of American agriculture and to impoverish such a large segment of our farming population that our whole national economy would suffer from the effects. It is for this reason I shall vote for these payments and that I am urging you to join me in this vote.

FARM CHECKS ARE NOT SUBSIDIES

These annual appropriations for the Government checks forming an integral part of the existing agricultural program, are carelessly referred to as subsidy checks or parity payments by many Members of Congress and writers for the press. Such names are inaccurate when used with reference to these checks for they neither subsidize agriculture up to the point where farmers receive the cost of production for their labors nor do they provide parity for the producers of farm products. Even after receiving these Government payments, the American farmer is today feeding America for returns which would be called sweat-shop wages or worse if they were given to men and women working equally long hours and at similarly hard labor in any other industry in this country. The ugly truth of the matter is that for the past 10 years the city dwellers of America have been mooching their living from the American farmer and—even including these checks—have been slowly sapping away his vitality and independence by giving him a buying power which is wickedly insufficient to enable him to succeed.

Mr. Speaker, I submit as a matter of basic honesty that this Government is not giving the American farmer a subsidy and it is not taxing its people to provide parity payments for the farmer when the cash returns from farm produce plus the Government payments are still grossly inadequate in providing our farmers with an equitable opportunity with other phases of American business, industry, and labor. These Government checks help the farmer to survive—they are far from adequate to enable the farmer to succeed.

FARM CHECKS DO NOT EVEN "COMPENSATE" OR "EQUALIZE"

A much better name for these checks would be "compensation checks" or "equalization checks" except for the fact that they neither "compensate" the farmer for the losses he is suffering by competition from cheap foreign food imports nor "equalize" the disparity between the price of what the farmer buys and the price of what he sells. When a man's dollar will buy 75 cents' worth of what he needs to survive, it is not giving him a subsidy or favoring him with parity to give him 10 cents in change—he will still wind up in the poorhouse or die of starvation if he cannot get the other 15 cents he needs to hold body and soul together and come out even. These Government checks will not develop successful farming as a long-term program but they do help to keep the farmer's family from suffering and to bolster up his hopes while a more equitable farm program is being developed which will have as its goal "a successful farmer on his own farm" rather than "a control to help the farmer survive." American farmers need these Government checks today to survive; but you and I owe it to them to develop a program under which American farmers can once again succeed.

AMERICA HAS BECOME A NATION OF "MOOCHERS"

Mr. Speaker, the cold, unerring logic of arithmetic tells its own story as to what is happening to the American farmer. It should convince every member of this House as to the justice and necessity of approving the Agricultural appropriations bill with its farm payments included. It points out the truth involved in my earlier remark that America is "mooching" its foodstuffs from our farmers without paying them a living price for supplying the products basic to a living America.

Recently representatives of nonfarming States forced through this body and the Senate the Reciprocal Trade Treaty Extension Act, which has since been signed by the President. This means that foreign countries using coolie and peon labor earning a few cents per day will continue to ship into this country in increasing amounts foodstuffs to sell in direct competition with the products of American farms. We have seen the effect of these treaties in the past; we have seen the price of American turkeys and of American dairy products forced down in almost direct relationship to the reduced tariffs offered producers in Canada, South America, and elsewhere. What has happened will happen again. After all is said and done, the law of supply and demand determines the price. Increase the supply by encouraging foreign imports of eggs, cheese, beef, wool, and other farm products and the demand for American products is lessened in American markets. Down drops the price, and our American farmer who has been encouraged to produce less to hold down the supply receives still less for what he does produce. Surely the appropriation of these Government payments is very small compensation, indeed, for the injury wreaked upon our farmers by the Government program of increased farm imports.

IF TRADE TREATIES HELP BIG BUSINESS, BIG BUSINESS SHOULD HELP THE FARMERS

Mr. Speaker, in simple justice those who voted to extend these treaties cannot now refuse to vote these appropriations needed so desperately by the American farmers who are the principal sufferers from this import policy. If, as they argue these trade treaties help the industrial regions and increase profit to the commercial bankers and brokers in the big cities, these selfsame beneficiaries of the Government tariff policy should not complain if they are required to share a small portion of their windfall with the American farmers whose distance from parity continues to expand as competitive farm products continue to flood American markets in ever-greater quantities. Big business cannot have its foreign trade cake and eat foreign food products too. At least, if it does so violate the ancient axiom it should not be unwilling to share a few of the crumbs with its farmer friends—and customers—by approving of these Government checks which come under the heading of earned income instead of parity payments for American producers.

THESE GOVERNMENT CHECKS ARE IN REALITY EARNED INCOME

So that it may be made perfectly clear that these appropriations for Government payments to American farmers are actually earned income to which the farmer has established his just claim by feeding America at a direct, personal loss to himself, I offer a few statistics in the attached table which tell their own story from the official records of the United States Department of Agriculture Marketing Service. This service is not part of the long political arm of the Department of Agriculture—it is the highly efficient statistical division operated by career men motivated by the sole desire to record and reveal the facts.

What are the facts? Are Government checks "earned income"?

Product	Year	Price received by farmer average in United States	Parity price (price needed to give farmer a dollar purchasing power for a dollar received)	"Earned income" (earned by the farmer but not received by him)
Wheat.....bushel	1938	$0.60	$1.12	$0.52
Hogs.....hundredweight	1938	7.72	9.17	1.45
Oats.....bushel	1938	.24	.51	.27
Corn.....do	1938	.47	.81	.34
Barley.....do	1938	.41	.78	.37

Conclusions from above table: The last column at the right indicates in each of 5 farm commodities America failed to pay the farmer a parity price by a wide margin during the year of 1938. The same general ratio holds true of practically all farm products. This disparity has continued without interruption for 10 years. Thus Government checks are "earned income" due our American farmers.

GOVERNMENT CHECKS ARE PARTIAL PAYMENTS OF EARNED INCOME LOST BY THE AMERICAN FARMER

Mr. Speaker, any Member making an impartial, justice-serving analysis of the foregoing table must agree with my argument that the appropriations for farm payments upon which we shall vote this week are necessarily fair and highly essential if the farmer is to receive even a small degree of justice under existing conditions. In the case of most farm products we have to go back to the year 1930 or 1929 or even farther to find a time when the American farmer last received a parity price for his products. I say again American city dwellers have been "moochers" off of the American farmers to the extent that they have filled their dinner buckets or loaded their tables with foodstuffs bought for less than parity prices. The Government payments we are now asking as a temporary stopgap to prevent the disintegration of American agriculture while a more equitable farm program and a just relationship between the farmer, the laborer, and the businessman of this country are being developed cannot be discredited as subsidies; they are a long-overdue partial payment to the farmer of the earned income to which he is entitled but which has been denied him for the past 8 to 12 years, depending upon the products in which he specializes.

GOVERNMENT CHECKS REALLY JUST SUBSISTENCE PAYMENTS

Give the American farmer a fair price for a full crop; give him the right to supply the American market at an American price level to the full extent of his ability to do so; give him a dollar for what he sells which will buy a dollar's worth of what he needs; give the American farmer an equitable opportunity with protection from sweatshop farm products from abroad; yes, give the American farmer the American chance to which he is entitled as an American, and the day when Congress will be asked to appropriate money for farm

checks will be gone forever. But, Mr. Speaker, until that time comes or until we do something to make a closer approximation to that bright era, we must not shut our eyes to the plight of agriculture. Call them what you will, parity checks, subsidies, compensation checks—these payments will help serve as subsistence payments to buoy up the American farmer and give him courage to fight on for a better day until such time as Congress succeeds in developing an economic pattern which will provide a fair chance for all under a government in which men will again be free.

Mr. Speaker and my colleagues, in concluding these remarks, I urge you to support the appropriations this year for farm payments, and I also plead that you do so with a realization that you are not voting charity to the American farmers, nor are you even voting equality of opportunity. You are voting him a part of what he has been underpaid—and only a small part of this underpayment—and this payment will help him weather through for another year. In the meantime all of us are charged with the responsibility of developing a permanent, self-financing, justice-producing farm program which will give the farmer parity prices for what he sells and rehabilitate him as America's best customer so that there will be more jobs for labor at better wage levels and more business for industry at fairer rates of profit. Prosperity begins for all when prosperity includes the American farmer.

UNFAIR FARM PRICES RESULTS IN ECONOMIC INFANTICIDE

Until and unless the products of the soil—the real new wealth of this country—are started through the channels of trade by exchanging them for an honest buying power, we are shutting off our economic stream at its source and committing economic infanticide by killing the first small germs of recovery before they leave the cradle of the farm.

While the rest of the world fights for farm products, which we enjoy in abundance, you and I must find a way to free our farmers from disaster and give to the folks who feed America their inalienable right to enjoy the blessings which are America's.

Sheep States and Goat States

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

EDITORIAL FROM THE NEW YORK SUN

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following short editorial printed in the New York Sun of April 23, 1940, commenting upon data prepared by the Honorable FREDERICK C. SMITH, of Ohio, which appears in the RECORD for April 11, 1940:

[From the New York Sun of April 23, 1940]

SHEEP STATES AND GOAT STATES

Representative SMITH of Ohio is a physician and surgeon, but it may be doubted whether, in the pursuit of his profession, he ever did a smarter job of dissection than one he has just done on certain data concerning Federal receipts and expenditures. Some of the results appear in tabular form in the CONGRESSIONAL RECORD of April 11, 1940, pages 4376–4377, where they may be consulted by anyone curious about the mysterious processes whereby the New Deal has in effect divided the Union into sheep States and goat States and has made the goat States pay, whether they liked it or not.

One table shows that from June 30, 1933, to June 30, 1939, 30 States, having 37 percent of the country's population, have "paid and obligated themselves for" about $5,270,000,000 in Federal revenue but have received in grants, payments, subsidies, and the like, $11,113,000,000—in other words, have had all their payments on account of Federal taxes and debt returned to them, with a "bonus" of $5,843,000,000. The other 18 States, including New York, New Jersey, Connecticut, and Massachusetts, have paid and obligated themselves for $35,227,000,000 and have received some $20,000,000,000 less than that in grants and subsidies.

In Mississippi, for example, Dr. SMITH shows that the average citizen has paid $25.60 into the Federal coffers but has received therefrom $222.20. The per capita cost for New York, at the opposite end of the list, was $670.50, but the average return in benefits was $192.60, a per capita "loss" of $477.90. Farm-benefit payments in New York represent approximately 1 percent of the value of the State's farm lands and farm buildings; but in Mississippi such payments represent approximately 23.8 percent of that value.

Another curious fact emerges from Dr. SMITH's tables. It is that, "on a population basis," the farmers' share of the increase in the Federal debt in the 6 fiscal years 1934–39 is greater than the amount they have received in benefit payments. That is, of course, something for farmers in New York, New Jersey, Connecticut, Pennsylvania, Ohio, Illinois, and a few other States to worry about. It is not likely for the immediate present to trouble the rest of the farmers in some 13 other States, where benefit payments are the equivalent of a dividend of anywhere from 23.6 percent to 10.7 percent on the value of farm lands and buildings.

Father Duffy and the Fighting Sixty-ninth

EXTENSION OF REMARKS

OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

ARTICLE BY RT. REV. DAVID T. O'DWYER

Mr. HART. Mr. Speaker, under leave to extend my remarks, I include the following tribute to Father Duffy and the Fighting Sixty-ninth which appeared in the Salve Regina, a publication of the Catholic University, and which was written by the distinguished scholar, Rt. Rev. David T. O'Dwyer. The article is such a fine appraisal of a noble character, great patriot, and splendid priest that I am glad to accede to the request of several of Father Duffy's friends to incorporate this excellent article in the RECORD. My pleasure in doing so is rendered all the greater by my own precious memory of his warm, rich friendship. The article follows:

[From Salve Regina for February 1940]

FATHER DUFFY AND THE FIGHTING SIXTY-NINTH

(By Rt. Rev. David T. O'Dwyer)

Ever since The Fighting Sixty-ninth was filmed I have been wondering how Father Duffy would have taken it. There is no doubt he would have been pleased; he enjoyed hero worship and affectionate regard in a certain naive way, without a grain of vanity or conceit. Modesty did not compel him to suppress these demonstrations; and he was not for a moment overcast by the concern certain people display in safeguarding their humility. The appreciation of his fellows just opened up for him some of the gay surprises of the human comedy. But I think, had he foreseen his statue in Times Square, he would have indulged in a certain tender wistfulness, his eyes would have filled up, and he would have been somewhat bewildered over the thought of transition from a house on Forty-second Street to the center of one of the most populous, energetic, and varied crowds in all the world.

Father Duffy was not the creation of publicity. He had endearing and fascinating gifts, and the spontaneity of their exercise and their never-failing resourcefulness won him a multitude of admirers among all classes in life. Publicity recorded his greatness; it did not make it. In analyzing the appeal he made, such words as "genial, humorous, kindly, tactful" would suggest themselves. He knew men and loved them with Christian ardor; and yet he was capable of indignation and disdain. A certain smug person got into difficulties involving penalties which Father Duffy felt were excessive. Father Duffy came to his rescue and was rewarded by a most embarrassing breach of confidence, whereupon he telephoned the indiscreet ingrate to strain himself to cultivate the honor that prevails even among harlots.

Father Duffy was what is popularly known as a "good fellow." This role has peculiar difficulties for the priest; as the world only too often indulges in a mirth in which the priest may not participate. The priest's frown on the unseemly is often interpreted as puritanical narrowness. And, on the other hand, should he compromise in any way, he will find his most captious critics not among his brethren in the clergy or among the Catholic laity, but among that not inconsiderable part of the general public who find in the lapses of priests occasion for righteous indignation and prurient glee. Father Duffy had a readiness of wit, a gift of irony, and a commanding superiority which could turn the tables on anyone who attempted to embarrass him by the unseemly, and yet leave the offender not so much stung by the rebuke as

ashamed of his indiscretion. Father Duffy's humanity, sweet and engaging though it was, was fortified by a certain unobtrusive austerity. His charm always recommended, never detracted from his virtue. Father Duffy was not merely good—he was holy.

The "good fellow" is not often a cultivated or a learned man. It would seem as though his good nature is not equal to the strain of attaining knowledge, or the discipline necessary for culture. A lack in these departments is easily condoned in the amiable. But Father Duffy was a man of solid learning, wide reading, and a literary discrimination that enabled him to hold his own among the most fastidious and the best informed. He had such competence in philosophy and theology that he could instantly perceive the significance of the trends of the day. He knew whither we were going, and why. And he had such serenity of conviction, and clarity of exposition that the bewildered invariably became composed in his present. He had multitudinous visitors who came from all walks in life. They included successes and failures, saints and sinners, and he had only one preferred list, those who had any connection whatsoever with the Sixty-ninth.

His chaplaincy did not end with the war; the soldiers still clung to him as friend, philosopher, and guide, and his ministrations were extended to their families in every difficulty and crisis. A friend on a purely social call would be offered a comfortable seat and given such refreshment as time and need suggested, and then Father Duffy would walk up and down the room with his hands behind his back in the pockets of his cassock, and would discourse with animation on every subject broached, while occasionally he stood still, and with a curious sidelong glance and far-away gaze, would reveal the deep mystic that was part of his fascination. His good humor was never failing; there was nothing pontifical about his utterances; he had no relish in deploring things; he had a quick eye for the silver lining in the dark cloud; he knew that God provided a remedy for every ill, and it was his great aim to get men to avail of that bounty.

He had wonderfully expressive eyes; mirth and humor reveled in them, but they seemed made for pity. His genius for friendship enabled him to win such men as Will Rogers, Heywood Broun, and Alexander Woollcott. I close with some extracts from the latter's obituary on him, and I leave to those skilled in research the task of discovering any more delightful tribute paid to priest or prelate.

"One had only to stop for a moment and speak to him on the street to go one's way immensely set up, reassured by what he was that there might be a good deal, after all, to this institution called the human race. * * * For he was the great New Yorker. Born in Canada, Irish as Irish, schooled in Maynooth, he was surely the first citizen of our town. This city is too large for most of us. But not for Father Duffy. Not too large, I mean, for him to invest it with the homeliness of a neighborhood. * * * Father Duffy was of such dimensions that he made New York into a small town. * * *"

Somebody Is Lying

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

Mr. FULMER. Mr. Speaker, under leave to extend my remarks, I want to insert in the RECORD an editorial submitted to me by Mr. Ovid Butler, executive secretary of the American Forestry Association, Washington, D. C.

One of the great troubles in this country today is that we have too many organizations and associations which do not produce anything on the face of the earth except to send out magazines and propaganda of all types in the interest of the groups which they represent.

Of course, there are thousands of people connected with these associations or organizations, many of whom are drawing handsome salaries, which might indicate that to this extent these associations and propagandists are creating purchasing power.

The pitiful thing about it is that the unorganized producers of farm products and the consuming public are paying the bill.

At the forestry hearings held in every section of the United States, we had dozens of representatives of associations and large operators. They all spoke the same language. To listen to them, and if you will read their statements in the hearings, you will readily agree that we have no forestry problems other than the need for more Federal money for fire protection, more Federal money for research, and more Federal money for disease and insect eradication; otherwise, the Federal Government is too far removed to have anything whatsoever to do with what is going on today and what has been going on during all these years, wherein our forest resources, which should belong to the people, and which should be utilized for the people, are being ruthlessly destroyed.

Listen to this—I am quoting from the editorial:

> The ghosts of forest scarcity have been driven from the woods by the forest survey and its accumulation of facts about our remaining timber supply, its current growth and drain.

Now, if you will read the hearings, this is exactly the language used by these witnesses representing large operators and associations, which are composed of large operators.

You should read the statements made by Secretary Wallace and Dr. Klapp, who is Acting Chief of the Forest Service, wherein they have given to us an altogether different picture about the serious condition of our forest resources. I am sure that you will immediately realize that somebody is lying.

The only remaining stands of timber to amount to anything are in the North Pacific region, hardwoods, California redwoods, and the Douglas fir. I understand that about seven operators own all of the California redwood.

We have other large operators owning individually around 200,000 acres, while thousands of acres in that area are becoming tax delinquent.

While holding a meeting at Portland, Oreg., one of the local county papers had to add 52 pages for the purpose of advertising tax-delinquent lands.

Take a look at the north Lake States. In 1890 they furnished 35 percent of the total lumber supply of the United States. Today they furnish about 4 percent, with millions of acres cut clean, million of acres tax delinquent, farm tenancy and unemployment running rampant.

In the South practically every acre of virgin pine timber has been destroyed, and they are chewing up the second growth either for sawmill purposes or for pulpwood, at a rate that will place this section in the same sad condition of the north Lake States and other sections of the United States within the next few years unless something is done to overcome the propaganda which is being put out by these selfish groups.

They bitterly oppose any type of regulation as to proper forestry practices, especially, if the Federal Government should even have the right to have the last word, in the event the States fail to legislate and properly enforce the carrying out of proper forestry practices.

I am sure that every member of the Special Forestry Committee is absolutely for the States having complete control over the regulations and the supervision of proper forestry practices. However, it is my firm belief that every member of this committee has agreed that if the State legislatures are going to be dominated by these representatives of selfish groups to the extent that they refuse to pass proper legislation dealing with forestry problems of the country, or if the States refuse to enforce proper legislation, then, either the Federal Government should have the right to see to it that proper forestry practices are carried out, or they should withdraw the furnishing of any money whatsoever to the States for any of these purposes.

You will note in the editorial that I am submitting to you that they are now wanting to bring pressure to bear on the members of this committee, as well as the Members of Congress, that we should for the next 5 or 10 years sit down and wait for the purpose of ascertaining whether or not during this period the States will make any effort to do the things that will have to be done if we are going to restore and properly preserve our forest resources in the interest of all the people.

I realize that practically all of these large operators and large owners of forest areas, amounting to several hundred thousand acres in the ownership of one operator in some instances, are, in some cases, carrying on proper forestry practices. They realize that it is good business to do so, and they realize what it means to them to get all of the Federal fire-protection money that they can get so as to be able to preserve these resources which are being held intact, while they are buying everything else in sight at fixed prices, cutting everything clean.

Each of these pulp and paper mills own anywhere from two to three hundred thousand acres of growing pulpwood.

We had a gentleman from New York, connected with some national association representing the pulp and paper mills, stating that they were cutting about 10 percent of their holdings. In other words, they are holding their pulpwood in reserve, so as to be able to have some place to cut after they have ruthlessly destroyed the pulpwood belonging to everybody else; not only that, but they have leases on thousands of acres which they will be able to fall back on later.

In investigating the pulpwood situation in the South we found that they had buyers in every pulpwood section checking up on tax-delinquent lands for the purpose of buying and leasing same. If this is not a pitiful picture, then I am unable to paint one.

As previously stated, we have 40 or 50 pulp and paper mills in the South. Under the monopolistic program that they have in buying pulpwood, wherein, unless it is a very large landowner, they have allotted areas wherein they have an actual contractor who proceeds to hook up with one, two, or more subcontractors, without any responsibility to anyone, buying the pulp products from farmers, very often, hog round, at a price not per cord of 128 cubic feet, but for from 15 cents to $1 for 160 cubic feet, called a unit. Farmers are not permitted to sell direct, and, because of operating as individuals, having to sell because of their financial condition, they are just as helpless as thousands of wage earners who are hired by these contractors to cut this pulpwood, who are not receiving a sufficient wage to feed and clothe their families.

No wonder we have millions of farm tenants and unemployed people in this country, and unless Members of Congress decide to pay more attention to the passing of constructive legislation in the interest of the unorganized, instead of listening to these writers of magazines, these highly paid lobbyists who are putting up at the best hotels in Washington, and thousands of propaganda, including telegrams, coming in when the Congress would attempt to do something in the interest of the real people, we are going to have something in this country that a liberty-loving people would not like to see.

BREAKING THE FOREST DEADLOCK

The Little Orphan Annie phase of forestry crusading has passed. Informed persons no longer believe that the timber famine goblins will get us if we don't watch out. The ghosts of forest scarcity have been driven from the woods by the forest survey and its accumulation of facts about our remaining timber supply, its current growth, and drain. These facts are broadly reassuring and drive home that the time has come to have done with controversy and to move forward in completing a national program of forestry that in its larger outlines will have the united support of all forest interests, public and private.

Certainly progress on a wide front turns upon that achievement. For too many years forestry in terms of a national program has been water-logged between crusading of the past and controversy of the present. Different forest interests have remained locked in argument over this or that phase of program policy until forestry to the lay public at least has become pretty much a confused picture of all trees and no forests, all controversy and no agreement. No wonder so many people have turned their interest and support to the simpler and less complicated movement for parks and complete preservation.

Two years ago the President of the United States asked Congress to appoint a Joint Commitee on Forestry to try to break the controversial deadlock. During 2 years the members of this committee have turned from time to time away from more pressing tasks to study the forestry problem in its national aspects. Now the committee has decided that the task of digesting the great mass of testimony taken and of recommending new legislation to Congress requires more time. So we may not know for another 12 months whether the committee has an answer to the Nation's forest stalemate.

But whatever may be the committee's ultimate findings, we believe it already has made a distinct and significant contribution to the situation. Serving as a common screen upon which all interests could throw their views, it has brought into focus not only the major parts of a needed national program but major differences of opinion as to how these parts should be forged into a program of the whole. And the significant and hopeful thing in this focusing process is the revelation that the forest interests, in spite of the thunder-rumbling clouds that have hung over them these last few years, are not so widely apart after all.

A review of the testimony given the committee by representatives of forest industry and those of the Federal Government shows that both groups are pretty much in agreement on all major policies. Differences lie in methods and extent of application. Even on the question of public regulation of private forest operations which has long been the spear head of controversy, there seems to be common acceptance of principle, and difference only in detail of application. Both accept public controls provided they are developed and exercised through the States. The Forest Service, however, holds that if the States within a reasonable period do not put into effect local regulations sufficient to keep forest land productive, the Federal Government should be authorized to step in and do so. And it would condition Federal aid to the States upon regulatory action by the States. Although the record of the hearings is not clear, the industry, one concludes, is opposed to Federal pressure that will force action by the States or will ultimately open the door to direct Federal regulation.

Having brought years of forest controversy and disagreement down to this major difference, the committee has set the stage for closing the breach and forwarding the national program upon a commonly accepted course of action. The views of both industry and the Forest Service represent compromises of past positions and are encouraging evidence of a desire at long last to free the forest question of its controversial shackles and to make orderly progress. It would appear that only a little more give and take is needed to effect this end. If the industry on its part would accept the proposition that Federal financial aid for forest protection, reforestation, and management benefiting private forest owners be made contingent upon satisfactory guarantees that forest devastation will cease and private forests will be handled by practices that assure continuous forest growth; and if the Forest Service on its part would accept trying out for a period of five or ten years regulation through the States without provision for Federal step-in, the whole forestry program could at least move forward.

Nothing would be lost by such a resolution of differences. If at the end of 5 or 10 years, or whatever period might be agreed upon, enough States have not put into effect regulatory controls to assure satisfactory progress, the question of direct Federal participation could then be taken up and considered in the light of results shown and experience gained. It is better to make progress slowly than not at all.

What Do You Think and What Do You Intend To Do About It?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

Mr. HOFFMAN. Mr. Speaker, the following is a table put out by the Sun Bureau, Washington, D. C., on January 6, 1940. Its accuracy has never been questioned.

This table sets forth the complete financial record of every President of the United States from the adoption of the Constitution in 1789 to date. The figures given up to 1939 show the actual receipts, expenditures, and deficits recorded in the annals of the Treasury Department and certified to Congress in the annual report of the Secretary of the Treasury. Figures for 1940 and 1941 are the estimate presented to Congress by President Roosevelt in his Budget message last Thursday.

The totals show that Franklin D. Roosevelt, in 8 years, has spent 58½ percent as much as all of his predecessors put together in 144½ years. He received in taxes in these depression years 44 percent as much as all of his predecessors together have collected, and he has almost exactly doubled the national debt.

President	Number of fiscal years served	Receipts	Expenditures	Surplus (+) or deficit (−)	Public debt at end of administration
George Washington	8	$32,665,765	$34,088,506	−$1,422,741	$83,762,172
John Adams	4	34,984,839	34,262,668	+722,171	82,976,294
Thomas Jefferson	8	113,400,835	72,424,289	+40,976,546	65,196,318
James Madison (War of 1812)	8	130,311,080	176,473,974	−46,162,894	127,334,934
James Monroe	8	171,895,953	147,237,899	+24,658,054	90,875,877
John Quincy Adams	4	94,831,286	65,427,037	+29,404,249	67,475,044
Andrew Jackson	8	252,061,371	152,969,098	+99,092,273	336,958
Martin Van Buren	4	102,219,579	122,325,262	−20,105,683	5,250,876
Harrison and Tyler [1]	4½	104,430,540	108,904,688	−4,474,148	15,925,303
James K. Polk (Mexican War)	4	123,139,658	175,477,220	−52,337,562	63,061,859
Zachary Taylor	1	43,603,439	39,543,492	+4,059,947	63,452,774
Millard Fillmore	3	163,993,174	140,088,047	+23,905,127	59,804,661
Franklin Pierce	4	282,172,928	255,154,264	+27,018,664	28,701,375
James Buchanan	4	197,716,370	272,933,490	−75,217,120	90,582,417
Abraham Lincoln (Civil War)	4	763,026,123	3,352,380,410	−2,589,354,287	2,677,929,012
Andrew Johnson	4	1,825,248,460	1,578,557,655	+246,690,805	2,545,110,590
U. S. Grant	8	2,670,905,586	2,253,386,783	+417,518,803	2,107,759,903
Rutherford B. Hayes	4	1,225,899,968	1,032,268,057	+193,631,911	2,019,285,728
Garfield and Arthur	4	1,474,023,408	1,027,742,757	+446,280,651	1,578,551,169
Grover Cleveland (first administration)	4	1,474,159,137	1,077,629,099	+396,530,038	1,249,470,511
Benjamin Harrison	4	1,536,450,844	1,412,315,899	+124,134,945	961,431,766
Grover Cleveland (second administration)	4	1,316,948,887	1,441,674,184	−124,725,297	1,226,793,713
William McKinley (Spanish-American War)	4	2,076,208,146	2,093,918,534	−17,710,388	1,221,572,245
Theodore Roosevelt	8	4,676,747,962	4,655,450,515	+21,297,447	1,148,315,372
William Howard Taft	4	2,794,065,060	2,799,211,874	−5,146,814	1,193,047,745
Woodrow Wilson (World War)	8	24,375,781,688	46,938,260,143	−22,562,478,455	23,976,250,608
Warren G. Harding	2	8,116,239,632	6,667,235,429	+1,449,004,203	22,349,687,758
Calvin Coolidge	6	23,959,941,899	18,585,549,136	+5,374,392,763	16,931,197,748
Herbert Hoover	4	11,453,002,513	15,490,476,656	−4,037,474,143	22,538,672,164
Total of all Presidents up to F. D. Roosevelt	144½	91,586,076,130	112,203,367,065	−20,617,290,935	22,538,672,164
Franklin D. Roosevelt	8	40,089,857,957	65,628,526,692	−25,538,668,735	44,938,577,622
Grand total, all Presidents	152½	131,675,934,087	177,831,893,757	−46,155,959,670	67,477,249,786

[1] Up until 1843 the fiscal year coincided with the calendar year. In the administration of President Tyler, however, it was changed to run from July 1 to the following June 30, thus making President Tyler accountable for 4½ fiscal years instead of 4.

Some have found fault because I have often criticized the New Deal and its policies. Today I am not criticizing. I am just giving you the facts.

Please note that the deficit incurred by Lincoln's Civil War administration was $2,589,354,287; that the deficit incurred by Wilson's World War administration was $22,562,478,455; that the total deficit created by these two great wars was $25,151,832,742; that Franklin D. Roosevelt, in 8 years of peace, will have created a deficit of $25,538,668,735, or $386,835,993 more than the total deficit of these two wars.

Of the last 16 administrations, 4 have been Democratic, and all but 1, the first of Grover Cleveland, have given us a deficit. Of the 12 Republican administrations, but 3, those of McKinley, Taft, and Hoover, gave us a deficit, and McKinley's deficit was the result of the Spanish-American War.

What do you think about it? What do you intend to do about it; remembering that President Roosevelt told us in substance that many a government has been wrecked on the rocks of a loose fiscal policy; that the Government's only source of income is through taxes, which, as he told us, are paid in the sweat of the man who works; remembering that he told us that the Nation which continued to pile up deficits was on the road to bankruptcy?

Paste these figures in some convenient place where you can read them day after day; where you will be constantly reminded of what has happened, of what is happening, in our country.

Unemployment National Problem No. 1

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

Mr. COCHRAN. Mr. Speaker, businessmen from every corner of the United States are in Washington this week to attend the meeting of the United States Chamber of Commerce. Millions of unfortunate citizens in this country who have for years been unable to secure employment in private industry will be heartened by the announcement the slogan of the business executives is "Build America, Keep America First." Let me express the hope that when the gentlemen leave for their homes they will remember that slogan and start the wheels of progress going in their establishment at a pace that will provide employment for those who are anxious to resume their place in private industry.

As I continue to read the article I note the convention will consider a number of our progressive laws and their effect on business, such as the Wage and Hour Act, the National Labor Relations Act, the Security and Exchange Act, as well as the Logan-Walter bill which provides for a review of administrative decisions.

Not only businessmen but public officials must consider unemployment as problem No. 1 in this country. It will be problem No. 1 until it is solved. Better still if it is labeled public enemy No. 1.

It will not be long, as a result of the census, that we will have real figures on unemployment. The sooner that information can be furnished to the country the better and I express the hope that the President will see that a recapitulation is available at the earliest date possible. Regardless of the figures it will be just that many millions too many.

No matter who is President, or what political party is in power, unemployment must and will receive attention until work is found for all who desire and are willing to work. Somewhere we must find the cure for this terrible disease that is destroying the lives and lowering the vitality of so many of our fellow men, women, and children. Consultants must be called in, there must be general cooperation, but the desired result will never be accomplished until the very businessmen now in Washington and their associates see the wisdom of using their best efforts to place the unemployed back to work.

If it means shorter hours or a shorter workweek, then that must come. To what extent labor-saving and labor-displacing devices have brought about unemployment is information we must have.

No one will say progress must be retarded. As Isadore Lubin, the statistical expert of the Department of Labor, a member of the monopoly committee, said last week, inventions, labor-saving machinery, and technological advances must be continued and encouraged but that the Government

and industry must find some way to see that loss of jobs as a result does not fall upon innocent victims.

Mr. Lubin pointed out that the States as well as the Federal Government provide for the worker who is disabled, while on duty, through workmen's compensation laws; but those who are disabled because a new machine or process throws them out of employment are not now taken care of. It is such questions as this that businessmen and public officials must solve, but one set cannot bring about a solution without cooperation of the other.

Men will not be placed back to work by destroying progressive legislation. That must be distinctly understood.

The billions of dollars that have been spent by Federal, State, and local governments has not remained in the pockets of those who have been employed as a result. Eventually that money reached the cash registers of the employers.

About 200 percent has been added to the value of stocks quoted on the New York Stock Exchange since 1932. July 1 of that year the stocks had a value of fifteen and one-half billion dollars. The 1st of April of this year the same stocks had a value of nearly $47,000,000,000.

Bonds on the stock exchange in 1932 showed a market value of over $37,000,000,000, while April 1 of this year those same bonds had a value of over $50,000,000,000.

Does this look like the present Roosevelt administration has retarded progress? Remember also this increase comes during a period the Security and Exchange Act has been in force.

Millions have been placed back to work, but millions are still idle. As I said, this problem cannot alone be solved by Congress, State legislatures, or public officials. The businessman can, and must, help bring about a cure. If we will all forget our likes and dislikes, put the brains of the country together, then we can "rebuild America and keep America first."

Mr. Speaker, under leave to extend my remarks, I include the following statement issued by Col. F. C. Harrington, of the Work Projects Administration. The statement follows:

HARRINGTON URGES COOPERATION IN NATIONAL EMPLOYMENT WEEK

Col. F. C. Harrington, Commissioner of Work Projects, disclosed today with the approach of National Employment Week that 1,250,000 workers have left the W. P. A. rolls voluntarily during the last 12 months.

He urged that the week, proclaimed by President Roosevelt for May 1 to 8, be made a period for accelerating the return of W. P. A. project employees to a regular place in the industry and business of their communities.

Nearly half of the 2,000,000 persons now on the W. P. A. rolls, the Commissioner said, are 40 years of age or older and belong to the group of stable and experienced workers, many with heavy family responsibilities, with which Mr. Roosevelt's proclamation is especially concerned.

"It has been the purpose of the Work Projects Administration not only to provide a living for needy, employable persons and public improvements for the communities which sponsor our projects," Colonel Harrington said, "but also to retain the habits of work which an employer naturally expects of the men and women he hires.

"The fact that W. P. A. project employees are now working—maintaining their skills on the kind of jobs for which their experience fits them—makes our rolls a natural reservoir of labor from which employers may draw during the spring seasonal increase in work and especially at this time when the drive for jobs is highlighted by President Roosevelt's proclamation of National Employment Week.

"I urge those who can provide employment to appreciate the uniform desire of 2,000,000 men and women on W. P. A. to go back to regular jobs in industry and business. The fact that these people are anxious and able to leave W. P. A. for private jobs is well illustrated by the fact that an average of approximately 100,000 have been leaving voluntarily each month, even in times of declining industrial activity. About 1,250,000 left of their own accord during the last 12 months, and it must be assumed that most of them accepted jobs elsewhere.

"It is true that many of these persons have had to return to W. P. A., but they do not hesitate to accept even temporary work for a private employer. The regulations under which a man, when a new job is terminated after some days, weeks, or even months, may return to W. P. A. without red tape, make him glad for the opportunity of private employment.

"The President has given particular emphasis to the situation of seasoned workers of 40 and over. Nearly half of our rolls are made up of such people, and this is not by their choice. Experience is on their side, and we have found generally that they are able workers driven by heavy family responsibilities. To overlook them this week and hereafter will not lessen their misfortune."

The Place of Farm Credit in the National Farm Program

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

ADDRESS BY SECRETARY WALLACE

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Secretary of Agriculture Henry A. Wallace delivered before a mass meeting of farmers called by the National Farmers' Union and the National Federation of Grain Cooperatives, at St. Paul, Minn., Saturday, April 27, 1940, and broadcast on the Farmers' Union Hour by the National Broadcasting Co. and associated stations:

The fight for agricultural equality seems to be never ending. It is a battle fought on many fronts.

You remember how the wheat farmers of the Northwest began this fight 20 years ago. Through their farm organizations, through their cooperatives, through such movements as the McNary-Haugen crusade, they tried to put their own industry on an equal footing with the rest of the country.

At last, in 1933, we won the opportunity to go ahead with a program of our own. In the last 7 years, we have built the first effective national farm program we ever had.

But all through these years, we have had to work against the bitterest kind of opposition. The forces which defeated the original McNary-Haugen bills fought Triple A, farm security, commodity loans, and almost everything else we have tried to do. They fought these programs in town and in country; in Congress and out of Congress; in the courts and in the press; by prophecies of disaster, and by cries of communism; by half truths and by outright falsehoods. They used all the methods which had defeated farm legislation in the past. But this time they failed. The farmers went ahead in spite of them.

The success of the national farm program can be measured by the substitute programs that are being offered. Insofar as these substitutes get down to definite proposals, they are mostly carbon copies of what already is being done—though, of course, the persons offering the substitutes claim they would do everything much better than we are doing it.

But while much of the heat has gone out of the attacks that used to be made on the Triple A, the enemies of agriculture are just as implacable as they have ever been. They are just as watchful. They will lose no opportunity to weaken the programs we now have or to prevent them from being extended or improved so they will give greater service to agriculture.

Now the enemies of agriculture, instead of making a frontal attack on Triple A, are driving at our farm-credit flank.

They seized a new opportunity to attack the farm program when the Farm Credit Administration was transferred last summer to the Department of Agriculture by Congress and the President.

Many farmers looked upon this transfer as a chance to make the farm-credit program a vitally important part of the national farm program, and thereby improve the entire farm-credit situation.

What is that credit situation today? There is plenty of room for improvement. More than one-third of all the farms in the country are mortgaged for a total of more than $7,000,000,000. This is 20 percent of the value of all farm land and buildings. It is true the farm-debt load is $3,000,000,000 smaller than it was 17 years ago. But how was this reduction brought about? A large part of it was brought about at the expense of the farmers—by foreclosure and bankruptcy. When depression drove down farm prices and farm-land values, thousands upon thousands of farmers were pushed off their farms.

One of the principal reasons for the increase in tenancy is that the farm-debt load is too great and interest rates are too high.

Sixty years ago, three out of every four farmers owned the land they cultivated. Today nearly half our farmers are tenants or sharecroppers—and tenancy is still increasing.

If we want to keep farmers on their farms, we must do something about this debt burden. We must do something about it in order to strengthen the whole national farm program.

But our enemies don't want to see the farm program strengthened in this way. They don't want farm credit to serve farmers better. The moment the farm-credit system was put in the Department of Agriculture, they began to view it with alarm. Recent events have set this opposition chorus into full cry.

You know who these enemies are. They include the same financial, journalistic, and political interests which always gang up against anything which really will help the farmer. Even some of our friends have been deceived by the false picture which the enemies of the farm program have been spreading over the coun-

try. I shall repeat some of their falsities, so that you may recognize them for what they are.

No. 1. They say the farm-credit system has been perfectly sound, but that now it is going to be wrecked by the Department of Agriculture.

No. 2. They say that we are going to hand out money to farmers without any regard to whether or not it will be repaid; that we will use "soft credit" or "loose credit" policies.

No. 3. They say that the value of the land-bank bonds will be impaired.

No. 4. They say we are going to pass a "death sentence" on the cooperative features of the so-called farmer-owned credit system.

No. 5. They say that charity and relief are going to be all mixed up with sound banking.

In one breath they say the Secretary of Agriculture is too busy to think about the farmer's credit needs and in the next breath they accuse him of trying to be a credit dictator.

After the Farm Credit Administration came to the Department of Agriculture last fall, I began to find out things about this farm-mortgage situation. I found it much worse than was generally realized. I found also that any proposals for improvement were met by a campaign of misrepresentation—and vilification was begun, and was carried on with increasing virulence. Nothing could be any more destructive to the confidence of investors or the welfare of the land-bank system than such a campaign.

Under such circumstances, I decided to give the farmers and the public the full picture, just as I have found it, and so I am here to speak out today.

I propose, therefore, to take up these misrepresentations one by one and answer them as briefly as I can. What I say along this line will have to do with the land-bank system. None of the following comments applies to the bank for cooperatives or the production credit associations, both of which are functioning well. But with regard to the land banks some changes will have to be made—and the quicker they are made, the better it will be for everyone concerned.

In reply to misrepresentation No. 1 that the land-bank system was sound but is now being wrecked by the Department, the answer is that the land-bank system has long been in weak position. Farmers were saddled with mortgage debts which were too great. As a result, 25 percent of all the farm-mortgage loans held by the land banks today are delinquent, and 60 percent of all the national farm-loan associations are either insolvent or their capital stock is so badly impaired they cannot make any new loans. Since the Farm Credit Administration was organized, more than 85,000 of the farm borrowers have been foreclosed off their farms and many thousands more are in immediate danger of being foreclosed. The Secretary of Agriculture was in no way responsible for this mess, but he will have to help clean it up.

Neither were the directors of the farm-loan associations as a group responsible. The farm depression of the last 20 years has hurt the land-bank system just as surely as it has wrecked many thousands of country banks. In a few States the wreckage of farm-loan associations has been almost complete, because in addition to the farm depression there has been year after year of unprecedented drought. It is against the destructive after effects of war and weather that we are battling, as well as against misrepresentations of bitter enemies. In the forties we are going to hear a lot about the bad loans on land made by the Government during the twenties and thirties. For the record I want to make it clear that the Department of Agriculture should not be held responsible for loans made before the Farm Credit Administration was transferred to the Department on July 1, 1939. But we are responsible, in view of the trust placed in the Department by the President and Congress, to do everything we can in a sound way for those human beings who have been victimized by the excessive loans of the twenties and early thirties. We must do everything we can in a sound way for those who have suffered from war and weather.

And now what about misrepresentation No. 2, that we will make the land banks into "soft credit" or "loose credit" institutions, loaning excessive amounts to farmers who either can't or won't pay back. Several of the land banks have been dealing in "soft credit" for several years. If this is not true, why are 25 percent of the loans of the system delinquent, and why has it been necessary to foreclose on so many farmers? My reply is that excessive credit never did anyone any good. "Soft credit" or "loose credit" in the form of excessive loans will have to come in the future from some other institution than the Farm Credit Administration. We aren't going to sink the farmers again with a millstone of excessive debt.

Misrepresentation No. 3 is that the Department of Agriculture will impair the value of the land-bank bonds. If there has been any impairment of these bonds, it was caused by the loose credit policies of the past, and not by anything that has been done since the Farm Credit Administration became a part of the Department of Agriculture. As a matter of fact, the Department of Agriculture believes that the guaranty of the Federal Government should be put squarely behind the land-bank bonds. If this is done the land-bank bonds of the future, instead of being weaker, will be as strong as the Federal Government itself.

Misrepresentation No. 4 claims that we are going to destroy the so-called farmer-owned credit system. We all believe in cooperation, but we don't like to see the word used where it does not apply. Those of you who have borrowed money from a Federal land bank know just what I mean. As a borrower, you are a member of a farm-loan association, and yet I wonder how many of you have so much as attended an annual meeting in the last 20 years. Perhaps one in four of you has turned out to one of these meetings. In recent years the Farm Credit Administration has tried earnestly to breathe some life into the dry bones but without so very much luck.

You members of cooperatives describe a cooperative in very simple terms as an enterprise owned and controlled by the group affected. You farmers never have owned the land banks. The Government, not the farmers, has provided and has been responsible for the huge part of the capital used by the land banks. The Government has never been willing, and probably never would be willing, to give to farmers control of a system in which it has such an enormous investment. The land banks have never been true cooperatives. The thing to strive for is a cooperative spirit and technique in administration, but we should not be deceived into thinking that even that makes a real cooperative like your grain cooperatives.

Under the present system I don't think it will ever be possible to make cooperation in the farm-loan associations a really living thing. To put a genuine cooperative spirit into the farm-loan associations it will be necessary for the directors to have something real to do, something corresponding to what the county committeemen in Triple A have to do. And so we stand for creating, not destroying a cooperative farm-credit system.

In reply to misrepresentation No. 5, to the effect that the Department will mix up charity and relief with sound banking, I say that instead of mixing these two things we propose to do some unscrambling that ought to have been done a long time ago. Where a man's neighbors judge him to be a good moral risk but where many years of bad weather and bad luck have made him seriously delinquent, the wise course would be to let that man continue on the land as a self-supporting citizen on a rental basis, obtaining a loan or grant, if necessary, from the Farm Security Administration. Thousands of competent, hard-working men with the best kind of an attitude toward paying their obligations are delinquent today through no fault of their own. Bad weather and farm depression have ruined them. Should they be kicked off their farms when in the judgment of their neighbors they have learned to know those farms better than anyone else? Is it true economy for the Government to kick them off? We must remember that it costs over $500 a year to care for a family when it goes on work relief in town. The Farm Credit Administration has repeatedly sold farms it secured by foreclosure to new owners at much less than it had in them. Would it not have been better to readjust matters so the original owner could have stayed?

I am convinced that in many cases the cheapest way out for the Government is to avoid foreclosure losses and scale down the principal of the excessive loan, in keeping with the probable productive value of the farm. I don't call this either relief or charity. Of course, any such reduction should be made only after we have the recommendation of local farmers who know whether the mortgages are excessive and whether the borrower is competent and honest. Properly administered by hard-headed farmers in the respective communities, I believe such common-sense reduction will save money for the Government. It may not be sound banking from the standpoint of lending agencies that want to keep a fictitiously high value on their mortgages. But it is definitely sound banking from the standpoint of a government which is interested not only in the permanency of the soil, the people who live on the soil, and the communities which those people build, but also is interested in protecting the Federal Treasury.

The principle which I am now talking about should be written into law. If the enemy wishes to call this principle an illustration of the way in which the Department mixes up charity with sound banking, he is welcome to his side of the argument. For my part, I believe we can demonstrate that this principle is not only more humane than short-sighted, cutthroat banking but, in the long run, will save more dollars for the Federal Treasury.

I am satisfied that local farmers will not allow this principle to be abused by the scalawags. The man who is able to pay should pay, even though he took out a loan at the high point in 1920. But I do think it is fair that even the well-to-do farmer who bought a farm in 1920 for four times what it is now worth, and who has a land-bank mortgage at 6 percent, should have an opportunity to get his interest rate cut to 3½ percent. This man has kept up his payments all these years. He should not be released from the high mortgage he agreed to in 1920, but I do say that we ought to put such a man in position to get a lower interest rate on his high loan. By easing his interest payments only we may be able to cut his annual amortization payments by 25 percent, and that may make all the difference in the world to a man who has demonstrated under the most difficult circumstances that he is an upright, contract-keeping citizen. Otherwise even that man may be ruined, although he has kept up his payments all these years.

The time has come now to get to the hot spot in this controversy—interest rates. There was a time when farmers had to pay 6, 7, or even 8 percent to borrow money on land. In those days the private lender, the insurance company, and the local bank had things their own way. Then, in 1916, the land banks started. Their competition brought interest rates down, and especially has this been true since 1933. Farmers will never forget the debt of gratitude which they owe the land banks for reduction in interest rates.

It should be clearly understood that I am not attacking the land-bank system. That system is of real value to agriculture. But I am attacking those selfish interests which oppose efforts to improve the system and put it on a better basis for serving farmers.

Every year for 7 years there has been a special act of Congress reducing interest rates on a year-by-year basis. At first the rate was reduced to 4½ percent and since 1935 it has been 3½ percent. This has cost the Federal Treasury nearly $40,000,000 annually. Many farmers would have paid their land bank 5, 5½, or even 6 percent in interest in 1939 if it had not been for this aid from Congress. The same farmers will go back to 5, 5½, or 6 percent in 1941 if Congress does not pass a similar law.

I want to see all the borrowers in the land-bank system get the benefit of a rate at least as low as 3½ percent without the necessity of legislation every year and without the necessity of having nearly $40,000,000 a year out of the Federal Treasury. This can be done by Government guaranty of land-bank bonds. It will take 6 or 7 years to pay off all the present land-bank bonds, but once these are out of the way the land-bank system can be put on a self-financing basis which will enable the American farmer to get permanently the benefit of a 3½-percent interest rate.

It is because of our determination to get this 3½-percent rate permanently for farmers that there is so much shooting going on these days. In the eyes of some people the greatest crime of the New Deal is the reduction in interest rates. We are making in the Department of Agriculture commodity-credit loans at 3 percent, tenant-purchase loans at 3 percent, rural-electrification loans at less than 3 percent. We are putting money to work at lower wages and some people don't like it. They are determined to get back to the good old days of 5-, 6-, and even 7-percent interest. Now I don't object to seeing interest rates go up a little in times of great prosperity. Some increase in interest rates may occasionally be necessary to put a brake on a runaway market. But in times like these, and in times as they are likely to be when the war comes to an end, it is vital to have low interest rates.

The New Deal stands for low interest rates. The old deal stands for high interest rates. The battle is on. I did not choose this field of battle, but I do accept the challenge. And I am sure every real farmer in this room is ready for the fight.

The campaign against lower interest rates for farmer borrowers and against other proposals for changes in the farm-credit system has been waged as vigorously as any other campaign against the farm programs since 1933. Among those most prominent in this fight have been the American Bankers Association and some of the State bankers' associations.

I hold in my hand a circular sent out by the Minnesota Bankers Association under date of April 12, 1940. The mortgage situation in Minnesota and surrounding States has been so bad that it would seem desirable for the bankers to join gladly in a sound effort to relieve debt-burdened farmers. I am sure if the bankers understood their own interests better, they would be helping us in lightening the farmers' mortgage debt load.

The bankers call these proposals—and I quote—"a step toward the complete socialization of agriculture in this country."

To farmers who have gone through this farm fight since the early 1920's this language has a most familiar sound. It is the type of misrepresentation that has been used in an attempt to block every effort to help the producers of this country.

If the people had taken this kind of propaganda seriously, there would be no farm programs at all. You can be pretty certain that when the interests raise the cry of socialism they are trying to drag a whole carload of red herrings across the trail that leads to the real issues.

Few farmers and few friends of farmers are going to be fooled very long by this kind of "bunk."

The big money groups, who are fighting desperately against lower interest rates for farmers, profess to be great believers in the cooperative feature of the farm-loan associations. You know how it is. If you take out a $4,000 loan, you don't get $4,000. Instead, you get $3,800 and a receipt for $200 in stock. The financial groups claim that makes you a cooperator. Actually, in most cases it means that you pay interest on $4,000 even though you got only $3,800 in cash. As a rule you get no return whatever on your stock. If a Wall Street firm undertook to sell stock on the same basis as the farm-loan associations, investors who lost money by this process would be demanding all kinds of investigations. I don't think the word "cooperative" should be applied to a transaction in which the farmer in the majority of cases is bound to lose money.

I know something about this 5-percent stock provision because my wife and I have long paid interest on an $8,000 land-bank loan, although we got only $7,600 in cash. I have our $400 stock receipt here in my hands. I doubt if one farmer in a hundred thousand has even seen his stock certificate. How many of you have ever read the receipt for your stock?

Mine reads: "This receipt represents your investment in stock on which dividends will be paid." My association is 90 percent impaired. It doesn't pay dividends.

The receipt goes on to say, "It will be accepted at face value on final payment of the loan." In view of the 90-percent impairment this simply is not true.

I read further, "If you sell your land this receipt should be transferred to the purchaser and you should collect not less than face value therefor." The fact is that it is impossible for most farmers when they sell their land to get face value for their stock simply because the stock isn't worth its face value.

Finally, this notice ends up by saying, "It cannot be legally transferred to anyone other than the purchaser of the land mortgaged, on account of which this stock is issued." I don't know how it happened, but the facts are that 20 percent of the receipts have become separated from the mortgages.

This kind of receipt, valueless in a majority of cases, is the basis for all the talk you have been hearing about the cooperative character of the land-bank system which they say we are destroying.

I would like to see the land banks made more cooperative, with an interest rate to farmer-borrowers set high enough to provide an ample margin to cover the cost of money plus all operating expenses. Then, after proper reserves are built up, whatever profits are made could be pro rated back to the borrowers as a patronage dividend.

Such a policy will give the land-bank system a cooperative spirit and method such as it has never had before.

If the land banks are thus improved, it will be possible, with the Farm Credit Administration in the Department of Agriculture, to work out a united national farm program. A sound Triple A program means a lot to the success or failure of the land banks. Those who operate the land banks both locally and nationally should be sympathetic toward the Triple A insofar as it influences soil fertility and farm income. The most successful Triple A programs can be operated only in those counties where there is considerable stability of tenure. The Triple A and all other cooperative movements are strengthened if farmers are more permanently anchored on the land. What a mighty team Farm Credit and the Triple A can be if they pull together steadily for conservation of the soil, stability of farm communities, and increase in farm income.

This farm credit issue is an issue which cuts deep. It vitally concerns the welfare of farmers, not only here in the Northwest but all over the United States. We hope it will be settled this year. But if it isn't, the issue will go on until it is settled, and settled right.

The farm-credit fight, bitter though it may be, is only one of many fights, all of which are of the utmost significance to the future of our Nation, and the future of world democracy. Fundamentally, the one thing for which we are all battling is the right to live in our homes year after year, with enough money to feed and clothe our children properly and give them a decent education. In order to enjoy these rights, we must pay the price of cooperation, of study, of watchfulness, and of understanding.

We want no dictator from either Wall Street or Washington telling us what to do. But, we do welcome a government which gives us the machinery for expressing our wishes through local leadership and through which the local leadership can combine for united national farm programs. This is the very soul of an efficient modern democracy capable of standing up against threats, whether from within or from overseas. Trojan horses have worked in certain countries overseas because of the attitude of bitter minorities opposed to the rank and file of the common people. The dictators, in their vaulting ambitions, think they can place Trojan horses in this country and in Latin America. They think they can build a Trojan horse out of unemployment, out of bitter old dealers, out of Communists, out of racketeers. To meet the challenge of the dictators we need to be fully prepared, not only in the military sense, but also in an economic sense. The farmers are the very backbone of democracy. But, if the farmers, because of reduced income and burdensome debt, are forced to leave their land, then democracy is threatened at its very source.

This war is certain to have the most serious repercussions on all agriculture. Since last September 1, the outside world has taken about 20 percent less of our food and tobacco than it did during the corresponding period a year ago. For political and economic reasons, England and France are not likely to buy nearly as much of our farm produce as we might wish. So far as possible they are going to try to buy within their own empires, from countries like Rumania and Turkey, for political reasons, and from countries like Argentina, where the English pound and the French franc will buy more than they will in this country. The British and French wish to use their precious American dollars to buy things in this country which they can't get any place else, notably airplanes. If to win the war the British and French are forced to buy farm products from the United States, they will do so. Otherwise not. It is all a question of hard, military, business necessity.

Whatever happens, there is trouble ahead for American agriculture. We might as well recognize it and begin to prepare for it. For example, if we hold completely aloof from Europe and Asia after this war comes to an end, it is obvious that our exports will rapidly dwindle to the merest trickle. That means that Triple A, Farm Credit, Farm Security, and all of the other agencies of the Department of Agriculture will have the biggest task on their hands which they have ever faced. If, because of unusual European war buying of farm products there should be a temporary agriculture prosperity, we must fight attempts that are sure to be made to destroy essential parts of our agricultural-adjustment machinery. For after the war buying comes to an end, we will need this machinery more than ever. There must be agricultural preparedness as well as military preparedness. There must be preparedness for peace as well as for war. The agricultural problem can be made much simpler if the provisions of the peace make room for the far-visioned approach of President Roosevelt and Secretary Hull through the trade-agreements program. But in any event, whatever the American people may decide on with regard to the peace, it is obvious that the Triple A, Farm Credit, and the whole farm program must be improved and not weakened. Farm

income must be maintained and farm expenses must be reduced. The farm interest burden must be cut down and must not be allowed to pyramid again.

I fear the world problem is so great and will be so long continued that the Triple A and Farm Credit will need a lot of help by Farm Security. There are nearly a million farm families who can be helped only slightly by Farm Credit and Triple A. These families need loans from Farm Security and in drought years they may have to have grants. Until the world settles down and excessive unemployment ceases, we shall have to continue with the food-stamp plan for distributing farm surpluses to needy in the cities. Several million families in the city are spending less than 5 cents a meal per person and we intend to do all we can to see that these people get at least an extra 2½ cents per meal per person with which to buy the farm surplus which otherwise would go to waste.

What goes on among the farmers and workers of the United States during the next few years will probably determine the course of world history during the next hundred years and possibly for a thousand years to come.

Efficient, modern democracy was perfected only recently in Denmark, Norway, Sweden, and Finland. These countries, over the years, have been making the changes necessary to keep democracy working. In adapting their social and economic system to the necessities of the modern world, they have been far in advance of the United States. They were succeeding. But now ruthless hands have been laid upon the Scandinavian democracies.

In western Europe democracy will be handicapped for long years to come by the war and the inevitable post-war reaction. Only in this hemisphere do we have the possibility of building in peace an efficient, yet tolerant, democracy, based on hard work, cooperation, and free speech. And the very essence of all this, as they found in Scandinavia, must come from farmers and workers, efficient in their job and filled with the spirit of cooperation. We, like the Scandinavians, must be ready and willing to make changes necessary to make democracy workable. We must do whatever is necessary to make our farmers and workers secure.

We must be watchful and strong or the day will come when forces opposed to such necessary changes will prove to be the Trojan horse within our own gates. We must be watchful and strong or the day will come when a Trojan horse will capture some nation in this hemisphere and we shall have to undergo the endless agony which has so long convulsed Europe. Pan Americanism, democracy, cooperation, and peace are the fires we must keep alight on this hemisphere until such time as the madmen disappear into the whirlpool which they themselves created, and the world can slowly start rebuilding.

In all of this effort to strengthen our own democracy, credit on land is only a part. But in connection with the rest of the agricultural program, it is vital because it contributes so greatly toward stable farm communities. And so in closing, I urge you to organize to fight for your homes. Fight for a better credit system. Fight to guard your farm program against every kind of attack. I trust this meeting is not just another meeting. It should and must lead to action.

Fourth Reorganization Plan

EXTENSION OF REMARKS

OF

HON. DOW W. HARTER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

Mr. HARTER of Ohio. Mr. Speaker, with the President's fourth plan on Government reorganization he has transmitted a message in which he recommends the reenactment of the Reorganization Act, which expires on January 20, 1941. Furthermore, he recommends that in such reenactment there should be no exemptions. In other words, the President proposes that power to reorganize the Interstate Commerce Commission, the Federal Trade Commission, the Securities and Exchange Commission, the Maritime Commission, the Federal Power Commission, and other independent agencies, be conferred upon the Executive.

In the fourth plan the President has reorganized one independent agency, the Civil Aeronautics Authority. The reorganization of the Authority is, of course, a matter entirely different from the reorganization of other nonregulatory agencies. In the treatment of the Civil Aeronautics Authority we have some clue to what the President has in mind in asking for power to reorganize the Interstate Commerce Commission and other related agencies.

The proposed reorganization of the Authority deprives it of its independence. All its functions are transferred to the Department of Commerce, and the present Authority is abolished, becoming a subordinate board. The order states that the new board shall exercise its functions of rule making, adjudication, and investigation independently of the Secretary of Commerce. But at no point in the order is there any statement that the board shall continue to have any functions at all.

The order states merely in section 7 (a) that the functions of the present Authority are transferred to the Department of Commerce. It does not state that the new board will continue to exercise the functions of the present Authority. So far as can be discerned from an examination of the order the Secretary of Commerce will be free to distribute the functions of the present Authority wherever he wishes in the Department of Commerce. Only in the event that the new board receives some functions of rule making, adjudication, or investigation will those functions be exercised independently of the Secretary of Commerce. As a matter of fact, although the functions of the present Authority are transferred to the Department of Commerce, the functions of rule making, adjudication, and investigation which the new board may have will be independent only of the Secretary of Commerce. It remains to be seen whether they will be independent likewise of other agencies in the Department of Commerce.

If it had been intended that the new board will receive all of the present functions of the Authority and that certain functions would be independent not only of the Secretary but also of the remainder of the Department of Commerce, it would have been easy to say so. The order is either badly or shrewdly drawn, and in its very wording constitutes a threat not only to the independence but even to the continued life of the Civil Aeronautics Board.

However, the threat to the independence of the present Authority is clear enough without reading between the lines or without analyzing what it is that the order does not say. For the order states in terms that the new board will be independent of the Secretary only with respect to rule making, adjudication, and investigation. Thus with respect to the expenditure of money, the appointment of personnel, and all the other functions which the agency exercises, the protection even of a nominal independence is not to be afforded. Moreover, the order states expressly that the Secretary of Commerce, through whatever facilities he may designate, must direct and supervise both the budget and the personnel functions of the board. Furthermore, the new board will be unable to report either to the President or to the Congress except through the Secretary of Commerce; the President's order makes this limitation upon the board explicit. The Civil Aeronautics Act requires the present Authority to make an annual report to Congress and permits it to transmit recommendations more frequently. This provision of law, so necessary to assure truly independent advice for Congress in matters relating to civil aeronautics, is repealed by the President's order; hereafter Congress can be spoken to only by a member of the Cabinet.

Thus the Secretary of Commerce, with his control over the money, the personnel, the reports, and other activities of the new subordinated board, can effectually defeat whatever independence may be thought to exist by virtue of the provision that the board shall exercise its functions of rule making, adjudication, and investigation independently of the Secretary.

What independence is there in the members of a board who have to depend upon the Secretary for the very desks at which they work, for the telephones they use, for the secretaries they trust? Independence means nothing unless it includes not only the will but the ability to defy the Secretary of Commerce where such defiance is dictated by consideration of the public's interest. If by a wide stretch of the imagination we assume that the members of such a subordinated board would have the will to defy the Secretary of

Commerce, even imagination will not help us to discover on the part of the board the ability to defy the Secretary. Whatever the Secretary may do, whatever interpretations he may give to the vague words of the President's order, the board must remain silent and suffer with closed lips unless, through the magnanimity of the Secretary, it is permitted to speak. For it can report neither to the President nor to the Congress except through the Secretary. In these degrading limitations there is the mantle not of independence but of subservience.

Why is it that for 50 years the Congress and the country have entrusted peculiarly delicate and important tasks to independent agencies of government? It is because there are certain administrative functions which require a special competence, which require courage in administration, and which require absolute freedom from political pressure. It is not only a matter of determining impartially the rights of private parties. It is also a matter of assuring conditions under which technical and complex questions can be dealt with in the cold light of reason and with the special ability which comes from expert knowledge and experience. To assure the sway of reason and to assure the free play of expert knowledge and the untrammeled accumulation of expert experience, Congress cannot depend upon the political departments. It must create agencies, equipped to perform the tasks of regulation and protected absolutely from the forces of politics. It must have not only men of courage to man those agencies but also the freedom for the exercise of courage.

These conditions cannot be found in the reorganized Civil Aeronautics Authority.

No task recently undertaken by government so urgently demands the virtues of an independent agency as is true of the regulation and development of civil aeronautics. Highly technical, notoriously appealing to politicians because of the headline and dramatic potential of aviation, the regulation and development of civil aeronautics upon which the lives of millions depend must be given the protection which can be found only in an independent agency.

Western Pennsylvania Businessmen Against St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

RESOLUTION OF THE ALLEGHENY REGIONAL ADVISORY BOARD

Mr. VAN ZANDT. Mr. Speaker, the Allegheny Regional Advisory Board, with headquarters at Pittsburgh, Pa., speaking for the largest as well as many of the smallest industrial and commercial operations in Pennsylvania, is decidedly opposed to the consummation of the proposed St. Lawrence deep waterway treaty with Canada.

The members of the Allegheny Regional Advisory Board adopted the following resolution, which represents the views of the industrial traffic managers of the various industries holding membership. The position taken by this group of businessmen is typical of the strong opposition throughout the United States to stop the development of another Government subsidized competitor of the rail and coal industries.

Resolution with respect to the Great Lakes-St. Lawrence deep waterway treaty

That the Allegheny Regional Advisory Board, a voluntary organization of shippers with membership embracing western Pennsylvania, eastern Ohio, northern West Virginia, and western Maryland, whose object is to promote and maintain efficient and adequate transportation service for the mutual benefit of carriers and shippers alike, at its meeting in Pittsburgh, Pa., on March 14, 1940, adopted the following resolution:

"Whereas there is now renewed agitation for the consummation of the proposed Great Lakes-St. Lawrence deep waterway treaty, commonly known as the St. Lawrence seaway and power project;

"And whereas the railroads are the lifeblood and backbone of our transportation system and their adequate maintenance is essential to the welfare of the country as a whole: Therefore be it

Resolved, That the Allegheny Regional Advisory Board go on record as against ratification of the proposed St. Lawrence seaway and power project for the following reasons:

"1. That the proposed St. Lawrence seaway and power project, either as a navigation or power enterprise or both, is unsound, uneconomical, and injurious to the welfare of the Nation as a whole and to the industries of this district, as well as to the railroads of this Nation;

"2. That the cost of construction of the proposed project would place a very heavy additional burden on the taxpayers of the country at a time when such a burden is unjustifiable from the standpoints of any benefits that could possibly accrue from the vast expenditure necessary therefor;

"3. That this Nation has now reached the legal limit of indebtedness and the further addition of an expenditure of a sum variously estimated to be from $200,000,000 to $1,000,000,000 as called for in the premises is unwarranted if not in fact illegal;

"4. That originally proponents of the project presented it as desirable and necessary on account of needs of transportation; that when this reason was exploded they changed front, and now support it as a project to produce hydroelectric power; that this ground is also untenable because power is now being generated in the United States in sufficient volume as not to call for any further development as proposed by this treaty; and that the present facilities of the power-producing industry of our Nation are such as to be able to satisfy any increasing needs of consumers for years to come, thereby making the construction of this seaway and power project absolutely unnecessary in the public interest, and merely a useless waste of public moneys;

"5. That the loss of traffic to transportation carriers of this country would cause such a loss of revenue as to jeopardize efficient transportation service and adversely affect their workers, resulting in unemployment for many thousands of men, with its collateral effect upon business due to loss in purchasing power, and thus only increase the relief rolls of the Nation, and, in turn, to sustain such additional heavy relief appropriation necessary, increase taxation;

"6. That the production of additional cheap hydroelectric power as proposed under this project will bring about an immense reduction of electric power produced by coal, which, in turn, will cause a great loss in tax revenues to Federal and State Governments on account of decreased coal production; that competition of imported fuels and materials handled by ships under foreign flags using said waterway would only increase, to the detriment of American ships and operators; and that extensive development of hydroelectric facilities will seriously disrupt the present status and retard future industrial growth in all States; and

"7. That since the camouflage has now been removed from the new treaty and it has been stripped of its imaginary help to industry in the United States, it can now be viewed in its true light; that is, in one phase just another hydroelectric power project, entirely unnecessary except as another specious way of spending hundreds of millions of dollars of public money at a time when neither the law nor the necessities of this country as a whole warrant it."

Our Wise Neutrality Program

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

EDITORIAL FROM THE ST. LOUIS STAR-TIMES

Mr. HENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Star-Times of April 26:

[From the St. Louis Star-Times of April 26, 1940]

OUR WISE NEUTRALITY PROGRAM

During discussion of the neutrality law last autumn Mr. Roosevelt successfully insisted on discretionary authority in regard to invoking the law toward other people's conflicts. For this he was roundly denounced by professional isolationists, who charged he would misuse his discretion in favor of the Allies. The isolationists wanted to compel him to invoke the law whenever fighting broke out between nations anywhere in the world.

Events in Scandinavia in the past 5 months vindicated the President. They have proved the wisdom of a flexible policy which allows responsible administrators to judge our proper actions in relation to specific events.

The neutrality law never was invoked against Finland and Russia, though these two nations certainly were engaged in military conflict. No state of war was formally declared by either belligerent. And at no time during the brief but savage combat was this country's peace endangered. Proclamation of the neutrality law would simply have deprived us of even the opportunity to aid Finland in ways which would have been safe had Congress chosen to authorize them.

Yesterday, however, Mr. Roosevelt invoked the neutrality law in its full force in regard to Norway, which has been dragged into war by the German invasion. Norway's war, just as Finland's, is undeclared, except in statements from King Haakon. The Nazis call their invasion merely a "protective occupation."

But the position of Norway is very different from that of Finland in December. The Norwegians in fact are alined with Britain and France. Norway is, willy-nilly, the battleground of the armies of Germany and the Allies. Unless we prohibited credits and loans to Norway, there would be a great gap in the barriers we have erected to prevent loans to the other belligerents.

Mr. Roosevelt's proclamations declaring our neutrality, and forbidding sales to Norway except on a cash-and-carry basis, were clearly necessary. Further, they should serve to silence some of the ambitious Republicans who, exploiting the desire of the people to keep out of war, have the impertinence to contend that they, and they alone, represent the "party of peace." Before the coming Presidential campaign is ended they may find that such exaggerated claims have a dangerous backfire.

Mississippi River Parkway

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

EDITORIAL FROM THE ST. LOUIS COUNTY WATCHMAN-ADVOCATE OF APRIL 26, 1940

Mr. ANDERSON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis County Watchman-Advocate of April 26, 1940:

MISSING—THE MISSISSIPPI RIVER PARKWAY—A WORTHY EMPLOYMENT PROGRAM—WILL THE ROOSEVELT ADMINISTRATION COOPERATE IN A SURVEY?

There is no great national park or parkway located in the 10 States adjacent to the Mississippi River, and it would seem logical that the 30,000,000 people living in these 10 States should be given consideration for a great national parkway. This green ribbon would be only a fractional size of the Smoky Mountain National Park in the East and the Yellowstone National Park in the West. One-fourth of the population of the Nation resides in these 10 States. They are finding more leisure on their hands. They naturally wish to go places and see things. They desire to go by attractive, scenic routes. They want to see all the great improvements which have been constructed along the Mississippi River. Public interest has been aroused by the 26 locks and dams recently created in the upper Mississippi. Great dikes and floodways of the South are equally interesting. People desire accessibility to this mighty waterway.

Since the Mississippi River parkway project was proposed about 2 years ago, much headway has been made. All the State legislatures that met in 1939 endorsed the project, and some have passed enabling acts authorizing their State highway departments to cooperate with Federal authorities in a survey for such a parkway. The legislatures of the States that assemble in 1940 are also giving this matter their attention. There is a universal approval from the source to the mouth of the Mississippi River for a great rural national parkway.

This Mississippi River project has resulted from planning by various State planning boards in accordance with congressional act of June 23, 1936, which authorized the Secretary of the Interior, through the National Park Service, to make a comprehensive study with the several States, with a view toward developing a coordinated, adequate public-park, parkway, and recreational-area plan and program for the people of the United States. The State planning boards of the 10 States along the Mississippi River have prepared various State plans. Recognizing the need for coordination, representatives of these planning boards through committees appointed by the governors of the Mississippi River States, are cooperating in an interstate parkway planning committee. They logically envision a great tourway from North to South and from South to North. It will serve as an important market-to-farm route for tourists all over the Nation.

When the World War came to an end and our soldiers were returning to their native States, the problem of their reemployment was a vital issue. Consideration was then given to many possible constructive programs. The one most civilizing influence at that time seemed to be to get America out of the mud. With that thought ever in mind, the United States Bureau of Public Roads cooperating with the highway commissions of the various States, the county courts, and the highway engineers of the respective counties, conceived and have constructed a national civilizing system of commercial highways. They very properly then concentrated on commercial highways between commercial centers for commercial vehicles. At that time, automobiles were relatively few in number. Today, there are over 25,000,000 passenger cars. Over one-fifth of these are owned by citizens of the 10 States along the river.

These millions of passenger cars, enclosed against all kinds of weather, with ever-increasing speed travel the highways of America. Within the last two decades, commercial trucking has grown by leaps and bounds. It is this mixed traffic which has created a traffic muddle. This muddle has resulted in thousands of deaths annually and tens of thousands of injuries. It seems timely to us that this muddle be corrected. America seems ready for a new auxiliary system of passenger travelways.

This seems to be a thoroughly sound, practical, and economic solution. It seems obvious that either the two or more lane mixed trafficways be widened or that the through passenger traffic be separated from the commercial traffic. Certainly, it would seem to be timely for a survey of this situation. Unless a solution is found the traffic-accident and death rate will continue.

As a representative newspaper of river country, we are all gratefully mindful of the exceptionally fine highway surveys and the resulting roadway systems created under the supervision of Thomas H. MacDonald, Chief of the National Highway Administration, and his famed staff of highway engineers. Together, with the highway department of the several States and counties, a truly remarkable highway system has resulted. We reiterate, this Nation owes a debt of gratitude to the Congressmen who authorized the program that granted Federal aid to help the States make this system possible. Progress never ceases. The world continues to turn. Perhaps history will again repeat itself with respect to reemployment. When these overhanging war clouds blow away, perhaps those now engaged in the production of war materials will need some civil reemployment project upon which to rely. If we have learned anything in the 20 years that have elapsed since we first started our present highway system, we should have learned the value of preplanning. We should not be caught short the second time. Let us initiate a plan for suitable travelways. All the experts who have been consulted with respect to the proposed Mississippi River parkway agree that such a national trunk rural parkway is a "natural."

In cooperation with various officials, planners, and highway-minded people, there was introduced into Congress a year ago a bill, H. R. 3759, which has been reported favorably by the Committee on Public Lands of the House. The corresponding Senate bill (S. 1978) has been introduced into the United States Senate. These companion bills for the first time in the history of the Nation, define a national rural parkway, specify its requirements and stipulate the responsibilities of both the State and Federal agencies. It is purely an enabling act. It proposes a survey. It asks for no funds in the 1941 Budget. As, if, and when Congress passes such a parkway bill and the President signs it, it will take the State planning agencies and other public officials months to gather together all the existing data on surveys and plans now available. When these various materials are ready they will be turned over to the proper Federal agency. Such a survey will not be expensive.

All the possibilities of the proposed survey of this parkway fit in with the proposed De Soto four hundredth year anniversary celebration to be initiated in 1941. It will take months to make the survey, for the State to acquire the needed rights-of-way and easements, and years to finish such a parkway.

It is not proposed to follow the shore line of the river mile after mile. That indeed would be monotonous. It is generally agreed that the parkway would be constructed over or under the cliffs and caverns and across riverbends and through back country. Such location also would tend toward the most economical cost of land acquisition, parkway road construction, and maintenance. Where more than the main route of the parkway is initially warranted, the Government may designate subsidary branches or alternate routes for the purpose of providing connections with the approaches of the various trans-Mississippi River bridges, or for the purpose of reaching sites for recreational, scientific, or other parkway purposes.

Numerous cities and towns along the banks of the Mississippi River came into being with the early river-boat trade. They were stabilized by the railways which followed the river. They flourished and grew as the river and rail traffic gathered raw materials and finished products from the farms and factories along the river. As the Nation developed from the Atlantic coast to the Pacific coast, transcontinental highways, railways, and airways were built. The Panama Canal came into being permitting intercoastal shipping. Industry spread throughout the Nation. The Mississippi River towns therefore need reinvigoration.

This proposed parkway would constitute a "conservation-recreation corridor." In an emergency it would serve as a military highway relief measure. It would provide relief for commercial thoroughfares. It would assure accessibility to the river at all times. It would prove of universal benefit. It would help the urban and rural population and increase its income from the travelers along this parkway.

These bills are now before this Congress. The States have pledged or are rapidly pledging their cooperation to assist in surveys and to furnish the right-of-way if and as needed. The parkway will injure none, but will help many. It is so worthy that we deem it appropriate that a survey be made. A survey can be made and should be based on the specifications contained in the enabling act in the congressional bills.

Will the Roosevelt administration cooperate in such a survey? The people of this valley want an answer. Since actions always speak louder than words, the appropriate answer is action at this session. Congressmen, it is up to you. If this is a government with imagination, courage, and faith in America, it should act.

Now is the time for Congress to pass this enabling act. Now is the time to assure the millions in the Mississippi Valley that they will receive due consideration for such a tourway. The proposed parkway is not a luxury, but a logical necessity. It is timely to survey its possibilities before too much money is spent in the widening of existing commercial highways. It is timely to think in terms of an employment project that is worthy, useful, economically sound, and humanly desirable. It is obvious that parkways are more useful than pyramids. National employment projects and programs are problems facing all of us. Planning should precede projects. Surveys should precede plans. Specifications should precede surveys. Congress should enact these specifications. Then and not until then will State or Federal agencies be in a position to move forward.

Congressional action is the next step. Thirty million people deserve consideration.

Public Defender

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

Mr. CELLER. Mr. Speaker, the public-defender idea is neither revolutionary, novel, nor impracticable. It is amply justified by historical precedent and by the procedure in foreign countries. It has stood the test of time and experience. An official called pauperus procurator appears to have existed under the Roman Papal Government—Browning's poem, The Ring and the Book, volume III, page 279. There was such an official in Spain in the fifteenth century.

In the cortez of Madgiral (1496) and still more in the celebrated one of Toledo (1480) many excellent provisions were made for the equitable administration of justice, as well as regulating the tribunals. The judges were to ascertain every week, either by personal inspection or report, the condition of the prisons, the number of the prisoners, and the nature of the offenses for which they were confined. They were required to bring them to a speedy trial and afford every facility for their defense. An attorney was provided at public expense, under the title of advocate for the poor, whose duty it was to defend the suits of such as are unable to maintain them at their own costs. * * * Severe penalties were enacted against venality in the judges, a gross evil under the preceding reigns, as well as against such counsel as took exorbitant fees, or even maintained actions that were manifestly unjust. (Prescott's History of Ferdinand and Isabella, vol. I, p. 194.)

The Spanish law now provides for the employment of counsel to represent indigents in both civil and criminal cases—"Las Leyes de Enjuiciamiento Civil y Penal." In every district a lawyer is registered who takes charge of the cases of indigents in turn.

In the Argentine Republic the defense of accused persons unable to employ counsel is entrusted to the "defensores de pobres y ausents"—defenders of poor and absents. These counsel are lawyers appointed by the Supreme Court of Argentina for life at a monthly salary. There are also public defenders for infants and insane persons.

In France there exists an organization called "L'Assistance Judiciare," through which persons without sufficient means are entitled to avail themselves of the protection of the courts. The bar in that country is unified into an order, assignments to the defense of indigent prisoners are made by the executive head of the orders from the bar in general, and accepted as obligatory. This insures to the defendant dignified and competent counsel.

In Belgium, in accordance with the law of July 30, 1889, covering judicial assistance to the poor, an indigent person has the right to choose a lawyer, who gives his services gratuitously. He is called a "Pro Deo" lawyer. A petition for such free procedure must be sent to the judge, who has the right to dismiss the petition or allow the "Pro Deo" lawyer's appointment, according to what his investigation as to the prisoner's circumstances develops. The procedure has this advantage, that the prisoner, by selecting his own attorney, cannot be heard to complain that he was dependent upon counsel who is unsatisfactory to him for any reason.

The Constitution of Mexico provides for the free public defense of its citizens, through the "Defensores de Oficio," the number of whom is stipulated in the "Ley Organica de Ministerio Publico." The constitution of each one of the Mexican states provides also, with the jurisdiction of the state, for the "Defensores de Oficio," whose number is specified in the "Codigo de Procedimientos Penales" in some jurisdictions, and in the "Ley Organica" in others. The same general principle is followed, although the various states have different forms and laws.

The Norwegian act of May 22, 1902, concerning "procedure in criminal cases," prescribes that a lawyer must be assigned by the court for the defense of any person who is being tried for crime, the expense thereof to be borne by the state. This method of compensation insures a more adequate defense than a system of free counsel.

In England, counsel assigned to the defense of an accused person is paid by the Government.

Under the criminal system in Denmark, the court appoints, in each case, a prosecutor and a defender for the accused person. Both of these are selected from a staff of public attorneys in the particular city or district, who have been appointed beforehand by the king to handle public cases.

We can learn much from foreign jurisprudence with respect to securing to accused persons the right to a fair trial, despite the so-called safeguards of our personal liberties.

This idea is also abundantly justified as humane, just, and economical by the successful operation of the public defender's office in various American communities.

While the present movement is based primarily on the necessity for extending adequate and proper legal assistance to indigent accused persons, it is a mooted question as to whether or not all accused persons should not be defended by the State.

I, of course, do not approve of such course. But it is interesting to note in this connection that, according to the Wetboek von Strafvordering—Code for Administering Penal Law—of the Netherlands, any person accused of crime may have counsel assigned to him, and that the privilege is not restricted to indigent persons. This counsel is chosen by the president of the court from among the lawyers in his district.

THE PUBLIC-DEFENDER SYSTEM FOR THE UNITED STATES

When the city of Los Angeles, in the year 1914, created the office of public defender this action was regarded by the majority of the rank and file of the bar throughout the country as a novelty, like Lochinvar coming out of the West. For some time to come the advocates of the public defender remained few and far between, and their solitary expressions were like a voice crying in the wilderness.

Although the legal profession has a tendency, because of the very nature of its activities, to be somewhat deliberate in accepting modifications in traditional forms and systems, nevertheless experience has shown that when in the course of time, as a result of observation and experience, it becomes convinced of the desirability of reform, it does not hesitate to champion such a proposal and even lead in its attainment. This is just what has happened to the idea of the public defender.

The action that Los Angeles took in 1914 was shortly followed by its northern neighbor, San Francisco. Other large cities gradually followed the example of the two metropolitan centers on the Pacific coast. For example, Omaha acted in 1916, and Minneapolis in 1917. Chicago installed the public-

defender system in 1933, with splendid results. In the meantime, the State of Connecticut established the public-defender system on a State-wide basis. Such officials are appointed by the court in each county.

State and local governments can frequently act as experiment stations for new ideas. They are sometimes in a better position to do so than the Federal Government, because of the vast extent of the activities of the latter. In this instance, the Federal Government has lagged behind the progressive communities. Consequently, the Federal Government is still without a public defender. A movement to provide such an officer in every Federal court has, however, been inaugurated and is making strong headway.

In the fall of 1937 the conference of senior circuit judges, which constitutes the governing body of the entire judicial system, adopted a resolution approving in principle the appointment of a public defender, where the amount of criminal business of the district court justifies the appointment. In the fall of 1938, and again in the fall of 1939, the conference renewed this recommendation.

In his Annual Report for 1938, Attorney General Cummings recommended the adoption of the principle of the public defender for the Federal judicial system. He remarked that—

> Wherever such a system has been in operation it has proved successful, both in preventing possible miscarriage of justice and eliminating dilatory tactics and technical obstructions on the part of defense attorneys.

Attorney General Murphy, in his report to the Congress for 1939, made a similar recommendation. Within a few weeks after taking office, Attorney General Jackson urged the enactment of a bill to establish a system of public defenders in the district courts of the United States. His statement on the subject is exceedingly illuminating and should receive the sympathetic attention of all those who are interested in improving the administration of criminal justice. Attorney General Jackson said:

> Public defenders are no longer a novelty. The subject has long passed the experimental stage. For some years the office of public defenders has been in existence and operation in a number of communities, and in at least one State it has been in existence in every county. Observers and students of the subject generally reach the conclusion that in every instance the institution has been beneficial. Not only does it assure proper representation by counsel to an individual defendant, but it makes a considerable contribution in the direction of eliminating delays and technicalities and expediting trials. This has notably been the experience in Chicago, where the office of public defender was established a few years ago.

The organized bar of the country, speaking through the American Bar Association, has likewise officially gone on record as endorsing the plan of creating public defenders for the Federal courts.

I introduced in the House of Representatives a bill to create the public-defender system throughout the Federal courts. It is known as H. R. 4782, and is now pending before the House Judiciary Committee. A companion bill (S. 1845) was introduced in the Senate by Senator ASHURST.

We recognize the fundamental principle that a person accused of a crime is entitled to be represented by counsel. In fact, this right is guaranteed by the sixth amendment to the Constitution of the United States, so far as the Federal courts are concerned.

The Supreme Court 2 years ago, in a case that has become a cause celebre, held that the constitutional guaranty is not satisfied by merely according to the prisoner the right to hire counsel if he can afford to do so. The constitutional guaranty goes further and requires, so the Supreme Court holds, that the court appoint a lawyer to defend a prisoner who is impecunious and unable to pay for counsel. The system of having the court assign counsel to indigent prisoners is a traditional practice that has been in existence for a great many years. How much better it is, however, to provide a standing official whose duty it will be to act as defense counsel in such cases rather than to have the court select some lawyer, frequently more or less at random, to defend a case when the necessity arises.

THE INADEQUACY OF OTHER REMEDIES

Various opponents of the public-defender idea have enthusiastically proposed three plans which it is claimed will be an effective cure-all for the present difficulties.

These plans are as follows:

First. That the local bar associations should furnish a corps of reputable attorneys to volunteer their services as counsel for indigents.

Second. That legal-aid societies or other voluntary charitable organizations should undertake the defense of such persons.

Third. That the trial judge should be empowered to fix compensation to counsel in each case, such compensation to be paid by the county.

Not one of the proposed remedies, in my opinion, affords an adequate solution of the problem. Let us examine each proposal:

I. If the situation could be materially improved by the cooperation of the bar associations in supplying a list of volunteer attorneys to the court, is it not singular that they have not heretofore adopted such a course? Certainly they cannot plead ignorance of criminal-court conditions. Why have not the judges, who know the need for competent counsel in assigned cases, and who have the power to designate proper counsel, requested the assistance of the bar associations in an endeavor to promote the administration of justice? The answer is a very simple one—reputable and busy attorneys do not care to volunteer their services for this unproductive work, and the judges are not inclined to assign them, except in rare instances and in capital cases. And, as many of you will surely agree, it is unfair to expect a lawyer to devote his time and skill to such gratuitous service.

II. While legal aid societies have done splendid work and should be encouraged, the argument that they will afford a sufficient substitute for, and render unnecessary the establishment of, public defenders is wholly without merit. In the first place, such associations are generally handicapped by lack of sufficient funds, as has been evidenced by their frequent and urgent appeals to the public for financial support. Aside from this, however, there is a more potent and fundamental objection to the plan. An accused person should not be dependent upon any form of charity, indivdual or organized, for the resources or opportunity to present a merited defense. He should be entitled as a matter of abstract right to be defended by a sworn public official, who would have a positive duty, as well as the power and standing, to protect properly his interests. Neither private nor public charity, no matter how meritorious, will avail as a sufficient substitute for the denial of a legal requirement. Justice, not charity, is the universal need.

III. As regards the third plan, that of compensating assigned counsel: This, too, is open to serious objection, since it makes possible the showing of favoritism by the judges to certain lawyers, and thus leads to abuses, of which the "referee system" in civil cases is a conspicuous example. The compensation awarded would be hardly sufficient to induce experienced trial counsel to accept the cases. Furthermore, the aggregate of fees paid to counsel under such form of assignment would most likely result in a greater expense to the community than the creation of a public defender—without the benefits accruing from such defender. There is no reward, except he may figure that at some time when the judge gets into motion a bankruptcy part, he may remember him. But such are only pious hopes usually. The assigned lawyer has not inherently the interests of his so-called client at heart, a client, as it were, thrust upon him. He grumbles mayhap to himself, "Why in thunder did the judge pick on me?" At best, the defendant gets a raw deal. The defendant, be he guilty as sin, is entitled to better treatment.

Experience has shown that the creation of public defenders is not only a reform theoretically desirable but is also a step of major importance in the direction of improving the administration of the criminal law. First and foremost, it assures to indigent defendants suitable and proper representation by counsel. It has, however, another and much more far-reaching result—one possibly not intended by those who first

devised the plan. It leads to a much more effective and expeditious disposition of criminal cases. The public defender has no interest in pursuing dilatory tactics. He is under no temptation to present highly technical or ill-advised defenses. He certainly does not adduce perjured testimony, as unfortunately is occasionally done by some types of lawyers. Wherever the new system has been adopted, the result has been a speeding up of the administration of justice and a reduction of technical obstructions to decisions on the merits. This has been the case notably in Chicago, where all competent observers, including those who were skeptical when the reform was first proposed, acclaimed the beneficial results that have accrued to the community from the appointment of a public defender.

The time is ripe for the enactment of such legislation for the Federal courts, and if public opinion in support of such legislation becomes sufficiently articulate it is bound to pass.

House Joint Resolution 519—To Authorize Sale and Charter by Maritime Commission of Vessels for Intercoastal Trade

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

STATEMENT BY HON. MARTIN F. SMITH, OF WASHINGTON, BEFORE THE COMMITTEE ON MERCHANT MARINE AND FISHERIES

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me Wednesday, April 24, 1940, before the Committee on Merchant Marine and Fisheries:

STATEMENT OF HON. MARTIN F. SMITH, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF WASHINGTON

Mr. SMITH. Mr. Chairman and gentlemen of the committee, I appreciate the privilege of appearing in behalf of Mr. BUCK'S resolution as modified House Joint Resolution 519. I am certain all of us who are from the Pacific Northwest appreciate the promptness with which your committee has called these hearings. This is a matter of utmost importance throughout our entire section of the country, and it particularly affects the industries in my district. Unless we can obtain some of these vessels for our intercoastal trade, it is going to cause serious curtailment of employment in the lumber, wood pulp, flour milling, canning, and other industries throughout the entire Pacific Northwest.

The gentleman from California, Congressman BUCK, has outlined very clearly, I think, the purposes of the resolution and the situation which it is intended to meet. There is very little that I can add to what he has said. I merely want to emphasize the emergency which exists and which, of course, is thoroughly familiar to at least two members of your committee, Mr. Chairman, my colleague from the State of Washington [Mr. WALLGREN] and the gentleman from California [Mr. WELCH], who has served so ably for so many years on this committee. It is a real emergency. I know that your committee is going to give it very sympathetic consideration, and, of course, this is one case where time is of the essence. If we are going to be relieved, and if the emergency is going to be met, it will have to be done soon, before we have too many of these industries curtailing their operations. I am very hopeful that the matter can be acted upon soon in the House, so that the Senate will have time to act on it before Congress adjourns. I am in hearty accord with what Mr. WELCH has stated in regard to the importance of providing in this legislation, which, it seems to me is now covered by the amendment proposed by the Maritime Commission, proper safeguards to absolutely obviate and certainly prevent, if possible, any speculation or any profiteering in the sale or chartering of these vessels. I believe that the amendment, as proposed by the Maritime Commission, as now incorporated in Mr. BUCK'S modified resolution certainly should cover that very effectively.

I would like the privilege, Mr. Chairman, to read into the record at this point a brief statement issued by a group of the largest manufacturers and shippers in the State of Washington, setting forth cogent and compelling reasons for the immediate enactment of this legislation, and also a letter from one of my constituents.

Mr. CHAIRMAN. Without objection, it is so ordered.

Mr. SMITH (reading):

"MEMORANDUM ON INTERCOASTAL SHIPPING SITUATION

"All industries in the Pacific Northwest which use intercoastal shipping to domestic markets on the Atlantic and Gulf Coasts are seriously affected by the withdrawal of ships from those services—for more profitable employment created by the European war. Twenty-seven ships, or 25 percent of the fleet plying between the Pacific Northwest and the Atlantic coast, will be out of the intercoastal service by May 1940. It is probable that the bottoms available for this vital domestic trade will be further and progressively depleted as long as war continues.

"The tidewater sawmills of Oregon and Washington, which have heretofore shipped their product largely to intercoastal markets, are now being compelled to reduce such shipments to less than 60 percent of their normal volume; and face imminent curtailment in production and employment.

"The wood-pulp industry of the Pacific Northwest normally ships each year 300,000 tons intercoastally by water. These shipments have now been reduced to a rate of 120,000 tons annually.

"Oregon and Washington have shipped up to 300,000 tons of flour annually through the Panama Canal; but today this industry is unable to obtain adequate space for the firm orders now received. This directly cuts down the market for Northwestern grain.

"A similar curtailment of intercoastal outlets runs through all the water-borne commerce of the Pacific Northwest. It is causing unemployment which is rapidly growing to serious proportions.

"The joint resolution introduced by Representative BUCK (H. J. Res. 509) and Senator JOHNSON (S. J. Res. 246) is designed to relieve this situation. It would suspend, for the duration of the proclamation of the President under the Neutrality Act of 1939, the section of the Merchant Marine Act which reserves from use Government-owned ships which have passed an age limit of 20 years.

"The joint resolution would make this fleet of some 109 old ships available for disposition by the United States Maritime Commission, for either foreign or domestic trade, as the Commission may find the vessels needed.

"The joint resolution does not propose any wholesale releasing of the reserve fleet; and would not imperil the stability of the existing commercial water carriers or their rate structures. It would simply authorize the Commission to make these boats available, individually or in small groups, for designated trades, when and as satisfied of the need for additional ships.

"To accomplish the purposes of the joint resolution, it is believed desirable to provide authority for the Maritime Commission to make the ships available for commercial use under charter as well as through sale, and to give the Commission full authority as to the terms and conditions of chartering which may seem advisable in arranging for the use of these old vessels under the present emergency.

"The legislation should be drawn in broad and simple terms which place these reserve boats under control of the United States Maritime Commission, as to the extent of, and the ways and means by, which they may be placed in commercial service.

"G. V. Hayes, North Pacific Millers Association; C. B. Morgan, Rayonier, Inc.; R. E. Seeley, Puget Sound Associated Mills; W. B. Greeley, West Coast Lumbermen's Association.

"WASHINGTON, D. C., *April 19, 1940.*"

I would also like to read to you a letter received by me from Mr. C. H. Kreienbaum, executive vice president of the Simpson Logging Co., Shelton, Wash., bearing date March 7, 1940, which also describes the present emergency as it affects one of the largest operators and employers of labor in my district. The letter is as follows:

SIMPSON LOGGING CO.,
Shelton, Wash., March 7, 1940.

Hon. MARTIN F. SMITH,
Member of Congress, Washington, D. C.

DEAR CONGRESSMAN SMITH: The lumber industry is fast feeling the effects of a situation which has been more or less of a theory but is now realized to be a fact. It is a problem that will affect every employer and employee in the industry, to some extent.

Your help in the past has always been promptly and cordially given, although my requests have been small. The problem I am putting before you now is of so great importance that I am sure you will give it your best thought and every possible assistance when the time comes.

Of course, you are aware of the fact that a good many steamships have been taken out of the intercoastal as well as the coastwise routes, and sold or chartered into the trans-Atlantic trade. Consequently many of our sawmills on Puget Sound and Grays Harbor are finding it difficult to move lumber, and therefore are faced with the drastic curtailment of their operations and the enforced idleness of much labor.

We feel there is a possible partial solution to this problem, and our group is moving in the direction of that solution. We have a sales company on Puget Sound, owned by 18 operators who employ upward of 4,000 men in their plants, besides the 4,000 or 5,000 men involved in producing the logs which these plants cut. This sales company has been shipping between 17 and 19 percent of all the lumber that is shipped into the Atlantic-coast market by the sawmills of western Washington and Oregon. It has chartered upward of 200,000,000 feet of steamship-carrying space per year for the past 2 years, besides using approximately 200,000,000 feet of tonnage of other carriers.

After the end of March, this sales company will find itself with practically no tonnage available. This briefly is our problem.

This situation affects the McCleary interests, our logging operations and our sawmill, as well as the other operators previously mentioned. The Simpson Logging Co. is now in the process of curtailing its logging operations, which will affect both Grays Harbor and Mason Counties.

The solution to this problem, we feel, lies with the Maritime Commission, and the ability we may have in convincing our steamship people that they should risk taking over serveral surplus ships of the Maritime Commission, which now lie in the so-called boneyard. The Maritime Commission has about 20 vessels which are less than 20 years old, and which they can dispose of in an emergency. They have, I believe, about 109 vessels which are more than 20 years old, which they cannot sell without an act of Congress or Executive order from the President. We are interested principally in 4 or 5 of the 20 vessels which are less than 20 years old and which the Maritime Commission can sell.

The Commission has indicated reluctance to sell these vessels without an emergency which would warrant the placing of these vessels in the intercoastal trade. Inasmuch as our sales company and its sawmills are not in the steamship business, it will be necessary for us to convince our former steamship connection that they should risk the hazard of taking 4 or 5 of these vessels and placing them in the intercoastal trade.

Mr. Robert E. Seeley, the president of the Puget Sound Associated Mills (which is the sales company of which I speak), is leaving here Monday for New York to discuss this situation with our steamship people. If the steamship people are disposed to take the risk, they will go to Washington. If they should do so, I have requested that they call upon you for whatever help you may be able to give us.

In fact, it is quite possible that I might fly East to assist in their efforts before the Maritime Commission. If so, I will again have the pleasure of personally discussing our mutual problems.

In case I do not have the opportunity to go East, I know that you will do everything in your power to be of assistance to Mr. Seeley.

With kindnest personal regards, I am,

Very truly yours,

C. H. KREIENBAUM,
Executive Vice President.

In conclusion I would like, with your permission, to also present the statement of the Puget Sound Associated Mills, Mr. R. E. Seeley, president, which contains a fair analysis of the entire shipping situation in our section of the country, which is most critical. (The statement followed.)

St. Lawrence Seaway Project

EXTENSION OF REMARKS

OF

HON. PIUS L. SCHWERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

Mr. SCHWERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Buffalo Evening News of April 26, 1940:

[From the Buffalo Evening News of April 26 1940]

BOARD TERMS ST. LAWRENCE SEAWAY UNSOUND, RUINOUS

The proposed St. Lawrence seaway and power project was conclusively demonstrated as unsound today in a comprehensive economic survey promulgated by the Niagara Frontier Planning Board.

After a broad study of the economic ramifications of the project and its possible consequences from a national standpoint, the survey pointedly draws this conclusion:

"The seaway would be so generally ruinous to American commerce and industry, labor, and capital that its Nation-wide deleterious effects would far exceed whatever claimed advantages might redound to certain special interests from the waterway or to New York State and the Province of Ontario from the power plan."

Prepared over a 5-month period by Bertram D. Tallamy, chief engineer of the planning board, and Miss Tess M. Sedweek, executive secretary, the 140-page survey was presented to members of the board at a meeting in the home of Chairman Chauncey J. Hamlin, 1014 Delaware Avenue, this afternoon and was unanimously endorsed. Copies will be sent to the President, Members of Congress, and other officials.

SAYS REPORT WILL WARN UNITED STATES

"I feel that this report will unequivocally demonstrate to the American public how detrimental the St. Lawrence Seaway would be to the national welfare," Mr. Hamlin told the board this afternoon.

It embodies its major findings in 24 points. They follow:

1. The minimum total cost of the whole St. Lawrence project for both the United States and Canada would be $1,120,588,000. This figure is founded on Government estimates. It is about three times the cost of the Panama Canal.

2. The St. Lawrence project, on the basis of experience with similar works, probably would cost more than the $1,120,588,000. A total of $375,000,000 was spent on the Panama Canal, although it had been estimated to cost only $160,000,000; the Chicago Sanitary and Ship Canal cost $53,000,000 instead of $16,000,000; and the Suez Canal cost $80,000,000 instead of $30,000,000.

UNITED STATES TAXPAYERS WOULD SUFFER

3. At least 85 percent of the United States share of the project's cost would be borne by American taxpayers, who would be the victims of unfair discrimination: These taxpayers live in the region which could not be benefited by the St. Lawrence Seaway even if claims of proponents were valid.

4. American labor, transportation and industry, on the Government's estimates of probable seaway traffic, would lose $109,647,000 a year: Diversion of business from American transportation systems to foreign carriers, diversion of Canadian export grain movement from the United States and loss to American coal producers account for this figure.

5. The net loss to the United States would be $76,595,000 each year on the basis of the Government's estimates of seaway traffic: This sum represents the difference between two factors: One is the loss to established American commerce and industry plus the expense to American taxpayers; the other is the possible ratio saving by shipping via the St. Lawrence.

WOULD BE CLOSED PART OF YEAR

6. During 42 percent of the year, the St. Lawrence Seaway could not be fully utilized: The route would be closed because of ice conditions.

7. The American farmer would not gain from the St. Lawrence Seaway: Export grain would be the chief American agricultural product to be shipped through the waterway. Even if a possible maximum saving of 3 cents a bushel were realized, this would be absorbed by the foreign purchaser and vessel owner.

8. American manufacturers, who have cultivated this country's great inland market, would be seriously damaged by foreign competition resulting from the St. Lawrence Seaway: Alien tramp steamers would dump cheaply produced commodities on this currently protected Great Lakes market.

9. Foreign tramp ships would have almost exclusive use of the St. Lawrence seaway: American-owned vessels of sufficiently shallow draft to ply the proposed waterway comprise only 5 percent of the world's merchant-ship tonnage.

NO COASTAL BENEFITS EXPECTED

10. No route for more profitable trade between American ports would be offered by the St. Lawrence seaway: The location of the St. Lawrence is such that no appreciable coastal or intercoastal commerce would occur.

11. The St. Lawrence seaway would not carry the volume of traffic nor bring the savings in shipping rates to the exaggerated degree cited by many proponents: They have set the probable tonnage at 11,496,000 and the probable savings at $45,516,000 annually. The more accurate estimate is 3,873,000 for tonnage and $8,822,000 for savings.

12. The net loss each year to American commerce and industry and to the American taxpayer, on the basis of more accurate figures for estimated tonnages and savings, would be $42,233,000: The United States investment in the St. Lawrence seaway would result in lower earnings and higher taxes.

13. Maintenance of wholly cordial relations between the United States and Canada might be endangered by the St. Lawrence seaway: Serious questions could arise as to responsibility for defense of the waterway in times of war as to preservation of water levels in Canadian harbors on the lower St. Lawrence River.

MICHIGAN SOVEREIGNTY

14. Surrender of United States sovereignty over Lake Michigan would result from any treaty which, like the proposed treaty of 1938, limited the withdrawal of water from the lake at Chicago: It would prevent further development of the Great Lakes-Gulf of Mexico waterway by the United States.

15. The proposal for restoration of Niagara Falls beauty and for further power generation there has been inexcusably made contingent on the whole St. Lawrence project. There is no engineering demand for tying up the needed Niagara Falls project with the St. Lawrence development.

16. The United States would subsidize Canadian power to the extent of $48,860,000. This figure is reached by taking the minimum cost ($90,000,000) for the Canadian share of the power, under the least expensive plan yet advanced, and deducting costs strictly chargeable to power ($41,140,000) under the present plan.

SHOULD DIVORCE TWO PLANS

17. It is perfectly practical to divorce the seaway and power portions of the general St. Lawrence plan. There is no justification for burdening the proposed power development with the unsound seaway proposal.

18. The amount of power which would be created on the United States side of the river for $206,065,000 under the present St. Lawrence scheme could be produced for only $90,000,000 without the navigation project: The St. Lawrence Power Development Commission set $90,000,000 as a reasonable cost of power works on the American side of the International Rapids section.

19. Whatever power benefits might result from the St. Lawrence project would affect only the State of New York and eastern Canada: The St. Lawrence plan does not envision sale of United States power beyond the confines of New York State.

20. Neither New York City nor western New York is a practical market for St. Lawrence power. Under existing delivery conditions power from nearer sources is more practical and economical for these areas.

ESTIMATES TOO OPTIMISTIC

21. Previous estimates of increased power demand in New York State are too optimistic: The Niagara Frontier Planning Board finds that the demand in 1952 probably will not exceed 21,000,000,000 kilowatt-hours.

22. Overdevelopment of hydroelectric power is a dangerous policy to pursue: When generating plants are built without an adequate market for the power the capital charges accumulate to such an extent that the project never pays.

23. Adequate and economical power potentialities, apart from the St. Lawrence River, exist today in New York State and eastern Canada: Two outstanding examples are the Ottawa River in Canada and Niagara Falls.

24. Progressive development of Niagara Falls power potentialities independent of the seaway and in step with power requirements is the most practical plan: This would eliminate economic hazards to the new developments and to existing plants.

The report points out that the United States' share of the cost will be a maximum of $573,221,000.

From my own study I find that the suggested plans would give Canada full credit for the entire cost of the Welland Canal, which is completed and has been in usage for many years. It is my belief that we should not give credit for a waterway already in existence unless our authority over that waterway be extended at least to the center of same.

Michigan Chiefs of Police Laud Work of F. B. I. and Protest Against Smear Campaign

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 25, 1940

Mr. CRAWFORD. Mr. Speaker, the recent attempts of certain elements in this country to discredit the splendid work of the Federal Bureau of Investigation appear to be melting under the spotlight of the facts. Milton once said, "Truth is as impossible to be soiled by any outward touch as the sunbeam." When one compares the recorded facts concerning the great accomplishments of the F. B. I. in protecting the citizens of this Nation against underworld and subversive groups, the distorted claims of the latter collapse under their own weight.

Those launching this attempted smear campaign against the Federal Bureau of Investigation and its Director, J. Edgar Hoover, would hardly dare claim that the great law-enforcing groups of this Nation are in some sort of a conspiracy against the citizens. Persons making such claims would be laughed into the ocean and told to hike for their home abroad. Yet the F. B. I., which is being attacked, does have the support of the law-enforcement groups.

I hold in my hand a letter I have received from Chief of Police Fred H. Genske, of Saginaw, Mich., which contains a resolution adopted by the Michigan Association of Chiefs of Police, praising the cooperation of the F. B. I., endorsing the leadership of Director Hoover, and criticizing movements to discredit the Federal Bureau of Investigation.

Whose word shall we take? The leaders selected and supported by the taxpayers to uphold law and order or the mud slingers with sinister motives?

I am satisfied the Michigan Chiefs of Police know what they are talking about. I wholeheartedly approve the resolution they have adopted.

Their views and the resolution follow:

CITY OF SAGINAW, MICH., *April 23, 1940.*

Hon. FRED L. CRAWFORD,
Member of Congress, 1008 House Office Building, Washington, D. C.

DEAR CONGRESSMAN CRAWFORD: Following is quoted verbatim a resolution unanimously adopted by the executive committee of the Michigan Association of Chiefs of Police during a meeting at East Lansing, March 12, 1940:

"Whereas the police departments of Michigan have always received the utmost cooperation from the Federal Bureau of Investigation; and

"Whereas it has come to the attention of the police chiefs of Michigan that an unwarranted attempt is being made to curtail the activities of the Federal Bureau of Investigation, through criticism aimed at its Director: Therefore, be it

"*Resolved*, That the Michigan Association of Chiefs of Police, through its executive committee, in meeting at East Lansing on March 12, 1940, hereby endorse the splendid work of the Federal Bureau of Investigation under the able direction of Mr. J. Edgar Hoover, and protest any movement seeking to discredit this organization or curtail its activities."

In addition to a sincere endorsement of sentiments contained in this resolution, I want to state that the Federal Bureau of Investigation, under the able leadership of Mr. Hoover, has been of invaluable service to this department. Hardly a day goes by but we have evidence of the efficient work of the Bureau. We have always found its agents to be gentlemen, sincere in the pursuit of their duties, and always ready to lend aid wherever possible within the scope of their authority.

It would be distressing indeed to be deprived of even a small part of the services of Mr. Hoover and his organization.

Sincerely yours,

FRED H. GENSKE,
Chief of Police.

Western Association of State Highway Officials

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

RESOLUTIONS OF THE WESTERN ASSOCIATION OF STATE HIGHWAY OFFICIALS

Mr. ANGELL. Mr. Speaker, the Western Association of State Highway Officials has just completed its nineteenth annual meeting. The association adopted resolutions which are of great importance to the western portion of the United States and have an important bearing on our highway systems. As a part of my remarks I ask leave to extend these resolutions. They are as follows:

RESOLUTION I

Whereas, for the past 25 years, through cooperation between the State highway departments and the Public Roads Administration, there has been constructed in the United States a system of highways which is outstanding in the world; and

Whereas, from the funds allocated, the people of the Nation now have a capital investment of at least 75 percent of such funds which is still paying returns to them; and

Whereas there is an apparent tendency on the part of other agencies to create a duplicating agency to carry on similar types of work; and

Whereas, through the cooperation of the State highway departments and the Public Roads Administration, basic data have been compiled which now are available to determine comprehensive State highway programs; and

Whereas, through the present cooperative arrangement there has been developed in the State highway departments and the Public Roads Administration a trained engineering personnel and organization competent to carry on highway-building activities: Now, therefore, be it

Resolved, That the Western Association of State Highway Officials, representing the highway-construction activities of the 12 Western States, does hereby vigorously oppose any change in the fundamental procedure, organization, and methods of allocating funds and designating road systems and mileage; and be it further

Resolved, That it is the considered opinion of this association that any Federal funds in the future to be used for highway construction should be expended through the State highway departments and the Public Roads Administration and no other Federal agencies.

RESOLUTION II

Be it Resolved, That in the future the Western Association of State Highway Officials shall include the States of Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Texas, Utah, Washington, and Wyoming, and that no further reference to the 11 Western States in correspondence or otherwise will be made.

RESOLUTION III

Whereas under the existing law and regulations there is unnecessary and definite confusion with respect to the availability of forest-highway funds: Now, therefore, be it

Resolved, That the Western Association of State Highway Officials recommends to the consideration of the Congress the separation of forest-highway funds from other forest-road funds in making future authorizations or appropriations.

RESOLUTION IV

Whereas the Federal Government is collecting from the highway users more special taxes than are being returned to the various States and subdivisions thereof for the purpose of systematic and coordinated highway construction: Now, therefore, be it

Resolved, That we respectfully recommend to the consideration of Congress that it make available all of the highway user taxes collected by the Federal Government for such systematic and coordinated highway construction through State highway departments and the Public Roads Administration.

RESOLUTION V

Whereas there has now been introduced into Congress proposed legislation providing aid to the States from the Federal Government in the acquisition of rights-of-way upon application by the State highway departments: Now, therefore, be it

Resolved, That the Western Association of State Highway Officials endorse in principle such proposed legislation.

RESOLUTION VI

Whereas existing authorization for Federal participation in highway construction expires at the end of the fiscal year of 1941; and

Whereas legislation has been introduced continuing such Federal participation: Now, therefore, be it

Resolved, That the Western Association of State Highway Officials respectfully urge early and favorable action on such pending legislation; and be it further

Resolved, That the amount of authorization for the fiscal years 1942 and 1943 be not less than the amounts of the 1938 and 1939 authorization; and be it further

Resolved, That copies of these resolutions be telegraphed to the members of the House and Senate Roads Committees and to the congressional delegates from the 12 States in the association.

RESOLUTION VII

Whereas there have been many meetings of the Western Association of State Highway Officials, and from these meetings have come the outstanding ideas regarding our future highway programs as expressed by those highway officials most vitally concerned; and

Whereas this information is of great value to the people of our States, especially road users and those interested in road-building activities; and

Whereas in the past proper methods of acquainting these interested people with these facts have not been taken: Now, therefore, be it

Resolved, That it be the duty of each State highway department represented to give full publicity, information, and explanation to the public of these important matters which have been brought out in the convention; and be it further

Resolved, That it be the duty of each State in the Western Association of State Highway Officials to continue throughout the year a campaign of publicity to keep these matters before the public.

RESOLUTION VIII

Whereas the actions taken by this meeting of the Western Association of State Highway Officials should be in the hands of the congressional delegates from each of the States of this association: Now, therefore, be it

Resolved, That it be the duty of each State highway department in this association to immediately forward copies of these resolutions to each Member of their respective congressional delegation.

RESOLUTION IX

Whereas Robert A. Allen, president, of Nevada; Burton G. Dwyre, vice president, of New Mexico; and E. C. Knowlton, secretary-treasurer, of Utah, retiring officers of this organization, have given a large amount of their time and abilities to furthering the work of the Western Association of State Highway Officials and specifically have appeared before committees in Congress and promoted by their efforts the furthering of the highway program and the States represented in the Western Association of State Highway Officials: Now, therefore, be it

Resolved, That we extend to them a vote of thanks for their faithful and diligent services.

RESOLUTION X

Whereas the Nineteenth Annual Convention of the Western Association of State Highway Officials, held at Santa Fe, N. Mex., has been outstandingly successful; and

Whereas the success of this convention has been due to those who made the arrangements and furnished the finances for carrying it on: Now, therefore, be it

Resolved, That this association extend its thanks and appreciation to the Honorable John E. Miles, Governor of the State of New Mexico, the Honorable Mayor Alfredo Ortiz, of Santa Fe, to Burton G. Dwyre, State highway engineer, and his splendid highway organization, to the New Mexico representatives of the public roads administration, together with their ladies, and to their efficient, courteous, and charming stenographic help; and be it further

Resolved, That the newspapers of Santa Fe and Albuquerque, N. Mex., be complimented for the excellent publicity which they have given the convention; and be it further

Resolved, That the New Mexico State police be commended for their efficient and courteous service rendered to the convention.

Respectfully submitted by:

C. F. SEIFRIED, Wyoming,
Dr. W. I. HEWES,
Public Roads Administration, San Francisco,
H. R. FLINT, Idaho,
D. A. MCKINNON, Montana,
IVAN J. HILTON, New Mexico,
Resolutions Committee.

A Labor View of Management's Present Duty

EXTENSION OF REMARKS

OF

HON. HARRY N. ROUTZOHN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

RADIO ADDRESS BY WILLIAM L. HUTCHESON

Mr. ROUTZOHN. Mr. Speaker, for 10 years prior to my coming here as a Representative of the Third District of Ohio, it was my privilege to serve as a representative of organized labor—as trial attorney for the United Brotherhood of Carpenters and Joiners of America, at the head of which was and is its general president, William L. Hutcheson. Mr. Hutcheson also is first vice president of the American Federation of Labor.

Throughout those 10 years of service in the cause of labor, by my frequent contacts and association with him, I learned to know, love, and respect Mr. Hutcheson. Mr. Hutcheson is an ideal labor leader. He is ever alert and vigilant in the advancement of labor's cause—a militant, two-fisted fighter in behalf of organized labor and the laboring men and women of this country. At the same time he is reasonable, just, fair, and square with industry and the employers of labor.

Above all, he is a real American—stands foursquare for the American system of government, its constitution and laws, its traditions, and the guaranteed rights of its citizens.

As a champion of organized labor and its advancement in accordance with the form of government adopted and bequeathed to us by the framers of the Constitution, he has been the spearhead against radicalism and its insidious invasion of the high places of labor, its offices, as well as bold interjection among its rank and file.

Mr. Hutcheson further believes that labor and industry, working together, can put the idle back to work, allay industrial strife, and restore prosperity solely through noninterference from government and by being left alone to solve the labor problems between themselves.

That you may have the opportunity, my colleagues, to reflect on the wise and timely counsel of a great labor leader, I quote an address by Mr. Hutcheson, broadcast on April 23, 1940, over the National Broadcasting Co. The subject of this address was A Labor View of Management's Present Duty. It follows:

At the outset, I want to make plain that I am not here to discuss any of the controversial points between labor and management. There are many subjects which labor and management approach with naturally different views.

Tonight I intend to confine myself solely to that wide field where labor and management have a common interest. It is my purpose tonight to bring a charge against the executives of American industry. It is a charge that I make, dispassionately, and in a spirit of helpfulness. And it is a charge that is written large in the hearts of millions of workers, who stalk unemployed through the streets of the United States.

As a preface to this charge, I want you to cast your recollection back to the turn of the century. I want to trace with you the course which industry and labor alike have followed since 1900.

Long before that labor had been working and planning to improve the lot and the prospects of the average worker. Labor was striving for better conditions of employment, for a saving wage, for shorter hours, and for the general recognition of collective bargaining.

Management, too, had a goal that it was seeking. It was thinking in terms of more efficient production through new tools that were being placed in its hands.

The electric motor was beginning to be used in industry, the automobile industry was starting—4,100 cars were produced that year—the movies were in the making and aviation was waiting to be born. America was on the threshold of its real industrial growth.

Through the combination of American invention, American executive genius, American management, and American labor, the America of 1900 was transformed into the America of 1920. During those 20 years management and labor, capital and investment, were left reasonably free to solve their own problems, to settle their own differences, to make their own mistakes, and to attain their own objectives.

Out of the experiences of those 20 years American management and American labor worked out a new and an inspiring theory of industrial economics. They asserted that the higher the wage that could be paid to American labor, the greater market there would be for American goods. The larger market thus created, they declared, would pave the way for the efficiencies of mass production. Mass production of American goods would permit the reduction of selling prices to the consumer. We called that theory the theory of high production, high wages, and low prices.

Through this system we were able to raise the average standard of living in the United States to the highest level that this or any other country had ever known. Through that system the average worker's family was able to secure a larger share of the fruits of industry. Through that system, the average American home had bathtubs, electric lights, pianos, phonographs, radios, and all the things that make for comfortable living.

The point I am trying to stress is that while management and labor were left to their own devices, while they could exercise to the full the rights and responsibilities of free enterprise, without interference from bureaucrats, America went forward and all classes of Americans prospered.

As an aftermath of the Great War, however, certain strange and alien theories began to creep into the relations between management, labor, and government. So much achievement had not been won by labor and management in so many directions without abuses of power. Compared to the magnitude of America's accomplishments, those abuses were the exceptions and not the rule. Yet viewed solely as abuses some were real and important. They gave government a reason for stepping actively into the industrial scene.

As always, government's hand was heavy. It pressed the innocent to attack the guilty. It began to make itself felt in the relations between management and labor, in the taxes it imposed on the operations of industry, and in control of the mechanism by which old enterprises are expanded and new enterprises are financed.

Labor is much more sensitive to changes in the industrial field than is either management or capital. Labor viewed this incursion of government into the field of free industrial enterprise with suspicion and distrust. Labor has a greater stake than either capital or management in the progress and the expansion of industry. Capital can change from one field to another. Management can move freely from one part of the country to another. Labor, however, with specialized skill, with meager reserves, and with limited alternatives, depends for its very bread and butter upon the solidity and permanence of its jobs. When trouble comes to industry, capital and management may lose money, but labor loses work.

Labor apprehends and opposes dangerous trends long before they are apparent or important to management.

So that at a time when unemployment was relatively small, when the country was already in the upswing of post-war prosperity, labor issued a solemn warning to management and to the public.

In the 1923 convention of the American Federation of Labor, in Portland, Oreg., the following declaration was unanimously adopted. I quote in part:

"The largest freedom of action, the freest play for individual initiative and genius in industry cannot be had under the shadow of constant incompetent political interference, meddlesomeness, and restriction.

"The threat of State invasion of industrial life is real. The continual clamor for extension of State regulatory powers under the guise of reform and deliverance from evil can but lead into greater confusion and more hopeless entanglement.

"The ambition to build must be saved; the abuses must be eradicated by means of organizations befitting the state of our development and the demands of our time. In no other way can industry continue that growth which is required to satisfy our ever-growing demand for commodities and avoid submersion in a wave of blighting political domination.

"The organized functional elements in industry will find easy of solution those problems to which politicians now turn their attention in futility. Industry must organize to govern itself, to impose upon itself tasks and rules, and to bring order into its own house. Our people cannot live and thrive under the regime of bureaucracy that threatens unless industry solves its own problems."

Seventeen years ago labor issued that warning. Seventeen years ago labor prophesied the disasters that were latent in government interference with the processes of free industrial enterprise.

Again and again in its yearly conventions labor has repeated that warning. It has again and again boldly asserted that bureaucratic domination paralyzes industry. In season and out of season it has fought to keep the dead hand of government away from the wheels of industry. Even at the cost of temporary advantages it has steadfastly held true to its convictions and its traditions.

In the past decade labor has seen some of its cherished dreams come true. It has seen its right to bargain collectively embodied in the law of the land. It has seen the establishment of reasonable standards for hours of work and for scales of wages. It has secured reasonable standards of hours and wages on Government contracts. It has been courted and comforted by those in power. It has even been led up on a high mountain and promised the domination of industry if it would follow obediently wherever government led.

In spite of all this, labor has held fast to its independence. For it has known that what government gives government can take away. And in spite of the gifts of government to labor, it knows there are still 10,000,000 idle workers walking the streets.

And today labor is openly challenging the theory that government can cure America's industrial ills. Labor today is surer than ever before that only through the stimulation of industry and business can employment become stabilized and unemployment reduced. The meeting of the executive council of the American Federation of Labor at Miami on January 31, 1940, issued the declaration that—

"We urge that all government actions that tend unnecessarily to discourage business expansion cease, and that a positive effort be made to encourage greater industrial activity. We have learned a lesson that when opportunities of profit diminish, opportunities for jobs likewise disappear."

I have dwelt on labor's fight for independence and labor's struggle for free enterprise as an introduction to the charges I would present tonight against management. While labor has been enduring the sweat and the toil of battle, what has management been doing to resist government domination of business? What has management done to protect the freedom of industry and labor?

I charge the leaders of American business with failure to be leaders in the fight against bureaucratic control of industry.

I charge them with lack of effective action, while the shackles were being laid on free enterprise.

I charge them with lack of effective organization to resist policies which they knew were disastrous to the public and to labor.

I charge them with spending hundreds of millions of dollars to extol the merits of their products and practically nothing to tell the public the needs and the necessities of business.

I charge them with failure to drive home to the public and to the politician that restrictions on business inevitably bring in their train contraction and unemployment.

I charge them with timidity in resisting the mounting taxes, which reduced the ability of business to expand pay rolls.

I charge them with short-sightedness when they failed to awaken the public to the results they knew would flow from the infiltration of government into competition with private enterprise.

Finally, I charge the executives of American business with mass cowardice in permitting key industries to be purloined and broken one by one, with resulting unemployment to labor, without rushing in unison to their defense.

Four months ago, in a congress of American industry, the National Association of Manufacturers formulated a declaration of principles in which they stated the objectives which they believed industry should set for itself.

I quote from that declaration:

"The contribution that American industry can make to the national welfare depends upon the preservation of free enterprise and individual initiative. Laws to protect society from abuses are necessary and desirable, but in the public interest it is essential that any law or any other process affecting industry shall not limit the authority of management as to render it unable to fulfill its responsibilities."

Four months have passed since that pronouncement was made. But what has management done to defend free enterprise? What has it done to drive home to government and to the public that national progress depends upon liberating management and labor from the clutches of bureaucracy?

Pious words will get us nowhere. Assembled management can generalize forever, but it will never accomplish anything until it creates a public sentiment that will sweep away the political grit that is clogging the machinery of employment.

Labor has the right to demand that the leaders of industry should do more than talk. Not only should every individual executive do his part to protect the system of free enterprise, but in addition, and equally important, the executives of American industries should practice what they preach.

I should be the first to admit that there are many individual leaders who could successfully defend themselves against these blanket charges. There are many exceptions to the general rule, men who have risked much to proclaim the crimes that were being perpetrated on American business. I pay tribute, for instance, to the group of small businessmen who dared to stand up in Washington and tell the truth about the policies that were destroying them and their employees.

Management, able and efficient as it is in its own particular field, has floundered and retreated in its defense of the broad principles upon which the whole structure of America rests.

The appeal that I would make to you tonight, as a labor man, is that the executives of America's industries should face realities, just as labor has faced them.

It is not a theory but a fact that 10,000,000 workers are unemployed.

It is not a theory but a fact that the forward surge of American industry has been halted by Government incompetence.

It is not a theory but a fact that new enterprise has been stifled by the clumsy dictation of bureaucratic commissions and boards.

It is not a theory but a fact that capital which once went into the development of old industries and the creation of new ones, has gone into hiding because of fear of what Government may do

It is not a theory but a fact that as industry languishes, employment declines.

It is not a theory but a fact, apparent to anyone who has studied the course of industry and labor during the past decade, that the experiments of Government upon industry have made a bad situation infinitely worse.

Through those experiments we have seen saddled upon industry and labor a burden of Government taxes and debt which must be reckoned with by present and future generations.

None of the things that have been accomplished by labor and management in the past has been simple or easy. The men who developed the industries in this country, who created our railroads, who gave us the automobile and the electric motor, had each their difficulties and their heartaches before they won through to achievement.

Where Government has failed, labor and industry can succeed, today, just as they did in the past, in spite of every handicap that Government may place in the way.

The first responsibility of labor and management is to remove the handicaps under which they are laboring. After all, the basis of the American Government is that Government is the servant and not the master of the citizen. It is for the executives of industry today to be as brave and determined as their fathers before them. They have the facilities and the knowledge to chart a path back to the industrial policies which have made this Nation great. They have the power to tell the public and the politician that only through free labor and free management can national progress ever be resumed.

Labor has done and is doing its part to drive the lesson home. Management has an obligation to devote itself to the solution of the employment crisis which is stagnating progress and pay rolls.

There is still time for industry to act. America has always shown recuperative powers that have amazed the world. After every depression America has come back to higher levels of employment and prosperity.

America can do it again if labor and management, each in its own field, measures up to the dignity and the importance of its responsibility to the Nation.

"The Menace of Idle Dollars"

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1940

Mr. HOFFMAN. Mr. Speaker, that outside of Washington the people generally, and especially the editors of the smaller dailies, know what is happening to us is evidenced from the following editorial from the Sturgis Daily Journal, Sturgis, Mich., of April 27, 1940:

[From the Sturgis (Mich.) Daily Journal of April 27 1940]

THE MENACE OF IDLE DOLLARS

Concern of the Federal Reserve Board over the unprecedented amount of idle bank funds in the United States is symptomatic of what ails this country. There is no mystery about it. It does not require anything more than an elementary understanding of the habits of money to figure out why there is now $6,000,000,000 lying idle in banks while business hunts the cyclone cellar.

The money is idle because there is no place that its owners can invest it safely under the conditions that the Roosevelt administration has created. No man today with a few thousand or a few million dollars has any incentive to invest it in a new enterprise or to expand an old one. He knows that if his enterprise should succeed the Government will take all the gravy and if he loses he takes the loss.

Men who could and would give employment to hundreds of thousands of workers by using their idle money or borrowing it from the banks have learned from bitter experience that they can expect no return commensurate with the risk. To a new dealer a businessman is a bum. It's heads I win and tails you lose.

The banks of this country have on deposit six thousand million dollars that they would be only too glad to loan to any responsible businessman or corporation for job-making enterprises. Instead the money lies inert and unproductive, an appalling symbol of governmental folly.

Every one of those six thousand million idle dollars is a potential threat to the economic security of this Nation. Every dollar could be used by an irresponsible Government to create a credit inflation of eight times its normal value. One shudders to think of what a credit expansion of $48,000,000,000 would do to the integrity of the American dollar.

The incomprehensible thing about this deplorable situation is the attitude of Congress. Congressmen and Senators are assumed to have better than average intelligence and they should have a pretty fair idea of what makes the wheels of industry go round. Yet they persist in harassing industry by impossible restrictions and refuse to remove the shackles that now impede free enterprise.

Abolish the N. L. R. B., amend the Wagner Labor Relations Act on a fair basis, modify the detrimental restrictions of the wage and hour law, and watch those idle dollars come out of hiding.

Every dollar spent on a privately initiated enterprise is worth a hundred spent on futile relief.

If this administration will cease its senseless, vicious attacks on business; if it will muzzle some of the administrative agencies which are seeking to destroy private business; if it will abolish the N. L. R. B.; amend the wage-hour law so as to make it fair and reasonable; do the same with the N. L. R. A. and give business not only a breathing spell but time to recover, we will be on our road toward a solution of the unemployment problem.

Wage-Hour Law

EXTENSION OF REMARKS
OF
HON. MARY T. NORTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1940

EDITORIALS FROM THE WASHINGTON POST AND WASHINGTON STAR

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two editorials, one from the Washington Post and one from the Washington Star:

[From the Washington Post]

CONFUSED PROCEDURE

Three bills are now before the House carrying amendments to the Wage and Hour Act—the Norton bill, the Ramspeck bill, and the Barden bill. The extraordinary procedure by which the latter, the most controversial of the three measures, was brought to the floor of the House precipitated a heated debate on Thursday in which little attention was paid to the merits of the proposal.

Representative COX, of Georgia, who is leading the fight for the Barden bill, made no secret of his hostility to the regulatory principle of the Wage and Hour Act. "I cannot conceive of a worse mistake," he said, "than the thrusting of Federal power into the activities of the people as is done by this law. You seek to regiment, you seek to regulate, a relationship that should forever be kept free."

Admitting that he was opposed to any law setting a uniform wage scale for the entire country, Mr. COX charged that the businessmen of the industrial East were responsible for enactment of the law because they hoped it would kill off competition from the South and West.

Of course, there is more than a modicum of truth in charges that sectional self-interest played a large part in saddling the country with the rigid minimum-wage provisions of the present act. But that does not justify amendments instigated by other selfish sectional interests to exempt from the act large groups of low-paid workers in need of protection against exploitation.

Mr. COX is obviously not interested in making the wage and hour law more workable, with a view to eventual achievement of its major objectives of raising living standards and improving working conditions in the South as elsewhere. In advocating the Barden bill he is espousing discriminatory exemptions from the provisions of the wage and hour law, and, judging from the sweeping character of his attack upon the law, he regards the Barden bill as an entering wedge which may open the way for further extensive exemptions.

It is evident that no constructive, well-balanced plan for revising the wage and hour law can possibly emerge from the present confusion. The House has its choice of three revisionist bills, and it may amend at will any one of the three in any way it chooses. Not one of these bills undertakes to do a thorough job of overhauling the existing law and it is virtually certain that any attempt to amend them from the floor will only introduce fresh complications.

Under the circumstances President Roosevelt's appeal for postponement of plans for amendment to next year should be heeded. By that time, as he says, "we shall know a great deal more about the subject." Meanwhile the Wage and Hour Division will have had opportunity to strengthen its administrative machinery and should be in position to offer good advice as to how to make the law more practical and easier of enforcement.

[From the Washington Star of April 28, 1940]

WAGE-HOUR LAW

The wage-hour law is not perfect, but its main objectives are sound, and the House should weigh carefully the various amendments that will be offered before the pending battle for revision ends.

In this complex economic era, with millions still unemployed and new labor-saving devices speeding up the output of factories, the Wage-Hour Act offers hope of spreading employment by shortening hours and of raising the buying power of the lowest-paid workers by fixing reasonable minimum-wage rates.

It is not surprising that its wide application to industries engaged in interstate commerce should lead to early demands for changes in the act, and there can be no doubt that some of these changes are logical and desirable.

For example, the basic purpose of the act would not suffer if white-collar workers, earning $150 or $200 a month, were exempted, as proposed by some of the amendments.

On the other hand, there does not appear to be any real justification for singling out the processing of agricultural products and exempting hundreds of thousands of workers in such plants from both the wage and hour standards, as proposed in one of the pending bills. It is estimated that this step would exclude more than 1,950,000 persons from the benefits of wage-hour standards.

As the law now stands, these agricultural operations are exempt in the "area of production," and it may be that this definition needs some clarification. The House Labor Committee has made a concession in that direction by proposing partial exemption from regulation of hours for 16 operations not performed on the farm, but a drive is on in the House to take these occupations out from under both wage and hour limits. Supporters of the law have good grounds for fighting this proposal which goes far beyond the clarifying stage.

Some farm groups are said to favor this complete exemption on the theory that if the law increases processing costs it will add to the farmer's marketing costs. Even if this is true, it is taking a narrow view of the economic problem confronting the country today. Unless the buying power of the millions of low-paid workers and the unemployed is restored the farmer will not find a market for his crops. And if one large field of processing is excluded it may be difficult for Congress to resist demands for similar treatment of other industries.

Wage-hour regulation, like any new venture in Federal control, could be carried too far, but the present standards of 30 cents an hour and a 42-hour week are not drastic if applied with reasonable provision for unusual situations.

In Order To Have Food People Must Have Waterways

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

Mr. MANSFIELD. Mr. Speaker, in her article of April 29 Miss Dorothy Thompson says:

The Danube is a river of destiny. Once it rose in Austria, almost at the Swiss border. Now its source is German. It flows through Germany, Hungary, Yugoslavia, then forms the border between Rumania and Bulgaria, until it empties into the Black Sea in Rumania again.

From Rumania Eugene Kovacs, of the New York Times, writes in the Washington Post of April 29:

The Germans today dominate the Danube.

Along the whole length of the river from Sulina to Turnu Severin, that is to say, from the Black Sea to the frontier of the Rumanian Danube, the German colors predominate. With few exceptions, all the international traffic is German. The Danubian ports are packed with German tugs, barges, and tankers, and German agents fill the harbors. And they not only dominate the business traffic in Galatz, Braila, and Turnu Severin but keep watch on the security of the river.

The French colors have totally disappeared from this international artery.

* * * * * * *

The British still keep their merchant fleet on the Danube but only in the ports of Macin and Ghecet and these boats, with the exception of those which took part in the unfortunate excursion at Giurgiu and were forced to return, are idle and will probably remain so.

Braila is the center of the cereal trade, and since the ban on exports of barley, oats, and wheat, trading has fallen almost entirely on corn. The Germans, however, do not buy this commodity, most of which is shipped to Italy. For the time being the wheat the Germans bought on contracts which are allowed to be filled is still being loaded in this port as well as soybeans and sunflower and other vegetable-oil seeds.

Some seven German firms control almost all the traffic and the German consul is extremely busy. Galatz, only half an hour away by train, is the timber center. The goods on the Danube are all going to Germany. Larger transactions are only held up through the shortage of rail cars.

This is no time to suffocate our waterways with restrictive legislation such as the Wheeler-Lea railroad bill.

Norton-Ramspeck-Barden Bills

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1940

Mr. SABATH. Mr. Speaker, I ask unanimous consent to insert a few of thousands of letters and telegrams that I have received protesting against the emasculation of the Fair Labor Standards Act. These communications refute the statements of the advocates of the Barden bill that that measure aims to aid agriculture. The fact is that agriculture is not affected and Members from agricultural districts are being misled by these false representations. The underlying reasons of those pressing for the passage of the Barden bill is to exempt from the operation of the Fair Labor Standards Act the unorganized and poorly paid wage earners. Organized labor is able to protect itself from unfair employers, and it is in the interest of those workers who are not organized that I take this opportunity of inserting these letters, telegrams, and statements which uphold the fairness and justness of the present act, which has established a minimum-wage floor level, and surely a sufficient time should be allowed to prove the operation of the act before amendments to exempt certain working groups are considered:

I insert a letter from the National Consumers League, signed by its general secretary, Mary Dublin, and by nearly 600 of its members:

NATIONAL CONSUMERS LEAGUE,
New York, N. Y., April 24, 1940.

DEAR REPRESENTATIVE SABATH: The undersigned 750 men and women, well known in public life, are convinced that passage of the Barden bill to amend the Fair Labor Standards Act would emasculate a law which has rescued hundreds of thousands of defenseless wage earners from hunger and want.

The act would be a mere sham, were it to be amended to apply only to those workers who already receive more than the wage rates prescribed by the act. Yet that is what the Barden bill proposes to do in exempting over 1,000,000 workers most in need of its coverage. These men and women in the lowest-paid industries in the country can in no sense be called agricultural workers. It was to protect just such employees as these that the act was passed, and there is no reason in having the law unless it applies to those most in need.

We believe the Barden bill would seriously injure the farmer. By returning over a million workers to starvation-wage levels, the farmer would be deprived of an essential market for his products.

In subjecting them to unfair competition, the measure is equally injurious to the interest of all employers who today maintain fair standards. Further, it would discriminate against many employers engaged in businesses similar to those the bill exempts. For example: Canning establishments engaged exclusively in canning fresh fruits and vegetables have a complete wage exemption, but canneries which can fresh fruits and vegetables and also can "dry lines," such as pork and beans and soup, receive no wage exemptions.

The Barden bill runs counter to consumer interest. In the food-processing industries even a 25-percent rise in wages above the present level set by the act would not add 2 cents on the dollar in costs to the consumer. Fair wages will not add to food costs. On the other hand, unfair wages cast immense burdens upon the community. In the words of Supreme Court Justice Hughes: "What these workers lose in wages the taxpayers are called upon to pay. The bare cost of living must be met. * * * The community is not bound to provide what is in effect a subsidy for unconscionable employers. The community may direct its law-making power to correct the abuse which springs from their selfish disregard of the public interest."

In the interest of health, decency, and fair play we urge you to vote against the Barden bill. Give the Fair Labor Standards Act a

chance to prove itself that hundreds of thousands of pitifully underpaid workers may have an opportunity to earn at least the meager living the act assures.

Respectfully yours,

Cleary Dublin, general secretary; Dr. Harold Aaron, New York City; Etheldred, Abbot, Illinois; Charlotte E. Abbott, Nebraska; Mrs. Paul Abelson, New York City; George A. Ackerly, Washington, D. C.; M. W. Ackerson, Jr., Pennsylvania; Adeline E. Ackley, Connecticut; Dr. Thomas Addis, California; Mary V. Alexander, New York; Elizabeth C. Alling, Illinois; Mrs. Frederick S. Zwemer, New Jersey.

Mr. Speaker, I next insert a letter and accompanying statement received from Nina P. Collier, secretary, the Emergency Committee for Preserving the Fair Labor Standards Act:

THE EMERGENCY COMMITTEE FOR PRESERVING
THE FAIR LABOR STANDARDS ACT,
Washington, D. C., July 17, 1939.

The Honorable ADOLPH J. SABATH,
House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN SABATH: The Emergency Committee for Preserving the Fair Labor Standards Act was formed to voice the sentiment of a substantial number of the American people represented by a wide range of church, consumer, and labor groups. This committee is opposed to any change in the Fair Labor Standards Act at this session of Congress. A statement of the committee's purpose is enclosed.

There has been brought to our attention the possibility of the consideration by the House Rules Committee of proposals to amend the act before the adjournment of Congress.

Our committee respectfully begs the House Rules Committee to grant us a hearing if any consideration is given to this rule.

The importance of a public hearing on this act cannot be overestimated.

Cordially yours,

NINA P. COLLIER, *Secretary.*

THE EMERGENCY COMMITTEE FOR PRESERVING
THE FAIR LABOR STANDARDS ACT,
Washington, D. C.

STATEMENT OF PURPOSE

This committee, representing church groups, consumer groups, labor organizations, and other public-spirited groups and organizations, has come into being to help organize effective resistance to a concerted attempt of the original enemies of the Fair Labor Standards Act to destroy the act, under pretense of intention to improve and strengthen it.

Recent developments and current legislative maneuvers leave no room for doubt that the old enemies of the Wage and Hour Act are determined, if at all possible, to scuttle this act, and ruin it now before it has had even the beginning of an opportunity to prove its practicability and its economic worth.

The same powerful lobbyists who continuously fought the bill before its enactment into law last year are now seeking to make new alliances and obtain support in attempting, under the guise of "clarifying" amendments, to exclude members of sweated industries, and to destroy the very foundations of the act.

The Administrator of the Fair Labor Standards Act has publicly stated, "It is now clear that the high-priced lobbyists are not going to let any clarifying amendments go through the Congress unless these amendments carry along with them the emasculating exemptions which they seek for the special groups they represent."

The Secretary of Agriculture has also pointed out the harmful character of the amendments advocated by representatives of the large agricultural processors and industrial employers.

This emergency committee, in view of the present legislative situation, is unqualifiedly opposed to the consideration of any amendment to this act in this session of Congress.

These same groups have also proposed a resolution for a special investigation of the Wage and Hour Administration, intending by that device to force a reopening of the act, to create an opportunity to undo this legislation, which was won last year only after years of struggle.

All available forces for the support of this law must be reorganized for its defense now. It may require as much force to defend the act as it required last year to pass it.

The victory achieved last year is lost unless this law is effectively protected now. This committee, in taking this stand, believes that it represents the true sentiment of the vast majority of the voting population of the country.

Nina P. Collier, National League of Women Shoppers, secretary; Father R. A. McGowan, National Catholic Welfare Council; Bishop Francis J. McConnell; Rabbi Barnett Brinckner; Elizabeth Christman, National Women's Trade Union League; W. D. Johnson, Railway Labor Executives Association; Gardner Jackson, Labor's Non-Partisan League; James McNamara, Hotel and Restaurant Employees International Alliance (American Federation of Labor); Donald Henderson, United Cannery, Agricultural, Packing, and Allied Workers (Congress of Industrial Organizations), Charles H. Chase, American Association for Economic Freedom; Daniel Driesen, American Communications Association (Congress of Industrial Organizations); John P. Davis, National Negro Congress; Marion Bachrach, Washington Commonwealth Federation; Mildred Riemer, American League for Peace and Democracy; Leo Goodman, United Shoe Workers of America (Congress of Industrial Organizations); John J. Abt, Congress of Industrial Organizations Wage-Hour Bureau.

An organization of agricultural workers, who have studied the proposed legislation, have wired me as follows:

WASHINGTON, D. C., *July 24, 1939.*

Hon. ADOLPH SABATH,
Chairman, House Office Building, Washington, D. C.:

Urge your leadership in opposing all amendments to wage and hour bill.

MAGDALENA GALE,
Secretary, Agricultural Local, No. 2, United Federal Workers of America.

Omnibus Transportation Bill

EXTENSION OF REMARKS
OF
HON. ROBERT CROSSER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1940

Mr. CROSSER. Mr. Speaker, at the time the conference report on the omnibus transportation bill, S. 2009, was being prepared, it was held that the rules of the House do not permit a minority report or an additional statement in regard to the bill by a member of the conference committee. I therefore stated that I intended to make an additional statement in the House in regard to the conference decision which would appear in the CONGRESSIONAL RECORD.

The following is the matter to which I refer:

ADDITIONAL STATEMENT BY MR. CROSSER

Considering as a whole the bill as submitted by the conferees, I have decided to sign the conference report.

I do, however, express disappointment at the elimination of section 8, relating to consolidations, and so forth, which I felt was helpful to the general public interest and to the welfare of employees.

War Debts Resolution

EXTENSION OF REMARKS
OF
HON. MARTIN L. SWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1940

RESOLUTION BY THE UNITED IRISH-AMERICAN SOCIETIES OF NEW YORK

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the United Irish-American Societies of New York, at a meeting held at Eighty-sixth Street Garden on Wednesday evening, April 24, 1940:

Whereas a joint resolution has been introduced in Congress—in the Senate by Senator ROBERT R. REYNOLDS, of North Carolina, and in the House by Representative JENNINGS RANDOLPH, of West Virginia—requesting and empowering the President of the United States to enter into negotiations with the British Government for the acquisition of certain British possessions in the Caribbean and Central America for the purpose of national defense, in part payment of the debts which Britain owes to the people of the United States; and

Whereas it is the established business practice for a debtor who cannot pay his indebtedness in cash to turn over real estate or other property in settlement of the claims against him; and

Whereas it is unfair and unjust to impose steadily increasing tax burdens on the people of this country while nations in debt to the United States are allowed to evade their solemn obligations; therefore, be it

Resolved, That we, delegates to the United Irish-American Societies of New York, acting as American citizens whose interests, like those of millions of other Americans, are affected by those unpaid debts, wholeheartedly endorse the joint resolution introduced by Senator REYNOLDS and Representative RANDOLPH and appeal to Members of both Houses of Congress to support the proposition, in justice to their constituents; and we recommend and urge that a similar demand be made on other debtor nations that have possessions on the American continent, the acquisition of which would increase facilities for this country's defense.

Thomas S. McMillan

MEMORIAL ADDRESS
OF
HON. BUTLER B. HARE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. THOMAS S. MCMILLAN, late a Representative from the State of South Carolina

Mr. HARE. Mr. Speaker, I know of no man in public life who led a busier or more active life than that of my lamented colleague the Honorable THOMAS S. MCMILLAN. From the days of his early boyhood to the time of his death he was enthusiastically active in every undertaking whether it be in recreation or at work. He was born near the little town of Ulmers, S. C., November 27, 1888, being the son of James C. and Mary K. McMillan. The first 6 years of his school days he and his twin brother, the Honorable John B. McMillan, walked daily during the school term to Hickory Hill, a one-teacher rural school, a distance of 3 miles from their home. During 1902 and 1903 they attended the grammar school at Ulmers, which was also about 3 miles from their home. From 1904 to 1907 they attended the Orangeburg Collegiate Institute at Orangeburg, S. C., a coeducational institution with a curriculum corresponding to that of the present-day high school. During the scholastic year of 1908–9 THOMAS S. MCMILLAN taught school at Perry, S. C., and entered the State University at Columbia, S. C., in the fall of 1909, where he received his A. B. degree in 1912.

While at the university he was active in athletics and took a leading part in literary society work. On two or more occasions he was elected by the student body as the best all-round man in the university, and the most popular student. Prior to and following his graduation he played professional baseball during the summer months, where he earned sufficient funds to meet expenses in both his academic and law courses at the university. He received his LL. B. degree in 1913, and opened an office at Charleston, S. C., the following year, with James B. Heyward, under the name of McMillan & Heyward. In 1916, at the age of 27, he was elected to the House of Representatives of the State legislature from Charleston County, where he served until 1924, when he was elected to Congress from the First Congressional District of South Carolina, which he served continuously until his death, September 29, 1939. He served as Speaker pro tempore in the State legislature from 1921 to 1923, when he was elected Speaker, being the youngest member ever to serve a full term as Speaker.

He and his twin brother were not only alike in appearance, size, and action, but were quite similar in their likes and dislikes, and were boon companions up to the completion of their high-school work. They were both outstanding young men in every activity, and the success that followed both can be ascribed to their honesty, hard work, square dealing, and right living.

Mr. MCMILLAN and I were elected to Congress in 1924. We came here together, and, as we represented adjoining districts, with similar problems, we soon developed a very close friendship. He possessed a most congenial disposition, was enthusiastic in any undertaking, and could be relied upon in any contingency. He had a positive and highly cultured conception of his obligations to his family and fellow man, and was always ready, willing, and glad to assist a friend or neighbor at any time and under any circumstance.

His success as a Member of Congress is a matter of record and is one to which any Member could point with pride, for very few, if any, was more rapidly promoted in the minds and affections of his friends and colleagues. At the beginning of his services he was assigned to the Committee on the Post Office and Post Roads, later to the Committee on Rules, and finally was assigned to the Appropriations Committee, where, within a short time, he became chairman of the subcommittee handling appropriations for the Departments of State, Justice, and Commerce. It was here that he had an opportunity to demonstrate his ability and those diplomatic qualities and virtues that made him a most useful and successful Member of Congress, and where he was able to demonstrate those virtues that made him universally admired by members of both political parties.

Mr. MCMILLAN was a man of many parts. He inherited and developed the cardinal virtues from his youth up. He was always honest, sincere, and courageous in the discharge of his studied convictions. He was clean in his personal life and adhered to a sound political philosophy in which he demonstrated frankness, fairness, and unusual political integrity. In his private and public life he demonstrated those virtues worthy of emulation by anyone who is ambitious to be of service to his fellow man and his country.

Chester C. Bolton

MEMORIAL ADDRESS
OF
HON. GEORGE P. DARROW
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. CHESTER C. BOLTON, late a Representative from the State of Ohio

Mr. DARROW. Mr. Speaker, our departed friend and colleague, CHESTER C. BOLTON, during the 10 years of his service in Congress attained a position of vast influence, and by his recognized ability, his fine moral character, and his genius for friendship, won a permanent place in the affection and mem-

ory of his colleagues. His unselfish devotion to duty, sincerity of purpose, as well as undying loyalty to each and every cause he espoused, established for him a high place among our country's statesmen.

I mourn his loss sincerely, but, with his family and friends, console myself with the reflection that his labors have not been in vain. He has left a record worthy of any man.

Sleep on, dear friend, such lives as thine
Have not been lived in vain,
But shed an influence rare, divine,
On lives that still remain.

Chester C. Bolton

MEMORIAL ADDRESS
OF
HON. MARTIN L. SWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. CHESTER C. BOLTON, late a Representative from the State of Ohio

Mr. SWEENEY. Mr. Speaker, I join with my colleagues on this memorable occasion in paying tribute to the memory of a fellow Member of Congress from an adjoining district in the State of Ohio. Though of opposite political faith, I considered him as a friend long before he was honored with the responsibility of representing the Twenty-second Congressional District of Ohio.

If I were to single out any one attribute in his character, I would designate kindness as the outstanding quality that drew to him so many friends and admirers. Reared in an atmosphere of culture and refinement, possessed of the world's goods as measured in a material sense, there was nothing of the aristocrat in the life and character of our friend. Lavishly he scattered his beneficences among the lowly and needy of society in an effort to improve their conditions. Race or color were never considered by him when dispensing charity, and there was no ostentation in the manner of his giving.

I indicated to the House on the occasion of his death that while he would be missed by his splendid family and his host of personal friends, the one group who perhaps would miss him more were the crippled and disabled children of the Nation, who were the principal objective of his bounty.

He served well his native State in the General Assembly of Ohio, and gave untiring of his strength as a Congressman from the Twenty-second District of Ohio. If at times I differed with him on measures under consideration in the Congress, it was because of divergent viewpoints men hold on legislation. Every vote he ever cast on any measure representing the welfare of his country was an honest vote according to his convictions.

I recall distinctly his courageous fight against the hypocrisy of national prohibition. It was my privilege to work with him and labor for the repeal of this hypocritical piece of legislation. The issue of national prohibition transcended all party lines, in my opinion. In the congressional elections of 1932 it was my privilege as a Democrat and believer in tolerance and personal liberty to speak for him and urge his reelection to Congress against an opponent who was advocating national prohibition. The strain of public service has been terrific in the Congress of the United States during the past 10 years. CHESTER C. BOLTON'S loyalty to his official duties caused him to expend his energies to an extent that jeopardized his health, bringing about his untimely death.

One does not measure the value of an individual's worth by longevity, but rather by the accomplishments, even though measured in terms of a few hours or a few years in the span of an ordinary life. Our friend left a legacy in the form of a splendid contribution to his country, his church, and his home. His family and his friends may mourn his passing, but they will find consolation in surveying the record of his humble, sincere devotion to his duties.

John Boyle O'Reilly has epitomized the dominant characteristic of our friend, CHESTER C. BOLTON, in his beautiful poem entitled:

WHAT IS GOOD?

What is the real good?
I asked in musing mood.
Order, said the law court;
Knowledge, said the school;
Truth, said the wise man;
Pleasure, said the fool;
Love, said the maiden;
Beauty, said the page;
Freedom, said the dreamer;
Home, said the sage;
Fame, said the soldier;
Equity, the seer

Spake my heart full sadly.
"The answer is not here."

Then within my bosom
Softly this I heard:
"Each heart holds the secret;
Kindness is the word."

Carl E. Mapes

MEMORIAL ADDRESS
OF
HON. LUTHER A. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. CARL E. MAPES, late a Representative from the State of Michigan

Mr. LUTHER A. JOHNSON. Mr. Speaker, when the present session of Congress convened in January, there was missing at the Republican leadership table in this Chamber one of the outstanding Members of the House, the Honorable CARL E. MAPES.

On December 12 last, while in New Orleans, serving in his official capacity as a member of a committee of this House, he was suddenly stricken and passed away before his loved ones could reach him.

I was greatly shocked and deeply grieved when I heard over the radio the announcement of his death, for during the more than 16 years of service I had with him in the House, while we belonged to different parties, I had formed a deep attachment and affectionate regard for him.

During his service here he had always been one of the leaders of his party; and while he was active and diligent in the discharge of his duty, he was always kind, courteous, and considerate of the rights of others.

He was splendidly well-poised, of judicial temperament, and in frequent debates in the House, when feeling was running high, he was always calm, self-possessed, and never displayed the slightest anger or animosity against those who opposed him. He was an able parliamentarian, possessed a keen, logical, and analytical mind, and was always fair and a perfect gentleman in his deportment. I have often commented upon his calm and the sedate manner in which he dealt with difficult problems under the most trying circumstances.

He was never known to take any unfair advantage or make demagogic appeals, but discussed all questions, both of parliamentary procedure and of legislation, upon the highest intellectual plane.

He possessed the confidence, esteem, and affection of the entire membership of the House, and his party, his country, and his friends miss his wise counsel and leadership.

He was devoted to his wife and children.

I knew him intimately and well, and his passing is to me a distinct personal loss.

William Albert Ashbrook

MEMORIAL ADDRESS
OF
HON. LUTHER A. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. WILLIAM ALBERT ASHBROOK, late a Representative from the State of Ohio

Mr. LUTHER A. JOHNSON. Mr. Speaker, death took 18 Members of the House during the year just past, and on this roll are the names of many who had served for many years and whose presence and service here will be missed by their colleagues. Among these, none will be more sadly missed than the Honorable WILLIAM A. ASHBROOK, of Ohio.

We occupied adjoining offices in the House Office Building, he was my neighbor and friend and I had an affectionate regard for him.

His district, his State, and Nation will miss his wise counsel and able leadership as a national legislator. He was capable, courageous, honest, sincere, and earnest in the performance of his duties, and I wish to pay this brief tribute and express my personal sympathy and sorrow at his passing.

John Andrew Martin

MEMORIAL ADDRESS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. JOHN ANDREW MARTIN, late a Representative from the State of Colorado

Mr. COFFEE of Washington. Mr. Speaker, in the tragic passing of the late JOHN MARTIN, Colorado lost a great and distinguished son, this body a statesman of profound attainments, and the United States of America a legislator of sound liberalism and a warm heart.

It was always a glorious sight to see the silver-haired JOHN MARTIN standing in the Well of the House courageously championing the rights of minorities, of the worker, of the farmer, of the underprivileged—always with good humor, his speeches ever marked with chuckles and a pleasant manner. We miss him in this body. We need him here now. His record is an inspiration to those of us who follow after him.

In the liberal bloc of this House, JOHN MARTIN took an active part. His counsels were always welcome and valuable. His advice sprang from a life of public service and of varied contacts. He was a man of industry, of engaging personality, of infectious charm.

Mr. Speaker, I feel a deep sense of sorrow in the death of JOHN MARTIN. Often I have thought how much I would like to have advised the citizens of his home city of Pueblo of the high regard entertained for JOHN MARTIN by his colleagues here of all political parties. No matter how pointed were his attacks upon political adversaries, the sting was not a personal one, because the javelins of satire and criticism with which his speeches were replete were always barbed with good humor.

JOHN MARTIN, you have gone to your eternal abode, but your spirit lingers with us. You have tossed the torch to us. We hope to continue for a time, God willing, as evangels of that new day and new order which will bring decorum out of chaos, equity out of injustice, and provide opportunity for all in this land we love so much. You have carved your name in our hearts and minds. You have made an indelible contribution to legislation. Your work will endure.

Mr. Speaker, one of the saddest features of one's service in this great legislative body is the time when a colleague, by the stroke of an inscrutable destiny, is removed from our "clubby" midst. The handclasp which once gladdened our day is no more, and we know that the eyes which once lighted when they saw us are dimmed in death's depressing pose. The mind which illumined and inspired is sequestered in the sepulcher—yet the memory of the fellowship and of the statesmanship lingers with us throughout the years. We are the product of the cumulative inspiration given to us by our fellows. I know that my life has been brightened and my lot made easier because of intimate contacts and genial fellowship with a grand and great Congressman such as indubitably was the late JOHN ANDREW MARTIN.

Chester C. Bolton

MEMORIAL ADDRESS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. CHESTER C. BOLTON, late a Representative from the State of Ohio

Mr. MICHENER. Mr. Speaker, when CHESTER C. BOLTON answered the final summons, the House of Representatives lost one of its most beloved and influential Members. Mr. BOLTON had a definite place in public life and as a businessman in his own State of Ohio before he ever came to the House. His outstanding service in the War Department during the World War, and in the readjustment months that followed, gave him a national acquaintance and standing enjoyed by few.

On this memorial occasion others have discussed in detail his accomplishments. Born in his home city of Cleveland, he came from pioneer stock. His ancestors had much to do with the building of that great city, and Mr. BOLTON creditably carried on. A man of integrity, wealth, education, refinement, ability and industry, he used well the talents he had. To CHESTER BOLTON wealth was valuable only as it could be used to do good for others. He was in public life because he was a patriot and was willing to contribute of his time and his means to make this country better. No man among us was more gentle, more courageous, or more democratic. He liked people and, in turn, people liked him. His very character inspired confidence in everyone. It was a joy to meet him and many a dark day has been made just a little brighter by his cheery presence and association.

Possibly no man in the Congress was more familiar with our Military Establishment and the workings of the War Department. Mr. BOLTON specialized along this line and those who knew him best felt assured that in time he would be our Secretary of War. Politically he was a Republican and few men in his generation did more for the advancement of his party and the things for which it stands. As chairman of the Republican congressional committee, he was an indefatigable worker. As a member of the Appropriations and other committees of the House, the length of the day depended entirely upon the work to be done. He was effective in debate. He was a dynamic figure in any task he undertook. He was a leader who inspired. He has left a splendid heritage to a splendid family and their loss is the Nation's loss.

Cassius C. Dowell

MEMORIAL ADDRESS
OF
HON. GEORGE P. DARROW
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. CASSIUS C. DOWELL, late a Representative from the State of Iowa

Mr. DARROW. Mr. Speaker, our good friend and colleague, CASSIUS DOWELL, answered the final roll call on February 4, 1940. His death was a personal loss to me. We had been closely associated for many years, having started our congressional service at the same time in 1915 as Members of the Sixty-fourth Congress. I knew him intimately, and was proud to have enjoyed his friendship and to have worked with him.

Mr. DOWELL was a sincere and conscientious legislator and public servant. His judgment was keen and dependable, and he was zealous in the interests of his constituency. He was among the most regular attendants of sessions of the House and took an active part in its proceedings, being well versed in parliamentary procedure and an able debater.

I deeply mourn the loss of a close friend.

Thomas S. McMillan

MEMORIAL ADDRESS
OF
HON. LUTHER A. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. THOMAS S. MCMILLAN, late a Representative from the State of South Carolina

Mr. LUTHER A. JOHNSON. Mr. Speaker, in the passing of TOM S. MCMILLAN the House lost one of its most popular and most beloved Members.

During his entire membership in the House I had the pleasure and the privilege of serving with him, and through frequent contacts and association with him learned to know him intimately and well.

In September 1937 we were both delegates to the Interparliamentary Union in Paris, France, and he and I were traveling companions, and this afforded me opportunity of becoming even better acquainted with him than I had been before.

I recall an incident on this trip which demonstrated his deep affection and loyalty to his boys. After he reached Paris, opportunity was afforded him of making an extensive trip in Europe, with other members of the delegation, and while he very much desired to avail himself of this wonderful opportunity, and others insisted that he do so, he declined the invitation because he had promised to return home in time to take his boys on a summer vacation fishing trip, and he said that this was his first duty and greatest pleasure, to be with his boys, and he promptly returned home to keep this engagement. This was typical of TOM MCMILLAN, for his loyalty and devotion to his friends was second only to his love and devotion to his wife and children.

He had a big heart, a sympathetic and understanding nature, and a winsome and pleasing personality that drew men to him, and it is not strange, therefore, that he had such a large number of friends, and his influence in the House was most potent.

He was capable, courageous, and with a fund of common sense, so essential in the discharge of the duties of a national legislator. It is not surprising that he took such high rank as a Member of this House, and that his passing caused such universal grief upon both sides of the aisle.

His district, the State of South Carolina, and the Nation lost an able and distinguished legislator when he passed away.

I was one of those who loved him, and shall miss him, and shall forever cherish the memory of my friendship and association with him.

Carl E. Mapes

MEMORIAL ADDRESS
OF
HON. GEORGE P. DARROW
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. CARL E. MAPES, late a Representative from the State of Michigan

Mr. DARROW. Mr. Speaker, when the soul of CARL E. MAPES took its flight and passed on to its reward a useful life came to a close. His passing was most unexpected and spread deepest gloom among his friends and colleagues, who loved him for his deeds of kindness and achievements.

CARL MAPES was a hard-working and painstaking legislator with a mind that was keen and alert. He had the indomitable quality of courage and a skillful, fair, and convincing manner in presenting arguments. He had unbounded energy and was never happier than when engaged in some task which required close and earnest attention.

When I came to Congress in 1915, Mr. MAPES was entering his second term. During the long period of our association there developed a close personal friendship between us. I valued his opinions and counsel, respected his sincerity, and regarded him as an outstanding statesman and public servant.

He is gone, but his memory liveth;
He is dead, but his example is here;
The sweetness and fragrance it giveth,
Will linger for many a year.

Samuel D. McReynolds

MEMORIAL ADDRESS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. SAMUEL D. MCREYNOLDS, late a Representative from the State of Tennessee

Mrs. ROGERS of Massachusetts. Mr. Speaker, many touching and eloquent tributes have been paid to the memory of the late SAM D. MCREYNOLDS, who was chairman of the Committee on Foreign Affairs of this House, and I wish to speak of my own deep feeling of sorrow at the passing of this true friend. Those of us who served with him upon this great committee knew so well of his great devotion to the cause of peace, his untiring efforts to keep our country neutral in a world bent upon strife. A most unselfish man, he looked upon his congressional duties as a public trust. I shall always remember his patriotic, unselfish decision in declining to run for the United States Senate at the time the Committee on Foreign Affairs was considering neutrality legislation, and when his experience and leadership was so badly needed. It was typical of the man to sacrifice personal ambition to what he considered his duty. His passing was a great personal loss to all of us who knew him and worked with him. Our country can ill afford to lose the services of a man so fine and so patriotic as was Judge MCREYNOLDS.

William I. Sirovich

MEMORIAL ADDRESS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of Hon. WILLIAM I. SIROVICH, late a Representative from the State of New York

Mr. COFFEE of Washington. Mr. Speaker, the tragic passing of the brilliant Dr. WILLIAM I. SIROVICH was a poignant blow to me. I enjoyed immensely his friendship, the inspiration of his scholarship, his unfailing liberalism, his courageous championship of dissident minorities, and his unalloyed statesmanship.

On frequent occasions he would give me the benefit of his considered counsel on matters of pending legislation. In my first term in this House he rendered me invaluable aid in connection with my official duties. His thorough familiarity with the classics never failed to thrill me, as revealed in the speeches he made on the House floor. I was always inspired and filled with awe by the erudition with which his orations were studded. Dr. SIROVICH possessed a marvelous grasp of science, literature, the drama, history, sociology, medicine. He was conversant with the discoveries of the past; he was alert to the lesson of the centuries. He was keenly attuned to the contributions made by bygone ages.

His passing created a vacancy hard to fill. He was a colorful figure of pleasing appearance and personality. He was always well dressed, a man of sartorial impeccability, at whom one was proud to point as a Member of Congress of the United States.

We miss him in this body, Mr. Speaker; we need him with us today. And so I say, BILL SIROVICH, your physical presence may no longer be with us, but the work which you have done lives on.

I recall on many occasions, when BILL SIROVICH felt impelled to take up the cudgels for some unpopular cause at the very risk of his life, aware as he was of the impending doom which awaited him as a result of the disease with which he knew only too well he was grievously afflicted. Dr. SIROVICH'S championship of indigent actors and artists was well known. His understanding of their problems was complete. We need more men in this body who are endowed with such versatility, such a warm heart, such unique scholarship as was this remarkable son of New York City.

Civil Aeronautics Authority and Air Safety Board

EXTENSION OF REMARKS

OF

HON. KEY PITTMAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 30 (legislative day of Wednesday, April 24), 1940

ARTICLES, LETTERS, AND TELEGRAMS FROM VARIOUS SOURCES

Mr. PITTMAN. Mr. President, I ask unanimous consent to publish in the Appendix of the RECORD certain publications, telegrams, and letters opposing the fourth reorganization plan because of the transfer of certain functions of the Civil Aeronautics Authority and Safety Board.

These data were presented to me by the secretary of my colleague [Mr. MCCARRAN] who is absent today.

There being no objection, the articles, telegrams, and letters were ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of April 30, 1940]

NOTED PILOTS HERE TO FIGHT SAFETY PERIL—AVIATORS OF 11 AIR LINES LAUNCH "LOBBY TO SAVE LIVES"

(By Edmond Monk)

Convinced that defeat of the Presidential plan to abolish the Air Safety Board and transfer the C. A. A. to the Department of Commerce is vital to the future of American aviation, famous pilots of the Nation moved into the Capital yesterday to confront Congress with a second "lobby to save lives."

From 11 of the Nation's leading air lines came uniformed flyers representing 1,500 pilots. In chorus they voiced their fears that adoption of President Roosevelt's proposal would seriously menace safety of millions of Americans who travel by air.

NEW ATTACK IN SENATE

The first "lobby to save lives," the flyers explained, was partially aimed at setting up the C. A. A. and their Air Safety Board. It is to hold this ground gained that they are here today, they said.

Meanwhile the Senate yesterday echoed with a new attack on the President's proposal as time for a show-down appeared set for late this week.

Senator HARRY TRUMAN, Democrat, of Missouri, told the Senate that adoption of the proposal of the President would result in a serious blow to aviation; he praised the record of the two agencies. He cited particularly the record of no fatal accidents on air lines for more than a year.

Senator PAT MCCARRAN, Democrat, of Nevada, will arrive in Washington today. A bitter foe of the President's latest reorganization plan, the Nevadan is expected immediately to map lines of battle against the proposal.

M'CARRAN MAPS FIGHT

Senator BENNETT C. CLARK (Democrat), of Missouri, charged that the old Bureau of Air Commerce was saturated with politics which prevented its effective operation in promotion of air safety.

"Under the old system," he said, "United States Senators were killed in air crashes." His reference was believed to be to the death of former Senator Bronson Cutting, of New Mexico, several years ago in an airplane crash.

Representing 1,500 highly trained pilots on American passenger and mail lines, the 11 flyers were unanimously outspoken in protest against the change in status of the Air Safety Board and the C. A. A.

MENACE TO FLYING PUBLIC

Several of the flyers testified at hearings which led to creation of the safety agency and the C. A. A. All said they believed a change as proposed would constitute a step backward and a menace to the air-traveling public.

Today the second "lobby to save lives" will move on Capitol Hill, where a large number of legislators will be contacted by the pilots. The group will also gather with Senator MCCARRAN sometime today.

"I certainly do not think the American public desires a return to the crash-ridden days when the Department of Commerce regulated aeronautics," said Art Mills, veteran pilot of 1,250,000 miles of passenger travel.

WARNS OF TRAGEDY

Representing pilots of the Braniff Airways, flying from the Great Lakes points to the Gulf of Mexico, Mills said:

"If the proposal goes through, we will have a recurrence of the tragic situation which occurred when the air-mail contracts were canceled in 1934 and the Army detailed to fly the mail. Then there were 66 crashes and 12 pilots lost their lives in less than 2 months."

Ray T. Elsmore, Western Air Express pilot with 12,000 hours as a passenger-transport pilot, was equally emphatic in his protest.

EMPHATIC AGAINST CHANGE

Twenty-two years in aviation, a World War flier, and commander of the Three Hundred and Twenty-ninth Observation Squadron, Army Air Reserves, Elsmore said:

"We know of the many fatal accidents under the old Department of Commerce supervision. The present proposal would put the air lines under regulations similar to the former status. Why make a change which statistics and records show would effect a menace to the air-traveling public?"

D. W. Ledbetter, American Airlines, 12 years' experience and 12,500 air hours, and now flying the New York to New Orleans trip:

"Hard facts and statistics prove that it would be impossible to improve on the perfect record for safety that the Civil Aeronautics Authority and the Air Safety Board have brought about in the aviation field. We're not just assuming the efficiency of the Board and the C. A. A. Records prove our case."

H. L. Smith, Pennsylvania Central Airlines, who has 9,000 hours and flies the Washington-Detroit trip, said:

"It represents very definitely a backward movement. It will make air travel more hazardous. I think it would be well to maintain the status quo. The record speaks for itself."

James H. Roe, T. W. A. flyer, with 10,000 hours and who flies the Kansas City-New York trip:

"We pilots are not concerned so much for our own safety, but for the public whose lives are in our hands. Nearly 3,000,000 passengers will be carried by air this year. It is our obvious duty to oppose reorganization plan No. 4."

C. F. Luethi, Northwest Airlines, Naval Reserve aviator, flying the route from Minneapolis to Billings, Mont., 10,000 hours:

EXPANSION ENDANGERED

"I am carrying on for 'Cash' Chamberlain, who was here with the first 'Lobby to Save Lives.' Shortly after creation of the

C. A. A. and the Safety Board—but before their effect could be felt—'Cash' crashed to his death near Miles City, Mont. The need for greatest safety regulation, such as now provided, cannot be overemphasized."

R. C. Young, Eastern Airlines, 9,000 hours, pilot on the New York-Miami trip:

"The air lines now are on the verge of the greatest expansion program yet undertaken as a result of the increase in public confidence. This was brought about through the splendid safety record set up under C. A. A. and A. S. B. regulations. Under the expansion plans many of the giant four-motored planes carrying 42 passengers will be utilized. If we ever needed rigid safety regulation it will be from now on."

"Hi" Little, United Air Lines, 12,000 hours, New York to Chicago pilot: "I was a member of the first 'Lobby to Save Lives.' The results of the legislation we advocated then have been far above our highest hopes."

DEFINITE BACKWARD STEP

G. E. Rodieck, Mid Continent Air Lines, 7,000 hours, who pilots the Tulsa-Minneapolis flight:

"We pilots here in Washington today speak for practically all of the Nation's passenger-line pilots. In the interest of the public's safety we hope to convince Senators and Representatives that Reorganization Plan No. IV represents a definite step backward in aviation."

Gilbert Blackmore, Pan American Airways, former Navy aviator with 9,000 hours of passenger flying, now a pilot of the American Clipper flight from New York to Lisbon, Portugal:

"Preservation of safe conditions is vital to air transportation, especially long-distance flying such as the Clipper transoceanic routes. The C. A. A. and the Air Safety Board have done an excellent job, so why turn backward?"

RECALLS PILOT'S DEATH

S. H. Hopkins, Chicago & Southern Airlines, 6,500 hours, pilot on the New Orleans-to-Chicago passenger hop:

"All pilots of the Chicago & Southern strongly protest against Reorganization Plan No. IV. For the past year it has been a pleasure not to buy funeral flowers for some pilot every 28 days."

[From the Washington Times-Herald of April 30, 1940]

WHY TAKE A CHANCE?

Flying low and blind into heavy weather, a transcontinental transport plane came scudding east into the dawn of May 6, 1935, on the regular run between Albuquerque, N. Mex., and Kansas City, Mo., with 13 people aboard.

It was an hour behind schedule, and the radio was not working very well. Only 30 minutes of gasoline were in the tanks. The pilot finally got through to the weather information service furnished civil aviation by the Federal Government, and was told he would find a clear ceiling at Kirksville, Mo., where there was an emergency landing field.

He put his rudder over and banked through the fog toward where he thought Kirksville was. The left wing snagged a tree, turned the plane into a snarling cartwheel, and hurtled it into a roadbank 16 miles south of Kirksville, which, contrary to what the pilot had been told, was smothered in fog.

Four persons, including the pilot, were killed instantly. One more died shortly thereafter. Eight were badly hurt.

IT TOOK A SENATOR'S DEATH TO ROUSE THE SENATE

There was only one exceptional fact about this crash, for it was otherwise only another in a succession that lasted from 1933 to 1939. The exceptional fact was that the late Senator Bronson Cutting, of New Mexico, had boarded the plane at Albuquerque, and so had died on the roadbank.

Citizens had been petitioning the Congress to do something about civil aviation ever since President Roosevelt, in 1933, had canceled the air-mail contracts and then restored them after a disastrous interlude that nearly wrecked the Army Air Corps. Civil aviation had never really recovered from that episode. But Congress still would not act.

Senator Cutting's death changed all that. Members of Congress came to realize that what had been happening to people whose names meant nothing could also happen to them. The reaction was exactly that of a policeman who sees another policeman shot.

Congressional investigations followed for a year.

AIR BUREAU WAS JUDGE, JURY, AND PROSECUTOR OF ITSELF

It was demonstrated that the Bureau of Air Commerce, in the Department of Commerce, was being saddled with an impossible assignment to make the rules for civil aviation, enforce them, and then punish anybody whose neglect should cause a failure of service. The Bureau was prosecutor, judge, and jury, not merely toward the aviation industry but toward itself as well.

In consequence, it was a subservient creature of the Secretary of Commerce and the complete victim of rascally politics. Civil aviation was teetering into bankruptcy. Public confidence was shattered.

To correct this terrible condition, Congress took control of aviation away from the Department of Commerce and set up an independent agency, the Civil Aeronautics Authority. Within the Authority it provided an Air Safety Board.

The Board had just one duty—to investigate all accidents involving civil aircraft, and publish its findings as to responsibility. It was free to criticize the C. A. A., Congress, the air lines, the pilots, the plane manufacturers—anybody.

The C. A. A. and the Board went into action on August 8, 1938. They made the aviation business stable and successful. On March 27, 1940, the industry could and proudly did celebrate the passing of 1 full year free of disaster. Not a single life had been lost in the air transport business, yet the industry had progressed technically and was fulfilling more schedules at faster speed than ever before.

YOU MAY SAVE LIVES BY SAVING THE C. A. A.

On April 11, 1940, the President's fourth plan for the reorganization of the executive branch of government provided that the independent Civil Aeronautics Authority and the independent Air Safety Board be abolished.

Their functions would be telescoped into the Department of Commerce under control of the Secretary. And the civil aviation business would be right back where it was in 1935 when Senator Cutting was killed.

This reorganization program comes before Congress soon for ratification. There is no merit in the proposal to wreck the C. A. A. It is doing a good job.

Members of Congress, remember Senator Cutting. You have corrected the conditions which brought him death. You have an opportunity to return to those conditions or to preserve the present safer way of flying.

Why take a chance? Save the C. A. A. and the Safety Board. You have every reason to say that you will save human life by doing so.

LOS ANGELES, CALIF., *April 29, 1940.*

Senator PAT MCCARRAN,
Washington, D. C.:

In the name of all certificated personnel of the American aviation industry, and in the best interests of the entire aviation industry, as well as the general public of the United States, we protest in the strongest terms against the President's proposed Reorganization Plan No. IV, which would abolish the Air Safety Board and scuttle the Civil Aeronautics Authority. We especially protest the high-handed manner in which the Executive seeks to set aside, by mere stroke of the pen, an act which was adopted only after 5 years of consideration by both Houses of Congress. In the best interests of constitutional democracy we demand the defeat of this destructive proposal.

PAUL W. HAIRGROVE,
President, Licensed Airmen of America.

GREAT NECK, N. Y., *April 29, 1940.*

The Honorable PAT MCCARRAN,
Senate Office Building, Washington, D. C.

The undersigned are aviation underwriters for a large group of insurance companies, writing a substantial part of all aviation business in this country. Drastic reductions in rates have been made during last year due to excellent experience which our unemotional analysis indicates due in no small measure to present Civil Aeronautics Authority and Safety Board arrangement. Therefore urge you strongly resist suggested transfer to Department of Commerce.

ASSOCIATED AVIATION UNDERWRITERS.
By D. R. SCARRITT, *Underwriting Manager.*

SAN FRANCISCO, *April 26, 1940.*

Hon. PAT MCCARRAN,
United States Senator, Washington, D. C.

DEAR SENATOR MCCARRAN: The San Francisco Junior Chamber of Commerce heartily supports the position which you have taken in leading the opposition to the President's Reorganization Plan No. IV, now before the Congress, and which plan proposes to put the Civil Aeronautics Authority into the structure of the Department of Commerce and to abolish the Air Safety Board.

The Civil Aeronautics Act is the most progressive step ever taken in this country in the cause of civil aviation. We thoroughly oppose any proposal which affects the present status of the Authority and the Air Safety Board, whose fine work is evidenced by the recent perfect record of freedom from air-line accidents.

Very truly yours,

SAN FRANCISCO JUNIOR CHAMBER OF COMMERCE,
TRUMAN R. YOUNG, *President.*

Copyright Convention

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, April 30 (legislative day of Wednesday, April 24), 1940

RESOLUTION OF LEAGUE OF AMERICAN PEN WOMEN

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a

resolution adopted at the biennial session held in the city of Washington, April 20 to 26, 1940, of the National League of American Pen Women. The League of Pen Women, by this resolution, are on record as favoring the ratification of the Copyright Convention, which now heads the list of treaties on the Executive Calendar.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas it is altogether just and proper that creative authorship should receive, in most generous measure, protection of copyright, as contemplated by the Constitution of the United States;

Whereas the Government of the United States is greatly handicapped in its effort to protect American authorship from literary piracy in other countries because the United States lacks sufficient treaty guaranties from other governments;

Whereas the Convention for the Protection of Literary and Artistic Works, which has been favorably reported by the Committee on Foreign Relations and is now pending on the Senate Executive Calendar, is the best available instrument for the safeguarding of American authorship from infringement of copyright in other countries;

Whereas the present copyright law of the United States was framed before substantial progress had been made in the revolutionary developments of the present century respecting the utilization of literary and artistic works;

Whereas among many other alterations, it is necessary for reasonable protection that authors be accorded copyright in all manuscripts, that the divisibility of copyright be fully recognized by law; and

Whereas an excellent beginning in copyright reform has just been made in respect of one important item, namely, the vesting in the author of renewal privileges and ownership of copyright, for the period following the original 28-year term of copyright in magazines, periodicals, and other composite works, regardless of whether such articles have been separately registered at the copyright office, for which enactment the National League of American Pen Women expresses its cordial appreciation to the Congress and President of the United States: Therefore be it

Resolved by the National League of American Pen Women, assembled in biennial session in the city of Washington, April 20–26, 1940, That—

(1) The Senate should give immediate and unconditional approval to the Convention for the Protection of Literary and Artistic Works.

(2) General legislation for the modernization of the copyright should be prepared by the appropriate committees for enactment at the next session of Congress.

Peace as a Policy

EXTENSION OF REMARKS
OF
HON. HARRY S. TRUMAN
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, April 30 (legislative day of Wednesday, April 24), 1940

ARTICLE BY BARNET NOVER

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the RECORD an article which appeared in the Washington Post yesterday, from the pen of Barnet Nover, entitled "Peace as a Policy." The experience of the Scandinavian country should be a warning to us.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of April 29, 1940]

PEACE AS A POLICY

(By Barnet Nover)

A LESSON FROM SCANDINAVIA

When the present war began no region in Europe was more definitely and wholeheartedly committed to a policy of peace than Scandinavia.

Neither Norway nor Sweden, neither Denmark nor Finland, had any designs on any nations. They were content with what they had. They harbored no open or secret territorial ambitions. They were wholly free of the false belief that a nation's greatness can only be reckoned in terms of size or martial prowess. They wanted only to be let alone to pursue the arts of peace as they had done for so long and with such remarkably constructive results. And to win the right to remain at peace they were prepared to treat and did treat the opposing belligerents with even-handed impartiality.

What has been the result? The record speaks for itself and it is a grim record indeed.

Finland was invaded by Russia and despite fierce resistance was finally forced to cede to the aggressor an economically important and strategically invaluable stretch of territory. Denmark has been overrun. Norway is now a battlefield, indeed the major battlefield of the war. Only Sweden has avoided invasion but its immunity may be only temporary.

What the Scandinavian nations most feared has come upon them. Neither a long and fruitful record of well-doing nor a careful neutrality policy has saved them. Their crime was to be small and weak and more or less helpless. Their very virtues have been turned against them.

Yet as a group they are not wholly free from blame for what has happened. Their present tragic plight is in part, at least, the result of a prolonged and excessive addiction to the belief that if a nation wants peace earnestly enough it will have it regardless of the tides and tempests sweeping over the rest of the world.

In other words, the four Scandinavian nations made peace the be-all and the end-all of their foreign policies. That was noble of them. It showed how completely civilized they were. But it ultimately led them as it has led other nations down the path of disaster.

The events of the past decade have made it clear that peace cannot safely be made the basis of policy but if it is to be achieved it can only be as the resultant of policy. Its fulfillment does not belong in the realm of will but in that of action.

On October 19, 1939, 7 weeks after the outbreak of the European war and 6 weeks before Russia's attack on Finland, the sovereigns of Sweden, Denmark, and Norway, and the President of Finland met at Stockholm to discuss the situation facing the four nations of the North.

"Our consultations," said King Gustav of Sweden on that occasion, "have confirmed the solidarity of the governments of the northern states." This theme ran through all the other speeches made at the meeting. "I am convinced," said King Haakon of Norway, "that our collaboration with the other northern peoples in the interests of peace has been consolidated and strengthened in these days," while President Kallio of Finland gave hearty thanks to "our friends for all the support and sympathy which have been extended to us."

When the successive tests came in the months that followed, the unity of sentiment which bound the four Scandinavian nations proved inadequate to save any of them. Sweden and Norway did send a good deal of unofficial assistance to Finland. But that aid was insufficient. The kind of assistance that might have proved decisive was never rendered; to have done so would have endangered that very policy of peace which each of the other Scandinavian nations had made the cornerstone of its foreign relations.

What would have happened had these four nations not limited their cooperation to the moral and diplomatic sphere, but had formed a solid bloc to defend any one of them against any and all aggressors, is conjectural. But there is at least a possibility that it would have had a deterrent effect on Russia last September and on Germany more recently. Certainly the lot of the Scandinavian nations would not be worse than it already is. For together the four nations have a population of close to 17,000,000 and a combined fighting force capable of giving any aggressor a run for his money. The Scandinavian nations refused to hang together, with the result that they are hanging separately.

The tragedy of Finland and Denmark and Norway, the impending tragedy of Sweden, are but the latest chapters in a sorry tale that began in Manchuria in 1931 and has since circled the globe.

Like the Scandinavian countries, Great Britain and France also wanted peace and also made it, for years, the be-all and the end-all of their policies. The result was Ethiopia and Munich and war. Nor can the people of the United States view developments taking place in Scandinavia with any measure of complacence. Quite the contrary. These developments have a lesson for us which cannot be disregarded with impunity. For there are loud voices raised in this land which repeatedly insist that peace is something you can achieve by wishing, by legislation, by oratorical legerdemain. The struggle in Norway shows how dangerous an illusion that can be.

Amendment of the Wage-Hour Law

EXTENSION OF REMARKS
OF
HON. JOSEPH E. CASEY

ARTICLE FROM THE BOSTON POST

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from a recent issue of the Boston Post:

[From the Boston Post of April 29, 1940]

MILLION HIT IN PROPOSED BARDEN BILL—DENIES THESE WORKERS 30 CENTS AN HOUR MINIMUM

(By Robert L. Norton)

About as raw a piece of legislation as has come before the House in this session is the so-called Barden bill fixing certain exemp-

tions in the Wage and Hour Act. Behind the bill is a combination of the packing, canning, sugar, and cotton lobbies, which are seeking to deny more than 1,000,000 workers a minimum of 30 cents an hour.

FARM TALK BUNKUM

The drive to break down the act is camouflaged under the pretext that it will aid the farmer. This is the sheerest sort of bunk, since the wage and hour law does not regulate the working hours of the farmer's hired man or girl, or specify the wages that must be paid them.

As a matter of fact, the amendments proposed by the North Carolinian remove the benefit of the legislation from the very people it was intended to help most, the unorganized and helpless workers, who, prior to the time that the law became effective, were paid a dime an hour, and even 5 and 3 cents for the hardest kind of work, under the worst possible conditions.

The effect of the passage of this bill would be to put an end to the application of the entire minimum-wage principle. It would drive great groups of people back to starvation wages, and increase relief costs. These workers are just as necessary to the processing of agricultural products as the shoe-factory worker is to prepare the stockman's hides for the market. It would be as logical to exempt one as the other.

GUARANTEED $665 YEARLY

At the top figures today they are guaranteed a minimum of 30 cents an hour for a 42-hour workweek, or payment at the rate of $665 a year. Certainly this is not a standard calculated to wreck American industry—$12.60 a week.

The chief elements supporting the bill are southern Tories, northern Republicans, and reactionary employers in parts of the Northeast, bent upon an attempt to break down the wage scale in an attempt to exploit both the poor white and colored labor in those sections of the country. It is essentially the same group which, until the passage of the Wage and Hour Act, made it impossible for the textile industries of New England to compete with those of the South.

It's the same sort of blind opposition that the original Black-Connery bill faced when it was proposed to fix a "floor" for wages and a "ceiling" for hours. Every court that has passed on the validity of the act has sustained it. Consequently, the scene of attack is shifted to Congress.

NEEDS HONEST REVISION

In lieu of repealing the act, the first move was to deny the Administrator sufficient funds to enforce it, and now the proposal is to exempt without social or economic justification these miserably paid workers who need its protection most. A large percentage of these workers are women.

Obviously the present law is unfair in some instances; for instance, in the way it works out in the case of small telephone exchanges. It also operates to the hardship of employers in the case of overtime paid to many white-collared workers. As Mr. Roosevelt states, the law is in an "evolutionary stage."

There is no doubt that many amendments are necessary, but these may be achieved through an open and aboveboard revision and not through the adoption of killing amendments at the behest of pressure groups.

The plea that the Barden bill would help the farmer is wholly specious.

Liberal Government

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

EDITORIAL FROM THE ELKHART (IND.) TRUTH

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a recent editorial from the Elkhart Truth, Elkhart, Ind. It is an excellent summary of the futility and the failures of the New Deal.

The editorial follows:

[From the Elkhart (Ind.) Truth]

"LIBERAL" GOVERNMENT

Mr. Roosevelt in his address to the Young Democrats on Saturday evening, called on them to support the "common sense" and the "liberalism" of his regime and stated that all the Republicans had to offer was repeal of his progressive laws and return to pre-depression measures and methods.

Fortunately, many people will remember our pursuit of "the more abundant life" by a program of scarcity; the killing of the little pigs; our paying the farmers for not producing food while at the same time we are spending immense sums to provide more agricultural land; our subsidizing exports so that foreigners can buy our produce cheaper than we can buy it ourselves; our importing agricultural products when we can't sell what we produce ourselves; our buying, at artificially inflated prices, billions of gold and silver for which we have no possible use; our—but why go on? If this is common sense, it is not strange that there are many people who want no more of it.

Then the liberal government. Mr. Roosevelt's idea of "liberal" is apparently a Government more and more centralized in the Executive, with Congress and the States reduced to little more than ratifying bodies; a Government by a lot of little "star chambers," who make and enforce their own rules without let or hindrance, even by the courts; a Government taking a larger and larger proportion of the national income in taxes until these taxes are becoming confiscatory. Charles I lost his head for operating this kind of a "liberal" government.

There is one phase of Mr. Roosevelt's government, however, which is truly "liberal." That is his liberality with our grandchildren's money. There are no doubts on this score. It has been well said that a new beatitude has been written. It is, "Blessed are the American youth, for upon them shall be saddled the national debt."

When a man is about to die from strangulation with a rope about his neck, obviously the first thing to do to save his life is cut the rope. This is what Mr. Roosevelt's opponents advocate, but to say that they advocate nothing else is simply not the truth. Everyone who has heard or read the speeches of his opponents or the report of the Frank committee knows it is not the truth. There have been many sound and constructive suggestions as to how to restore sanity to our Government, but first the rope must be cut.

Evidence is accumulating that Mr. Roosevelt's sophistry is becoming less effective. Fortunately the American people have brains, and they are beginning to use them.

Intrigue

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1940

Mr. THORKELSON. Mr. Speaker, the propaganda which is now disseminated in the press is so bewildering that one hardly knows what to accept or expect. According to the press a naval battle has been raging between the German and the English fleets somewhere in the southeastern part of the North Sea for over 2 weeks. Everyone who has the slightest familiarity with a naval battle knows that such engagements do not ordinarily last over 45 minutes without severe damage to one side or the other. We also know that Germany has no fleet large enough to engage the British or French fleet, so we wonder what sort of naval craft are involved in this "press" battle.

According to the press, German and English forces are in death grips from the Arctic Circle to the Skagerrak, all of which is pure fiction and should never appear in the press. What is the purpose of this propaganda? The purpose is to arouse sympathy for Norway and the Scandinavian countries. Has any one of these countries asked for sympathy? Certainly not. And if they had it would make no difference, for the administration's sympathy is not with Scandinavia but with Great Britain instead. The Scandinavian countries know that, and so do the Scandinavians in the United States, so the press may as well close up and fill its pages with something worth while.

Norway is situated on the western side of a great mountain which separates it from Sweden. The coast line of Norway is rocky and unfit for landing any war machinery, except in harbors adaptable for such purposes. An air force entrenched in Norway with strategically located coast defenses is liable to make the landing of troops an expensive procedure with tremendous sacrifice of lives and property. Little or nothing is to be gained by such occupation except extension of the battle front and the base of operation against Germany. No doubt this is held by England as the most desirable procedure, for it takes the war away from her shores and shifts the battlefield into a neutral country which is defenseless and unprotected. England is responsible for that, for she was the first one which invaded the neutral waters of Norway with her navy and mine fields.

If the English war is to be fought in Norway, it can only end in destruction of that country; but it may also, if England persists in this foolhardy venture, end in British defeat. However, it is her pudding and she should eat it without asking us for help and without annoying us with jabber from her incompetent and meddling statesmen. They are like all internationalists—filled with chatter to distract and confuse while they reach out to pull others in to pay the penalty for their own sins.

We should not forget that it is the English starvation blockade that is responsible for the widening of battle fronts, for no people with the slightest respect for themselves will meekly sit and wait to be starved by the internationalists who rule Britannia. No one should lose sight of the fact that boycott and starvation of noncombatants and neutrals is an oriental or Asiatic weapon. The blockading power does not care about the suffering a blockade may bring or how many lives it may destroy by starvation. The only question at issue is that of winning the war. Is such procedure justified today, and particularly by powers which set themselves up as champions of human rights? It is a question to which all of us may give serious consideration, and it is also an issue which the newspapers ignore.

Norway has been under internationalistic rule for a number of years. It strikes me they are sick and tired of that rule, and therefore prefer, if they must be invaded, an invasion by Germany instead of England. England can only add to their trouble, for Britannia has been ruled by the money changers for several hundred years, and the stronghold of this unholy tribe is now in Great Britain and the United States. They are even moving out of Holland, for I have papers from that country in which the people complain of unreasonable withdrawal of gold from the Netherland banks. This same thing happened in Norway, for the Hambro regime has, I understand, withdrawn the gold. Some of it has been shipped to England and the greater part to the United States. I now quote from the New York Post, April 15, 1940:

The *Bergensfjord* left Olso 2 days before the German invasion. Captain Anzjon said he had received no instructions since the invasion. The ship carried 380 passengers, including 131 Americans citizens, and $19,500,000 in gold, part of $80,000,000 sent here from Norway for safekeeping in the last 10 weeks. The shipping of so much gold just before the invasion suggests that persons in Norway expected the invasion, although Captain Anzjon said everything had been calm when he sailed.

We do not appreciate the value of gold because we are practically self-sufficient, except in a few articles such as coffee, tea, and rubber. It is different with European nations, for they must import to live; and to buy they must have gold. It is in such nations that the power of gold is felt, and it is the lack of this metal which is now forcing them to engage in exchange of commodities or barter. Is it possible that those who now own and control the gold may become an instrument that will bring about a closer understanding among neutrals, an understanding that may promote a friendlier relationship based upon mutual trading of commodities and necessities to sustain life? It is possible that gold may become the very weapon that will destroy those who have sold their souls for such wealth.

Since the invasion of Scandinavia I have received a number of letters, all of them more or less typical, and from one of which I shall quote, without giving the writer's name:

APRIL 23, 1940.

MY DEAR CONGRESSMAN THORKELSON, OF MONTANA: About Norway—do you know of the story of "Terje Vigen"? It tells of the hard times in the Napoleonic wars and how England oppressed the Norwegians, as epitomized in the sufferings of Terje, who had to row across to Denmark from Norway for a few barrels of corn or wheat. On his return, just as Terje brought his boat to the shore of Norway, he was seized and sent to England, where he was put in jail for 5 years.

Do try to read this classic epic to your colleagues in Congress to inform them how Britannia rules the waves and waives the rules.

Folklore further has it times were hard in Norway during the Napoleonic wars because of the blockades and trade upsets in Europe. The poor Norwegians were the innocent bystanders and were even reduced to using the bark of trees in the making of bread. So that when the Rothschilds offered to help Norway with their gold, if also the Norwegians would let the chosen people in, the unsuspecting Vikings could not foresee the year 1940. Perhaps the Rothschilds only wanted a few of the chosen people to enter Norway to keep a weather eye on the gold. In the year 1940 so close an eye did the chosen people keep on the gold of Norway that it is reported $150,000,000 of it has suddenly appeared in England and another $50,000,000 of it arrived in New York just before the outbreak of the battle between the British and the Germans for Norway. And a week ago Secretary of the Treasury Henry Morgenthau announced he was "trustee" of all Norwegian and Danish assets in this country. The Norwegians probably have no more title to the gold which they were under the illusion belonged to the people and the banks than the Poles had title to their gold which landed in Paris. And I wonder if the English really own their gold, and if we here in the United States are not acting as a treasury and safety-deposit box for the international bankers temporarily. Some day they may clear out of here with the gold and dive down another "rat hole."

To get back to the Napoleonic days and the opening of the door of Norway to the wandering Jew, a Norwegian poet wrote a beautiful and heart-rending poem about the Jews. Did you learn to recite it as a schoolboy in Norway? So much did the Norwegians not suspect that they accepted the Rothschild gold. Now, more than 100 years later, one Hambro said to be of the Rothschild tribe, arrived as president of the Norwegian Storting (Parliament).

All who run may read. Could it be that the international banking interests of the Rothschild Hambro conflicted with the interests of Norway? I enclose an enlightening newspaper clipping from the New York Post of April 4, 1940, which tells about the last card played by the British via London's powerful Hambro bank with connections in Norway and Sweden. It may turn out that the prowling lions of Judah overplayed their cards. The clipping further states that the sister of the Norwegian Storting's (whereabouts now unknown) president, Hambro, is married into the Wallenberg family in Sweden, and that the Wallenbergs are the uncrowned kings in finance in Sweden. It is fascinating, is it not?

I can begin to understand one of the causes of our national ills here in the United States lies in the anaconda of finance, from which we are suffering, and which weighs us down. The Jews, themselves, admit in their own writings, that they control the gold trade. Such control amounts to tyranny when used to oppress and enslave peoples.

When a small alien minority, alien in customs and at home everywhere, and yet regarding no place as home, when such a minority penetrates and dominates a vast majority, such dominance represents intolerance by the minority of the majority. Sooner or later the tables will be turned.

The struggle is so unnecessary. A majority will always seek the services of a minority when that minority excels and specializes in certain fields. It is a law of economics and of nature that the fittest survive. But it is intolerable for a minority to spread out everywhere in a network. Then it happens, as among the Jews, those in the minority are placed in positions for which they are not qualified, and for which they are not recognized as capable.

It is a peculiar power that control of the gold gives the Jews. Just as when one is apt to use a pistol in a quarrel if one carries it on one's person, or if it is too handy, so the Jews resort to the use of their gold to serve their purposes. Injustice will meet a day of reckoning.

Speaking of gold, the recent book by Littlepage entitled "In Search of Soviet Gold" hints of mystery when mention is made that Stalin, the ruler of Russia, is not satisfied with Serebrovsky's lack of information about the financing (?) of gold mining in Alaska. Serebrovsky was the head of the Russian Gold Trust for the Government and was sent to Alaska to make a survey of mining there. In the end the "Jew" Serebrovsky was executed for sabotage in the gold industry in Russia, and the above-mentioned book tells of this. Who knows whether or not he knew more about the control of Alaska than he cared to give out to a "nontribesman"?

I like to think there may be more "Congressmen ———" in Norway in her hour of need. And where are those squareheads and greenhorns who made way for the Guggenheim interests in Alaska? The enclosed clipping in the New York Herald Tribune dated November 16, 1939, gives, shall I say, a modest estimate of Murry Guggenheim, only one of many of his kind.

I make no apologies for being very fond of the real English, and my heart bleeds for them in this hour of their death struggle with the international bankers and vultures using England as a base.

An alien minority has brought about the decay of England by exploiting it and using it as a countinghouse. It is a sign of decadence, with too many in England living on the dole since the World War and with too many unemployed and with too many of the younger generation never having been employed and with blighted areas in mining and factory towns. Need I go on?

If the decay of England was the fruits of victory from the last war, could the lot of England have been worse in defeat? And what will the fruits of victory for the Allies be in this war that may turn into a second World War? Just the thought of the precipice should make all the belligerents lay down their arms. It is up to those who "have" to compromise.

There is an undercurrent of unexpressed fear in the world of the Jews, not because of the Jews, per se, but because of what they seem to have the power to do. When and if they take flight from the shores of Albion, it is not impossible that their golden treasures will have been removed to the care of the United States of America.

I am sure the Norwegians only wanted to be neutral in the current struggle. The British mining operations roused old fears in Norway. And it is extraordinary that fear of blockades and of lives and ships meeting a watery grave did not lead the Norwegians into the arms of the English of whom the Norwegians are

fond, as English society often vacations in the Land of the Vikings, and the late Queen of Norway was an English princess.

The Norwegians were nearer to the English sphere of influence. Yet there must have been some fear of those ruling England today, a fear that took away the will to fight the invading Germans, a fear that paralyzed the natural instinct to protect a proud and ancient land.

And if fear rules this world, the home of the brave and of the free will become the house of fear and of the enslaved. The "newly arrived" are almost succeeding in placing their calf of gold on the top of the United States Capitol Building in Washington, in enslaving the people by means of a stamp plan whereby all of us will have to stand in line from the time one is born until one dies, and in order to hasten the rotting process agents of destruction via communism, under whatever label, are abroad in the land, and apostles of indecency are glorified.

Something as trifling as the "lack of a horseshoe nail" will upset the best-laid plans, and I am reminded there is no such thing as a perfect crime.

We shall see what we shall see. Time moves swiftly today and we are just one lap behind the "swindlers."

Very truly yours,

J—— T—— B——,
(The Viking's Daughter.)

This letter gives one Scandinavian angle, and I have had a number like it. Not one writer has expressed himself in favor of the past or the present attitude of Great Britain. Surely there is no one of us who does not deplore the German invasion of Scandinavia, but we are not fooled as to the cause of this invasion. English relief to Norway is tantamount to destruction, and England should, in respect to herself and humanity and to protect innocent lives from useless sacrifice, stay home and mind her own business.

I shall now quote from the New York Post, April 4, 1940. Reading this you will find that England was planning to invade Norway and the internationalist prepared the road for invasion. His hand is the one which drips with blood and it is he now, as before, who is urging the world to fight another war so that he may rule the "goyem" dupes.

COMMONS TO DEBATE ECONOMIC WARFARE IN SECRET SESSION—DIPLOMATS IN BERLIN WORRIED OVER POSSIBILITY OF HOSTILITIES IN SCANDINAVIA

LONDON, April 4.—The House of Commons will meet April 11 for a secret session to debate the allied program for economic warfare against Germany, Prime Minister Chamberlain announced today.

"I quite recognize that the subject is one of great importance," Chamberlain said, "and one which perhaps might be difficult to debate in public."

There has been only one other secret session in the present war, held December 13.

Establishment of a government trading corporation to deal with neutrals, particularly Hungary and the Balkan nations, was announced by Sir John Simon. The company, it was said, would embark on barter transactions.

BERLIN ENVOYS FEARFUL OF SCANDINAVIAN WAR

(By Wallace R. Deuel)

BERLIN, April 4.—Grave anxiety regarding developments in Scandinavia in the near future was voiced in diplomatic quarters here today as signs multiplied that Anglo-German rivalry for domination in Norway and Sweden is assuming ugly proportions.

The most extreme fears here took the form of apprehension lest actual hostilities between the Reich and the Allies might break out in the north.

These fears are based on the possibility that France and England might intervene in Norway or Sweden, or both, to prevent shipment of raw materials, notably Swedish iron ore, to Germany. If this should happen, most qualified observers feel the Nazis would intervene as well.

There are several considerations which would seem to militate against such a development, but these do not suffice to reassure some Scandinavian quarters.

MUST HAVE SWEDISH ORE

For one thing, hostilities in Scandinavia would appear to be contrary to Germany's interests because hostilities would interfere with deliveries to the Reich, no matter who might emerge the victor from such hostilities, and interference with its supplies of Swedish iron ore is the last thing Germany wants.

For another thing, the Reich also wants to keep the theater of military operations restricted to the western front for other reasons.

For still another thing, a front in Scandinavia would be geographically more inconvenient for the Reich to defend than it would be for its enemies.

Finally, Allied interference with Swedish deliveries would be more difficult in summer, when much of the ore comes through the Baltic, than during the winter when all of it comes down the Norwegian coast.

Apprehension is acute here, nevertheless.

BRITON IN STOCKHOLM TO DISCUSS IRON EXPORTS

(By Leland Stowe)

STOCKHOLM, April 4.—As the latest move in the Allies' determined drive to choke off Swedish iron exports to Germany, an exceptionally influential British representative has quietly arrived here after pausing to confer with Norwegian authorities in Oslo.

Through her intermediary Great Britain is reliably reported to be asking Sweden either to eliminate completely or to reduce sharply her iron shipments to the Reich.

This man is Charles Hambro, head of London's powerful Hambro Bank and one of Britain's most astute financiers. Reputedly, he has been dispatched to the Norwegian and Swedish capitals as a spokesman for the British Ministry of Economic Warfare.

What Hambro seeks is an important downward revision of the quota of Swedish ore allotted to Germany as supposedly normal trade.

What Britain and France are offering the Swedes as an inducement for lopping off several million tons of their iron-ore sales to Germany is not yet known.

HAS VALUABLE CONTACTS

The choice of the head of the Hambro Bank as Britain's representative in these delicate negotiations underscores London's desire for a new settlement without benefit of controversy or extreme blockade measures unless they cannot be avoided. In British quarters here considerable optimism is expressed over the prospects of success.

Hambro possesses extraordinarily valuable contacts in both Sweden and Norway. He is related to Joachim C. Hambro, president of the Norwegian Parliament, while his sister is married to one of the Wallenberg brothers, who are the uncrowned kings of Swedish finance.

PLAYING LAST CARD

London is now counting upon Hambro to enlist the Wallenbergs' support—and, largely through them, the consent of the Stockholm Governments—for drastic reductions of iron exports to Germany.

It appears that the British are playing a last business-financial card before resorting to such extreme measures as an imposition of their blockade inside Norway's 3-mile limit.

There remains, however, the uncertainty as to what Germany may do to meet the British challenge in Sweden.

This quotation from the New York Post is informative, as it shows that Great Britain had representatives in Norway and Sweden before April 4, 1940.

According to Mr. Deuel's report in the same article, Berlin expressed great fear that France and England might intervene in Norway or Sweden, or both, to prevent shipment of raw materials, notably Swedish iron ore to Germany.

Reports from Stockholm by Mr. Stowe reveal the fact that Mr. Charles Hambro, head of London's powerful Hambro Bank and one of Britain's most astute financiers, was in Norway and Sweden as England's representative. The article further states:

> Hambro possesses extraordinarily valuable contacts in both Sweden and Norway. He is related to Joachim C. Hambro, president of the Norwegian Parliament, while his sister is married to one of the Wallenberg brothers, who are the uncrowned kings of Swedish finance.

No one should be fooled. Mr. Hambro and his delegation were in Scandinavia to promote an alliance with England, an act which could not but result in German invasion. This is admitted by the English Government, and that should be sufficient evidence, I am sure.

How closely this crowd of money changers cooperates when gold is in jeopardy is evidenced by the fact that the complete gold stock of Norway was removed before the invasion and $18,000,000 of Swedish gold was recently landed in New York. That, if nothing else, is the most conclusive evidence that the international money changers had prepared Norway for invasion and anticipate the same thing may happen in Sweden.

We are informed by the President that from now on Norway, and I presume Denmark, goes on a "cash-and-carry basis." This, if it were not so terribly tragic, would be laughable, for how can either Denmark or Norway buy from any nation without gold or gold credit? This gold, which actually belongs to the people of Norway, was removed or taken by the international financiers, apparently as their own property. The Norwegian people, as well as we, should know this, for they will then, like us, have a clearer understanding of the power of gold and how they, like us, are dupes of Shylock.

The Secretary of the Treasury is now looking after the belligerent's property. Will any of this be returned to Norway or credited to the Norwegian people? My guess is no. It is held for the money changers.

This is the cash and here is the answer to the carry message of the President:

BRITISH HOLD DANISH SHIPS

LONDON, April 24.—The Admiralty today said 135 Danish ships have been detained in the United Kingdom ports since the German invasion of Denmark. The ships are to be used by the British for the duration of war, the announcement said.

This is self-explanatory, and means that the international bankers have not only removed the gold, but, in collusion with England, have made it impossible for Norway and Denmark to carry on international commerce.

Those who have followed my remarks will recall that I made a statement that everything was set for us to finance the British war, with all the gold in the United States Treasury. I have already called attention to the fact that England requisitioned 60 American stocks and bonds. Let me now quote an article which is self-explanatory. As you read this, I want you to bear in mind that England is holding about fourteen billions of these stocks and bonds.

BRITAIN CALLS 117 UNITED STATES ISSUES

The British Treasury has requisitioned 117 more United States stocks and bonds owned by English subjects in its drive to obtain dollars to pay for purchases of war supplies here.

Announcement of the mobilization was made last night in London and it is understood the Treasury will pay for the securities at prices ruling Saturday. This is the second requisitioning of securities; the first covered 60 issues and was dated February 18.

The new list includes some of the best-known securities, such as United States Steel, Chrysler, Bethlehem Steel. There are 92 stocks and 25 bonds.

Additional mobilization of United States issues will be announced from time to time, it is said. The British Treasury in its order emphasized that the mobilization is "precautionary" and that it is simply continuing its previously disclosed policy of taking over private holdings of United States securities from time to time with the object of selling the issues as the Government needs new dollars.

Is it possible that Great Britain, being as poor as she pretends to be, has been able to buy fourteen billions of American bonds and securities with gold and is still unable to pay one cent on her war debt to the United States; or is this a transaction in which the international financiers connive to defraud the people of the United States? It is quite evident that we have already paid for England's preparation and are selected to pay for the present war. This will be done with securities and bonds and not with money.

The Scandinavian people in the United States understand British intrigue as well as that of other European countries and are, therefore, not unduly excited over happenings in Norway. Americans of Scandinavian descent regret the invasion of Norway, but we also realize that this invasion was only made possible by a division in the ranks of the Norwegian people. The old and stable Norwegians, who are nationalistic and opposed to internationalism, no doubt preferred invasion by Germany. The internationalist and his dupes preferred invasion by England. Norwegian lives and property can best be saved at this time by keeping England out, so that Norway will not become a bloody British battlefield.

However, one thing stands out in bold relief. The Scandinavians in the United States are not hyphenated, but are instead Americans, as is right and proper. I believe I speak for them when I say that we do not want the United States to become involved in the European war, no matter who is invaded.

Amendment of the Wage-Hour Law

EXTENSION OF REMARKS

OF

HON. MARY T. NORTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

ARTICLE BY CHARLES G. ROSS

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Charles G. Ross which was printed in last night's issue of the Washington Evening Star:

[From the Washington Star of April 29, 1940]

OPPORTUNITY KNOCKS FOR REPUBLICANS—WAGE-HOUR CHANGES HELD CHANCE TO AID PARTY, PROGRESSIVISM

(By Charles G. Ross)

The Republicans in the House of Representatives are confronted with a great opportunity. They have a chance to do something for the cause of sane progressivism, and, at the same time, to do something important for the good of the party. They can show that the Glenn Frank report, "A Program For a Dynamic America," is something more than a form of words. It will be interesting to see whether they seize the issue which a group of Southern Democrats are trying to hand them, in the fight over the proposed Barden amendments to the wage-hour law, or whether, out of blind opposition to the administration, they go along with these destructive amendments and so cancel out the issue.

The question is whether or not more than a million workers engaged in the "processing" of agricultural products shall be deprived of the benefits of the wage-hour law. This is the aim of the drastic Barden amendments—to make it possible for this group of industrial workers, of the very class that the wage-hour law was designed primarily to protect, to be paid less than the modest minimum scale fixed under the act.

THOSE WHO WOULD BE HIT

The people who would be affected by the exemptions are not doing farm labor. Farm laborers are already exempt. Those who would be put outside the pale of the act by the Barden amendments are performing industrial operations on farm products. They are working in canning and packing plants and other processing plants, and the beneficiaries of the change, though it is offered in the guise of "farm relief" and is mistakenly supported by a number of farm organizations, would be the owners of those enterprises, not the farmers.

Not all the southern Democrats, it should be added, subscribe to the short-sighted thesis of Mr. BARDEN. Notable in the opposition to his amendments is Mr. RAMSPECK, from the deep South—from Georgia. Mr. RAMSPECK is one of those who see clearly that the way to help the farmer is to increase the purchasing power of the people who buy the farmer's products. Mr. RAMSPECK is also of that group of southerners who believe that "the time has come when the South can no longer live on a stratum of economic life different from that in other sections"; that under the wage-hour law "we have taken a step in a direction which will be more beneficial to the South perhaps than to any other section of the United States."

HIS THE EXCEPTIONAL VIEW

But Mr. RAMSPECK'S, if one may judge by the debates now going forward in the House, is the exceptional view among his southern Democratic colleagues. On the ground of the supposed sectional interest of the South, these Democrats, by and large, want the Barden amendments.

Here is where the opportunity of the Republicans comes in. Here is a plain case where political expediency, from the standpoint of the G. O. P., jumps with the larger public interest.

I am going to let part of this column be written by a Republican, Representative BARTON, of New York, who is standing on the wage-hour issue with Mrs. NORTON, the Democratic chairman of the House Labor Committee. Mr. BARTON has an independent mind.

BARTON'S STAND

What follows is condensed from his remarks in the current House debate:

"I favor the Norton amendments, which were worked out with painstaking care in the Labor Committee. They remove hardships without weakening the act. The Barden amendments would exempt hundreds of thousands of the poorest paid and most helpless workers, including large numbers of Negroes and underprivileged white workers, especially in the South, for whose protection the act was especially designed.

"I believe we now have (in Colonel Fleming) a reasonable, intelligent, and cooperative Administrator of the Wage and Hour Act who appreciates the problems of both employer and employee. For this reason I favor adopting the conservative amendments of the Labor Committee and giving him another 6 months or a year to deal with such individual situations as can be ameliorated by changes in the regulations and definitions. At our next session the Administrator, who is directed to make recommendations from time to time to the Congress, may have discovered certain other ways in which the act can be perfected and unnecessary hardships and criticisms removed.

CHANGES WILL BE MINOR

"But such changes, I believe, will be minor. Neither the next session of Congress nor any session will be willing to repeal or undermine this legislation.

"It has commended itself to the social conscience of our people and has even in these few months been cheerfully accepted by the overwhelming majority of forward-looking employers throughout the land."

Thus Mr. BARTON, from the so-called silk-stocking Republican Seventeenth District of New York.

Mr. BARTON is talking the language of the Glenn Frank report, which came out in terms for governmental wage-hour regulation in situations where workers are unable to protect themselves through collective bargaining.

He is talking the language of Alf Landon in his recent Wichita speech warning the Republicans against "blind" antagonism to the social-reform measures of the New Deal.

Are the Republicans of the House going to throw off partisanship and stand behind the progressive views of Mr. BARTON on the wage-hour issue? Or are they going to line up for the economic Bourbonism represented by the Barden amendments?

Federal Blitzkrieg Against California

EXTENSION OF REMARKS
OF
HON. LELAND M. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

Mr. LELAND M. FORD. Mr. Speaker and my colleagues, I have asked for unanimous consent on several mornings to address the House on what I have termed a Federal blitzkrieg against the State of California. To you who do not live in the State of California, I would like to say that if you lived within the State you certainly would resent some of the things that I am going to outline here, the same as we in California resent them. For instance, within a very short period of time, we have had to face the following things: The threat of the enactment of the Neely bill, which many people have been led to believe was moral censorship, but as a matter of fact contains nothing whatever pursuant to censorship. This matter of censorship has been entirely handled by the moving-picture business, better than the handling of any other parallel conditions by any other business in the country. This bill would destroy at least half of this industry in California and would throw some thirty or forty thousand people out of work in Los Angeles County alone.

The second threat comes from a so-called second Neely bill, wherein the bureaucrats wish to provide that those who produce motion pictures and know the most about it cannot stage them for the public but must put them in other hands. It is far easier for these bureaucrats and those who do not know anything about this particular business to destroy it than it is to build it up and to furnish jobs for our people.

The third thing is that Mr. Ickes, of the national parks, has hit upon the new idea of charging these moving-picture companies $500 a day to use our national parks for moving-picture companies of over 25. Is it coming to a point where the heads of our bureaus feel that this is their personal property, or do they see fit to recognize that those of the moving-picture industry have equal rights with all other citizens to go into these parks, and that these same moving-picture producers pay the salaries of these same bureaucrats? Do the bureaucrats want the exclusive rights for staging scenes in their propaganda in our national parks, or do these parks belong to the people?

The fourth thing that they have attempted to do to the moving-picture companies is to make a charge on range lands and reclamation areas of $100 a day. In the making of these areas the Federal Government has never done anything except to declare them "public domain" and charge the stockmen so much per head for the grazing of cattle and sheep. Some of these things approach the point of being ridiculous.

Is it quite possible that all this pressure is being brought against the moving-picture business with the future idea in mind of coercing them to such an extent that it will have the effect of a real censorship? If this is true, Congress ought to remove and take out of circulation such heads of bureaus as this.

The next item would be the endeavor to enforce a Federal oil-control bill on California. California has had what is known as voluntary prorating of its oil, and the industry has worked successfully under this, but it is very peculiar how these different governmental agencies want to have at least partial control over the tremendous finances of these companies. They are using this oil-control bill as a wedge to confiscate some of our lands in California, which brings us down to the next point of this Federal blitzkrieg, and that is the Department of Justice threat to claim the tidelands in California and take them for the Navy without payment therefor. This is plain out-and-out confiscation, because the Department of Justice knows, and every lawyer knows, that every single decision handed down by the Supreme Court is against the Federal Government in this. It has been stated that the Federal Government is relying upon the so-called liberal interpretation of the new Supreme Court to write new laws which would permit the confiscation of property. If this is true, it should be nipped in its inception.

In connection with this threatened oil suit, which I understand is now on the President's desk for decision, I understand that there is an attempt to isolate California and fight California alone. Let me say to every single coast State that the precedent established in connection with California will be used to "blitzkrieg" every other State in the Union where similar conditions exist, and those States are: Maine, New Hampshire, Rhode Island, Massachusetts, New York, New Jersey, Delaware, Pennsylvania, Maryland, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Louisiana, Texas, Oregon, and Washington. Every single one of these States have an interest in this deal, and under no conditions should we permit the confiscation, without payment, of property in California, because if it is done there it will be done in these other States under the same rule.

We are also facing the destruction of our community property laws in California. In California women have certain property rights that we believe they are entitled to, and we are going to do everything we possibly can to see that those rights are maintained. The only reason that I could conceive of motivating those who conceived the idea of destroying these rights is this: That in California an income-tax return may be filed by the husband and also by the wife. This would, of course, make both pay taxes, but would bring them down in the income-tax brackets so that the taxes might be somewhat less. The thought occurs to me that the spenders in this country have gone to great lengths to find additional money to spend. Our members of Appropriation Committees, and others, in my opinion, would do well to look for ways and means to stop the spending of money rather than to look for new sources of revenue with which to pay for this terrific, terrible spending program.

Of course, we know that this country owes $45,000,000,000, but we never dreamed that they had used up all sources and were going to such great lengths to see what could be additionally taxed.

This brings me down, then, to further discrimination against the Pacific coast, in which the Federal Government of the United States is the chief offender. The Panama Railroad Company operates three American-flag steamships, and I understand the rates on cement from Atlantic coast ports to the Panama Canal are approximately $3 a ton. The same rates from Pacific coast points are $8 a ton. This means that our cement mills, our lumber, lime, brick, and all construction commodities cannot be sold in competition with Atlantic coast points, primarily on account of the Federal Government having broken up the equity of the rate structure.

I am the Representative of this territory, and I am appealing to you for help in the correction of these things, and expect to get it, the same as I would give it to you if the conditions were reversed.

I am including as a part of my remarks the following article from a recent issue of the Los Angeles Times:

ICKES IN ANSWER TO DISCRIMINATION CHARGE

WASHINGTON.—Secretary Ickes said today that if Congress would appropriate enough money to maintain the national parks he gladly would permit movie companies to use public lands without cost. This was in reply to press-conference questions concerning a resolution introduced by Senator ASHURST (Democrat, Arizona) calling for a Senate investigation of Interior Department charges ranging from $100 to $500 for use of the public lands in the filming of motion pictures.

Ickes recently ruled that movie companies must pay for the use of public domain on which they established "sets" and operated with casts of 25 or more actors. He excluded news reels and travelogs.

ASHURST characterized Ickes as a "lord paramount" over public lands and proposed that the Senate investigate.

"If the Congress doesn't want us to make these charges and will give us enough money to maintain public parks," Ickes said, "I gladly will take off all charges on special privileges to the movie companies.

"I hope we do have a Senate investigation. I'd like to say something about discriminations against the Interior Department in congressional appropriations.

"The motion-picture moguls make big profits and I thought we'd get a little money out of them for using public property. I don't see why anyone except those at the top of the Hollywood industry should get excited."

Reserve Board Member Warns of Inflation

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

Mr. THORKELSON. Mr. Speaker, I have a clipping that states that the British are growing impatient over the neutrality of America, and the headline further states: "Political leaders say war would never have started if the United States had stuck by Allies; 'Uncle Shylock' denounced." I can only say to this that we have not been neutral, and we are not neutral now, in any sense whatsoever. We are shipping war materials of all kinds to Great Britain and France, without even a blush. The British do not mean neutral. They mean, instead, when are we going to fight the war for them? Our reply should be, never again.

I quote, Washington Post, April 15, 1940:

For weeks there has been an increasing impatience over American neutrality in this country. It found complete expression tonight in the address of Maj. A. G. Church, treasurer of the National Labor Organization, who, speaking at Bristol, said that if the United States had stood by their natural Allies—Britain and France—since 1918, Adolf Hitler would not have been heard of, and the present war would not have been fought.

"It is," he said, "a melancholy reflection of the spirit of the times that it is upon Great Britain, France, and small communities in comparison with the great American Republic, that the responsibility for safeguarding free institutions and liberties of the peoples throughout the world falls, and that the numerically greatest democracy in the world can justify from the safe distance of 4,000 miles its policy of aloofness.

"It is inconceivable to those in Britain who have any respect for principles, any regard for justice, any enthusiasm for ideals, any prejudice against slavery, to find the great American Republic unresponsive to their appeals for help in a conflict which is to determine the fate of the world.

"Isolationism of America has created the present situation. It is time that the statesmen of America realized they must align themselves with Great Britain and France in this conflict against a slavery worse and more insidious than that against which Abraham Lincoln thundered and fought."

The author is, of course, aware of the fact that England has never treated the United States with common courtesy, and should, therefore, expect little from us. However, when he makes the statement that it is upon Great Britain and France and small communities that responsibility falls, as compared with the great American Republic, I cannot refrain from smiling. He evidently forgets that Great Britain owns over 13,000,000 square miles of property, with a population of nearly 496,000,000, and France has nearly 5,000,000 square miles and over 113,000,000 population, as against our 3,000,000 square miles, with approximately 125,000,000 people. So I say, what is holding Great Britain back if she wants to fight?

As a matter of fact, nothing is going to happen, no matter who wins the war. That is clearly evident as we observe the present invasion of Norway. Norway is separated from England by 400 miles, and I venture to say that England will find it very costly to get into Norway. It follows, therefore, that invasion of the United States by a power 3,000 miles from our shore is too silly to speak of. The only invasions we need fear are north and south of us, and I am sure they would be cared for should necessity arise. As to slavery, it would be well for the speaker, Major Church, to bear in mind that such conditions prevail in the British Empire.

What we should do is to look after ourselves and provide for equipping our own Army and Navy instead of those of foreign countries. At one time Russia received all our Army and Navy secrets for the asking, and today they are handed over to Great Britain and France. Congress is requested to appropriate more money for protection against espionage and stealing of Army and Navy secrets, yet the heads of the administration hand them out like a piece of pie at lunch. The administration acts like a group of irresponsible children with a new toy. I shall now quote an article by Maj. Al Williams, and I want to say that he is absolutely 100-percent right in his statement about Congress and about the administration, and should be commended for telling the truth. Washington Daily News, April 24, 1940:

SALE OF UNITED STATES PLANES TO ALLIES CRITICIZED

(By Maj. Al Williams)

Before we can have air power or the machinery for adequately defending the air over and around the United States, I think we will have to conjure up or even coin some statesmen for Congress.

We sadly need some political leaders who will base decisions on what is right and what is wrong.

The selling of American air power down the river was conducted on the national counter in full view of everyone, and with only one or two weak and notice-seeking protests in Congress, although the naval and military committees of House and Senate are supposed to be composed of men who know something about national defense, its machinery and its technical aspects.

I have no doubt as to where the idea of selling our latest war planes to the Allies originated. A few leaders of the administration—chiefly Mr. Roosevelt and Mr. Morgenthau—had decided to sell our best air fighters, without restrictions, and those who should have protected the interests and safety of the American people stepped into line like good little boys, selling as they marched.

QUESTIONS REASON

The excuses given to the public seemed to me to be based on the premise that said public is composed of addle-pated fools. By selling our planes, the boys in Washington were going to save us some money, get us later designs, and expand our aircraft-production facilities. "No secrets to be sold," was the keynote. It might have been true, in one sense, since everything is to be sold before any new and valuable invention could be tagged "secret."

Now, weeks after the sell-out there are squeaky protests out of Congress about the dangers of turning the finest products of American aeronautical genius over to the Allies. One says:

"The theory being pursued by our Government that this foreign business is going to help us by providing means for expanding our aircraft production is an error of fact and fundamentally unsound."

STRAIN ON NEUTRALITY

When we go into this business as a neutral nation we are immediately subjecting our neutrality (what a travesty) to a severe strain. When the United States permits our factories to take orders from foreign governments that are at war or threatened with involvement, we at once have a stake in that war. The next step will be that we will find ourselves financing the war and then, perhaps, becoming an active participant with our men and munitions.

If we had to go to war today, I doubt if we could put more than 1,000 combat planes in the air. A fleet without control of the air never can attain its full effectiveness and the same applies to the Army. It must have control over the air where it is fighting.

Why wasn't such a protest voiced when it might have done some good?

This article by Major Williams is self-explanatory so I shall make no further comments on it.

Let us now see how well prepared we are financially to fight another war. Let us first bear in mind that England and France will use American industrial bonds and stocks as money to pay for merchandise which they buy in the United States. These bonds and stocks are set up against the gold in the United States Treasury and will remain in the hands of the international bankers. These stocks and bonds can be used as they were in 1928 and 1929, to be sold on a climbing stock market, but this I do not believe is possible as we remember our experience of 12 years

ago. It is, however, to the interest of the international bankers to sustain the price of this stock, for such act on their part will render greater aid to England and France, their brothers in crime.

However, the point to bear in mind is that the American producers will never receive anything but an inflated and valueless dollar for work, merchandise, or other commodities, and that in itself is a most hopeless outlook.

Congress set up two classes: First, the aristocratic internationalist, who is secured with gold and uses gold credit and currency without restriction; and second, we, the common people, whom Congress placed upon a debased money standard, without security and without value anywhere or any place. Some may not believe this statement, but I defy anyone in the administration to contradict it, and prove that it is not true.

I shall now quote a short article from the Washington News, April 19, 1940, which in itself says a "mouthful":

UNITED STATES DEFICIT NEARS $3,000,000,000 MARK

The Treasury net deficit is within a few millions of $3,000,000,000 today. Hope has been abandoned for additional tax revenue at this session of Congress to avoid exceeding the national-debt limit.

President Roosevelt, however, believes the debt-limit issue may be avoided at this session of Congress by a combination of favorable circumstances which he hopes will come about. He told reporters yesterday Congress might reduce spending in the next fiscal year $200,000,000 to $300,000,000 below the Budget figure of $8,424,000,000. And he said it is possible Treasury revenue in the next fiscal year may be up $200,000,000 or so beyond budgeted expectation of $5,547,000,000.

In that event, he explained, $460,000,000 of new taxes asked in his Budget message will not be necessary to prevent Government borrowing from hitting the $45,000,000,000 limit which is fixed as the maximum national debt permitted by law.

This statement is the same buncombe we have had for the past 7 years and should not be taken seriously by anyone. Our national debt will be up to the limit at the end of next June, if all debits were placed in their proper column. We have lived on promises ever since the administration took office, and the the end is not yet, for we are going to meet with complete inflation and repudiation before the whole mess is over. The President knows that, and so does the Secretary of the Treasury, and it serves no purpose to kid the American people, for they are entitled to be informed of the truth.

If anyone should question this statement, let me now quote another little article from the Washington Post, April 23, 1940:

RESERVE BOARD MEMBER WARNS OF INFLATION—DRAPER SAYS AGENCY WOULD BE POWERLESS IN SUCH AN EVENT

Ernest G. Draper, a member of the Federal Reserve Board, warned yesterday against a potential injurious inflation and said the Reserve System was powerless to cope with such a contingency.

Secretary of the Treasury Morgenthau suggested, meanwhile, that the problems mentioned by Draper might well be studied by the Senate Banking and Currency Committee, which is preparing for an investigation of the whole monetary and credit situation.

Morgenthau said the problem of idle bank funds and its potential effects were being constantly studied by the Treasury.

Draper spoke before the Economy Club of Detroit.

"With excess reserves or idle funds of Federal Reserve member banks at around the $6,000,000,000 mark," he declared, "our volume of bank credit could be raised by an additional $35,000,000,000 or $40,000,000,000."

He pointed out that there was no immediate prospect of an inflation of this kind. "In fact," he said, "with more than 8,000,000 unemployed, how is it possible to generate a continuous, general, and injurious price rise without such a rise being nipped in the bud by competitive forces?"

"But we all realize," he added, "that conditions have a way of changing rapidly in days like these."

"The Reserve System's monetary powers," he declared, "are inadequate to deal with an unhealthy boom."

This article is the final admission by the Secretary of the Treasury that neither of them knows when inflation may take place.

Can anyone ask for a clearer statement than that? "The Reserve System's monetary powers are inadequate to deal with an unhealthy boom." What does that mean? It means that we will always remain as we now are, without any possibility of progress, increase in wages, or even increase in employment, because when that happens, and prices go up, our currency will collapse.

The fact is that our currency system is today in a much more serious condition than it has ever been in the history of the United States. This might appear like an open statement, but I challenge anyone on the Federal Reserve Board, in the Treasury Department, or the Federal Reserve banks to controvert this statement. Surely, if I am wrong, someone in these organizations will have the courage to come out and contradict me.

This truth must come out sooner or later, and it is my purpose as a Representative in this Congress to let the people know that it is going to happen, so they may be prepared to protect themselves in this catastrophe.

It should be clear, and the same group to which I have already referred may contradict this if they can, that we are operating on a purely inflated dollar since the Gold Reserve Act was passed in 1934—a dollar with no background except its purchasing power, which can only be controlled by holding price levels at a certain level. Is it possible that anyone in these three institutions will contend for one moment that these prices can be controlled indefinitely by the Treasury Department or any other Department of the Government? If anyone believes that, I will ask him to publish the manner in which it is to be done.

The fact is that price levels are maintained by importing and keeping surpluses on hand so that there will be no possibility of price raise, or increase in wages. We are doomed to go on forever on a W. P. A. schedule of $50 per month. It means simply that we are consigned to definite price fixing regulated by departments and bureaus in Washington. Should anything happen to create scarcity, the price will go up and the dollar will collapse like a toy balloon, and we will be in exactly the same condition that the German people were in when the mark collapsed after removal of gold.

Various Government officials appear to worry over the possibility that we might have a credit inflation or a currency inflation because of the accumulation of money in the banks. The statement is made that no one appears to be interested in using this money. Let us look at this from a practical standpoint: Why should I or anyone go to a bank to borrow money to engage in business, and leave in the bank valuable security for such loan, when we do not know the minute this "phony" money is to collapse? Surely I would be foolish to leave real estate or other permanent property as security for a loan of money that has no value and no character, a currency that may collapse the next day and leave me without property and flat broke. This is the reason why people do not want to use the money, and in this I believe business is right.

There is another angle also. Why should the people of this Nation engage in business and subject themselves to continual prosecution, persecution, fooling, and meddling by the most incompetent government that ever sat at the helm of the ship of state? There are thousands of reasons why business should not jeopardize any valuable property in order to expand or engage in business, and the best reason of all is the government itself, that is highly conspicuous for its incompetence.

The present war agitation is for no other purpose than an attempt and hope to cover up the blunders of the past 8 years; and should the people foolishly allow the administration to engage in such suicide, it can only end in a most horrible and bloody internal strife. It requires no prophet or son of a prophet to visualize what may happen. The handwriting is on the wall.

I earnestly hope that our people—and I mean the common people of this Nation—will take an interest in the coming election and elect men to office who are capable and who will adhere to the fundamental principles expressed in our own Constitution. We need a man at the helm of this Government, not a puppet. We need a man who has sufficient courage to take the bull by the horns and put this Government where it rightfully belongs, namely, securely upon the Constitution of the United States.

An International Angle

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 23, 1940

Mr. THORKELSON. Mr. Speaker, since my first address in the House, January 20, 1939, I have inserted in the RECORD remarks on different national and international problems. In these remarks I have referred to the League of Nation's Bank of International Settlements and the International Agricultural Mortgage Credit Co. These two organizations, under the direction of the League of Nations, comprise a plan which has for its background a world government dominated by international rulers. It is interesting to know that the bank and the League of Nations are American contributions to an international government which is to supersede our Republic. However, it is most interesting for all of us to know that the draft of the League of Nations had its beginning in Paris. This draft finally reached President Wilson and became his contribution toward a world government. In other words, it was an international shell game. The Bank of International Settlements was the brain child of the international bankers, but was proposed by the United States as the Young plan.

I shall now quote from the eleventh plenary meeting, September 10, 1929:

> The guiding principles I have just quoted make it clear that this bank was devised by the authors of the Young plan to be a central financial institution of great importance in world economy, an institution which directly and indirectly will be in a position to influence the economic and financial life of individual States, even those not directly concerned in the settlement of debts and reparations.

Mr. Raestad of Norway said, in speaking of the bank:

> On the whole, even supposing that it had the power to do so, the League of Nations would certainly not wish to establish at present too close relations with the bank for fear of being obliged to approve activities which might later on become a source of embarrassment for the League. On the other hand, if we confine ourselves to complete inactivity, we run the risk of delaying our action until it has become too late to act. * * * He also viewed with alarm the idea that all the changes in the statutes of the bank would be left entirely to the discretion of the directors, however great the confidence placed in their prudence and wisdom.

It is quite evident that many of the delegates suspected the motives of those who proposed the Bank for International Settlements, as well as each other, and it was this shyness that troubled the French delegate, M. Loucheur, as he preferred to have some definite proposal. He voiced his suspicion in the following words:

> A connecting link with the bank! No control! These were the suggestions. Personally he distrusted connections with banks. One did not know what might happen; there were periods of prosperity for banks, but, as with all things human, there were also periods of difficulty. Such a connection might at a given moment compromise the political body which had desired to establish it.

This to a certain extent reveals how the international money changers suspect each other, so why should not we, the people, who have been shorn and fleeced, suspect them? It is clearly evident in studying this plan that the international financiers, while desiring a league of nations, did not want to jeopardize their control of gold by placing the bank in a subservient position to the league. This same thought is carried out in the International Agricultural Mortgage Credit Co., for its transactions are clearly based upon the gold standard, and so expressed in article 5, which I now quote:

> In order to permit the International Co. to establish a special reserve as provided in article 21 of the statutes, the contracting governments undertake to make, as provided below, advances to the company, which it shall repay as provided in its statutes and which shall amount to 25,000,000 gold Swiss francs, equivalent to 7,258,064.516 grams of fine gold.

This clearly shows that gold, instead of being obsolete, is as it has always been, the standard international medium of value, and we should not be fooled by newspaper propaganda making statements to the contrary. I shall now quote from the convention, charter, and statutes of the International Agricultural Mortgage Credit Co., as approved by the Council of the League of Nations, and signed on May 21, 1931. I may also say that these documents are somewhat similar to the inter-American bank, which I recently discussed in the RECORD.

> ART. 2. The registered office of the International Co. shall be situated at Geneva. Its duration is not limited.
>
> ART. 7. The capital of the International Co. is expressed in gold Swiss francs, the gold franc being equivalent to 0.290,322,580,640 grams of fine gold.

This is also interesting for it shows that nothing but gold is to be used as capital for this company. I shall now quote article 28, in order to show that the bank will be entirely under private control:

> No person shall be appointed or hold office as president or vice president or as a director who is a member of a government, or a member of a legislative body, unless he holds such position for life.

It should be obvious that no government official has a position for life, except he be a king or emperor. I shall now quote from an English publication, Action, an article by H. T. Mills:

MONEY AND FEDERAL UNION

(By H. T. Mills)

Early in 1933, the minority report of the League of Nations' gold delegation predicted that "millions of people in this economically interlocked world must inevitably die of starvation, and it is indeed doubtful whether our present civilization can survive."

This nonsense was the work of so-called experts who appeared, or pretended, to be unconscious of the fact that the world's troubles were caused by inability to distribute plenty, rather than by shortage. International money power, which dominated the world after the Great War of 1914–18, determined more than ever to make money short, so that promoters of all activities on the planet would be obliged to borrow at rates of interest dictated by the creators of the money monopoly. The natural sequence of such a policy was that goods and services everywhere had to be cut to meet the available supplies of money, instead of the opposite being the case, as one might expect in a sane society. Money became the master of man, instead of his servant.

DESTROYING GOODS

One of the most common excuses put forward in defense of this procedure was that it kept up prices. But this involved sabotaging production and even destroying goods—200,000 cows burnt up in Holland; 100,000 bags of coffee per day destroyed in Brazil, each bag containing 132 pounds; Chile "rids herself" of 3,000,000 gallons of "surplus" wine; United States of America wheat crop reduced by a hundred million bushels, although millions lacked food in that country; vineyards uprooted in France; milk in Britain poured down drains, surplus made into buttons and umbrella handles; British farmers fined for growing too many potatoes; and complaints to the effect that there was too much corn, too much beef, too much mutton, too much bacon, too much butter, in spite of a report by Sir John Orr in 1936 stating that about 20,000,000 people were underfed in Britain. A more natural remedy would have been to create more money, had the money monopoly not forbidden it. Possibly the artificial shortage thus engendered so confused the minds of the League's experts that they wrote the nonsense referred to above.

B. I. S. AT BASEL

For the League of Nations, as everyone knows, was the child of international finance, being Jewish in outlook and operation. The actual League itself, like our House of Commons, might be compared to the lungs of the money power, but the real heart, or power house, was the Bank of International Settlements at Basel.

A short examination of some of the principia clauses in the B. I. S.'s original charter makes its objects quite plain. It was prohibited from working in currencies not based on gold or gold exchange, and so countries such as Germany, Italy, Japan, and Spain, because of their monetary experiments in basing their money upon production and refusing to receive international loans, became rebels to the system and left the League, although retaining representation in the B. I. S.

An intensive economic and financial struggle developed between these two monetary systems—the system of reality, which enabled states relatively poor in resources to accomplish marvels of rearmament and all sorts of improvements denied to much richer empires; and that of so-called democratic governments, who allow their boundless resources to be kept down to the level of a "managed" system of money, partly based on gold. Those states which had seceded from the League rearmed to defend their new money system; they spent on armaments what otherwise would have been spent on consumable goods, whereas the democracies, when they started rearming, purposely increased their supply of money in order to do

so. Had they not rearmed, it is almost certain that this increase would not have been effected in order to raise the ordinary standard of living.

USURY DEFIED

From 1935, when, during the Abyssinian war tension, the rearmament of this country was decided upon, to the end of 1935, when the program was in full swing, the note issue increased from £450,000,000 to £525,000,000. It is now £580,000,000. This bitter economic struggle made war inevitable; the usurious system centered in the Bank of International Settlements was being defied by countries who refused to borrow and get into debt, and consequently it became more and more difficult for England, who has to foot a food bill of more than £400,000,000 annually, to pay her way because her exports tended to diminish and interest tribute from abroad to decline. In the Far East the struggle led to friction with Japan over the silver bullion lying in the French and British concessions at Tientsin, which was made the security for loans to Chiang Kai-shek.

It is quite clear, therefore, that the aim of the international money lender, if he comes out on top at the peace, is to keep control of money. The plan for doing this is called "Federal Union," and is being boosted under various disguises from pulpit and platform throughout the democracies, although it is anything but democratic, being a grinding financial tyranny. It is the old League of Nations planning for shortage all over again in a much more violent form, since it would extend international monopoly to all activities of life.

Mr. W. B. Curry, a well-known advocate of this policy, states in his book, The Case for Federal Union:

"Lastly, the world community must ensure the means of development of world public opinion. I do not, of course, mean by this that everyone in the world should think alike. * * * What could be realized, and is not merely desirable but essential, is that everyone should have full and free access to the same sources of information. It must be possible for Germans and Englishmen * * * to argue about the same problems in terms of the same data * * *."

To render this effective the nations must be, so to speak, emasculated in an attempt to reduce their natural resistance. They are then to be effectively held in leash by a (presumably) well-armed international police force.

REAL CAUSE OF WAR

The books and pamphlets making out a case for federal union falsely claim that war is produced by national sovereignty. Money, the real cause of war, is only vaguely alluded to. The result of such an unnatural society would be, no doubt, the reduction of all peoples and standards to a mixed, humdrum, and low-caste mediocrity. Count Coudenhove-Kalergi, in his book Practical Idealism, states: "The man of the future will be a cross-breed * * * of Eurasian negroid race," over which the Jews will form a "new aristocracy of spiritual grace." Such ideas as these, joined up with the efforts of organizations like New Commonwealth Union, with its international police force, and international finance in the background, merge into the policy of federal union, which is fast becoming the real war aim of the Allies.

War is caused by the dishonest manipulation of material things, like commerce and money, not by the inherent sense of nationality latent in every healthy people, which is a spiritual quality and cannot be abolished. A good money system based on national production and issued debt free would soon permit an exchange of goods and services along normal international channels, but without a supreme international authority to control it. The British Empire would then stand firm as a unit, prosperous, free, and self-supporting. But if we persist in fighting for the establishment of federal union and all that goes with it, we shall surely antagonize the most powerful nations, so far neutral, with the possible exception of the United States. The writing on the wall is plain for all to see.

This article is from an English viewpoint and is opposed to a world union, and this is also my viewpoint, for I am equally opposed to a world government no matter whether it be called world union or anything else.

I shall now discuss another pamphlet which, I believe, is printed in the United States, as the address given is Box 251, San Bernardino, Calif. This pamphlet contains discussion of several subjects, but I am particularly interested in two—namely, that on gold and the one that refers to the United States of Europe. The reason that I am interested in the discussion of gold is due to the fact that the author is apparently a German and should therefore appreciate how it feels to be deprived of gold and gold-secured currency. He no doubt remembers the withdrawal of the gold from Germany and the following collapse of German currency. He also appears to be familiar with the condition that confronts us today, and that, when expressed from a foreign viewpoint, is also interesting to me.

Another article that I shall quote discusses a United States of Europe based upon the same principles as the Constitution of the United States. I am particularly interested in that, for should this book fall into the hands of some person who is not informed about the Federal Union, as discussed by H. T. Mills, he may be confused when he is confronted with the United States of Europe. The two, however, are entirely different and as a matter of fact, this is the first time my attention has been attracted to a United States of Europe.

The book to which I refer is entitled, "Interpretation of the German-English Conflict. Speech delivered by Price B. zur Lippe, M. A., before various American societies, clubs, and organizations, and an accompanying article by John H. Rand, Lusitania-Churchill-Athenia."

Gold, the powerful weapon in the hands of a few masters with which they could whip the common man in every nation on earth into submission, is no longer a value in itself. In fact, it never really has been that, but certain people managed to persuade us to see in it the all-powerful golden calf—or Mammon, god of the materialists. Poor old England is nothing else today but the lamb on the sacrificial altar of materialistic capitalism. The British Empire has for the last 150 years never been regarded by the masters of the earth as but the means to an end. Whatever nation should still be willing to enter this war on the side of Great Britain may, therefore, rest assured that she will not be sacrificing the best of her manhood for the welfare of the British Commonwealth or even for the rights of man or for liberty of mankind, but solely for the moralless masters of the age of capitalistic imperialism (cunningly referred to by them as the age of British democracy).

Not a single nation can be found in Europe to again get "the chestnuts out of the fire" for Great Britain, which has been doomed by her international masters and her servile statesmen, whom we Germans rightfully call "the gravediggers of the British Empire." France, we know, is too deep in the clutches of the financial overlords of Fleet Street, London. She cannot escape this firm hold except by following the one and only advice which we Germans try to make plausible to France, and this simply runs: "Do not fight." Whereas England intends to fight "to the last Frenchman."

The last World War was not won by the Allies. The United States of America won it for them. It cost the lives of 80,000 Americans and the heroic sacrifice of blood and health by another 200,000 of America's best manhood to uphold and preserve the already tottering system of capitalistic world imperialism. In comparison with Europe's 4,000,000 dead and approximately 8,000,000 wounded and crippled, the sacrifices of this great nation were really rather small. In a new world war they will go beyond all comprehension.

Most Americans know or at least they suspect that the propaganda in this country, conducted by the statesmen of Great Britain and paid for by the international money lenders, hoping to drag the best of America's manhood again upon European or maybe this time on Asiatic soil is simply terrific. In order to learn what British propaganda amounted to in the last war, I wish to recommend to you a book written by an American professor, Propaganda for War, by H. L. Peterson, Oklahoma University Press.

It might serve well to review very briefly what material gains or losses the United States of America got out of World War No. 1.

(1) England and France got practically all the German colonies, America none.

(2) The Allies received enormous shipments of arms, coal, and other raw materials and finished products. They got the entire German Navy, all of our merchant marine (with the exception of four little ships), and all of Germany's foreign trade. America received two or three German ships—otherwise nothing.

Now, what did America get for winning the last war for Great Britain and the internationally minded money sharks?

(a) A war debt of $27,000,000,000. In 1917 the total American national debt amounted to just $1,000,000,000; today it is $47,000,000,000 and is increasing year by year.

(b) America was handed the panic of 1921 that closed 6,000 banks and bankrupted 35,000,000 people in agricultural communities. And you know that after 18 years the farmers are still bankrupt.

(c) America was given an army of 12,000,000 unemployed, who, with their wives and children, mean 45,000,000 Americans depending upon Federal and State relief; this means about one-third of the entire population.

(d) These losses are, of course, all material losses and can, in the course of time, be regained. But America also suffered one tremendous loss of spiritual nature. Ever since the last World War this country has been swamped by alien "isms" and ideologies. The confidence and belief of many Americans in the one ideology which is theirs by heritage has been badly shaken. American democracy is tottering; in world war No. 2 it will vanish. In its place the people of this country will find dictatorship and communistic chaos. Senor Trotsky is biding his time. He didn't move so close to the American boundary for nothing.

Material losses can be regained in comparatively little time; spiritual losses only in years and years of terrific sacrifices; losses in life—never.

In order to complete this, which to me is a most interesting piece of information, I shall quote part 4 of this address, for it mentions the United States of Europe, based upon the same principles as our own Republic.

Again, Germany and Great Britain are at war. This time they oppose each other practically alone. British statesmen are foaming

at their mouths because national Germany succeeded in concluding a nonaggression pact with national Russia. Britishers call this "The most unholy alliance on earth." Had they themselves succeeded in calling Russia their ally, they would call it, I assure you, "The most holy alliance." Such is the game of propaganda.

Nevertheless, 100,000,000 Germans and their Government are determined to rescue war-torn Europe, once and for all, from the clutches of the financial overlords of Great Britain and the world. Such concepts as "world domination" and "world conquest" belong to the past. International capitalistic manipulations will no longer prevent the unification of Europe. We Germans and our Government are resolved: There shall be peace.

Ever since an American President brought the ideal of a League of Nations to our shores, and ever since Allied statesmen have misused this instrument for peace, changing it into a mere instrument of power politics, have we Germans been waiting for a chance to continue where the American idealist was forced to leave off. But we know that no one man, not even a single nation, will ever be able to accomplish this gigantic task—only through cooperation can this "palace of mankind" be built. All that we Germans, under the leadership of Adolf Hitler, wish to contribute is one of the cornerstones, namely the United States of Europe. The other three are: The United States of Americas, of Asia, and of Africa. How many years it will require we do not know. This much is clear, however: The basis of such a United States of Europe can never be political but purely economic. We must expect to have some sort of a federal government, which will consist of representatives of all European nations and which will regulate the material needs of Europe. Yet, at the same time, each nation must be enabled to live her own spiritual life. The Constitution of the United States of America provides just these needs—a Federal Government and protection for the "inalienable rights of States." It might well serve as a model for the future "United States of Europe."

The author mentioned the fact that President Wilson brought the idea of a league of nations to Europe. With this I take issue, for the League of Nations was a French idea, which came to the United States through the medium of our foreign representatives. The League of Nations was suspected by some of the European powers and even by us, for we did not join other European nations in establishing such world government. The League of Nations has been promoted by various philanthropic organizations and particularly through the influence of a source that should not be intermingled with the Government. I shall quote:

(a) Urge the Nation to make such concessions of national sovereignty as are necessary for the establishing of the kind of world commonwealth of nations which would facilitate peaceful change in the interest of justice and which would be able to exercise genuine police power on behalf of the welfare of the total world community.

(b) Urge the Government, when appropriate occasion arises, to tender its good offices in initiating international conference, at the same time indicating its willingness to make economic concessions of immediate national interest where they are necessary in order to establish justice for other peoples.

This quotation comes from an organization that has its headquarters at 297 Fourth Avenue, New York City. Read this carefully and you will find that this organization advises that the United States must concede national sovereignty to establish a world commonwealth of nations, that in turn should exercise a world policing power in the interest of peace and justice. This organization furthermore advises that we must disregard nationalities and make economic concessions to establish justice for other people. I can only say that we have conceded everything we can for peace, for we are now the world's most gullible Santa Claus.

The proponents of a federal union or world government advocate that we abandon our present Government in order to become a member of this big union.

Let us now return to the article under the authorship of Prince Lippe. At the end of his paragraph he suggests a United States of Europe based upon the Constitution of the United States; but I am very much afraid that he may not be familiar with the fact that we are not, since the seventeenth amendment was adopted, operating within the Constitution of the United States, but are, instead, a government in which there is no balance and little control. I have often called attention to this before, but I believe it bears repetition.

The Constitution of the United States provides that our Republic shall be composed of a number of States, whose government is represented by two Senators in the Senate of the United States. This is the United States of America. In our Republic the people are represented directly by representatives in the House and indirectly by State representatives in the Senate. The States are represented directly by their own representatives in the Senate and indirectly by representatives in the House. This is our dual form of government and comprises both elements that are necessary for balance, namely, the aristocratic side in the Senate and the democratic side in the House. This is the best government that has ever been provided for any people at any time. We destroyed this when we adopted the seventeenth amendment, and should for our own security repeal the seventeenth amendment, so that it may be restored as it was given to us by the founders of this Republic.

The proponents of the World Union, or whatever it may be called, require that the United States abandon its sovereign government in order to become a member of this international dream world, which is to be policed by a combined force of all member nations, under the dictates of an international ruler. Those who have heard speakers for this government should "take five" before they become enthusiastic about the plan, for are there any patriotic and loyal Americans who are willing to abandon the rights and liberties that we have had for 152 years and subject themselves and our Nation to being ruled by an international king?

I know what we would do. We would kick this king overboard the first week, because the American people will never tolerate such government as that. What then? This king will order his international fleet to attack the United States, and we, having been deprived of our fleet and our Army, will become vassals to this international monstrosity. Do we want that?

The Dies Committee Versus the Courts

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

OPINIONS BY JUDGES OF UNITED STATES DISTRICT COURTS

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I include therein two court opinions, one by Hon. George A. Welsh, of Philadelphia, judge, United States District Court, Eastern District of Pennsylvania; the other by Hon. F. Dickinson Letts, judge, United States District Court, District of Columbia, both relative to the illegal activities of the Dies committee.

ORDER OF HON. GEORGE A. WELSH, JUDGE, UNITED STATES DISTRICT COURT, EASTERN DISTRICT OF PENNSYLVANIA, PHILADELPHIA—TAKEN FROM THE OFFICIAL NOTES OF TESTIMONY

Well, it would appear that the only way that the aggrieved persons have of raising this question fairly and squarely, a question that I say is as fundamental as could be possibly raised in a Federal court, and without attempting to pass upon the merits or demerits or the guilt or innocence of anyone involved, but because the court believes that a probable cause has been shown for the issuance of a warrant, the court directs that a warrant issue.

Now, I don't know just what to say. Maybe I ought not to say anything. But I can't sit here, 61 years of age, gentlemen, with all my experience in public, without being somewhat moved, and I do hope that our people or all of us will try and remember that these rights of ours, so fundamental, given to us as the result of the battle of humanity through the centuries, must be preserved. Only toleration, only forbearance on the part of all our people can enable us to maintain those rights unimpaired. I know how sincere, truly sincere, many people are today in feeling that our institutions are in danger. I know that there are lovely men and women who wouldn't want to do an injustice to another living soul who feel all that we have struggled for through the ages stands in peril by reason of certain borings from within. There are people, whether correctly informed or not, who believe that agencies and influences from overseas are trying not to advocate a new philosophy of human government only, but they are trying to destroy the pillars and the foundations of the freest government that God has given to people.

Now, sometimes in our zeal to guard that which we love most and cherish most, we may become somewhat intemperate, and our vision may be blurred, and our judgment beclouded. Tolerance,

tolerance on all sides, is necessary today. We know the hatreds that are sweeping over the land, class prejudice, racial hatreds; we see many things done that we deplore. We see the press imperiled, we see editors jailed for expressing the God-given privileges of the free press, and today we have seen evidences given of something that no matter how we view the situation, I think in our calmer moments we must deplore.

I was hopeful that we could have found some other means of testing this great question out, and I regret that some other method could not have been adopted by very wonderful Government agencies in getting at facts. And as I said a few minutes ago, I hope we will not sacrifice freedom and liberty on the altar of patriotism, no matter how wonderful that may be.

I am directing the issuance of this warrant because I feel that not to do so would be to put the seal of approval on what has been done, and in granting it I am not putting the seal of disapproval on what has been done. I am not sitting in judgment on this particular case, but I do want the facts to be brought out before other men in the proper, legal way, to decide what is just and what is right. And again I say, America needs to be on guard.

OPINION BY HON. F. DICKINSON LETTS, JUDGE, UNITED STATES DISTRICT COURT, DISTRICT OF COLUMBIA

These relators are held under authority of a warrant issued by United States Commissioner Turnage authorizing their apprehension. They are charged with a violation of section 192, title 2, of the United States Code. Specifically it is said that they have violated the statute by refusing, when before a special committee of the House of Representatives, called the Committee on Un-American Activities, to answer certain questions propounded to them, questions said to be pertinent to the subject then under consideration.

I find that section 192 of title 2 defines as an offense the failure of a witness who has been summoned before a House committee, such as the Special Committee on Un-American Activities, to answer questions pertinent to the subject under inquiry. That statute not only defines the offense and denounces it but prescribes the penalty therefor.

That was not all that Congress did with respect to this statutory offense. By section 194 of title 2 the Congress prescribed the procedure by which one said to be guilty of the offense denounced in section 192 should be brought to trial.

In the first place, I think we must recognize the fact that Congress by these enactments was dealing with political questions and had in mind the necessity of protecting citizens who might be summoned as witnesses from unfair treatment by reason of the fact that differences in political opinion might prevail and that, by reason of such differences, unjust action might be taken.

I am of the opinion that Congress, seeking to prevent such unjust treatment of one summoned to testify upon a public question, determined that there should be a prescribed course by which the charge should be preferred, and through which the one accused could be brought before a proper court for trial. Congress did prescribe that when a committee such as this was confronted with an obdurate witness, a willful witness, perhaps, the committee should report the fact to the House, if it be a House committee, or to the Senate, if it be a Senate committee, and that the Speaker of the House, or the President of the Senate should then certify the facts to the district attorney.

It seems quite apparent that Congress intended to leave no measure of discretion to either the Speaker of the House or the President of the Senate, under such circumstances, but made the certification of facts to the district attorney a mandatory proceeding, and it left no discretion with the district attorney as to what he should do about it. He is required, under the language of the statute, to submit the facts to the grand jury.

I take it that Congress, by this careful manner of prescribing the course to be followed in a case of this kind, intended to protect its citizens in their political rights and intended to set up as a safeguard against unfair treatment or unfair attack a method mandatory in its nature which required the action of the grand jury before one so accused could be placed on trial.

In this case the warrant had for its basis the affidavit of one Robert E. Stripling, who is described as the secretary of the Committee on Un-American Activities. It seems obvious that Congress intended no such action to be taken by an individual. Stripling was not a member of the committee, he was an employee of the committee. It seems plain to me that he has no power to institute proceedings of this kind. I am likewise of definite opinion that a member of the committee would have no such right. Certainly a bystander could not institute proceedings of this kind. Congress intended to place the responsibility upon the committee itself, and it has prescribed what proceedings may be had when the committee has reported to the Congress, the House or the Senate, as the case may be, the fact of a witness' refusal to answer.

The only way a member of the committee of the House of Representatives can report such refusal to the House is by formal action of the committee itself. Here no such action was taken. Certainly Congress did not intend that any matters of this kind, that are political in their nature, should be left to the discretion of persons not charged with the responsibility involved. A bystander might, because of his own political beliefs and because he disagreed with the witness, rush off to the office of the Commissioner and swear out a warrant for the arrest.

The offense rests in the refusal of the witnesses to answer questions which are pertinent to this subject under consideration. The use of the word pertinent indicates that anyone in preferring a charge of this kind must, acting within discretion which a witness refused to answer was pertinent to the subject under consideration. That could not be left to a bystander or to the secretary of the committee or to a member of the committee. That is a function that must be performed by the committee in the authorized way, as is prescribed by the Manual of Rules of the House, in this case.

I think that Congress certainly intended to set up a safeguard for its citizens against the abuse of due process and intended to accord a degree of protection for political rights.

Upon consideration of the whole matter, I have concluded that these relators are not held by due process, that they are unlawfully restrained of their liberty, and that they should be released from custody.

The Legion's Widows and Orphans Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

Mr. MILLER. Mr. Speaker and my colleagues, several Members of the House have asked me recently how I thought the average World War veteran felt about the provisions of H. R. 9000 or, as it is more commonly called, the Legion's widows and orphans bill. In addition to the experiences I cited on the floor of the House on Thursday, April 18, I have tried to talk to as many veterans as I could contact in the limited time I have had available.

At this point I am inserting quotations from letters I have received from World War veterans, and one from a Spanish War veteran:

Congratulations upon your firm stand against the Rankin bill. Let every cent necessary be spent for the care and pensions to those that saw service on the other side during the World War.

Naturally, those men, and their families, who were actually injured or killed in service or later disabled as a direct result of their service should be generously taken care of.

In behalf of every patriotic taxpayer of this country may I offer you my warmest congratulations upon the fine, courageous stand which you took yesterday.

It is gratifying to note the position which you have taken in connection with the above bill (H. R. 9000). * * * As an ex-service man I am wholeheartedly in favor of certain benefits for those veterans who were actually wounded or disabled while in the service of their country, and certain pensions for the widows and dependents of such veterans, but am positively opposed to giving any further benefits to any ex-service man or his dependents who was not actually wounded or disabled in the service of his country.

I am thoroughly opposed to this bill (H. R. 9000) notwithstanding the fact that I am a Legion member in good standing and have served in the Twenty-sixth Division for 1½ years. * * * I am sure that every veteran who gives a serious thought to this subject will commend you on your action.

As a veteran of the Spanish-American War I feel that this country should take the best possible care of all veterans of any war in which they were engaged, who were in fact disabled in service in line of duty, and like care should be taken of the dependents of those who lost their lives because of wounds, injuries, or disease sustained in line of duty, but I cannot for a moment believe that we should provide for others, and I strongly urge that you do your very best to stop any proposed future pension legislation which will provide anything other than to take care of veterans who were disabled or their dependents.

Today's mail brought me a letter from a member of the American Legion residing in my own district, and in whose judgment I have a good deal of confidence. I quote from his letter:

Here goes for what little reaction on H. R. 9000 I have picked up. I inspected ——— Post of the American Legion last Friday night, and, under "good of the Legion," Comrade ———, who is and has been, I understand, an active Legionnaire, asked if I could explain the widows' and orphans' bill, for which the Legion was getting a lot of unfavorable publicity. I tried to present both sides fairly, and at the conclusion he announced his opposition to it; the rest of

the membership seemed to know little or nothing about it, and unless I am greatly mistaken, cared less. Comrade ———'s opposition was based on two points—that if the deceased veteran did not suffer disability, the proposed beneficiaries are not entitled to such privileged treatment, and that the country's finances could not stand it anyway. After the meeting I drew another very active member of the post aside and asked him his opinion of this proposed legislation, and his reply was, "Don't know much about it, but after what I heard, I consider the bill inadvisable."

The same Legionnaire further writes me that after attending a district meeting representing all posts of the American Legion in the county, he was coming more and more to the conclusion that there were comparatively few members of the Legion who really knew what legislation the organization was pushing, even though their posts were bombarded with circulars urging them to have members write "to your Congressman about this."

I am further convinced that most Legion members and veterans generally are unaware of the full import of this bill by the fact that I have received letters from Legion posts asking my support of H. R. 9000, "to provide for veterans' pensions."

In closing I might mention that the letters from which I have quoted herein are open to the inspection of any Member who might desire to see them.

Let Us Build Homes

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

Mr. ALEXANDER. Mr. Speaker, everyone who has thought over the problem of unemployment seriously and who is not over-selfish, has come to the conclusion that a widespread home-building and garden-making program is the first step, and the best step, which can be taken to constructively and most economically cure the depression for the Nation, and also at the same time best help the 10,000,000 unemployed and their dependents.

Not only that but it is also agreed that satisfactory family life—home life—is a first essential if we wish to preserve and perpetuate freedom and our excellent constitutional form of government. But how can we have satisfactory family life when one-third of our people cannot even pay rent because they have no job, much less have or enjoy the benefits and privileges of a permanent home?

I say agreement seems general on the above propositions, still we sit here with folded hands, dejected countenances, and fearful hearts after 10 years of meddling, fiddling, and wasted motion and wonder what to do and how to do it, although the answer is clear and evident.

I suppose some of you will immediately conjure up visions of the United States Housing Administration and of the F. H. A., or Federal Housing Administration, and with satisfaction or disapprobation, as the case may be, depending on your viewpoint, will feel that we have done something along the line I have above suggested, or will feel that these Federal so-called housing projects have disproved the theory of home building as an answer to unemployment.

I will not take the time to debate either of those viewpoints at this time, except to say there are some grounds for both opinions; but I do wish to insert a letter from Federal Housing Administrator Stewart McDonald, and then to add thereafter a few observations applicable in the case of Minnesota and undoubtedly equally so in other States:

FEDERAL HOUSING ADMINISTRATION,
Washington, April 29, 1940.

The Honorable JOHN G. ALEXANDER,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN ALEXANDER: The semiannual summary of F. H. A. operations reveals that 53,699 families in Minnesota have received loans of $47,410,808.47 for home-financing purposes. These loans were made by private lending institutions and had been insured by Federal Housing Administration as of the close of business December 31, 1939.

Of this amount 45,937 families obtained $17,637,154.47 in order to improve, repair, and remodel their properties under the property improvement provisions of title I of the National Housing Act.

In addition, F. H. A. insured loans totaled $29,773,654 in Minnesota for the purpose of financing home ownership for 7,762 families.

At the present time approximately 12,000,000 people in the United States are receiving the benefits of the F. H. A. program.

The F. H. A. insured mortgage has been a most instrumental factor in developing new home construction, the year 1939 breaking all records in volume of loans insured. The 1940 volume thus far exceeds even last year and I feel confident in forecasting that 1940 will show the greatest small-home-building program since 1927.

If you desire, I shall be very glad to send you a further summary of F. H. A. operations in Minnesota, broken down by counties through the close of the year 1939.

Sincerely yours,

STEWART MCDONALD,
Administrator.

Several things are evident if we do a little analyzing of the above letter. In general we can say that the F. H. A. is functioning and apparently there was or is a need for the type of service being offered. However, I think it can be said that the interest rate and charges made, although cut some as compared to similar extractions from the borrowing would-be home owner a few years ago, are still much too high to be conducive to a real activity, or productive of widespread accomplishment along the lines promised by sponsors of these laws.

When we consider that there are some 650,000 family units in Minnesota and compare that with the 53,699 families serviced as per this letter, we can see it is a relatively small proportion of the total, especially if most people need mortgage money, as I assume is the case.

We also find the average grant per family out of the $47,410,808.47 is only $882.90, so we get a much smaller average figure if we divide the $17,637,154.47 item by the 45,937 families aided. We also find the average mortgage allotment to the 7,762 families given help to own a home to be $3,835.82, which took up nearly $30,000,000 of the total of $47,000,000.

Several evident conclusions are easily seen: First, 7,762 families out of 650,000 is a very small quantity to help to home ownership; secondly, if the average is $3,835.82 per loan, it would indicate that the homes were an average $5,000 property, which is manifestly not the type to be built or occupied by an unemployed family, which means that little, if any, aid to rehabilitate the economically dispossessed in a permanent and direct way can be expected from the present type of operation of the F. H. A. And likewise I think it can be said that the loans to improve, repair, and remodel were not made to unemployed or for the purpose of encouraging home ownership, as their prospective ability to pay would doubtless eliminate them on the ground of their being poor credit risks. So about all we can get from the F. H. A. as an unemployment aid is from the temporary work provided.

On that basis I have supported the F. H. A. program, and I think we must continue to support it until a real program for solving the unemployment problem is formulated along the line I am suggesting.

But it is apparent from the analysis above that we cannot expect much from the present governmental housing activities in the way of a real and permanent unemployment solution on a sound and constructive basis not only for the unemployed but also for the people who still have jobs and/or pay the taxes.

Let me ask you, Is not that what we all want? Then why do we not get down to business and stop wasting time, money, lives, and democracy with half measures, makeshift programs, and false cures?

I am informed that in Minneapolis alone we have a need for 25,000 family unit homes, and that in Minnesota we need 50,000 new homes at once. Why do we not start something? But doubtless not all of these 50,000 homes needed are to replace those now occupied by unemployed people. So actually the potential home-building need in Minnesota is probably nearer 100,000 units, which means that the matter must

be approached from a two-way angle, which indicates we could have a considerable boom in business if we would give this matter some constructive thought and planning.

We hear a lot about idle money and idle men. What better place could we put our idle money? Is there any better security than a modern home? And where could we put our unemployed to work and to live to better advantage than on such a project? We have subsidized everything and everybody in this country, and we have been fairly successful doing it and have made a lot of little businessmen and businesses bigger by doing it. Why not now subsidize the unemployed a little bit by giving them help to provide themselves with a modern home and a garden? If we did, we would immediately solve the biggest share of that problem, and we would at least have something to show for our investment. What have we got now after 10 years of spending and lending to show for our aid to the unemployed? Very little—as we now have as big a problem, or bigger, as many unemployed, or more, and consequently, in terms of real accomplishment or a solution, about all we have to show is a bunch of debts and some receipts for wasted effort. True, we have fed and clothed and sheltered them after a fashion, but in an un-American style. Do we want to continue that mistake?

In pioneer days we subsidized our surplus population by giving them a 160-acre homestead. Why not do some modern pioneering by subsidizing our less fortunate brothers with a modern home and a garden?

How the American Taxpayer Is Helping To Support Foreign Wars

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

EDITORIAL FROM THE MOUNT VERNON (OHIO) NEWS

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mount Vernon (Ohio) News for April 27, 1940:

[From the Mount Vernon (Ohio) News of April 27, 1940]

PAYING WAR TAXES

If the Roosevelt administration were to come out flatly and demand that Congress levy taxes against American citizens for the purpose of raising revenue to help the Allies fight Germany, there would be a veritable uprising.

But, in effect, this very procedure is being followed in the United States today, under a New Deal measure.

Here's how it works:

The United States Treasury, under authority of the law enacted at the request of President Roosevelt, is paying $35 an ounce for gold, in contrast to the world price of around $21.

One of the main gold-producing countries of the world is British South Africa. In common with the rest of the gold-producing centers, South Africa is shipping its gold to the United States to take advantage of our beneficence.

But the South African producers don't reap the profit from our artificial price on gold. They must consign their gold to the Bank of England, which, in turn, ships it to the United States, and the Federal Treasury sends its check to the Bank of England.

The Bank of England pays the African producers in sterling, but when the Bank of England receives its payment from the American Treasury, it gets good American dollars. And the Bank of England pockets a tidy profit of some 25 percent.

This profit goes into the British Treasury, and the money is used to help finance Britain's part of the war against Germany.

As the United States Government pays for this imported gold out of the Federal Treasury, the money for these purchases actually comes out of the pockets of the American taxpayers.

President Roosevelt requested the law which authorizes the payment of $35 an ounce for gold. It is this law which compels the American taxpayer to foot part of the bill not only for the European war, but for the war of conquest Japan is waging against China, and the war of aggression Russia forced upon Finland.

This can be considered in no other way than a tax against the American people to help support wars which do not concern them.

In view of these facts, plus the dangers of our vast accumulation of gold, which economists have frequently pointed out, Mr. Roosevelt's refusal to retreat from his gold policy is indefensible.

National Employment Week, May 1 to 8, 1940

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

LETTER FROM DAN CAMPBELL

Mr. VAN ZANDT. Mr. Speaker, National Employment Week, May 1 to 8, 1940, is being conducted by the American Legion, Veterans of Foreign Wars of the United States, and other veteran organizations in cooperation with the Federal Employment Service and its veterans placement service and with all State employment services.

An employment week serves, first, dramatically to focus public attention upon unemployed older workers, particularly unemployed veterans; and, second, to increase the placement of unemployed older workers, particularly veterans.

The Veterans of Foreign Wars of the United States through its employment and civil service preference committee chairman, Mr. Dan Campbell, Washington, D. C., pledges full cooperation in the conduct of the National Employment Week in a letter addressed to President Roosevelt dated April 27, 1940. The letter follows:

MY DEAR MR. PRESIDENT: The Veterans of Foreign Wars is again pleased to pledge, as we did a year ago, our full support and cooperation as to the suggestions in your splendid recent proclamation designating the first week in May 1940 as "National Employment Week," for the purpose of arousing more active interest in the employment of qualified older workers, including veterans.

Our organization has long been aware of the increasing unemployment, proportionately, among persons over forty. For more than 5 years, the solution of the distressing problem of increasing unemployment among aging veterans—still well qualified to render satisfactory service—has been one of the major policies of the Veterans of Foreign Wars.

Each annual National Employment campaign conducted during the last 2 years, by the several veteran organizations and others, in cooperation with Federal and State employment services, resulted in greatly increased active registrations and placements of employable veterans and other older workers. Based on past experience we are hopeful that National Employment Week this year will result in many more thousands of veterans, and other workers, being placed in gainful employment.

New technological processes cause more displacement of workers over forty than among younger workers. Although all male employables above the age of forty constitute about 45 percent of all available male employables, those actually employed represent only about one-third of all employed males. Among other repercussions caused by this condition, the most striking is the introduction, during the Seventy-sixth Congress, of more than 1,100 bills to provide some form of pensions for older unemployed workers. The only alternative for pensioning unemployed workers is to provide them with the opportunity for self-supporting employment.

Two years ago last January, after we brought this problem to their attention, the board of directors of the National Association of Manufacturers urged its members not to set up "any arbitrary age limits in the hiring or employment of workers below any which might be fixed for permanent retirement," and that their qualifications to perform the task, rather than any maximum age, should be used as the basis for their employment.

May we therefore again venture to suggest, Mr. President, that the adoption of such a policy by all employers—and consequently the employment of a much greater number of qualified older workers—would be greatly encouraged by the issuance of an Executive order providing for the examination, appointment, and promotion of all employees for all Federal agencies on the basis of their ability to perform the duties involved, without regard to any age less than that set for permanent retirement.

Your continued active interest in constructive steps to bring about the greater employment of employable older persons, including veterans, should have far-reaching helpful results.

Respectfully yours,

DAN CAMPBELL,
Chairman, Employ. and C. S. Pref. Committee.

THE PRESIDENT,
The White House, Washington, D. C.

The Patent Office and the Patent System

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

ADDRESS BY HON. CHARLES KRAMER, OF CALIFORNIA

Mr. BOYKIN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address of Hon. CHARLES KRAMER, of California, at the Willard Hotel, Washington, D. C., Saturday, April 6, 1940, at the Patent Office Society Dinner, celebrating the sesquicentennial anniversary of the signing of the first Patent Act by George Washington, in 1790:

Mr. Toastmaster, honored guests, ladies and gentlemen of the Patent Office, at this time, when Congress, manufacturers, scientists, inventors, and others, are collaborating to commemorate in a suitable manner the sesquicentennial anniversary of the signing of the first Patent Act by George Washington in 1790, it is appropriate that the Patent Office Society, composed as it is of the personnel of the Patent Office, should join in the celebration. We who are familiar with the scope and importance of the work of the Patent Office are cognizant of the benefits that flow to mankind in many ways—better living conditions, creation of jobs, and other blessings. Our awareness, however, is not shared by all the people; in fact, the Patent Office is an institution that is more or less obscure in various parts of the United States, and despite participation in the enjoyment of the fruits of inventive genius, many men and women are not acquainted with the source of stimulation and encouragement which rewards those who by their research and discoveries are responsible for the development of our country.

There are others, who, familiar though they may be with the Patent Office and the patent system, are of the opinion that inventions in labor-saving machinery and devices should be suppressed by taxation of the inventions or by legislation constraining the Patent Office from issuing patents on these inventions, the theory of this group being that such inventions tend to destroy jobs in the industry displaced by the new invention. There is, in my opinion, scarcely any need to answer such an argument, as it has been refuted many times. While there is always need for readjustment when a radical basic patent is commercialized, we have only to look about us to see many examples of exploitation in industries that support millions of our citizens where formerly thousands were employed, and in every instance the general public is an even greater beneficiary.

The further advancement of our country is dependent on the continuation of the exploitation of patents. Inventions, to be exploited, must be stimulated by patent laws granting adequate protection and reward. It follows that our patent laws must keep step with the progress with which their initial institution has blessed us. They must not be allowed to become antiquated by lack of pertinent amendments. Just as Congress, in 1930, granted an entirely new protection by the act to provide for plant patents, so we must be alert to avoid any stalemate of progress that might result by an obsolete statute. Undoubtedly the necessity for amendments from time to time will be recognized; our current traffic regulations illustrate the development of laws to meet a necessity which was nonexistent 50 years ago. To summarize, our patent legislation, as well as our technological achievements, must be current with the march of time.

It is my thought that if in the future we can look back on this celebration and number among its attainments a consciousness of the American patent system impressed indelibly on the general public, then indeed will all the ceremonies have been eminently successful.

The Patent Office, as a bureau in the maze of departments and agencies, is to many just another function of our Federal Government—singling it out and as the best of its kind in the world—no amount of praise and honor, such as is now being accorded it, fully credits this great institution.

Many thousands of words are being written and spoken during this commemoration, developing all phases of the history of the Patent Office—from its humble beginning with one clerk down to the present time, with a personnel of some thirteen or fourteen hundred examiners and clerks. You men and women of the Patent Office here tonight, who as cogs in the great Patent Office machine are responsible by your prompt, capable, and intelligent criticisms of the works of our inventors, for the well-known efficiency of your Bureau are worthy of public commendation. It is therefore my pleasure to salute you this evening, and I include all your illustrious predecessors whose achievements undoubtedly are patterned in the resultant quality and quantity of patents as they issue today.

May you have every happiness in your work, and may you, through your efforts, continue to aid the prolific and fertile brains of American inventors, so as ever to keep us abreast and apace of the whole world in providing the best betterments of life.

America at the Crossroads

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

RADIO ADDRESS OF HON. ARTHUR H. JAMES, GOVERNOR OF PENNSYLVANIA

Mr. RICH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following radio address by Hon. Arthur H. James, Governor of Pennsylvania, before the Indiana Republican Editorial Association in the Claypool Hotel, Indianapolis, Ind., Friday evening, April 26, 1940:

Fellow Republicans and fellow Americans, as in any free nation, the American newspapers are the sentinels of American liberties.

No audience could be better than a group of newspaper publishers for my purpose tonight, which is to discuss with you the present crisis in our national life—to discuss it from the point of view of the Republican Governor of the largest Republican State.

Two years ago I went before the men and women of Pennsylvania with the message that our State stood at a crossroads. On Pennsylvania soil that spring and summer was fought the first critical battle between the New Deal and the American way of living.

The Republican Party, campaigning on a platform of Americanism, battled against the exponents of extravagance and experiments. Pitted against us were the ablest shock troops of the New Deal—the crooners and the hate singers. We fought mud and we fought money.

And when the votes were counted it was found that the men and women of the Keystone State had chosen between issues that transcended party lines. The Republican cause at that election not only revived the faith and zeal of those who had always been Republicans. It attracted to it thousands of men and women who considered themselves independent of party ties. It attracted also thousands who were Democrats but not new dealers.

We won that fight—and I say "we" advisedly, because it was a Republican Party victory, and by no means merely a personal one for Arthur James. We won that fight by a majority of nearly 300,000, a change in majorities of approximately a million votes from the New Deal sweep of 2 years before.

Tonight my message to you is that America herself stands at the same crossroads Pennsylvania faced 2 years ago.

May I point out to you some of the signposts which I see at that crossroads? One says "Dictatorship." Another says "Financial chaos." Another says "Continued unemployment."

One of these signs will strike terror to the heart of every mother in this Nation, for it foreshadows the day when a man in uniform will knock at her door. He will say: "We've come for your son. We need him for cannon fodder." That signpost spells "war."

For each of these highways there is an alternative. There is not only a highway to "war," but also one to "peace." Really, there are two sets of roads. One is the broad and tempting road laid out by the New Deal in the name of expediency, which skirts the chasm of war and loses itself eventually in the slough of despond. The other is the straight and narrow trail charted by the compass of American tradition, the path by which the Republican Party seeks to lead this Nation again to the high ground of traditional American life.

I cannot express myself too emphatically. The New Deal is a dead-end street. It contains self-limiting factors. The fight between the New Deal and the Constitution has gone too far to be compromised. The New Deal has started a debt program that is going up like a skyrocket, and ultimately must collapse just as fast. The New Deal has established a policy of consistently spending more than it earns, and there isn't anyone who really believes that can go on forever.

Billion after billion of American money, your money and mine, has gone out the window. It is gone but not forgotten. What we have to show for it, in the main, are these three things: a hole in the ground full of gold that nobody wants; a handful of costly experiments which already have greatly interfered with our economic life; and a $45,000,000,000 mortgage on our future earnings and present liberties.

The bulk of the money wasted in this country was spent either on a program of planned scarcity, or in the name of pump priming. Scarcity we now have—scarcity of jobs, scarcity of happiness,

scarcity of opportunities; scarcity of everything that offers hope of the new dealers ever bringing us to their promised more abundant life.

The pump priming hasn't worked, and now the new dealers are telling us that our frontiers are gone—telling us in effect that the pump is broken, and that what we need is a new pump modeled on the European lines of limitless power centralized in one pair of hands. They do not remind you that from such pumps in foreign nations tonight are flowing streams of blood.

I say to you that America needs no such new pump. The old one worked for us for a century and a half, and made us the greatest Nation in the world. What we need is to stop trying to prime that pump with the earnings of the years to come, and to prime it instead with the warm fluid of faith and hope and confidence.

What, except confidence, does America lack? She has men and women, the finest in the world, whose hands are aching for useful work to do. She has untouched frontiers of enterprise and opportunity, of resource and capacity. She has in her banks, driven there because the New Deal has consistently discouraged private enterprise, the accumulated savings of the thrifty middle class of America—money enough, once revived confidence summons it to work, to solve the financial and social problems of this Nation almost overnight.

Idle men and idle dollars! Are they not the roots of our long depression? The New Deal has experimented with every conceivable program except one of finding jobs for idle men and jobs for idle dollars. Everyone except the braintrusters has come to realize that the only hope for America is to try to get those men and dollars back to work.

They can be reemployed. Not under the New Deal—for the New Deal has destroyed the key to confidence, and without confidence the task cannot be accomplished.

Jobs can be found for idle men and for idle money only by a new administration at Washington. They can be found only when new voices of hope and faith and courage take the place of the 7-year dirge of hate and mistrust and suspicion and greed which has been the theme song of the New Deal.

Only one political party in the United States has at once the opportunity and the responsibility of raising that voice of confidence, and that is the Republican Party.

If we as Republicans can strike the spark which will light America's path through the present wilderness, we can do this Nation the most important service in her history. The alternative is simple; the New Deal took the election of 1936 as being a mandate; it would take a similar vote in 1940 as being nothing more nor less than a bill of sale. "Once to every man and nation comes the moment to decide in the strife of truth with falsehood, for the good or evil side."

The election next fall is one moment when America must decide—and it is one moment which will never again return. The choice will be final and irrevocable. After it is made, we will have either America of the glorious past, or a new America of most doubtful future.

After 7 years of meddling, of chasing rainbows, of rabbit-in-the-hat administration, the New Deal is coming face to face with the fact that the only solution it can think of for the twin problems of idle men and idle money is war.

Is the New Deal toying with the idea of war? Let me reverse that question: Is the New Deal making a firm stand for peace? Have we fixed upon a policy of giving the rest of the world a first-class example of tending to our own business and tending to it properly?

The unequivocal answer is "No." Internationally we are meddling and muddling. We are playing the same international game which in 1917, under a Democratic President who had been elected on a platform of peace, brought us into the first World War. Our international program is a mixture of quarantines and good neighbor promises; of most-favored nations being set off against nations which are in the New Deal dog house; of neutrality and taking sides; of trade agreements and inflammatory utterances. Once again we are burning our fingers at the fires of Europe.

Who are our representatives at the frontiers of war, our ambassadors who should be bending every effort to but one purpose, that of keeping America at peace? Are they men of probity and experience, men filled with the sentiments and convictions of the America of tradition, or men toying with the same isms and experiments which put Europe where she is today?

America's interests abroad are not being safeguarded by typical Americans at all, but by millionaire playboys, by men whose deeds and words have unfailingly stamped them as being more at home in the parlors of Europe than at the firesides of America. They got their office after they had done favors, financial or otherwise, to the New Deal.

Call the roll. George Earle, whose inherited sugar money helped sweeten Pennsylvania for the Little New Deal 5 years ago, and whose administration as Governor of Pennsylvania offered scant evidence of his capacity, his judgment, or his calmness under pressure. Jimmy Cromwell, Doris Duke's husband, whose reckless tongue almost talked him out of his job in Canada before he even had a chance to get his feet on his desk. Willie Bullitt. Tony Biddle. Able enough defenders of radical and un-American doctrines, exponents of all isms except patriotism, but bold and brash firebrands where fire extinguishers are needed.

America's foreign policy! The New Dealers boast that there has been little criticism of it. How can anyone either criticize it or praise it when no one knows what it is? Roosevelt has no more made clear his foreign policy than he has made clear whether he proposes to run for a third term.

Who, in theory, is the chief of our custodians of peace? Next to the President, himself, it is the Secretary of State, Cordell Hull. But it has been amply demonstrated that Hull knows more about mountain music than he does about mounting guard in the watch-tower of American neutrality. If Cordell Hull was really running our foreign relations, Jimmy Cromwell either would have kept his mouth shut in Canada, or come home quicker than he went, once he demonstrated how undiplomatic a diplomat he actually is. Hull is not chairman of our national board of peace directors. At best, he is just a member.

Again I ask, What is our foreign policy? We've waited since September to learn. We have seen a display of steeplechase diplomacy, have heard promises of peace, and seen provocations that could lead to war. We have been told that America would stay out, and we have seen preparations to go in. Even these preparations are disquieting, for they have consisted not in getting our defenses ready for a possible invader, but in completing plans for using any such emergency as the excuse for a centralization of power which no previous administration ever found necessary for winning its wars.

We in America do not know the foreign policy of the new dealers. We have been kept in the dark. We do not know whether secret agreements have been entered into with other nations nor, if such agreements exist, the extent to which they may pledge our lives and our resources.

We do know, however, that if the New Deal is no more successful in keeping us out of the war than it has been in getting us out of the depression, we might all as well begin getting fitted for our uniforms.

Two years ago the Republican Party swept to victory in Pennsylvania on a program of jobs and peace. Since then it found jobs enough to cut the State's burden of unemployment one-third, to reduce the relief rolls half a million persons. It has restored peace to the tangle of contention which marked its governmental, industrial, and labor relations. Reemployment and harmony have walked hand in hand.

What better watchwords could there be for our national Republican program than jobs and peace?

Let us on the one hand take the sprags from the wheels of industry and the shackles of fear from our money, and on the other undertake a program of peace and harmony abroad and at home.

Cornered by its long record of blunders and fruitless experiments, facing the wrath of the American people for its plottings for power, the New Deal has resorted to one of its favorite defenses—name calling. It is merely trying to cover up its own greed and ambition.

If the New Deal was interested solely in the forgotten man, why was the court-packing bill necessary? Why did the New Deal demand the reorganization bill? Why did President Roosevelt try his famous and unsuccessful purge of Senators whose only sin was to express views contrary to the Executive mind?

If it was merely a question of preventing rule by overlords of business, why did the New Deal try to set up rule by overlords of labor?

If the New Deal isn't opposed to the United States Constitution, why hasn't it run the country under that Constitution for the last 7 years? Why have we had more new and untried ideas of government fresh from "Red" Russia and Nazi Germany in those years, than the tried and true American ideas which worked so well for a century and a half?

It is because the Republican Party believes in the Constitution, and is demanding that its principles be observed by the public servants who are sworn to observe them, that the new dealers day after day are calling us reactionary.

Is the Republican Party the party of reaction? Concerning the States of my fellow stepchildren in the national family, those administered by Republican Governors, I am in no position to speak. But of Pennsylvania I can speak with authority. The Republican Party has been the party in control in Pennsylvania for 15 months.

I challenge anyone, new dealer or otherwise, to point to one good law which was on the statute books when we came into office which we have repealed or undermined. What is it that we did? We banned sit-down strikes, we altered the workmen's compensation laws so that they would work; we changed the role of the State government from being the tool of labor bosses to being the impartial friend of both labor and capital. We ripped politics out of relief and relief out of politics, and built up a system fair to the needy and to the employees and to the taxpayers. Even Roosevelt himself has referred to our relief administration as a model.

So far as labor is concerned, not for years has there been more harmony between State, labor, and capital than during the past 15 months. We have had fewer strikes and no riots. You may quote to me the dire predictions of the New Deal labor spokesmen who said we were putting labor in chains, and I reply to you that these same spokesmen have made no concerted effort to restore so much as one of the changes we made. Union men are demonstrating daily in Pennsylvania that their rank and file wants fairness more than favors and that they most desire to have in the State government an impartial friend to help arbitrate their differences.

Again I ask, Is the Republican Party reactionary? And again I answer:

If it is reactionary to believe in the Constitution, to believe that the American doctrines which worked so well for a hundred and fifty years are worth trying again in this present crisis, then we are reactionary.

If it is reactionary to believe in common sense and common honesty in government, then we are reactionary.

If it is reactionary to believe that a nation which grew to wealth and greatness on the foundations of its industries cannot afford to stifle those industries with overregulation and overtaxation, then we are reactionary.

If it is reactionary to believe that the arm of the States and of the Nation can be kept around the unfortunate without sealing their liberties and killing their personal initiative, then we are reactionary.

If it is reactionary to believe that peace, even at the price of isolation, is better than the war which is sure to follow the New Deal's international meddling, the Republican Party is reactionary.

If it is reactionary to think that it is wrong for a national administration to govern by edict and name calling, by cultivating hates and capitalizing misery, by playing class against class and race against race—if opposing these things is reactionary, then we are reactionary.

If it is reactionary to value liberty more than expediency, then the Republican Party is the most reactionary party in America today—reactionary, and proud of it.

I have looked into the faces of far too many American men and women to believe that they are not alive to the dangers in our national situation—too well aware of the true issues in the approaching campaign to be confused by such clumsy political strategy as the New Deal defending itself by calling its critics names.

If what the Republican Party believes in is reactionary, then so is patriotism and love and religion and all the other human springs from which flow those elements that sustain human life and courage in a troubled world.

As our party prepares for the critical campaign we are about to undertake, one serious task awaits us at the outset. We must select our leader and our spokesman.

Tonight I have been discussing principles rather than men, and that is because I believe that the question of who the candidate will be is of far less importance than what he will stand for. Nevertheless, for our cause, however splendid that cause may be, we must have a champion.

Our own Pennsylvania delegation is going to the Philadelphia Convention uninstructed. We shall go there to help pick the best man we can find, the man best qualified for the heavy tasks before and after the November election.

What will be the yardstick we will use? What will be the shoes which our candidate must fill?

First, he must be a man of courage and conviction, a man of fidelity and diligence, experienced both in the affairs of government and in the competent expression of his principles and intention. He must be a Republican—must believe in the Republican principles and know why he believes in them; must hold so firmly to them that he is unwilling to compromise those principles in the name of expediency of personal advancement. This is no year for halfway men or halfway measures.

Since he is to be our spokesman, and since he will be campaigning against the fireside chats of the sweetest crooner of them all, he must be a man who can say what he means and mean what he says.

Further, since this bids fair to be the political battle of the century, we will need a champion in whose courage and faith we can all take shelter—one who has never let his standard trail in the dust, one who proposes to nail his flag to the mast and keep it there.

That is the sort of champion Pennsylvania is looking for, and the kind which is needed for the success and future welfare both of the Republican Party and the Nation itself. The Republican Party, since it began, has specialized in finding men to meet emergencies.

This year the Republican Party stands where that little band of courageous soldiers stood who wore the tattered livery of the Continental Army during the dark days of Valley Forge, when American independence faced its first crossroads.

The Republican Party is the last safeguard between the men and women of America and European chaos.

We have not only the opportunity for leadership but likewise the responsibility for demonstrating our ability to pick the kind of leadership 130,000,000 people want. I know that the Republican Party will meet its responsibility as fearlessly and as ably as that other band of patriots met their responsibilities at Valley Forge.

Tremendous Response to My Appeal for a Peace Plank in National Political Platforms

---

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

Mr. LUDLOW. Mr. Speaker, on February 28 last, speaking in the Well of this House, I proposed a peace plank for insertion in the national political platforms this year, and I am now reporting the reaction to my suggestion.

The plank I propose is as follows:

Resolved, That we favor a Nation-wide referendum before declaration of war, except in case of invasion of the United States or some other country of the Western Hemisphere or internal rebellion.

The reaction has been tremendous. I cannot adequately describe the fervor and enthusiasm for the proposal that runs through a vast volume of correspondence that has come to my office since the proposition was first stated. The deluge of telegrams, postal cards, and letters endorsing the proposal and demanding such a plank in the national platforms would more than fill an entire issue of the CONGRESSIONAL RECORD.

PEOPLE SHOULD BE THE JURY

In this flood of correspondence, coming from all parts of the Union, there is evidenced a determination of the people that they themselves should be the jury to decide if and when our boys shall again be sent into the slaughter pens of foreign wars.

Throughout the mass of correspondence there is reflected this outstanding viewpoint, namely, that when it comes again to a question of throwing the lives of our young men and the treasure won from the sweat and toil of our people into the maelstrom of a foreign war, it should be the principal and not the agent who should make the decision, and in this case the principal is the 130,000,000 people who comprise the American Nation.

There is noticeable also a general belief that next year will bring us squarely up against the issue as to whether we are going to send our boys into foreign trenches and that if we are to protect America from war and save our democratic institutions, which will be hopelessly sunk in oblivion if another war comes, we had better be moving in the direction of committing both the Democratic and Republican national platforms to a definite peace policy. Our citizens are not blind in regard to what is going on. They have just read an official statement that the Allies are increasing their American purchases of war materials "enormously"; that our Government has released designs of the Army's latest tanks, guns, and other weapons for sale abroad, and they know that so much of this sort of thing has been going on since the embargo was repealed that we are being drawn up to the very edge of war.

Love of country is a dominant strain throughout the entire correspondence. Over and over again, in countless repetitious forms, the writers reveal their deathless devotion to America, stating that they would gladly make the supreme sacrifice to defend our homeland, but that they are opposed to sending a single soldier overseas to die in the settlement of the quarrels of other nations. As my appeal was especially directed to the youth of the land—the Nation's potential cannon fodder—many of the replies are from young men at the threshold of life. Bravely do these boys offer their lives for home and country while they eloquently plead to be spared the horrors of foreign slaughter pens.

In the space I may properly occupy it is impossible even to scratch the surface of this great volume of approving correspondence, but I will present a few excerpts to show the trend of thought.

VIEWS OF AN ARCHBISHOP

A great archbishop of the Catholic Church writes:

I am 100 percent with you and endorse your youth movement for democracy. It is Americanism of the true kind, and, if adopted, will be our best guarantee for staying out of all European wars.

Robert Morton, president of the American Radio Institute, of Detroit, Mich., writes:

Following your address over the Columbia Broadcasting System last night, this writer received a total of 93 telegrams from members of our listening committee, living in 14 States, emphatically approving your position, and urging us to hasten to assure you that this organization stands with you to the last man, as true Americans who believe, without equivocation or mental reservation, in the principles of freedom as enunciated in the Bill of Rights; who believe that we all should be willing to give everything we possess, even to our lives, to preserve our Constitution and our country, but not a dime for foreign aggression. We believe that, in the event of invasion, every mother's son capable of bearing arms should be enlisted under the colors, to die for our country if need be, even without his consent. But we believe that the people—men and women—have an inalienable right to decide whether our Na-

tion shall go to war overseas. Any other way would constitute a form of totalitarian government in contradistinction to the fundamental principles of democracy, which we are sworn to uphold at all costs.

This morning's mail brought scores more reports of listeners, every one of these eloquent in praise of your patriotic stand, and the writer is certain that thousands more listeners will similarly approve your attitude in writing before the week is passed.

Why not a plank in each of the political party platforms to be adopted this summer upon which candidates for the Presidency will stand for election as our Nation's Chief Executive? Why not?

This organization is proud to number among its members, from coast to coast, a vast number of men who are veterans of wars under the American flag; it is proud that every officer and even every member of every one of our numerous committees, from coast to coast, has taken a solemn oath to uphold the Constitution, and to defend it against all its enemies whomsoever. We are certain there is not one among the many in the organization who is not in favor of what was designated as the Ludlow amendment. As a cold matter of fact, sir, we are persuaded that there are not 10,000 men or women in the country who are not in favor of that proposition, particularly as expressed in your present proposed bill, which would require political parties to go on record as to whether they would permit the men who would die—and their mothers and wives—to decide whether we should fight a foreign foe.

Dictatorships can survive only by war. Democracies can survive only if there be peace. * * * If there is to be a perpetuation of our free institutions, the United States must be kept out of war, except in the case of invasion of our shores, or the shores of our neighbors in this hemisphere.

God bless you, sir. The support of this organization can be depended upon in the fight you are making—to the utmost. We are Americans.

Yours for the Bill of Rights,

AMERICAN RADIO INSTITUTE,
By ROBERT MORTON, *Chairman.*

PASTOR OF COMMUNITY CHURCH SPEAKS

Rev. John Haynes Holmes, pastor of the great Community Church, New York City, wrote:

APRIL 1, 1940.

DEAR MR. LUDLOW: I have read your speech of February 28 last with the greatest satisfaction and the warmest approval. I have long been a supporter of the so-called Ludlow amendment, and welcome this opportunity of expressing to you my gratitude for your brave and devoted leadership in this great work for peace.

I say for "peace," for we won't be having so many of these wars in the future if we can once get the war power in the hands of the people. I know this is no perfect guaranty against war, as there are times and circumstances in which the people themselves are swept away by the war mania. But I know of no better guaranty and no surer way to peace, especially in these days when the common people know that wars are not only horrible but "phoney," and that they are the ones who always pay the price in blood and treasure.

If there is anything more ghastly than the use of the people as counters on Mars' gambling table I don't know what it is. Your picture of governments betting "a million boys" against one another is as true as it is ghastly. And don't let it be forgotten that the American Government makes its bets in those terms, too. It has done so and will do so again when the occasion arises.

If there is anything elementary in this war business it is that the common people, the fathers and mothers of our boys, should be consulted before the Nation goes to war. Once fix it so that every father and mother going into the voting booth knows that he is voting life or death for his own son and the war business is going to become immensely difficult all of a sudden.

I beg you to continue your superb campaign for your referendum amendment. Now is the time when the people will rally to your support and carry this cause through to victory.

Very sincerely yours,

JOHN HAYNES HOLMES.

Other expressions:

DEATH IS SO PERMANENT

Edward Petermichl, 2725 North Talman Avenue, Chicago:

As I am in the cannon-fodder class, I certainly would like to have a voice in the matter of having my person shipped off somewhere and shot. Getting killed is so permament. For the United States I will give everything, for Europe not a burnt match. I wish you every success with your peace plank.

SENATORS GIVE VIEWS

United States Senator VIC DONAHEY:

I certainly would support such a declaration in our party platform, but I doubt if we could ever get it in. I have always followed you and your talk along this line.

United States Senator GERALD P. NYE:

I share with you most heartily that need you see for including within the political platforms this year declarations favoring a popular referendum on the issue of going into foreign wars. Extremely challenging is this subject today, and I should be most happy to be one of those privileged to further this effort to entertain the subject in platforms of the national parties this summer.

United States Senator HOMER T. BONE:

Not only do I favor this principle, but I would like to see my own party go definitely on record in favor of it in its next national platform, and this without weaseling or reservations that might rob the declaration of the significance that I believe the mass of people attach to the principle. The argument that a measure of this character would interfere with national defense is utterly frivolous. I sincerely hope that the Democratic Party will be courageous enough again to declare that those who must yield up their bodies in war should have something to say about the matter. If we were even half as considerate of our prospective cannon fodder as we are of property and profits in wartime, there would not be a moment's hesitancy in giving to the country such a declaration in our party platform.

United States Senator ERNEST LUNDEEN:

Thank you for your letter of recent date in which you asked for an expression of my views concerning declarations being injected in national political platforms this year whereby the people would be given the right to vote on proposals to send our boys overseas to fight in foreign wars. I am very much in favor of such a proposal.

United States Senator JAMES M. MEAD:

Our participation in foreign conflicts is unthinkable; our desire for peace is universal. Having this in mind, I shall prevail upon our platform committee to recommend the adoption of the strongest possible plank to effectuate our insulation from war.

United States Senator ALEXANDER WILEY:

I am in favor of the adoption of a plank in the national platform of the Republican Party proposing as an amendment to the Constitution the text of Senate Joint Resolution 140, which I introduced in the Senate on May 29, 1939. In closing, may I say that I believe we share a common desire to keep the United States out of any European conflict.

A GALLANT SOLDIER SPEAKS

United States Representative ED. V. IZAC, a medal-of-honor man:

I want to compliment you on your speech of February 28 regarding a suggested plank for all political platforms for this year.

We are all, of course, endeavoring to find a way to guarantee the people of our country, and I agree with you that we should not consider the sending of our boys across the water to fight in either Europe's or Asia's wars.

I have consistently supported the amendment suggested by you, but I believe it is really not understood by the great majority of those who oppose it. If we could make it clear to everyone that this does not in any way nullify the authority of the President of the United States, as Commander in Chief of the Army and Navy, to use existing Military Establishments in the best interests of the people of the United States; but rather does it make it necessary that before we can raise and equip an Army and send that Army out of the Western Hemisphere to fight on foreign soil we must have the approval of the men and women of the United States. This, to me, seems a most democratic step, and certainly should be resorted to before we permit any one man or any small group of men to compel the youth of our country to make the supreme sacrifice.

United States Representative FRANCIS H. CASE:

Certainly I am with you in your efforts to do something to protect our youth from the age-old handicap of a war, as you know.

United States Representative GEORGE W. GILLIE:

Your suggestion that both major political parties include forthright declarations in their 1940 platforms favoring the principle of a national referendum on proposals to send our soldiers overseas to fight in foreign wars is a splendid one, and I am for it 100 percent. Such a plank should have the support of all Americans, regardless of party, who are honestly opposed to a repetition of the tragedy of 1917.

United States Representative COMPTON I. WHITE:

I am heartily in support of your plan and will cooperate.

United States Representative HAROLD KNUTSON:

I strongly feel that the platforms adopted by both national conventions should contain a plank favoring a popular referendum on the question of America's entrance into any war. It is the people who pay the bills and must do the fighting.

United States Representative USHER L. BURDICK:

I approve of this with emphasis.

United States Representative STEPHEN BOLLES:

I am certainly in favor of platform declaration permitting the people to vote on war proposals. I like the idea of this nonpartisan youth movement for the purpose of aiding in such declarations.

United States Representative JERRY VOORHIS:

As you know, I have always supported your amendment to the Constitution and would support it today or any other day that I

had an opportunity to do so. I want to congratulate you on the fight you have been carrying on throughout the years on all of these matters.

United States Representative JENNINGS RANDOLPH:

Be assured of my cooperation in this matter, and I trust you will not fail to call upon me if I can assist in any way.

MASTER OF THE GRANGE

Louis J. Taber, master of the National Grange:

I can assure you that the National Grange will cooperate in every movement that has the threefold purpose of keeping America out of the war in Europe, of providing adequate national defense, and curing our economic problems at home.

Ex-United States Representative Thomas L. Blanton, of Texas:

I want to commend you for the splendid fight you are making to allow mothers and fathers, who in war suffer worse than death at home, and their sons, who are sacrificed on battlefields of horrors, to have a voice in deciding whether the United States shall send the flower of young American manhood across oceans to fight other nation's foreign wars. You are a fearless fighter for what you believe to be right. Every father and mother in the United States should get in behind you.

LEADER OF TEACHERS

Dr. Jerome Davis, president of American Federation of Teachers:

There never was a time when America was more seriously threatened than it is today. Taxation without representation was tyranny. For Americans to fight and die in Europe without being given a chance to vote on whether they want war or peace is also tyranny. Let us make our country truly democratic in peace and in war.

Maj. Gen. William C. Rivers, United States Army, retired:

Your suggestion is, I am sure, an excellent one, which the people at large will approve. I should think that both the great political parties would have such a plank in their platforms.

MISS DOROTHY DETZER

Miss Dorothy Detzer, national executive secretary, Women's International League for Peace and Freedom:

May I congratulate you on your splendid address before the House in February, proposing a peace plank for the major political platforms this year? As you know, the Women's International League has consistently and wholeheartedly supported your proposal for a war referendum, and we are glad to endorse a move to make it a political issue in this crucial 1940 campaign. I agree with you that our citizens have intelligence and wisdom enough to vote on whether or not American boys should ever again be sent to fight in a foreign war.

VIEWS OF A MARINE

Corp. Leo B. Shinn, United States Marine Corps, Quantico, Va.:

Being the ones who would have to bear the direct brunt of war, I think we should by some means have a voice in the matter of whom and for whom we should fight. The fairest means by which we could have that say, in my opinion, is your amendment providing direct referendum to the people of the United States (who are our mothers, fathers, relatives, and friends) before declaring war. Fighting to defend our beloved country against invasion or to prevent violation of the Monroe Doctrine is, of course, another matter, and I am sure we would all be proud of the opportunity to serve our country for such a reason.

Ex-United States Representative Herbert S. Bigelow, Cincinnati:

I have read your referendum on war address. It is a clarion call. I am for your plan 1,000 percent.

Catharine Sedgwick, director of the Foreign Affairs Forum, New York City:

I can agree with everything you say and I think that you expressed the sentiment of the people very eloquently. The two great national parties would only be expressing the sentiment of the people by adopting the plank you suggest in their party platforms.

CHIEF OF THE PAWNEES

Chief Natachee of the Pawnee Indians:

Your long talk was good and all good people should stand for your words and bill. May the Great Spirit help you to pass your bill to be a law soon.

I wish I might quote from the hundreds and hundreds of other letters I have received from soldiers who fought for their country and who would still willingly die to defend it from attack; from fathers and mothers who have sons sleeping in Flanders Field and from prematurely aged women who have sweethearts lying under the popples; letters many of which are filled with tears and heartthrobs. Space will not permit me to do that, but if anyone wants proof that the people of America are demanding and insisting upon action by the Democratic and Republican National Conventions pledging that the people of our country shall have a right to vote on future proposals to participate in overseas wars I invite him to an inspection of my files.

Farm Credit

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

LETTER FROM THE ILLINOIS AGRICULTURAL ASSOCIATION

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks, I include a letter to Mr. E. A. O'Neal, president, American Farm Bureau Federation, written by Mr. Earl C. Smith, president of the Illinois Agricultural Association and vice president of the A. F. B. F.

Mr. Smith is one of the country's leading authorities on agriculture and a student of all legislation affecting the farmer. His views on farm credit, as set forth in this letter, should be of extreme interest to the Members of Congress.

ILLINOIS AGRICULTURAL ASSOCIATION,
Chicago, March 28, 1940.

MR. E. A. O'NEAL,
President, American Farm Bureau Federation, 58 East Washington Street, Chicago, Ill.

DEAR MR. O'NEAL: I have had a number of my associate officers review H. R. 8748 in addition to the study I have been able to make of this proposed legislation and in accordance with the understanding reached by the board of directors when last in session, I am taking this means of informing you of the results of our study and position we believe the American Farm Bureau Federation should take on this proposed legislation. The American Farm Bureau Federation is committed by resolution to the building and maintenance of a fair, effective, sound, permanent, and independent farm credit system. The federation is also committed by mandate of its delegates to use its every influence to maintain and to strengthen the cooperative features of the present farm credit law. A careful analysis of H. R. 8748 compels the conclusion that this measure does not serve or further these objectives. As you are well-informed, the federation has during recent years consistently worked to secure and maintain interest rates on land-bank mortgages at 3½ percent, even though recognizing that such an accomplishment would require some assistance from the Federal Treasury until such time as farm prices could be brought to a level consistent with and to justify higher interest returns.

The federation has been subjected to rather severe criticism because of this continued effort during a period of low farm prices and has been charged with seeking to secure and maintain interest rates on a basis that was not consistent with sound credit practices. I believe that every effort of the federation should be put forth to continue 3½-percent interest rates on land-bank loans until much more substantial progress is made in improving farm prices, even though to do so would require annually rather substantial assistance from the Federal Treasury; but I cannot by any stretch of the imagination see justification for the federation supporting H. R. 8748, nor do I know of any sound basis of defense for such support should it be given.

The proposed legislation would ultimately remove or destroy such limited elements of independence as the present farm-credit law provides, and its cooperative features would be completely nullified, and if for no other reason, could not qualify as the basis for a sound or permanent system of credit.

Without attempting any detailed analysis of the bill, I mention only the following:

1. It will result in Government ownership of large acreages of farm lands. This is contrary to our well-accepted policy of encouraging and preserving independent private ownership. That the drafters of this bill recognized this is evidenced by the care with which they have provided that debtors conveying to the governmental agency may remain on the land with the hope of being able to repurchase. It has always been the policy to discourage, and within limits to require the liquidation of, large landholdings by insurance companies and similar institutions. It would seem to be just as unsound to permit large holdings by a Government agency and certainly more unsound to encourage it. It is noted that while the mortgagor-tenant may repurchase, no provision is

made requiring the sale of the land in case the tenant does not attempt to repurchase.

2. The requirement that the borrower subscribe for stock is eliminated, thereby removing the borrower's interest in the maintenance of a sound institution. Control is largely placed in the hands of debtors who do not have substantial financial interest in the success of the lending agency. All experience with successful cooperatives demonstrates that substantial financial investment and interest is the best assurance for continued membership interest and support.

3. The powers vested in the proposed local committees in connection with refinancing are such as to be fraught with favoritism and susceptible to personal and partisan influences. Farmers will not, and, in my opinion, should not, be expected to support a system where there is no assurance of equitable treatment to all borrowers.

4. Over a term of years the proposed system will undoubtedly be much more expensive and result in much greater cost to the Treasury than heretofore. Bonds would be fully guaranteed, both as to principal and interest, by the United States Government. With such a system of credit largely controlled by borrowers who have no direct financial interest in its success, with local committees determining the basis for refinancing, with sales back to the mortgagor-tenant at the productive value or the amount of the mortgage, whichever is less, and with the administration of the system wide open to political influences, it would be impossible to even start to estimate the financial drain upon the Treasury of the United States. It is certain, however, that over a period of years the cost would very greatly exceed the amount appropriated during recent years to provide land-bank borrowers with an interest rate of 3½ percent.

5. Over all, it is reasonable to expect that the large amounts required from the Federal Treasury to carry out the Government's guarantee obligations would furnish another instance of large appropriations charged to agriculture, even though none of the amount required was directed toward improvement of farm prices. No interest rate can be low enough to provide debtor-farmers with an opportunity to retain their property with farm prices at present levels. Individual farm ownership, sanctity of purchase contracts, restoration of reasonable contentment, and agriculture's normal contribution to general welfare cannot result from low interest rates, loose purchase contracts, or Government supervision of tenants on farms conveyed to the Government. These essential virtues can only be restored and maintained through the restoration of farm prices to a basis of fair exchange value to the products of industry and labor, and every emphasis and influence of the federation should be continued in this direction.

In the meantime, every reasonable effort of the federation should be put forth for the passage of S. 3480 and H. R. 8825, which will return the present Farm Credit Administration to an independent basis, and, in addition, present interest rates of 3½ percent should be continued, at least until such time as success is attained in restoring farm prices to a reasonably fair basis.

In expressing this view and opinion, I have not overlooked the fact that H. R. 8748 will appeal to many farmers who are hard-pressed and unable to meet their obligations. It is only natural that such farmers will grasp any straw which appears to afford temporary relief. On the other hand, the bill will not appeal to the great rank and file of farmers who are interested in the establishment and maintenance of a sound farm-credit system.

Taking together all of the above-mentioned facts and consideration of much other detail involved, I am forced to the conclusion that the American Farm Bureau Federation must record its opposition to H. R. 3748, while at the same time give its aggressive support to S. 3480 and H. R. 8825, and, in addition, use every influence it has with the present Congress to continue for at least another 2 years the 3½ percent interest rates by the Federal land banks of the United States.

Very truly yours,

ILLINOIS AGRICULTURAL ASSOCIATION,
EARL C. SMITH, *President*.

Un-American Activities

EXTENSION OF REMARKS
OF
HON. J. THORKELSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

Mr. THORKELSON. Mr. Speaker, it is my desire to call my colleagues' attention to an article which appeared in the Evening Star of April 29, 1940, in which I, along with Senators WHEELER, VANDENBERG, and REYNOLDS, was mentioned as being acquainted with Mr. Bishop, who appears to be an agent of the British Government.

It is my opinion that no one of those he mentioned knows him any better than I do, and I have never, to my knowledge, seen him.

As to the confusing testimony which has evidently passed through the hands of two or three people, and is no more than fabrication and hearsay evidence, the whole thing appears ridiculous and should never have been headlined in any paper that has respect for its own veracity. This is particularly true since I was called up three times during the day by the United and Associated Press, and I stated clearly each time that I knew nothing about it. Still, and in spite of that, the paper came out with what appears to be a well-laid plan to smear without justification.

It is not my desire to make this article very long, and the subject is, in reality, not worth discussion, were it not for the deliberate attempt by the press to smear Members of Congress.

Let me quote from the New York World-Telegram of January 15, 1940:

> The first tip on him, which eventually led to the investigation that resulted in the arrests of the plotters, came to the G-men from Scotland Yard.
>
> Bishop was in England toward the end of 1938 and approached a British Army officer on a subject which caused the officer to report to his superiors immediately. Bishop was deported and attracted no more attention until last spring, when Scotland Yard uncovered some information on his activities, which was passed on to the G-men.
>
> The G-men began to watch him, and in July found that he had become active in the Christian Front. In August more G-men were assigned to the case, several of them, apparently, being assigned to become members of the Christian Front.
>
> Before long they reported that the members of the Sports Club were planning assassinations and bombings. One plan they had was to cause a reign of terror against Jews that would result in such disorder that troops would be called out to protect the Jews. The Sports Club members hoped, said the G-men, that this would cause such anger among anti-Semites that the country would be in turmoil and the Sports Club would be able to seize power.
>
> Bishop has been questioned since Saturday night, when he and the 16 others were arrested. He has told several conflicting stories, in which the G-men put little credence.

Is it not possible that Mr. Bishop might have been a provocateur to bring about internal strife by agitating racial hatreds? It would appear so as one reads this article and I believe such was the intention of the plan, but it failed to register as expected. In other words, it fizzled, for no one was excited over these stupid theatricals in which the F. B. I. was involved.

The paper, however, states that the F. B. I. had been advised by Scotland Yard that Mr. Bishop was here. What could be a better procedure than to start this agent working to bring about dissension among our own people, and then tip our own F. B. I. off to discover this in order to bring about greater dissension and hatreds and probably internal strife.

This, of course, is one view, but let me take you to the end of the article and quote from a paragraph entitled "Rapidly Growing":

> The Christian Front and Cassidy have been investigated for months by the Nonsectarian Anti-Nazi League, 20 West Forty-seventh Street. Spokesmen for the league said today that although Father Coughlin had repudiated the Front, in the July 31, 1939, issue of Social Justice, Coughlinite publication, the Front was described as "a highly organized and rapidly growing militant Christian Front" and as "a defense mechanism against 'red' activities and as a protector of Christianity and Americanism."
>
> The spokesmen said they had obtained a code used by the Christian Front to describe the occupations of members and several were employees of city departments. The investigators of the Anti-Nazi League believe that the Sports Club members obtained their rifles, with the help of a physician, from the National Rifle Association.

Who is behind this movement? According to this paper, it is the Nonsectarian Anti-Nazi League, 20 West Forty-seventh Street, New York City. I have referred to this league before. It presumes to champion human rights, but is in reality a league of hate. Here we find the Nonsectarian League again bragging over the fact that it was their investigators who had investigated the Christian Front.

Anyone who is interested in the Nonsectarian Anti-Nazi League should read the RECORD of April 26, under the heading, "Leagues of hate." The statement in the World-Telegram confirms what I said in the Appendix of the RECORD, page 2442. In investigating all attempts to bring about racial hatreds, animosities, and strife among our own people we always come back to groups like the Nonsectarian Anti-Nazi League.

Looking at this from an international angle, what could be more appropriate? For is not the British Government ruled and controlled today by the international financiers and by the same group which sponsors the Nonsectarian Anti-Nazi League?

This answers the whole story. It is purely an internationalist scheme to break down Christian principles, and in this war on civilization anything goes.

The papers, unfortunately, even when advised differently, as they were yesterday, labor under such control that they cannot avoid joining a movement of character assassination.

Unfair and Dangerous

EXTENSION OF REMARKS

OF

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

Mr. MICHAEL J. KENNEDY. Mr. Speaker, under leave to extend my remarks, I wish to include therein an editorial which appeared in the New York World-Telegram on Monday, April 29, entitled "Unfair and Dangerous." This article will, I am sure, prove very interesting to every Member of the House, not only because of its timeliness but also because of its commendable sincerity.

The time has arrived, at the very outset of the Presidential campaign, when various spokesmen for the Republican Party, including Pennsylvania's Governor James and District Attorney Dewey, of New York, have initiated political tactics of an unfair and un-American character for the sole purpose of inflaming and terrifying the American people by their charge that "the Republican Party is the last safeguard between the men and women of America and European chaos." Such a reckless attack overlooks the important distinction that the Constitution provides that the Congress, and not the President, has the power to declare war. I wholeheartedly subscribe to the views expressed by Postmaster General Farley in the editorial below that "no politician should attempt to gain the favor of the electorate by making believe that one man can keep out of war better than the other fellow." Even the most violent critics of the New Deal have been loud and generous in their praise of its foreign policy; and, in my opinion, the efforts of the present administration under President Roosevelt and Secretary of State Hull establish beyond a doubt that the interests of the American people have been served in a flawless manner and with positive assurance that there will be no war for America.

I quite concur in the views expressed in the following editorial to the effect that the Republican Party would do well to base their campaign on political common sense and elimination of war talk. Should they persist in dwelling on a subject which is of no concern to this country at present, political candidates should be mindful that the intelligence of the American people will not tolerate deliberate false statements involving such a serious issue as war. The practical application of common sense will eliminate war for this country. If America's war is with unemployment, hatred, and disease, its future happiness will be assured. The editorial follows:

UNFAIR AND DANGEROUS

Pennsylvania's Governor James, who fancies himself as a candidate for the Republican Presidential nomination, journeyed to Indianapolis over the week end to make a speech in which, among other things, he said:

"After 7 years of meddling, of chasing rainbows, of rabbit-in-the-hat administration, the New Deal is coming face to face with the fact that the only solution it can think of for the twin problem of idle men and idle money is war. * * * Internationally we are meddling and muddling. * * * Once again we are burning our fingers at the fires of Europe. * * * The Republican Party is the last safeguard between the men and women of America and European chaos."

This, in our opinion, is dangerous stuff.

If there were evidence that President Roosevelt is taking America to war, through "meddling or muddling," or with deliberate intent because he can think of no other "solution" for domestic problems, we should condemn his course in stronger, plainer words than Governor James has used. But we know of no such evidence.

The Republican Party can find legitimate issues, plenty of them, on which to attack the New Deal. Neither Governor James nor any other Republican should seek to make campaign material out of generalized charges, unsupported by specific proof, that the President's leadership is betraying his country into the horrors of war. "No politician," as Postmaster General Farley said the other day, "should attempt to gain the favor of the electorate by making believe that one man can keep out of war better than the other fellow."

Equally true, no party should make foreign affairs a domestic political issue by claiming to be the only peace party.

Wages and Hours

EXTENSION OF REMARKS

OF

HON. LAWRENCE J. CONNERY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

Mr. CONNERY. Mr. Speaker, I want to state, most emphatically, my opposition to the passage of this legislation which has for its sole purpose the exploitation of labor. This legislation—Barden amendments—in reality is intended to authorize a few gigantic nationally known canning concerns to add to their profits by permitting such concerns to pay starvation or pauper wages to their workers.

If time permitted I would like to point out and to enumerate instances where it has been necessary for communities to pay relief to workers employed by some of the concerns who favor the passage of this legislation—the reason the communities were forced to pay relief to employees of these exploiting concerns being that the wages paid were insufficient to keep body and soul of the workers together.

The present law makes mandatory the payment of 30 cents an hour, or $12.60 per week, to workers. Surely no decent, self-respecting employer of labor will ask that his employees live decently on less than $12.60 per week. Especially is this true, Mr. Chairman, when in many cases the work is only temporary.

We have been exhorted to favor this legislation in the name of the small farmers. If this bill were to apply to the small farmers—the farm cooperatives—why is it that the supporters of this bill have not limited it to factories located in the rural communities? The real reason is that the promoters of this legislation are not the small farmers or the farm cooperatives, but the exploiters of labor who too often refuse to pay the farmers fair prices for the product of American farms.

I sincerely trust that the House will defeat this attempt to stifle the wage and hour bill. The wage and hour bill is one of the most meritorious pieces of legislation ever enacted by the Congress of the United States, and it is my belief and my hope that it will not be nullified by this tricky legislation we are asked to enact.

Amendment of the Wage-Hour Law

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

Mr. THOMAS F. FORD. Mr. Speaker, in opposing the Barden amendments to the Fair Labor Standards Act I fully realize that the act is not perfect. I believe, however, that under the fair and able direction of that splendid soldier, Colonel Fleming, that if given a reasonable amount of time the Administration will improve and such parts of the act as

appear to need amendments will be definitely known and Colonel Fleming can then come to Congress and suggest amendments that will enable him to administer the act with as great a degree of equity as is possible under the complex conditions existing.

What I most strenuously object to in the Barden amendments is the fact that their adoption would not make the act any more easy to administer, but would, because of the broadening of the exemptions, remove from the protection of the wage and hour provisions of the act a million or more inadequately paid workers. In fact, a careful analysis of these amendments warrants the assumption that they were designed not to improve but to destroy the act.

It is desperately hard to be tolerant of such measures as the Barden bill. This bill comes to the floor trumpeted as a measure designed to aid the farmer, in spite of the fact that its passage would mean a drastic lowering of the earning power of a great group of already poorly paid unskilled workers who, because of their inability to earn a decent wage, are unable to purchase such essential products of the farm as milk, butter, cheese and pork, cotton, and wheat in their finished form.

The plain truth of the matter is the Barden bill is both an antifarm and antilabor bill. It is a bill designed to aid packers and processors of farm products and does not affect farm labor, which is exempt from the provisions of the Fair Labor Standards Act.

If the proponents of this bill were frank, they would bring in a resolution asking for the repeal of the Fair Labor Standards Act, but this they dare not do. Instead they bring us a Trojan horse, so to speak, inside of which are a group of legislative daggers, parading as clarifying amendments, but designed to stab the act in the back, all the while proclaiming it as a measure to aid the farmer.

This is a dastardly back-alley attack on an honest law. It seeks by the use of trick and device to accomplish what its sponsors dare not attempt in the open. It is a thoroughly vicious measure, and it should be defeated.

Citizens of Washington, D. C., and the Poll Tax

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1940

RESOLUTION OF THE CONFERENCE OF CIVIL RIGHTS, WASHINGTON COMMITTEE FOR DEMOCRATIC ACTION

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I insert a resolution from the Conference of Civil Rights, Washington Committee for Democratic Action.

This resolution is perhaps as near the point on the iniquitous effect of the poll tax for the Nation as a whole.

THE POLL TAX

In 8 States (Georgia, Texas, Arkansas, Virginia, Alabama, Tennessee, Mississippi, and South Carolina) the requirement of a poll tax as a prerequisite to voting deprives more than 7,000,000 citizens of the ballot, results in taxation without representation and government without the consent of the governed, fosters fraud at the polls and corruption among the people, concentrates power in an oligarchy of wealth and bureaucracy, and tightens political-machine control through the traffic in votes and offices.

This condition permits the narrow constituencies of these States to send to the Federal Congress biennially 78 representatives, 70 of whom have received no effective opposition at the polls, who thus attain long tenure and through seniority acquire a plurality of committee chairmanships and ruling positions in House and Senate, whence they subvert the popular will by blocking necessary social legislation endorsed by a vast majority of the citizenry.

Because so very few can or do vote in elections for these poll-tax Congressmen, 57 more enjoy seats in the House than their States are entitled to under the fourteenth amendment. In 1938, 16 won their seats in districts where less than 6,000 persons voted as against 87,000 in the tax-free States, and the average obtained only a third of the winning votes cast for his colleagues from the rest of the Union. Since 1 vote for a winner in a poll-tax State is thus worth three votes elsewhere, the poll tax that disfranchises 83 percent of the voters in eight States also nullifies the ballots of two-thirds of the voters in the other forty. Where restrictions on the franchise for some thus become at once shackles on the suffrage for all, it is obvious that the poll tax is a national issue.

We citizens of the District of Columbia feel the injustice of poll-tax disfranchisement particularly keenly on account of the plight of our neighbors across the Potomac in poll-tax Virginia, and because, in spite of our residence in the Capital of a great democracy, we ourselves are deprived of the ballot; and we resent and reject a recent suggestion in Congress that a partial District suffrage be further fettered by a poll tax: Therefore be it

Resolved, That this conference for civil rights condemns the poll tax as undemocratic and dictatorial, commends those statesmen who are fighting to wipe away this national disgrace, and pledges itself and its members vigorously to aid the campaign for the passage of the Geyer bill (H. R. 7534) that would outlaw the poll tax in Federal elections; and be it further

Resolved, That copies of this resolution be sent to the members of the House Judiciary Committee, to Congressman LEE E. GEYER, the majority and minority leaders in both Houses, and be made available to the press.

The New Deal Record

EXTENSION OF REMARKS
OF
HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1940

LETTER FROM JOHN L. OSWALD AND REPLY

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from John L. Oswald, Forsyth, Mich., dated April 8, 1940, and answer to the same, dated April 23, 1940:

FORSYTH, MICH., *April 8, 1940.*

Hon. FRANK E. HOOK,
Washington, D. C.

DEAR SIR: I received a copy of the speech you made in the House of Representatives on March 13. It seems to me you do a lot of talking about what Russia has been doing to Finland, but when the misnamed Loyalist Government in Spain was murdering Catholic priests and nuns by the thousands, and Catholic lay people by the tens of thousands, I failed to hear you or any of the other new dealers raise your voice in protest.

Everyone with the reasoning of a child knew that this Loyalist Government of Spain was nothing but a horde of murdering Communists controlled by Russia, but I failed to hear you pleading with the people of this country or our Government to loan money to General Franco, who was fighting to save his country from communism. Instead, that great Christian President of ours tried to get Congress to lift the embargo so this Government could sell arms and ammunition to the Communist government of Spain.

The New Deal, it seems, was more interested in seeing the munition makers get their profits than in saving the lives of the innocent Spanish people.

I think it is about time for our Senators and Representatives to do something for the millions of starving people in this country instead of pleading for the people of Europe; or possibly they think if they do enough talking about Europe the people will forget about the rotten conditions at home; but if I am any judge of the American people I think they are just about fed up with the cheap politicians and that there will be a number of new faces in Washington after the November election.

Cordially yours,

JOHN L. OSWALD.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 23, 1940.

Mr. JOHN L. OSWALD,
Forsyth, Mich.

DEAR SIR: I have your letter of April 8 and note that you are misinformed with regard to my attitude and my actions. For your information I was one of the very few Members of Congress that was not sucked in by the petition that was signed in Washington in the interest of Loyalist Spain. I have condemned in no uncertain terms the very things you mention in your letter. Before you make statements of the kind you have made in your letter you should look up the facts. It seems to me you are one of those who have been referred to in the very wise saying "There are none so blind as those who will not see."

I have always been and always will be a champion of free speech, free press, and the right to worship God according to the dictates of our own conscience. I am one of those who believe that we as a Nation should work within the Constitution of the United States and especially at all times preserve and protect in the most vigilant manner the Bill of Rights which is the basis of our freedom. I will oppose any person I think is in any way sabotaging the Bill of Rights and considering himself above the law. I sometimes get out of patience with people who use the right of free speech to assassinate characters of innocent people and assassinate the principles for which they stand and therefore take exception to your statement "The New Deal, it seems, was more interested in seeing the munition makers get their profits than in saving the lives of the innocent Spanish people." Nothing is further from the truth and if you do not know it you should know it. I should think that you as an American citizen would be ashamed to accuse an administration that has kept us out of war and has done everything under the sun to promote peace of the things you accuse them of in your letter.

Might I further add that Voltaire once said: "I disapprove of what you say but I will defend to the death your right to say it." You have a right, thank God, in this country to say what you please but so that we may keep that right it should be used with discretion and be based on facts. You should not be swayed by vicious propaganda that has no foundation.

I note the last paragraph of your letter in which you state: "I think it is about time for our Senators and Representatives to do something for the millions of starving people in this country instead of pleading for the people of Europe, or possibly they think if they do enough talking about Europe the people will forget about the rotten conditions at home, but if I am any judge of the American people I think they are just about fed up with the cheap politicians and that there will be a number of new faces in Washington after the November election."

No administration has ever done more for the suffering people than the present administration that you refer to as the New Deal. President Roosevelt and the Democratic administration have provided work-relief programs and relief prcgrams to the utter limit of the Federal Treasury. I trust and hope that business will cooperate with that administration so that we will no longer have the suffering millions of unemployed.

For your further information I have in every instance voted in the interest of the suffering millions in this Nation and at times I have been thoroughly disgusted to see the solid Republican minority coupled with conservative Democrats from the South sabotage that program to such an extent that there are suffering millions.

Neither you nor anyone else can tell me what suffering and hunger really are. I have felt the pangs of hunger. I have been among the unemployed, and I have labored with my hands from daylight until dark. I have not always been an attorney. I have not always been a Member of Congress. I have worked my way through school by the sweat of my brow, and I intend to protect those who are now in the same position that I was in at one time myself. It is only by the grace of God that I have been able to gain the position I am in, and were it not for the grace of God I would probably be swinging a pick with the W. P. A. workers. I do not intend to let you or anyone else challenge my sincerity in the interest of the suffering masses.

I am a liberal who hates communism and all other "isms" that are the antithesis of Americanism, and it is my ardent hope that we will get to the bottom of the cause of poverty and thereby eliminate un-American activities.

I think you owe an apology to the men of both parties who have labored in the interest of humanity. There are a few on the Republican side, but very few, who are not controlled by the conservative element. As I stated before, practically a solid Republican vote is cast continuously against all measures that are in the interest of progress and liberal government.

In closing, may I say that in my opinion you are not to blame for the statements you have made in your letter, but have been swayed through ignorance of the real facts and vicious propaganda that are being spread throughout this country to mislead unsuspecting people.

I do not expect this letter to make an impression on you, because I believe that you are among those who do not want to see the light and are just misled. It is rather unfortunate, and I do not blame you but blame those who have misled you.

Sincerely yours,

FRANK E. HOOK, M. C.

Poll Tax Is Unconstitutional

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

Mr. GEYER of California. Mr. Speaker, the right to vote in a Federal election is a privilege guaranteed by the United States Constitution, and is not subject to State taxation. In other words, as a Memphis, Tenn., newspaper, the Press-Scimitar, puts it: "States cannot—but they do." Southern newspapers have given considerable publicity to the recent testimony of Attorney Crampton Harris before the House Judiciary Subcommittee in arguing the constitutionality of the poll-tax requirement for Federal elections. The following account of Attorney Harris' testimony is given in the Birmingham Post, April 11, under the heading "You can't tax right to vote":

"The right to vote in a Federal election derives from the Constitution," Mr. Harris contended. "States are permitted under the Constitution to set up qualifications for voters, but I maintain that the payment of a poll tax is not a qualification.

"Legitimate qualifications include, for instance, a minimum age which sees to it that the voter has attained an age of responsibility, a residence requirement, which serves an obvious purpose, and in some instances even an educational requirement, which also has a bearing on the qualifications of the voter.

"But the payment of a poll tax has no bearing at all on the fitness of a person to vote. Often, in fact, the tax is paid by another. * * *

"* * * No State has a right to overthrow the method set out in the Federal Constitution for selecting the representatives of our Government. Suppose a State passed a law saying that no one could vote who had less than $50,000 or $1,000,000. It shocks the mind. It would be an encroachment on an essential Federal right, yet so is the poll tax. Some may say it is a matter of degree, but in such matters there is no such thing as a question of degree. The right to vote cannot be taxed, no matter what the amount."

The constitutionality of the poll-tax requirement is, as you know, being attacked through the now famous Pirtle case, mentioned in the following excerpt from an article by Ernest Lindley in the April 3 Birmingham News:

Pirtle—Henry Pirtle—is a white man from a Tennessee mountain county. Being otherwise qualified, he has requested a judgment declaring that he was entitled to vote for a Member of Congress, despite the fact that he had not paid his poll tax. Two years ago the Supreme Court upheld the poll tax in the somewhat similar Breedlove case. But since then the composition of the Court has changed, and the Pirtle case is based less on Pirtle's right to vote than on the right of the Federal Government to have the benefit of his vote in a Federal election.

Road to Recovery and Conservation Through the Industrial Use of Farm Products

EXTENSION OF REMARKS

OF

HON. RUDOLPH G. TENEROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

Mr. TENEROWICZ. Mr. Speaker, it would be an ambitious boast on my part if I were to tell you that I had digested the vast compilations of material which have been placed at my disposal during the past several weeks. I have, however, weighed well parts of the testimony of various persons before the T. N. E. C. body now investigating monopoly and have done a little research on my own part. All of which convinces me that a few of my ideas might be workable as a partial solution to some of our economic problems.

The problem which has been claiming the attention of a special group of us here in Congress has been, How can we, as a people, plan on full utilization of our great capital, our vast natural resources, and our manpower?

There are about 130,000,000 persons in the United States. Our peak of employment has included about 50,000,000 persons, of whom never more than 10,000,000 were employed in the heavier industries. Statistics show that less than 4 percent of the working population of the United States work with or about machines. Three million men are normally employed in making, selling, and servicing cars. Approximately 30,000,000 persons live on farms and are normally engaged in agriculture and about 10,000,000 persons are unemployed at the present time.

From these figures it can be readily shown that technological unemployment—machines—is not the prime cause of our present dilemma, but only one of the many contributing factors. For instance, failure to utilize our land and water

resources could be considered a greater loss to our country's income.

But nonuse of our vast agricultural resources is an even greater tragedy. Planned and utilized intelligently, these millions of untilled acres could be harnessed to attract and create new capital and business. And it would, moreover, put thousands of men back to work.

We have ample evidence to show that great masses of men and women have been displaced by machinery. On the other hand we have the paradoxical evidence that it was mass machines, working on a production basis, that created new jobs. Anyone who starts out to solve the problem of unemployment by an outright condemnation of the machine is bound sooner or later to get tripped up in his reasoning.

America has achieved her present preeminence in the family of nations by her ability to invent and to apply this inventiveness so that the greatest good could be accomplished for the greatest number.

It is thoughtless, indeed, and inaccurate, to blame the Fords, the Knudsons, and the Kellers because men have walked the streets in idleness for the past 10 years.

One of the most enlightened statements it has ever been my privilege to read along this line was placed in the record of the T. N. E. C. Committee recently by Dr. James Thomas, president of Chrysler Institute of Engineering in Detroit. It is a rather long statement but so ably does it bring out this point that I am taking the liberty of quoting a portion of it:

I should say that the width and the depth and the beauty and the glory and the influence of any cultural period in the world's history is measured entirely by the ability of the commerce of that day to carry the freight and not succumb to the load. It is an interesting thing.

In 1790 we had an interesting country here, but it wasn't a big country except geographically. Yet in 140 years, up to 1930, we find some interesting statistics. I know you don't like statistics. There are three sorts of liars: Liars, damned liars, and statistics. If you are interested in classifications, after the golf players and the fishermen and the husbands who stay out late we have all the liars there are. I am not unmindful that Abe Martin says that it's funny how a man with facts can break up an argument. Now, you listen.

In 1790 we took a country that had four hundred millions of income, and in 140 years we raised that to eighty billions; we took a country that had a new wealth of five hundred million, and in 140 years we raised that to three hundred and seventy-five billions; we took a country that had three millions of population and raised that to one hundred and twenty-five or one hundred and twenty-seven millions; we took a country with no roads at all and built 600,000 miles of paved roads, 3,000,000 miles of roads, and we put 25,000,000 automobiles on those roads in our anxiety to get somewhere, only exceeded by our anxiety to get back to where we started that we might start somewhere else. We produce 85 percent of all the automobiles produced in the world. And did you know that we have more radios than all of the rest of the world combined? And it is certain that we listen to more stuff over them, but that, too, can be cured. We have more bathtubs than all the rest of the world.

They say that 7 percent of the population of the planet, living here in the United States, tilling 5 percent of the tillable acreage of the world, produce half of the food crops produced on earth. One English authority said we had created and owned half of the wealth of the world since the Revolutionary War. Whether that is true, 60 percent of all the minerals extracted from this planet are taken out of the ground of the United States. And I know this: That half of the world's communication facilities are here in America and that we have nearly half of all the railways and nearly half of all the electrical energy on the planet, and this 7 percent of the population of the planet enjoys such high standards of living that we drink half of the world's coffee, use half of the world's tin, a little over half of the world's rubber, three-fourths of the world's silk, one-third of the world's coal, and two-thirds of the world's crude oil, and 80 percent of all this wealth we have created, which enabled us to use all this, has been the result of technological development.

My intelligentsia friends say to me, "Well, I know, but this is only crude, crass materialistic culture." Thinking you would say something of that sort, I looked up some facts for you, and what do you suppose I found? Interesting facts: That in the 140 years we built three times as many colleges and endowed them with nearly five times as much money as all the rest of the world in any period of 140 years; we built three times as many libraries and put nearly five times as many books in those libraries as all the rest of the world in any period of 140 years. In 1933, when we were right at the bottom of that other depression, we found we had 29,500,000 boys and girls and young people in schools and colleges in this country and employed 1,000,000 teachers to teach them. That is 30,500,000 people working at this thing we call idealistic culture, and if we aren't getting on with it, it is time we school teachers reexamined our jobs, because you boys have certainly paid the freight.

But that isn't all of the story. With colleges and extensions, evening classes, evening schools, radios, lectures, whatnot, we are literally hurling learning at the masses, and that is an educational opportunity, that is a marvelous cultural chance, and if it doesn't work it isn't the fault of the machine and the modern technology and the economic management we have had which has produced the stuff to carry it. Somebody said, "It puts people out of work." Philosophically this is the glory of the machine, not that it puts men out of work numerically, but abolishes labor.

Here in our own country, between 1870 and 1940 (use these figures because that is the period of our most rapid technological development) our population increased 218 percent in that 70 years. Would it surprise you if I told you that was 20 times as fast as populations ever grew anywhere else in the world? That is so. In spite of that, the gainfully employed increased 291 percent right at the period when we were making our most rapid technological development. Would it surprise you if I told you that more people are gainfully employed in 1930 than was true in 1870, 1880, 1890, 1910? That is what our census shows. Would it surprise you if I told you that in 1875 only 324 people out of each thousand were gainfully employed, and in 1900, 100 out of every thousand, and between 1900 and 1930, that is, the 30-year period of our most rapid technological development, we created 20,000,000 new jobs, and that now 1 workman out of every 7 is making things his father never saw if he is past 55, and 1 man out of every 4 is making things his grandfather never saw if he is past 60? It is just the new jobs we have created, that is all. The only infinite thing is human want, and as human want grows this machine must continue to supply the demands or we can't possibly live under our present standards. We are working more people, building roads and transportation equipment, in proportion to our population than was ever true before in the history of the world. So the machine has not put people out of work in that field. It has put them back to work.

Mr. Edsel Ford testified before the Temporary National Economic Committee recently that machines have lowered the cost of production of an automobile from $3,500 to $600, and machines have created millions of new jobs.

This is all well and good. We are willing to concede that the machine and the men who have wielded this great machine power have from the outset been motivated by the most honest of business ideals.

But it seems to me there are even more profound ideals and considerations that have been lost sight of in this careening course ever onward to greater and greater production levels.

I maintain there has been little consideration given in the last two generations to the general economic policy, and this economic policy, I maintain, has entirely different objectives than the business policy which has been dominant.

I grant you that a business has to make profits, but these profits should not endanger the competitive opportunities under our particular kind of economy.

There should be at all times a maximum chance for business to grow. But there should be maintained likewise at all times something like full consumption and more nearly total employment.

American business, despite all its lofty motives, can never wholly exonerate itself of its lack of regard of the human agencies that helped in its growth.

Human values—problems affecting the mass of humanity thrown out of work by mass production and machines—is the concern of both business and government.

On this point, Dr. Kreps declared before the Temporary National Economic Committee:

Similarly, so far as technology is concerned, technology involves certain definite economic costs that may not be met by the individual business, may not have to be met by them, such as the cost of occupational obsolescence, or the cost of retaining workers whose skill has been supplanted, or finding jobs for workers who are no longer needed. Even though the business can get rid of them, and even though the industry can get rid of them, the economy cannot. You have got to support these men. There are costs involved.

"Ghost towns" is a term used to describe cities in which entire industries have moved their plants and equipment to an entirely different community than that in which they have been operating. They have been known in recent years to pull up stakes, as it were, and leave entire laboring populations dependent upon governmental agencies for sustenance. In many instances employees who had owned their homes, or worse yet, were buying them, lost whatever investment they had, in many instances their life savings. It would seem that

company responsibility to the men who had made their success possible should dictate that they consider what was to become of these families.

These are not remote considerations. They are constantly in the process of happening. Today a more enlightened labor leadership is deeply concerned with problems such as these "ghost towns," which multiply from year to year.

Labor today is anxious to sit in with business in the solution of these grave matters. And it is a responsible type of labor leadership, whose offer of cooperation, I believe, business cannot afford to spurn.

Every generation has its pioneering to do in order to solve its special problems. Certainly we all have the spirit of cooperation in us to transform this period into the beginning of a great era of scientific advancement. The various abuses of capital can be adjusted by changing a few of the rules of the game so that a greater number of Americans may share in our national wealth.

As President Roosevelt has said:

> Industrial efficiency does not have to mean industrial empire building. And industrial empire building, unfortunately, has evolved into banker control of industry. We oppose that.
>
> Business enterprise needs new vitality and the vitality and flexibility that comes from the diversified efforts, independent judgments, and vibrant energies of thousands upon thousands of independent businessmen. The individual must be encouraged to exercise his own judgment and to venture his own small savings, not in stock gambling but in new enterprise investment. Men will dare to compete against men but not against giants.

Unemployment is the chief concern of most of us and we are all vitally interested in each new approach to its solution. Many of us, I am sure, are in accord with the objectives of the 30-hour week, as proposed by labor. To me this seems a step in the right direction for a partial solution in industrial areas. It will increase consumption and will absorb some of the unemployment slack.

Another step toward decreasing industrial unemployment should concern itself with a more broad use of apprentice schools such as are now working successfully in the Ford and Chrysler Motor Cos. in Detroit. Youth is clamoring—and rightfully so—for an opportunity to prove itself. I can think of no better way in which industry can serve the community than by establishing these vocational schools in industries which require certain skilled labor. I think, furthermore, that all new industries that are in the process of evolving should include these apprentice schools as a requisite part of their program.

So well has the program worked in the Ford and Chrysler trade schools that they have a waiting list of thousands of applicants, I am reliably informed. This proves that youth is only too anxious to take its place in the work world if the opportunity is available.

If you notice, I am speaking of remedies that are applicable to industry alone. I fear that this is a failing common to many city-bred students of the problem. All too often the city observer is prone to think in terms of factory jobs when he discusses unemployment.

Once upon a time I approached the problem with a characteristic city man's viewpoint, but those days are long past. I have realized fully for some time that the problem of unemployment is wrapped up inextricably with agriculture.

Already there are skeptics who question industry's reluctance to avail itself more fully of nature's vast and endless store of inorganic wealth and energy. It has seemed to these skeptics that business has been altogether too slow in forsaking its old ways of using organic materials solely for its productive purposes.

Science has demonstrated conclusively that these processes can be served most ably if industry awakens and begins to avail itself of our agricultural bounties and their natural resources.

For years science has been showing industry how, in hundreds of ways, this inorganic wealth can be used to create new jobs, cut costs, and even bring new enterprises into being.

And, on the other hand, industry's inability or unwillingness to comprehend these new scientific revelations and apply them is doubly destructive. This neglect—to my mind at least—has contributed largely to maintaining our present high unemployment levels.

But just as alarming has been the resultant waste of our great natural resources. The heedless drain upon our oil reserves continues unabated, despite the fact that these reserves are close to the depletion point.

In fact this extravagant waste of one of our greatest natural resources is rapidly nearing the calamity stage. The productive years of these reserves is already numbered. And there does not seem to be any doubt that we should do everything within our power to retain what is left of this strategic material.

To me it seems good business logic that we keep what is left of nature's diminished accumulation of petroleum and follow the scientist who shows us a better and more economical way to obtain our motor fuel. Besides the conservation aspect involved in such an innovation, an untold number of jobs would be created and the door would be opened in general to a more universal acceptance of science's new and significant discoveries.

In several European countries, as well as in some of our South American republics, conservation of petroleum by blending alcohol and gasoline has been in successful use for a number of years.

That this alcohol can be obtained from soil-grown, self-replenishing agricultural material, such as corn, is a well-established chemical principle.

But the fact remains that despite these precedents, and the general approval of the plan by our American engineers, powerful interests here in the United States are bitterly opposed to adoption of the plan.

They oppose it bitterly, despite the added prosperity that would follow its acceptance. Like ostriches with their heads in the ground, these special interests can be expected to maintain this opposition until that fast-approaching day when our petroleum reserves will have been exhausted.

Let me quote what Dr. William J. Hale, eminent chemist of Midland, Mich., has to say in one of his reports on the attitude of the petroleum interests to this program:

> If our petroleum corporations had any foresight at all, they would understand how the introduction of this fuel would conserve their petroleum holdings and increase markedly the purchasing power of farmer and hence reduce unemployment and increase automobile sales, thereby calling for more and better fuel and a much extended use of lubricating oil.
>
> But the petroleum corporations are intent upon burning up all the petroleum in this country at earliest moment in order that they may develop their foreign holdings in petroleum fields and import as much therefrom into this country as quickly as possible.

Deeply concerned over the rumors that our reserves are approaching exhaustion, I wrote to the Department of the Interior, Bureau of Mines, with regard to our oil and gas reserves, and I received the following information from Mr. R. R. Sayers, Acting Director, Bureau of Mines. I quote as follows:

> Concerning oil reserves, page 134 shows a table prepared by H. J. Wasson in which the petroleum reserves in 1938 were estimated at 10.2 years' supply, in terms of future production, and at 12.7 years in terms of current production. Current production is based on the ratio of reserve at end of year to production during the year.
>
> The estimated life of natural-gas reserves, in terms of 1937 production of 2,370,000,000,000 cubic feet is about 28 years if Davis' estimate of reserves of 66,000,000,000,000 is used. The president of the American Gas Association estimated reserves as 62,000,000,000,000 cubic feet and pointed out that, at the rate of withdrawals during 1936, the reserves would have a life of 28.5 years, whereas, at the rate of withdrawals of 1937, the life would be reduced to somewhat less than 25 years.

Additional evidence that our oil reserves are dangerously low and that an alcohol blend is workable, is herewith offered in the form of statements from two of our leading governmental authorities:

> Secretary Wallace, May 1933: Most engines now in use appear to be able to handle a 10-percent alcohol-gasoline mixture without adjustments and without much change in mileage per gallon of fuel. Corn would provide an abundant supply of suitable raw material for the production of alcohol. Other farm products, such as wheat, rice, and potatoes, could be utilized when there were large supplies available at low prices. In fact, the manufacture of alcohol could be used as a material aid in taking care of surpluses and stabilizing the markets for farm products.

Secretary of Commerce to Secretary of Agriculture—letter, December 20, 1935:

The continued adequate supply of fuel for motor vehicles and airplanes is one of the essentials of national prosperity in which the Department of Commerce is directly interested. Despite the present supply of petroleum, authorities agree that the country must look forward to a diminishing supply, which condition may shortly make necessary importations of foreign crude oils. In order to be of significance in relation to the present motor-fuel demands of the United States, alcohol must be produced, not from a limited supply of waste products but from farm crops which can be raised and handled in quantity for the main purpose of producing alcohol, or other suitable fuel.

Use of an alcohol blend for motor fuel has long passed the stage of theorizing. The following are some statistics gathered by the American Good Government Society, who have been interested in this movement:

Germany is the largest user of alcohol blend as a motor fuel. The Government decree of an alcohol blend went into effect in 1932 and its use grew 340 percent in 7 years. In 1937 they consumed 75,000,000 gallons. They use chiefly potatoes in their alcohol.

France uses beet roots, fruits, and molasses in their making of alcohol. The French Government pays 38 cents a gallon for alcohol and sells it for around 17 cents a gallon to oil companies, which is the approximate cost of gasoline. This loss is made up by a government tax on all gasoline and kerosene, while the blended fuel is exempt from the tax. The product there is a 50–50 blend of half alcohol and half gasoline.

Sweden uses a blend of 25 percent alcohol with 75 percent gasoline—largely a byproduct of wood pulp. Their output rose 110 percent in their 6 years under the plan. One of the interesting facts about Sweden is its use of an alcohol blend without compulsion.

Czechoslovakia did not have compulsory regulations of alcohol blends when they had their own government. Their blend is composed of 30 percent gasoline, 20 percent benzol, and 50 percent alcohol. In 1935 they used 20,000,000 gallons as motor fuel. This was done in spite of the fact the blend sells for about 12 percent more than straight gasoline.

Japan: According to a recent press release, the Department of Finance of the Japanese Government, dated last February, a million yen have been appropriated to begin construction of five alcohol factories. When her expansion is completed she expects to make 10,000,000 gallons in Formosa alone. She uses sugar for her alcohol blend and is expanding her crop production. She pays out $50,000,000 a year for petroleum imported into Japanese frontiers.

Brazil: It is understood their present blend is 10 to 15 percent alcohol to the remaining parts of gasoline. Petroleum imports amount to over $20,000,000 annually.

Italy: The Government has decreed a 25-percent part of all alcohol produced to be marked for motor-fuel use. In 1937 they used 7,500,000 gallons of alcohol for motor fuel, 5 percent as much as gasoline. Their 1936 production was 35 percent from sugar beets, with an unspecified amount from wines and other sources. The methods of obtaining alcohol vary widely from year to year, depending upon the quality of their wineries. With a varying quantity of poor wines depending more or less upon natural causes, governmental policies are flexible and adjustable in order to be successful.

Peru: A beginning has been made in Peru in using alcohol in fuels. Although the quantity of alcohol used is small, we find that the increase amounted to about 30 percent, as compared to a rise of 8 percent in total gasoline consumption.

Poland: The Polish Government in 1933 decreed that the producers of petroleum buy an amount of alcohol equal to 9 percent of the amount of gas sold. The increase in alcohol used as fuel has been tremendous in Poland rising from 270,000 gallons in 1931 to 2,400,000 in 1936, a growth of almost 800 percent in 5 years. The actual consumption of gasoline was 25,000,000 gallons. This gives an approximate 9-percent proportion of alcohol legally required to be used as motor fuel.

Philippine Islands: They are one of the leading producers and users of alcohol fuel. In 1930 they used 4,200,000 gallons of alcohol, or 15 units of alcohol to every 100 units of gasoline. In 1936 they used 8,600,000 gallons of alcohol, increasing their proportion of alcohol to 21 units for every 100 units of gasoline.

The British Empire: The Imperial Chemical Industries, Ltd., at Billingham, England, is a Government-subsidized plant. When completed it will cost $55,000,000 and will have a capacity of 45,000,000 gallons of petrol a year from the process of hydrogenation of soft coal. An alcohol plant could have been built for $7,000,000 to produce the same amount of alcohol, but England desires self-sufficiency and is therefore turning her coal deposits into liquid fuel.

A blend of alcohol and gasoline is being marketed today in England without Government compulsion but with encouragement by tax exemptions. Except for certain special cases, alcohol blends of gasoline are tax free. In the case of the new Billingham plant, the Crown will pay the firm a subsidy of 8 pence (16 cents) a gallon of gasoline petrol for 9 years to encourage the enterprise.

Hungary: This country is a substantial consumer of alcohol fuel. According to 1930 figures, the latest available, over 3,000,000 gallons of alcohol were used in blends, as compared with about 21,000,000 of gasoline, giving a ratio of about 14 gallons of alcohol for each 100 gasoline sold. The blend is called Motalco and consists of 20 percent alcohol to 80 percent gasoline.

It may be of interest here to note that when Germany entered Poland and took possession of the country none of the alcohol plants were destroyed and are, in fact, working double their usual schedule.

For some time I have investigated the economic potentialities that a blended motor-fuel program would offer the United States. In one instance I traveled 500 miles back to Detroit to consult with an authority. I have talked with dozens of Washington officials and I have read dozens of books and pamphlets. I might say in passing that my college chemistry has returned to me in satisfactory measure, although it is not necessary that one have any specialized knowledge to comprehend these facts, so readily apparent are they.

I assert that universal use of a blended mixture of alcohol and gasoline, even if a minimum blend of 2 percent alcohol were adopted at the outset, would require an alcohol output the United States could not immediately supply. I further assert that the adoption of such a program would utilize every scrap of surplus the farms of this country could produce at their present crop capacities, and there still would not be enough agricultural material to supply even a minimum 2-percent blend.

I assert—and I am bulwarked by the conclusions of scores of authorities—that millions of acres of land now idle would necessarily be converted into productive farm lands overnight if motor fuel blended with alcohol were to propel our American automobiles.

Every kind of agricultural product raised in the United States would in theory be grist for the industrial-alcohol distilleries. Corn, apples, barley, sorghum, plums, potatoes, sugar beets, wheat, and yams, to name only a few of our diverse farm products, could each supply in varying quantities its yield of alcohol. Corn, however, has gained highest approval in scientific and agricultural circles.

Following is a break-down of two tables prepared by the United States Department of Agriculture, showing the yield per ton and per acre of various commodities:

Average yield of 99.5 percent alcohol per ton

	Gallons
Wheat (all varieties)	85.0
Corn	84.0
Buckwheat	83.4
Raisins	81.4
Grain sorghum	79.5
Rice, rough	79.5
Barley	79.2
Rye	78.8
Prunes, dry	72.0
Oats	63.6
Sweetpotatoes	34.2
Yams	27.3
Potatoes	22.9
Jerusalem artichokes	20.0
Sugarcane	15.2
Grapes (all varieties)	15.1
Apples	14.4
Pears	11.5
Peaches	11.5
Plums (nonprunes)	10.9
Carrots	9.8

Average yield of 99.5 percent alcohol per acre

	Gallons
Wheat (all varieties)	33.0
Corn	88.8
Buckwheat	34.2
Raisins	101.7
Grain sorghum	35.5
Rice, rough	65.6
Barley	47.9
Rye	23.8
Prunes, dry	82.8
Oats	36.3
Sweetpotatoes	141.0
Yams	94.0
Potatoes	178.0
Jerusalem artichokes	180.0
Sugarcane	268.0
Grapes (all varieties)	90.4
Apples	140.0
Pears	49.3
Peaches	84.0
Plums (nonprunes)	21.3
Carrots	121.0

If the blend were to be raised eventually to 10 percent, it is conservatively estimated that 800 new industrial distilleries would have to be built. And if these 800 distilleries worked on a full-time capacity throughout the year, each would have to produce a 10,000-gallon daily output to satisfy the demand for the blended motor fuel.

Again, conservatively speaking, 1,000,000 men would find work on land now idle and thousands of additional workers would find employment in the hundreds of scattered refineries. Each section of the country would have to erect these plants to meet the requirements of the program.

Another point I would like to make is that there would be a minimum of waste involved in this agricultural distilling. Quantity, not quality, would govern the acceptance of the product intended for distillation. That is, it would not be necessary that the cream of the crop be offered to the distillery. Products of lesser quality could be converted just as readily into industrial alcohol as the more select products.

Nor is that all. After the alcohol would have been extracted from the crops, the end products would be available to the farmer for livestock fodder.

This is no Utopian dream that I project but a plan whose workability has been proved in the testing laboratories of a dozen countries. I am willing to grant that promise of the reemployment of 1,000,000 men does not totally solve our domestic unemployment problem, but it is a step in the right direction—a step along the scientific path.

And without getting too optimistic about the prospect, I feel certain that it is the scientist—the soil chemist especially—who is destined to lead us out of the economic quicksands that have bogged us down for half of a generation.

To expedite the arrival of the day when blended motor fuel will be an actuality in this country, thus helping to conserve our natural wealth and contribute in no small way toward economic recovery and reemployment, I have this day introduced a bill in the House of Representatives.

My bill stipulates that it shall be deemed unlawful for any person to ship or transport in interstate commerce any type of motor fuel unless it contains a specified percentage of alcohol manufactured from agricultural products.

Realizing that it would be physically impossible to produce, at the outset, enough alcohol to supply the preferred 10-percent blend, I have specified that a graded scale be followed during the introductory years. The first year, I specify a 2-percent blend be used; 4 percent the second year; 6 percent the third; 8 percent the fourth; and in the fifth year the desirable 10-percent solution.

I have said it would be a physical impossibility to produce in the beginning enough alcohol for the 10-percent blend. Let me be more specific. According to figures from the Independent Petroleum Association, we used for motor-fuel purposes in the United States during 1938–39 approximately 24,000,000,000 gallons of gasoline. A 10-percent blend would require annually 2,400,000,000 gallons of alcohol.

Speaking in terms of the alcohol-producing ability of the corn crop, this would mean that approximately 32,000,000 additional acres would have to go under cultivation. In 1938, according to figures from the Agricultural Department, 91,792,000 acres of corn were planted for harvest. Corn yields about 75 gallons of alcohol to an acre.

It is my firm conviction that the soil offers the only remedy for our present social and economic ills. And if we were to begin by using blended motor fuels we would be only scratching the surface. Its adoption would represent the acceptance of only a tiny part of an inspiring program for economic rehabilitation that the agricultural engineers have been busily drafting for years. Words like plastics, chemurgy, and many others, coined in the laboratories of the scientists, are beginning to spell out the magic sesame that, to me at least, seems destined to open the door upon a new prosperity that will be enduring and stabilized.

I wish to add just one more thought in concluding. It seems to me that any recovery program would be greatly aided by a central planning body—a group which would be established to plan and direct rather than to govern.

Purely an advisory board, such a group should, I believe, be represented by business, labor, and Government and should be chosen by their own selected groups.

The purpose of this board would be to effect a national economy for the people of the Nation so that full utilization of our national resources would result. This board, as I envisage it, would also present factual statistics to those who control the wealth of the Nation, in order that idle capital, idle land, and idle manpower could be put to work for the continued growth of our country.

The Panama Canal Society of Washington

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

ADDRESS OF THE PANAMANIAN AMBASSADOR

Mr. MAY. Mr. Speaker, on the evening of April 20 there was held in Washington the fifth annual dinner reunion of the Panama Canal Society of Washington. The society's membership is made up of old-timers, that is to say, of citizens of the United States residing in and near Washington, who, in varying capacities, participated in the construction of the Panama Canal. The President of the society, and chairman of the occasion, was our former colleague, Hon. Maurice H. Thatcher, for 10 years the Representative from the Louisville, Ky., district. During the construction period of the great Isthmian waterway Mr. Thatcher served several years as a member of the Isthmian Canal Commission, and head of the Department of Civil Administration (Governor) of the Canal Zone. The guest of honor and principal speaker at the dinner reunion was the able and popular Ambassador from Panama to the United States, Dr. Jorge E. Boyd.

At the conclusion of his address the Ambassador, on behalf of the President and Government of Panama, and because of the considerations stated by him, presented to Mr. Thatcher the diploma and insignia of the Order of Balboa—a distinguished honor, indeed—for the bestowal of which the recipient is to be heartily congratulated.

As regards Dr. Boyd, it may be interesting to note certain important contacts or assocations he has with our country. First, his grandfather, Archibald Boyd, was a citizen of the United States who made his final home, and married in, Panama. This was about the time of the California gold rush. In cooperation with his brother James, he founded the Star and Herald in Panama, and this newspaper survives to this day as one of the leading publications of Central America. Next, the Ambassador's attractive and popular helpmate is a Virginian by birth, the former Miss Elizabeth Bolling, niece of Mrs. Woodrow Wilson.

Under leave accorded, the address is herewith included:

Mr. Chairman, distinguished friends, I am not going to try to make any speech here this evening, it not being usual nor customary to make speeches in family gatherings, and we really are congregated around this table as members of the Panama American family.

However, I am going to have the pleasure of chatting with you informally, not as the Ambassador of my country but as the true friend of all of you who have contributed so much personally to the grandeur of the United States while in the Canal Zone, and to the establishment of the most intimate and cordial relations between our two peoples. Above all, may I express to you my sincere appreciation for the thoughtful and gracious invitation to be your guest at this beautiful reunion.

In these troublesome moments through which the world is passing, due to the abuse of power and utter lack of respect for the law of nations on the Old Continent, it is most gratifying to all the inhabitants of the Western Hemisphere to be enjoying all the constitutional rights that guarantee their liberty, freedom, lives, and personal possessions. It is most fitting to make a short review on this occasion of the traditional peaceful history of Panama and of its continuous policy of international cooperation.

Ever since the colonial days when the peoples of the neighboring republics were fighting bloody battles against the Spanish armies in Central and South America, Panama obtained its independence without any bloodshed and in a peaceful manner, due to the sagacity of its leaders. It joined spontaneously the Republic of Colombia in order to form a big nation with Ecuador and Venezuela.

For the first time in this continent, in the year 1826, the Congress of Panama was convoked by Simon Bolivar to proclaim the ideal of cooperative peace by means of a system of international unity unparalleled in history, and invitations were sent to all of the American nations to take part in its deliberations. It directed the establishment of the organism which was to settle by peaceful means any discords or disputes that might arise between themselves. In other words, for the first time the principles of arbitration were proposed.

Also, the notion of a League of American Nations to defend themselves by joint action against any possible European territorial ambitions that might threaten their peace was discussed. This conference led to what later on has come to be the actual Pan American Union of American Republics, whose fiftieth anniversary of existence we have celebrated on the 14th of this month, and it also served as a basis for the League of Nations that today sits in Geneva.

Unfortunately, the doctrine of pan-Americanism therein advocated did not find fertile ground among the rest of the young nations of this hemisphere until a very short time ago. Following the Congress of Panama a period of unrest, foreign aggression, and inter-American wars took place. It was during this time that France invaded Mexico, civil war was ravaging the United States of America, and there was war between Mexico and the United States.

The spirit of American unity had died away, and, in order to revive it, James G. Blaine called the Congress in Washington, and the Bureau of the Pan American Republics was created, which has been working tirelessly to foment trust and understanding between all these countries; but it was not until the recent Conference of Foreign Ministers of Panama of September 1939 that there was realized the necessity of unity of ideals and policies. It was at this congress that there was established for the first time the effective effort in practical form of true continental solidarity of the 21 American republics, and there was unanimously approved the determination to act as one nation in the defense of each other against any outsider.

Due, in great part, to the broad-mindedness and brotherly attitude of the illustrous Chief Executive of the United States, Pan Americanism, that is to say, inter-American unity, is no longer a phophecy nor a dream, but a reality.

We are all identified in the necessity of holding together in the defense of our sovereignty and territorial integrity. Continental public opinion has resolutely reached the conclusion that although in America there does not exist the germs of hatred, terror, jealousies, and narrow-minded nationalisms, but the spirit of generosity and of peace, the only way in which to maintain our democracies and the peace of our continent is by being prepared, and by presenting a common front, so that if one of the 21 American democracies should ever be attacked, the other 20 will join in its defense. The unity of the Americas means their safety.

Again turning back to the Isthmus and its generous desire to serve the world, in 1903, when the Hay-Herran Treaty, negotiated between the United States and Colombia for the construction of the Panama Canal, was not ratified by the Colombian Senate, the populations of the Isthmus rose as one man and separated from that sister nation whom it had spontaneously joined when it separated from Spain, and resolved again to assume the direction of its own destinies.

The new republic was then formed, again without any bloodshed, which was the traditional peaceful attitude of the Panamanian people. A new treaty was negotiated with their older sister of the north for the construction of the eighth wonder of the world, the Panama Canal. In the carrying out of this colossal enterprise, it became the true and only ally of this great country.

In this tremendous undertaking, all of you have taken part, more or less, to the honor of both nations, and for the welfare of the world at large. It is a very happy thought to congregate annually in the Capital of the largest democracy on earth to commemorate that achievement. Your names have been written with indelible ink for posterity, and we are grateful to all of you for your patriotic contribution.

To carry out this heavy task you have faced almost insurmountable obstacles, fighting not only against rival commercial interests, but against nature itself. You have contributed to the transformation of a line of mountains into an artery of communication that has shortened long distances from the remotest corners of the world to our American shores; and you have converted an unhealthy region into a healthy resort, free from tropical diseases.

Yellow fever is now unheard of; and the sanitary conditions are such that Panama is today the center where people from Central and South America go to recover their impoverished health, and to obtain the best and most advanced medical treatment for all kinds of illnesses. Among the first scientific men who discovered the origin of the malignant yellow fever was General Gorgas, who served as a member of the Isthmian Canal Commission during the construction era. This plague was brought to our shores from other ports, the Panamanian people being immune to it; and it was one of the causes of the failure of the French enterprise.

The rivalry of commercial interests, I repeat, threatened to prevent the completion of this waterway. Powerful organizations—it was alleged—lured away almost every Chief Engineer who was placed in charge of its construction, and it was only through the tenacity and wisdom of the great American President, Theodore Roosevelt, that it was finally carried to its conclusion, by charging the Army with the task, not only of achieving this engineering feat, but of organizing its administration in such an efficient manner that not a single case of graft or any scandal has ever been heard of. To all this work the civilian forces contributed in the largest degree.

To the American people, then—civilian, as well as to units of the Army—is due the success of the greatest waterway of history.

Among us here tonight we have our distinguished chairman, the president of your society. As a member of the Isthmian Canal Commission, and chief of the civil administration of the Canal Zone, during construction years, he performed his duties in a creditable manner. Included among them were the representation of the Isthmian Canal Commission and the Canal work in their relationships with the Government of Panama. After the completion of his period of Isthmian service, and return to his country, and in the discharge of his new and important obligations as a Representative in Congress from his State of Kentucky, he continued—and he yet continues, with all the means in his power—to strengthen the friendly bonds that unite our two nations.

In Congress he sponsored and procured the enactment of the legislation that brought about the construction and operation of the permanent ferry across the Panama Canal and the building of the modern roadway extending from the western terminus of the ferry through the Canal Zone. These works bear his name, and the Thatcher Ferry and Thatcher Highway constitute vital links in the inter-American highway, whose completion will mark a new and important step in the promotion of inter-American relationships. Also he was the author in Congress of the act creating the Gorgas Memorial Laboratory, located in the city of Panama, and which is becoming one of the outstanding institutions devoted to the study of the causes and prevention of tropical disease. It is thus serving the entire world. In these and in many other ways he has endeavored always to promote the friendly and, I should say, fraternal relations that exist not only between our two Governments but, as well, between our two peoples.

His Excellency the President of Panama, a son of one of the founders of the new Republic, who was in office—first as President and afterward as Secretary of State for Foreign Affairs—during the period that Congressman Thatcher served in the Canal Zone, and who had the highest regard for his integrity, honesty, broadmindedness, and intelligent work, has charged me with the very pleasant duty of delivering to this eminent American the high distinction of the well-deserved decoration of the Order of Vasco Nuñez de Balboa, in its degree of Comendador con Placa, with which the Government of Panama rewards the virtues of distinguished citizens.

It is a privilege and an honor to me, another son, to deliver to my dear friend Mr. Thatcher the insignia and corresponding diploma with sincere congratulations for this high distinction.

One Man's Power

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

EDITORIAL FROM THE CATHOLIC TELEGRAPH-REGISTER

Mr. HESS. Mr. Speaker, on Friday, April 26, of this year, there appeared in the editorial columns of the Catholic Telegraph-Register, of Cincinnati, Ohio, an editorial which I think every American should read.

It expresses my sentiments on the subject, and is one of the strongest arguments which can be presented against a third term for any President of the United States.

The editorial reads as follows:

[From the Catholic Telegraph-Register of April 26, 1940]

ONE MAN'S POWER

This is the age of one-man strong-arm governments. The most notable products of the times are Mussolini, Hitler, and Stalin among the major powers. Smaller nations, especially in Central Europe, have had their strong political figures guiding their destinies. Fortunately for their subjects and, perhaps for themselves, not all dictators have always used their authority tyrannically. But the danger is forever present that the dictator will become a tyrant, the more so when his rule is based upon the ideology of the absolute domination of the totalitarian state.

Hitler and Stalin are the classic examples of the modern absolute state. Men of little training in the art of ruling, they have ridden

to the heights on the catchwords of a popular enthusiasm and maintain their domination by the ruthless removal of all opposition. Their word is law even over life. Their closest associates must be sacrificed if they are threats, real or fancied, to the security of the state, identified in the person of the dictator.

In our own country the growing centralization of power in the Federal Government at Washington is a disguised trend to place more and more absolute authority in the hands of one man in the position of Chief Executive. In national emergencies we have allowed temporary dictatorial power to be exercised by the administration in control of the Federal Government. Such authority has never been wholly relinquished once the crisis was passed.

We wonder what may have been the turn of events in our own country if Hughes had been elected over Woodrow Wilson and if Senator JOHNSON had accepted the Vice Presidency and had become President instead of Calvin Coolidge. The story of the depression years may have been quite different if Al Smith had been chosen President instead of Hoover. Certainly we were headed for some let-down after the false boom of the twenties. No President could have avoided the depression, but a Chief Executive of Al Smith's character would have dealt with realities far differently than did Hoover.

The 7 years of Roosevelt have been, on the whole, disappointing. He has enjoyed more power in office than was ever yielded to any other President. After a whirlwind beginning that promised a steady fight against the depression and the evils that caused it, Roosevelt's administration bogged down. In recent years the President has seemed much more concerned about world affairs than about our own domestic problems. Temporary measures have been prolonged year by year until they seem permanently necessary. The powers so generously conferred on rulers to lead the country back to normal conditions are now assumed to be the prerogatives of democratic representative government.

We are drifting rapidly away from our precious heritage of free citizens. If the demands of the times make it necessary that we relinquish temporarily some of our rights owing to emergencies, it becomes all the more urgent that we give over these rights to the keeping of leaders of high moral principles. We are facing another crisis in a Presidential election year. Our duty as citizens is to choose our best candidates for office.

Did Someone Say "War Credits"?

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

ARTICLES FROM THE WASHINGTON DAILY NEWS

Mr. THILL. Mr. Speaker, the following news article indicates that our exports of war materials are increasing rapidly. More and more we are becoming an arsenal for certain warring nations of Europe. Our internal economy is being disturbed to such an extent that soon we will hear the cry, if we do not hear muffled tones already, that an economic collapse will befall the United States if we do not extend credit to European belligerents.

[From the Washington Daily News of April 26, 1940]

UNITED STATES EXPORTS BOOM AS WAR GETS WORSE

The war-stimulated boom in foreign trade increased American exports during the first 3 months of 1940 to $1,068,773,000, more than one-third the amount for all of 1939, the Commerce Department announced today.

Sales to foreign customers in the first quarter exceeded this country's purchases abroad by $410,349,000.

Demands for American airplanes, machinery, chemicals, raw cotton, and copper, and iron and steel products have increased sharply since the war. The United States, in the same period, has increased its purchases of foreign crude rubber, tin, and wool.

With the intensification of war in Europe, the report said, the sharply expanded demand for this country's merchandise continued unabated in March.

Although imports during the first quarter failed to extend the steady and substantial rise of the second half of 1939, the Department said, the fact that they exceeded the same period last year indicated a higher volume of domestic business activity than a year ago.

Wood-pulp imports dropped during March to 74,000 tons valued at $3,500,000, the smallest for any month since April 1933. Most imported wood pulp comes from Norway and Sweden and is generally used by the American rayon industry.

Shipments of agricultural products in the first quarter comprised 23 percent of total exports; 52 percent of this country's imports represented agricultural products.

Note well that, although certain war industries are thriving because of war orders, the farmer is getting little benefit at the present time. Hugh S. Johnson ably expressed the probable turn of events if the war in Europe continues in the following news article:

[From the Washington Daily News of April 26, 1940]

ONE MAN'S OPINION

(By Hugh S. Johnson)

This is the way to get mixed up in other people's wars. First, you sell them your goods. They become your best customer. They make jobs for your unemployed and dividends for your stocks. When their purchases have become an important part of your economy, they run out of cash.

Your business is threatened. They ask for credits. Some old boat rockers begin to croak about this. Some say, "Where your treasure is there will your heart be also. This will surely compel you to send armies to protect your dollars."

Your politicians reply: "We shall never send an American mother's son to bleed on foreign shores." Your best customers add: "We don't want your military assistance. You are too far away. Your efforts to equip and transport armies would interfere with your value to us as a base of supplies."

The assurance of repayment of such loans is so slender that no private funds are available. No one person wants to risk, but if Congress authorizes the Treasury to loan all the people will be forced to risk collectively what nobody would be willing to risk individually.

That is reckless statesmanship, but by this time hysteria and emotion have ousted both prudence and judgment.

From the beginning of this sequence there has been growing a sloganeering stupidity. "They are fighting our war. They are paying in blood. We shall only pay in dollars. It is the least we can do." When we opened a credit of $3,000,000,000 to the Allies in the World War, the votes in the committees of the House and the Senate were unanimous. To the suggestion that Allied bonds were selling below par the answer was, "All the more necessary to loan them this money at the lowest possible rate of interest." When one Congressman said, "They will use it to retire private loans elsewhere." Answer was, "Do not limit or qualify the use of this money." When mutual guaranties among borrowers was suggested, the reply was (prophetically), "If we get this money back at all * * * we shall get off cheap."

Thus, we buy an interest in a war we are going to fight with goods and dollars, but not with blood—"just a few divisions as a token and a symbol to show the flag."

Then the going gets tough. We are in to the eyebrows on the economic and sympathetic side. Our friends' backs are "at the wall." The whole tune changes. "Send us men. If they haven't equipment, send them in their undershirts."

The demands on us become almost insulting to abandon our organizations and commands and conscript men to fight under foreign flags and officers.

So we finance most of the cost of the war from this point out for ourselves and our Allies. We pack men by the millions like sardines into transports and send them untrained into battle. We are cursed for tardiness, stinginess, and timidity. Then comes victory, maybe, and we learn that we have been fooled on the war's objectives. The victors didn't share our ideals and under secret treaties they take all and leave us nothing—and then repudiate all debts and vilify us for even asking for repayment.

This is our actual World War experience, neither distorted nor exaggerated. We are going through it again, step by chuckle-headed step. We have now reached the stage of "we don't want your men, only your dollars," and "they are fighting our battles," and "we will help them by everything short of war, but not an American mother's son will be sent abroad."

"As a dog returneth to his vomit, so a fool returneth to his folly" (Proverbs, XXVI, 11).

Agriculture Under the New Deal and the Effect on Dairy Farmers

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

Mr. KILBURN. Mr. Speaker, the major objective of the New Deal agricultural program has been to raise farm prices to parity levels and to achieve a sound adjustment of agri-

cultural production by restricting crop acreage. This program has been carried out under the provisions of the Agricultural Adjustment Act of 1933, the Soil Conservation and Domestic Allotment Act of 1936, and the Agricultural Adjustment Act of 1938.

The New Deal farm program, however, has failed to accomplish this objective. In the first place, prices of wheat, corn, cotton, and hogs as of August 1939, or just prior to the outbreak of war in Europe, were in many instances as far below parity as they were when the original Agricultural Adjustment Act was approved in 1933. As of August 15, 1939, corn was only 59 percent of parity, hogs 60 percent, wheat 49 percent, and cotton 56 percent. Beef cattle, a commodity which was not controlled, was at parity.

Nor has the New Deal succeeded in controlling production by restricting acreage. Wheat production in 1939 was 754,971,000 bushels compared with 551,000,000 bushels in 1933, a prerestriction year. Corn production in 1939 was 2,619,000,000 bushels compared with 2,399,000,000 bushels in 1933, a prerestriction year.

Supplies of leading agricultural commodities were also larger in 1939 than they were in 1933. Total wheat supplies in 1939 were 1,050,000,000 bushels compared with 929,000,000 bushels in 1933. Total corn supplies in 1939 were 2,952,000,000 bushels compared with 2,786,000,000 in 1933. United States supplies of commercial cotton in 1939 totaled 23,122,000 bales as against 22,541,000 bales in 1933.

The United States Department of Agriculture's index of total agricultural production—1924=100—stood at 104 in 1939 as against 97 in 1933, an increase during the 7 New Deal restriction years of 11 percent.

One of the most serious aspects of the New Deal farm program, however, relates to the decline in farm exports. The following table indicates the percentage net exports are of domestic production of important agricultural commodities.

Percentage net exports are of domestic production of specified commodities, 5-year average, 1926–30, and year 1938 [1]

Commodity	Average 1926–30 (percent)	1938 [2] (percent)
Cotton, including linters [3]	54.0	28.1
Wheat, including flour	18.3	11.4
Corn, including meal	.7	2.6
Oats, including meal	.8	.4
Rye, including flour	29.5	1.4
Barley, including flour and malt	11.7	3.3
Rice, in terms of rough	23.5	19.0
Tobacco, unmanufactured	33.8	28.8
Pork, excluding lard	3.4	.8
Lard, including neutral lard	31.6	13.7

[1] Years beginning July.
[2] Preliminary.
[3] Crop years, August to July.
Source: Agriculture Department appropriation bill, 1941.

This situation exists in spite of tremendous spending on the part of the New Deal for agriculture. Total expenditures of the Department of Agriculture in 1933 were $79,000,000, compared with $1,607,000,000 for 1940. Total expenditures of the Department of Agriculture for agricultural recovery for the 7 years, 1934 to 1940, are estimated at approximately $6,000,000,000.

Not all farmers, however, have been equally favored in the distribution of Government funds. In 1936 Secretary Wallace, in response to a Senate resolution introduced by Senator VANDENBERG in the spring of that year, made public the names of individuals, firms, and corporations who received in any one year benefit payments in excess of $10,000. For the 3 years 1933, 1934, and 1935 combined, a total of 715 persons or firms received $36,871,000, or an average of $51,567 for the 3-year period.

Large payments were continued under the 1936, 1937, and 1938 agricultural programs. For example, under the 1938 conservation program 14,886 payees received over $1,000, while 524 payees received over $5,000, and 113 payees over $10,000. Under the same program 2,437,000 payees received $40 and less, while 1,251,687 received $20 or less. While a limitation on payments over $10,000 was imposed by Congress when it passed the Agricultural Adjustment Act of 1938, this limitation only serves to lessen the inequality and does nothing to remove it.

Great inequality also exists in the distribution of Government funds as between farm products. For example, dairy products are second only to meat animals as a source of cash farm income. Yet dairy farmers receive little in the way of Government payments. The largest share of payments under the agricultural conservation program go to the wheat, cotton, corn-hogs, tobacco, peanut, and flax growers; and dairy farmers receive no parity payments, which are estimated at $236,000,000 for the fiscal year 1940.

In my study of parity payments I wrote to Mr. A. W. Manchester, director, northeast division, Agricultural Adjustment Administration, United States Department of Agriculture, requesting a tabulation of parity payments made for the years 1937, 1938, and 1939 to the approximately 9,000 dairy farmers who reside in the New York Thirty-first Congressional District, which I have the honor to represent. I ask permission to quote from his letter, addressed to me, of April 2, 1940:

> This will acknowledge your letter of March 27, in which you requested a tabulation of parity payments made for the years 1937, 1938, and 1939 in the counties of Clinton, Essex, St. Lawrence, and Franklin, in New York State.
>
> We are informed from our examining section that no parity payments have been made to farmers in any of these counties, for the reason that the crops on which parity payments are made are not grown in them.

Therefore, if the principle of parity payments is right, it is grossly unjust and unfair not to include the production of milk in the list of agricultural occupations to be benefited. I believe that dairying is the most vital branch of the industry of agriculture, and yet the dairymen have faced a crisis throughout all this New Deal spending. Again, these same dairy farmers are paying their share in taxes for parity payments, from which they derive no benefits.

In concluding let me say there is one way for this Congress to aid the farmer, and that is reduce his cost of government and thereby the heavy burden of taxation that he bears.

Senator Wheeler and the Presidency

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Tuesday, April 30 (legislative day of Wednesday, April 24), 1940

ARTICLE BY ROBERT BENDINER

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article by Robert Bendiner on Men Who Would be President—BURTON K. WHEELER appearing in the April 27 issue of the Nation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Nation for April 27, 1940]

MEN WHO WOULD BE PRESIDENT

BURTON K. WHEELER

(By Robert Bendiner)

Motorists driving through Montana in the fall of 1920 found the roads lined with posters depicting a huge bloody hand. Those who slowed down enough to read the legend beneath the gory emblem may have been reassured to learn that the State was not in the grip of some nameless terror; that the road signs were merely a device of the Republican Party and Anaconda Copper to warn the good citizens of Montana against voting for that pro-German, wobbly, anarchistic Bolshevik BURTON K. WHEELER, Democratic candidate for Governor. The Harding tidal wave enveloped WHEELER as it swallowed up all Democrats in 1920, but he polled 17,000 more votes than Cox, the Presidential head of his ticket, and displayed a political virtuosity that 20 years have heightened and refined.

BURTON K. WHEELER has what it takes to make a good gambler—the shrewdness to gage chances and the nerve to take them. Bold enough to be a flaming liberal in the early twenties, when only "Bolsheviks" were liberal, he was daring enough to lead the anti-Roosevelt forces in the middle thirties when only "economic royalists" were anti-Roosevelt. In both cases he staked his political fortunes on a hunch that public opinion was about to shift. His hunch in the twenties, despite his initial defeat, was to gain him a star role in the Senate for 17 years; his hunch in the thirties may win him or lose him the Presidency of the United States.

Little about BURTON KENDALL WHEELER reminds one of his New England origin; nothing more, in fact, than a hint of Massachusetts in his enunciation. The language itself and the Wheeler history are those of the West in which he has spent nearly 40 of his 58 years. Born in the village of Hudson, the tenth son of a desperately poor Quaker shoemaker, WHEELER managed during his school days to amass $750 with which to study law at the University of Michigan. Shortly before he was to leave for Ann Arbor he lost $500 of his fortune in a bank crash and had to go on working throughout his college days. In 1905, fresh from law school, he moved on to Colorado, partly for his health, and set out to find himself a practice. "Neither at Telluride, at Ouray, or Montrose—in fact, nowhere on the western slope," he says, "did they seem to recognize my legal talents, so I went my way to Montana."

Montana looked scarcely more promising. Offered nothing better than a bill-collector's job at $50 a month in Butte, the young attorney faced west again, determined for no good reason to try his luck in Spokane. But four poker sharps in search of a sucker decided his fate otherwise. Inveigled into a session of stud, the wandering lawyer lost every cent he had and missed his train as well. The latter misfortune hardly mattered, however, since his ticket was included in the last pot. In his penniless state even the $50-a-month job looked good. He settled down and in time opened a cubbyhole of his own.

Most of young WHEELER's practice consisted of personal-injury suits brought by miners against the copper companies. To stem a growing dissatisfaction, the copper barons in 1910 staged one of their periodic fake "reform" campaigns, in which the usual procedure was to single out an ardent champion of the miners, turn his head with the promise of office and the sudden wealth, comparatively speaking, of a legislator's salary, and then mold him into a tractable servant of the companies. It usually worked, and WHEELER must have looked like a natural. He wasn't. He rebelled almost immediately against orders to oppose the election of Thomas J. Walsh for United States Senator. Walsh lost, but 2 years later he tried again and won. A notable byproduct of his victory was the appointment of BURTON K. WHEELER as Federal district attorney.

No respecter of precedents, WHEELER proceeded to set the State of Montana by the ears. His term as Federal attorney was marked by a spate of prosecutions for all the kinds of corruption that flourish in a frontier society dominated by powerful absentee industrialists. It was a period of germination for the causes and antipathies that were to govern his future political life. He started out by smashing the practice of using decoys to catch saloonkeepers in the act of selling firewater to Indians and ended up by fighting against the manner in which the wartime espionage laws were being applied. He repeatedly refused to indict "wobblies" as such and spoke out boldly against the persecution of German-Americans. He made no secret of his opposition to American entry into the war, and was rash enough to advocate, in a mining State, government ownership of natural resources and the railroads. Small wonder that his bid for the governorship in 1920 was greeted with the show of bloody hands.

One of the chief Republican talking points in that campaign was that if WHEELER were elected, the mines would close. WHEELER lost, but a year later the mines closed anyway. So when he ran for the Senate in 1922 the Republicans were hard put to it for an issue. The pendulum had begun to swing away from the fierce militarism of the early post-war days, and the best the local G. O. P. could offer was the suspicion that WHEELER wanted to introduce free love into Montana. It wasn't nearly enough, and he went to the Senate by an overwhelming majority.

WHEELER brought to the Senate a brash pugnacity which he was quick to put on display. On his first day the young man from Montana had to be told not to smoke on the floor of the Senate; 2 days later he was overriding party whips to precipitate a first-class row over a committee assignment. In less than a week he had established himself as a scrapper and the despair of his advisers; within 3 months he was spokesman for a group of "New Democrats," corresponding roughly to the LA FOLLETTE group among the Republicans. By the end of his first session he had dug deep into the noisome doings of the Ohio gang and had greased the chute for its ultimate retirement from public life.

Mr. Smith going to Washington could not have asked for a more perfect target than the looting apparatus that was the Harding administration. The "Little Green House on K Street," where Attorney General Daugherty and his chief henchman, Jess Smith, directed fleecing operations amounting to millions, was history's gift to BURTON K. WHEELER. His demand for an investigation was a speech that Paul Y. Anderson described as "an attack so savage that even the Senate flinched." Senator Willis, of Ohio, pleaded that the Attorney General was "as clean as a hound's tooth," but WHEELER carried the day. He was made prosecutor for a congressional committee of investigation.

WHEELER did his work well. Before the first echo of his challenge hit the public ear Jess Smith was dead—ostensibly a suicide though some think that he was murdered; before the last echo faded away four principals of the Ohio gang, as well as Secretary of the Interior Fall, had found their way to Federal penitentiaries, and the easygoing President of the United States had died in an odor that could hardly be called one of sanctity.

Before Daugherty finally abandoned the Little Green House on K Street he managed to make himself something of a nuisance to WHEELER. Since there seemed no other way of stopping the Montana Menace, Daugherty combed the WHEELER record for something that would discredit him. Secret Service men under the command of W. J. Burns went to work on the case; at one time 29 of them were on the scene in Montana. The net result of their prowling was a charge that WHEELER had accepted a fee for using his influence as a Senator to obtain oil concessions from the Interior Department for a friend and client. WHEELER had, in fact, acted in behalf of a client named Campbell, who was an oil promoter, but had limited his activity, he said, to representing the man in a suit brought in the State courts of Montana. He was promptly cleared by the Senate, but the Department obtained an indictment against him in Montana in April 1924, just in time to embarrass him in his campaign as La Follette's running mate on a third-party ticket. The case came to trial the following April, and the jury took two ballots—one to go out to lunch and one, after 13 minutes' deliberation, to acquit WHEELER.

From the point of view of traditional American liberalism WHEELER goes to the 1940 convention with a cleaner political record than any Presidential candidate has been able to show since the La Follette campaign of 1924. Antimilitarist to the core, he has opposed every major arms appropriation on principle. The National Labor Relations Act and the wage-hour law had his active support. Almost single-handed he pushed through the Public Utilities Holding Company Act with its "death sentence" intact, though several stanch New Deal wheel horses had yielded to pressure and even the President wavered. He has always been an exponent of the tax-the-rich school and fought repeatedly for the highest possible relief appropriations. He warmly supported the Wagner Act, Social Security, S. E. C., and T. V. A., and went along on the A. A. A. despite his antitrust objections to price fixing. Aside from his voting record and his magnificent job on the Ohio gang, his chief claim to senatorial distinction is the monumental work he has done as chairman of the Senate Committee on Interstate Commerce in unraveling the intricate railroad tangle.

At first blush the WHEELER record would seem to establish him as the logical man to carry on the New Deal. Senator GEORGE W. NORRIS, leader of the third-term movement, looks upon WHEELER as Roosevelt's only plausible alternative. Yet a great gulf separates him from the new dealers, and it will be bridged only if the Roosevelt lieutenants conclude that they have no other choice. In part the issue is personal, in part ideological.

WHEELER was the first important liberal to push Franklin D. Roosevelt toward the White House. He spotted the New York Governor as his man as early as 1929 and worked hard to line up the Northwest for him. Through NORRIS he won over the powerful Huey Long, who at WHEELER's request paid Roosevelt a preconvention visit in 1932 and later reported to WHEELER: "I don't like your ——— but I'll be for him." Six years later WHEELER was to reflect bitterly: "I'm the last man on earth Jim Farley and Roosevelt would let have the nomination."

Interpretations differ as to what happened between 1932 and 1938 that wrought such a change in the relations between BURTON K. WHEELER and Franklin D. Roosevelt. * * *

Whatever the personal factor involved, there is enough genuine difference between WHEELER's liberalism and the New Deal to warrant a breach on objective grounds. There are two great areas of conflict: concentration of power in the Government and foreign affairs. WHEELER is fully prepared for a substantial degree of Government regulation, but he is alarmed at the world-wide trend toward centralized political control, and it is noteworthy that practically every brush he has had with the administration has been over an issue involving Federal encroachments that he considered dangerous. He opposed the N. R. A. as Government-sponsored price-fixing, fought the administration on its reorganization bill, voted to end the President's devaluation powers, and was with Borah in every attempt to block a Federal antilynching law. The issue reached a climax in the fight over the President's plan to perform a blood transfusion on the Supreme Court—a fight that marked a turning-point in WHEELER's career.

The most skilled hand would find it hard to disentangle the motives that led BURTON K. WHEELER not merely to oppose the Roosevelt court-reform plan but to command the forces of opposition. Never a believer in judicial impeccability, he was well aware of the social passions that throbbed beneath the black robes. He believed thoroughly that the Supreme Court's measuring rod of constitutionality was a slide rule, and he knew, too, that the current Court was rapidly choking the breath out of the New Deal, most of which he himself believed vital to the country's welfare. Yet long before the rip tide of opposition had set in WHEELER waded out and attacked with a savagery he had hitherto reserved for the Daughertys and the Falls. On the death of Senator Robinson, Democratic majority leader, which WHEELER attributed to the strain brought on by the battle over the Court, he became almost hysterical. "I beseech the President to drop this Court fight," he exclaimed, "lest he appear to

fight against God." I believe that WHEELER was genuinely moved by what he conceived to be the dangerous casuistry and unconstitutionality of the President's plan. At the same time there were apparent in his slavishness to theoretical purity signs of personal rancor—and something of a holy satisfaction in being able at last to pitch into the administration for the kind of deviousness he had long suspected but never openly encountered. To satisfy his own frequently expressed conviction that "judicial oligarchy" was a bad thing for the country he offered a constitutional amendment whereby Congress, following a general election, could by a two-thirds vote override a Supreme Court decision. But, as many who had no love for the Roosevelt plan pointed out, it might take 10 or 15 years to get an amendment ratified by three-fourths of the States, assuming Congress could agree on one. In the meantime, what would become of the New Deal—and of the country? To which WHEELER replied, "The trail of true progressivism is long, but it is right."

Whether or not WHEELER wanted to command the anti-court-plan forces, the leadership was forced upon him. The enemies of "that man" would not overlook the opportunity of having a crusade against him led by a sworn progressive. As a result WHEELER soon found himself in a weird position. The copper moguls, who had detested him for a quarter of a century, flooded his office with sticky congratulations. Editorials appeared in the most primitive Republican papers lauding him as the "man who saved the country." He even received letters commiserating with him on the publication of a newspaper picture of his daughter snapped in the act of passing out C. I. O. leaflets to Government employees. And acquaintances asked him what they were expected to say when Wall Street men who had always called him a Bolshevik remarked, "What a wonderful fellow, your Senator WHEELER!" Conversely, the tributes of Anaconda and the blessings of the Liberty League sat poorly on the chests of WHEELER's working friends back home. From Dillon came the bitter complaint: "We find you in bed with Hoover, Mills, Mellon, Morgan, and others right down to the little tories who tried to mob you years ago." WHEELER had indeed been mobbed in Dillon back in the 1920 campaign, but the reference was infelicitous; it enabled WHEELER to remind his critics: "When I was driven out of your town, you did not have backbone or nerve enough to stand up and protest." As for his new admirers, WHEELER says he is "realistic" and confidently predicts they will run for cover before he is through.

WHEELER's leadership in the Court battle and his almost rabid isolationism combined to draw on him a withering fire from the left, which the current bear hugs of John L. Lewis and a shift to isolation in certain leftist quarters have only now begun to damp down. Most vocal in the left opposition has been former Representative Jerry O'Connell, whom WHEELER helped to beat for reelection in 1938. O'Connell's Montana Liberal keeps up a hysterical drumfire of personal attacks on the Senator's integrity which are chiefly a rehash of accusations first served up by the puppets of Mr. Daugherty. * * *

Much of the ammunition used by O'Connell and other left-wing foes of WHEELER consists of the assertion that he has "sold out to Anaconda." No evidence has ever been offered in support. His voting record down to date, particularly on labor, has not been calculated to give copper-mine owners or any other vested interests the least comfort. WHEELER critics—even the New Republic—point to his opposition to the Hull reciprocal-trade program as a sign that he is wearing the Anaconda livery. The reverse is true. Anaconda has heavy stakes in Chilean copper. A reciprocal-trade treaty means that Anaconda can bring its Chilean copper to New York for less than it can market the top of its Montana mines. On the other hand, Montana miners have a sliding-wage scale and see no advantage at all in a declining price for their product. Much of this sell-out talk has died down since the fiery Court-fight days, and if WHEELER recently has not been the butt of the Anaconda press, the most likely explanation is that his enemy wisely, and traditionally, adopted the policy, "If you can't lick him, join him."

Some of the bad blood between WHEELER and Roosevelt has subsided, and WHEELER is doing his best to effect a reconciliation. Two years ago he was telling audiences that he wouldn't support his own brother for a third term. Now he says he will support Roosevelt again if he seeks a third term, but he hopes—and believes—the President won't. Not only does he oppose a third term on principle, but he believes it would be politically unwise on Roosevelt's part, and has told him so. The trend is to the right, he argues, and even if Roosevelt were elected, the country would plague him with a still more conservative Congress than the Seventy-sixth. For that reason he doesn't think the strategy would be worth the sacrifice of principle involved. Nevertheless, if that is the way things work out, he will go along "rather than weaken the liberal group in the party"—a consideration that did not disturb his fight for the principle of an "independent judiciary."

Concerning his own chances, WHEELER is a bit coy. "If they handed me the nomination on a silver platter and a certificate of election with it," he says, "I'd be pretty worried." If Roosevelt abandons the field, it may well be that the 58-year-old Montanan with the shambling gait, the frank tongue, and the eternal cigar will have something to "worry" about. To be sure he committed the cardinal sin of party irregularity in 1924, and he comes from a State that has only four electoral votes, but in the internecine war in the Democratic Party, WHEELER is the only big figure with friends in both camps. His conduct in the court fight and his veiled antipathy toward a third term have made him the favorite of large sections of anti-Roosevelt Democrats without costing him the support which a lifetime of prolabor activity has won for him from the trade unions. The violent courtship of John L. Lewis has made Green a bit sour, but WHEELER is experienced enough not to throw himself into the Lewis embrace, particularly since he is more than a little suspicious that the C. I. O. chieftain is using him merely as a reminder to the Roosevelt forces that there are other places to go. The railway brotherhoods are WHEELER's for the asking. As for Montana's puny electoral vote, WHEELER men will tell you that Montana shares WHEELER with the whole region of the Mountain States, which means 30 votes, and that he can count on entering the convention with no fewer than 125 pledged delegates. His stand against the reciprocal-trade treaties and his long fight for a parity price act, coupled with farm-debt adjustment, make him a better bet in the Farm Belt than Cordell Hull.

WHEELER's bitterness in the Court fight, the loose charges that he has sold out to Anaconda, the row with O'Connell, and the responsibility for THORKELSON have all served to surround him with a fog of doubt and vague mistrust as far as liberals are concerned. But his voting record, his speeches, and his remarks in the course of a recent talk I had with him convince me that neither Hull nor McNutt nor any other candidate with half a chance would carry on as much of the New Deal. "The social reforms that have been inaugurated by this administration," he told the National Association of Manufacturers, "have my hearty approval." Social security, T. V. A., wage-hour legislation, S. E. C., and Government relief for the unemployed would all be safe under WHEELER. Civil liberties would probably be guarded with a zeal never before seen in this country. All WHEELER's experience has developed in him a detestation of secret police. He has been hostile to the F. B. I. ever since the Daugherty days and is even now engaged in an investigation of wire tapping by that agency.

WHEELER was widely reported as having told the Congress of American Industry that he favored a balanced budget, but he went on to remark that "periods of national emergency, such as we have been experiencing, put the possibility of a balanced budget beyond the power of either a liberal or a conservative administration." And privately he affirms with even more conviction that as long as we have 10,000,000 unemployed, the Government must continue its spending policy.

His thoughts on unemployment have more conviction than clarity. He believes that people who want to work and are given no opportunity are "entitled to Government relief," but they have "a greater right—a divine right—the right to a job." And "either private industry must employ them or the Government will." When I asked him what he would do in the face of this most crushing of all problems, he admitted that he was at a loss. "I owe my people more than demagogy," he said. "I can't go to them with a panacea." If elected President, he would call outstanding business and labor leaders into an immediate conference. He would say, particularly to business, "You have been knocking everything the New Deal tried to do. What do you want? What do you think can be done?"

Where WHEELER breaks most sharply with the Roosevelt administration—and the breach is probably enough to lose him any hope of administration support—is in the realm of foreign policy. He is profoundly against American participation in the war under any circumstances short of an invasion of this country and against any steps that might lead to such participation. Would he have the United States take any part in the peace? He doesn't think we would have a place at the peace table without having engaged in the war, but he would be willing to have us take part in an international conference for economic reconstruction after the war. In fact, he would like to see Franklin D. Roosevelt go as an American representative, along with a Republican or two, to prevent a repetition of Wilson's sad experience. He is too antagonistic toward the Nazis to consider himself neutral in thought; anti-British though he admittedly is, he would like to see the Allies win. But he would not like to see them subjugate Germany. Along with his passionate isolationism goes a dangerous naïveté concerning foreign affairs. He spoke to me of the possibilities of Britain's accepting a Goering peace, and intimated that such an eventuality would not be entirely distasteful to him.

BURTON K. WHEELER is not a great statesman, nor does he think of himself as one. He is a politician with principles. If he lacks the sense of history of a Roosevelt or a Wilson, he is likewise free of their willingness to be devious in the present for the sake of future gains. He is extremely sensitive to public opinion, and rather than attempt to mold it and give it direction he is for sounding it out and conciliating it at every turn. If a National Labor Relations Act is good medicine but hard to get down, the patient should be cajoled and given small doses, he believes, until he is used to it and ready for stronger treatment. WHEELER would slow the tempo of the New Deal, a policy which might mean a breathing spell for the patient but which, that tempo being what it is, might mean rigor mortis for the doctor. The risk is great, but when it comes to political gambling few players have a surer hand or a cooler head than BURTON KENDALL WHEELER.

The Urgent Need for Flood Control on the Washita

EXTENSION OF REMARKS

OF

HON. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

STATEMENT OF HON. MIKE MONRONEY, OF OKLAHOMA

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I am asking unanimous consent to incorporate my remarks in regard to the urgent need of flood-control work on the Washita River, made recently before the House Committee on Flood Control, as follows:

Mr. MONRONEY. The hour is late, and I don't care to take up too much time of the committee. You have been very nice in letting us appear this late.

I would like to heartily endorse everything that my colleague, Mr. MASSINGALE, has said regarding the Washita. I think it is almost the forgotten river, as far as Oklahoma is concerned, on flood control. Yet, as he says, it affects the living of approximately 25 percent of our people and 450,000 acres of land.

Recurring floods each year cause an average annual damage of $2,500,000 within Oklahoma as a result of the failure to work out any kind of a flood-control program on the Washita. These figures have been carefully compiled and tabulated in a report by the Oklahoma Planning and Resources Board, a State government bureau.

The number of persons directly affected by these floods total 250,000. In addition, the devastation to agriculture and business will indeed affect added thousands indirectly through interruption of agricultural marketing and business.

Because of the suddenness and sweep of the Washita floods, the State and counties affected continually have to replace bridges, highways, roads, and drainage structures as the high water rushes down the Washita Valley.

The Washita floods, because of the rapid fall of the river, the large number of big tributary streams that empty into it, are sudden and devastating. Not only do the floods thereon cause much property damage, but in 1937 following a cloudburst in the western part of the State 17 persons lost their lives in one rapid sweep of the stream.

We have been trying for 18 months to get the Army engineer's report in, and it was promised to us as far back as last fall. I believe they are working in conjunction with the Department of Agriculture, and we are very hopeful that the system of tributary dams that the Department of Agriculture has surveyed and planned for, will be authorized by the Flood Control Committee.

To understand the necessary program on the Washita, one should know of the valuable, fertile lands in this valley. It flows through the richest farming country in the State, and although the valley is considered narrow, the widespread number of farmers living therein is great. The immense value of this fertile bottom land is not subject to the construction of so-called "main stem" dams. To build a series of two or three main-stem dams would inundate the richest portion of the valley.

Because of the lack of good main-stem dams, this would cause most expensive construction to be undertaken and in the end would reduce greatly the cultivatable acres in this valley.

All parties along the Washita are agreed and have so stated in resolutions that they do not want a series of "main-stem" dams. They are advocating a plan, also approved by the State planning and resources board and by engineers of the Department of Agriculture, for a series of tributary dams.

In the surveys, some 20 to 25 tributary dams of varying size have been suggested and tentative locations selected. These tributary dams range from 17,000 acre-feet capacity to the largest of 102,000 acre-feet.

Because of the geographic situation, both State and agricultural engineers agree that these dams will properly control the flood waters and at the same time will not take out of cultivation vast amounts of the finest agricultural land.

The converse is true, rather, in that tributary dams will destroy little tillable land where reservoirs are located—and by building them proper distances from the Washita River, will salvage thousands of acres below the proposed dams now almost worthless because of recurring tributary floods that occur from one to three times each year.

I am particularly interested in one dam called Purdy Dam on Rush Creek, one of the large tributaries of the Washita, which endangers the city of Pauls Valley to a very great extent because it is at that point in the low valley that these two rivers converge and should we have a flood of equal proportions on both it would wipe out the entire valley there.

Frequently during heavy rains, portions of the county-seat town of Pauls Valley are under water from Rush Creek alone. Should flooded Rush Creek meet the Washita River at flood stage at their junction, I fear there would be great loss of life, livestock, and property damage running into the millions.

I have personally inspected the proposed site of Purdy Dam and know it to be an ideal location for such a tributary development. Land for more than 15 miles up the Rush Creek Valley could be reclaimed and put into valuable use. Now crops are destroyed so often by the sudden floods on the creek as to render cultivation of this valley hazardous and futile.

Other fine sites also have been surveyed by the Department of Agriculture and the State planning and resources board along a similar line.

As my colleague, Mr. MASSINGALE, has said, there is no portion of Oklahoma that produces better crops, more alfalfa, and other farm products than this fertile valley, and I sincerely hope that no longer delay will be occasioned than necessary before the Army Engineers will be able to have this report for consideration of the Flood Control Committee.

It is my understanding that some $4,000,000 is now available for tributary flood-control work by the Department of Agriculture. They are reluctant to undertake this work on the Washita, however, without a general authorization by the Congress.

Since, in order to start actual work on at least three of these dams for which money appears to be already available under previous appropriations, I respectfully ask that your committee include proper authorization for work to be started on the Washita at this Congress and let us get under way.

The people are decided on the type of control they need—this plan has the approval of two important surveys, as I have pointed out—namely, the Department of Agriculture and the State planning and resources board. Soon the report of the Army Engineers, who have delayed the transmissal of their report on the Washita, will be in.

Because of the need for immediate action, I sincerely hope and respectfully request that authorization be given for this important work on the Washita.

I thank you very much.

Federal Hospital Program

EXTENSION OF REMARKS

OF

HON. ROBERT T. SECREST

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

EDITORIAL BY DR. CHESTER D. SWOPE

Mr. SECREST. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Dr. Chester D. Swope:

[From the Journal of the American Osteopathic Association for March 1940]

FEDERAL HOSPITAL PROGRAM

(By Chester D. Swope, D. O.)

The fact that the P. W. A. is being liquidated, combined with the fact that the national health bill is temporarily grounded on the shoals of election year economy, has served to pare the Federal health program down to hospital and sanitation aids.

More than 200 applications for P. W. A. loans and grants for hospital construction to cost in excess of $100,000,000 were returned to public bodies last fall due to lack of funds. Since its establishment in 1933 P. W. A. has aided in the construction of hospital projects sponsored by State and local bodies in all the 48 States and Territories, involving 743 projects, 2,056 hospital buildings, and 107,849 additional beds. The Federal share in the cost of those projects amounted to more than $150,000,000 in out-and-out grants and nearly $26,000,000 in loans. In addition, P. W. A. financed the construction of 152 Federal hospital and sanitarium projects for veterans, Indians, the military service, and at Federal prisons, representing some 13,911 beds. During the last several years its program constituted 35 percent of all hospital construction. The folding up of P. W. A. now in process obviously creates a void in hospital construction.

It was in 1938 that Congress outlined the final program of P. W. A. It was in that same year that the President's Interdepartmental Committee called a National Health Conference in Washington for the consideration of a health program which had been proposed by the committee's technical committee on medical care. One of the proposals called for a $1,500,000,000 program of hospital construction and maintenance to be supported by Federal grants-in-aid of 50 percent of the cost. The National Health bill (S. 1620), was an outgrowth of the National Health Conference.

It contains a permanent program of Federal-subsidized hospital construction and maintenance. The financial outlay necessary to implement the full-health program of the bill is so large and has been subjected to so much criticism that its enactment piecemeal apparently is in order.

PRESIDENT'S HOSPITAL MESSAGE

Characterizing hospitals as "essential to physicians in giving modern medical service to the people," and stating that in addition to improving health services, attracting competent doctors, and raising standards of medical care, the new hospitals would provide "laboratory and other diagnostic facilities for the use of local physicians, as well as accommodations for local health departments," President Roosevelt, on January 30, recommended that Congress authorize a program for the construction and equipment of small hospitals in needy areas of the country, the Federal Government to retain title in the property and the Surgeon General of the Public Health Service to prescribe the standards for their organization, staff, and operation. He suggested that some 50 such hospitals, each having a 100-bed capacity, could be built and equipped for between seven and one-half and ten million dollars. To carry out the President's suggestion, Congressman LEA of California and Senator WAGNER of New York, for himself and Senator GEORGE of Georgia, introduced companion bills, each designated as the "National Hospital Act of 1940." Since that time two additional versions of hospital legislation have been introduced under the headings of the "Health Security Act of 1940." Aside from these three versions of hospital legislation, the hospital title of the National Health bill is still pending before Congress.

NATIONAL HOSPITAL BILL

The Lea and Wagner bills (H. R. 8240 and S. 3230) are identical and will be referred to as the national hospital bill. This bill authorizes an appropriation of $10,000,000 to build federally owned and equipped hospitals in areas where needed, upon the application of public bodies. The applicants would be required to show the need for such a hospital, and demonstrate to the satisfaction of the Surgeon General of the Public Health Service that the applicant-public body would be able to maintain the hospital in furnishing services of a satisfactory quality in accordance with regulations prescribed by the Surgeon General. The hospitals would be built and equipped by the Federal Government, and title to the physical property and equipment would remain in the Government. When so built and equipped, the Federal Government would lease the hospital to the public body for an indefinite period, the consideration for the lease being the maintenance and operation of the hospital in accordance with standards and rules prescribed by the Surgeon General. If at any time the maintenance and operation by the applicant fails to meet such standards and rules, the Surgeon General is required to terminate the lease upon 6 months' notice.

The Surgeon General is directed to conduct and foster surveys regarding needs for hospitalization and problems of hospital operation. In addition he is required to provide training and instruction of personnel who will be required in connection with the hospitals, to cooperate with State and local health and welfare authorities and with professional agencies, and to secure reports and make inspections with respect to professional service and standards of maintenance of the hospitals.

The bill provides for a National Advisory Hospital Council to consist of the Surgeon General as chairman, and six members outstanding in matters pertaining to hospitals and public health, to be appointed by the Surgeon General. The purpose of the council would be to advise the Surgeon General in reviewing project applications, and formulating appropriate professional standards and rules and regulations for operation and maintenance of the hospitals, and in carrying out inspections to determine compliance by the public body applicants.

The term "hospital" is defined to "include the physical facilities necessary for the prevention, diagnosis, or treatment of disease, and for the protection of the public health."

HEALTH-SECURITY BILL

H. R. 8288 and S. 3269 [S. 3269 is a corrected form of S. 3246] are identical and will be referred to as the Schulte-Mead bill. They constitute the first version of the health-security bill.

The Schulte-Mead bill would make $100,000,000 available for hospital loans to public bodies and nonprofit organizations. In the words of Senator MEAD: "This means that privately owned and operated and nonprofit institutions, such as those operated by religious, fraternal, or educational organizations, which have heretofore been denied Federal public-works assistance, will have an opportunity to benefit under the provisions of the bill."

The bill authorizes the Federal Works Administration to loan money for hospital construction, equipment, repair, alteration, extension, improvement, and in conjunction therewith the temporary operation and maintenance for a period not exceeding 4 years. It authorizes no public grants, such as were made by P. W. A. It is exclusively a loan measure. The hospitals constructed with the money loaned would not be Federal-owned, as in the case of the national hospital bill. They would be owned and operated by the public bodies and nonprofit organizations who obtain the loans.

As a condition precedent to making a loan, the Federal Works Administrator must determine that such facilities are now inadequate or nonexistent in the particular area to be served. The loans are authorized to run for a maximum of 50 years at 2-percent interest.

The term "hospital" is defined to mean "any institution or facility for the treatment of illness or disease, and includes any health, diagnostic, or treatment center, station, institution, or clinic."

The Havenner bill (H. R. 8439) is substantially the same as the Schulte-Mead bill. The chief difference is that where public body applicants are unable to furnish enough security, the Federal Works Administrator may grant them the use of W. P. A. labor up to the value of $50,000. In that respect it is a loan-and-grant measure. The labor grant does not extend to nonprofit corporation applicants. The term "hospital" is defined to include "health, diagnostic, and treatment centers, institutions, and related facilities."

Both the Schulte-Mead and the Havenner bills, in addition to authorizing loans for hospital construction, also authorize loans to public bodies and nonprofit corporations to construct sewage-disposal plants, such loans to run as long as 40 or 50 years, at 2 percent interest. In that connection it might be noted that the P. W. A. has participated in financing 1,525 sewer projects by grants in excess of $170,000,000 and loans in excess of $106,000,000.

HOSPITAL TITLE OF NATIONAL HEALTH BILL

Title XII of the national health bill (S. 1620) authorizes Federal grants-in-aid to States to construct and improve needed hospitals, and to assist the States for a period of 3 years in defraying the operating costs of added facilities. The real estate, improvements, and equipments would be owned by the State or political subdivision, and the States would be required to prescribe such standards of management as the Surgeon General of the Public Health Service finds necessary for their efficiency of operation. The Federal money would be granted under State plans approved by the Surgeon General. State advisory councils to be composed of the professions furnishing services under the State plans and other persons informed on the need for hospitals, and Federal advisory councils to be composed of members of the professions and agencies concerned with construction and operation of hospitals and other persons informed on the need for hospitals, are required by the bill.

During the first year, for general hospitals, $8,000,000 would be authorized as hospital grants-in-aid. No certain amount is mentioned for mental and tuberculosis hospitals. The bill provides for a "sum sufficient to carry out, in respect to such hospitals, the purposes of this title."

The term "hospital" is defined to include "health, diagnostic, and treatment centers, institutions, and related facilities."

The health security bills (H. R. 8288, S. 3269, and H. R. 8439) permit public bodies and nonprofit organizations to get Federal loans for the construction and temporary maintenance of hospitals. The applicants must convince the Government that there is need for the institution in the locality and that the applicant can furnish security for the loan. Under these bills the Government exercises no authority over the hospitals unless some control can be found necessary in the case of the temporary operation loans.

The Federal Government would exercise control over the operation of hospitals financed under the provisions of the national hospital bills (H. R. 8240 and S. 3230) and the hospital title of the national health bill (S. 1620). The national hospital bill authorizes the Surgeon General of the Public Health Service to formulate standards necessary to insure proper conduct of the hospitals and care of the persons served by the hospitals. And in the case of the hospital title of the national health bill the States are required to prescribe such standards as the Surgeon General of the Public Health Service finds necessary for efficiency.

The attitude of the American Osteopathic Association on such legislation is already a matter of record. As a follow-up to the National Health Conference, which was attended by a delegate of the American Osteopathic Association at the invitation of the President's Interdepartmental Committee, the Government's Technical Committee on Medical Care invited the association to make written suggestions regarding the proposed national health program, including the hospital plans, and a special osteopathic committee appointed for the purpose filed its suggestions. The hospital suggestions made by the osteopathic committee at that time (December 28, 1938) are equally applicable today to the national hospital bill and the national health bill, as follows:

"Existing hospital facilities, including osteopathic hospital facilities, should be utilized to capacity before any new construction is sponsored in the areas served by existing hospitals. Any system of hospital care supported in any part from public funds should contain legal restrictions against discrimination due to the school of practice in managerial control of the hospital or on account of the class of the hospital, viz, public, nonprofit, and proprietary.

"It is the aim of the American Osteopathic Association, the American Osteopathic Hospital Association, and the American College of Osteopathic Surgeons to promote the maintenance of high standards in osteopathic hospitals, just as it is the aim of similar organizations to promote high standards in medical hospitals.

"There should be basic minimum standards for hospitals, the meeting of which would qualify a hospital for use by the hospital indigent, and for participation by the hospital in any system of

general hospital care supported in whole or in part from public funds. The basic minimum standards so set should apply equally to osteopathic as to medical hospitals. We offer our cooperation for the definition of such a standard.

"The osteopathic committee requests that Federal grants-in-aid for hospital construction and maintenance be made under certain conditions to be set out in the Federal law authorizing the grants, and that one of the conditions be that the applicant shall agree that patients shall have the right to be treated therein by regularly licensed practitioners of a school of practice of their own choosing."

Russian Misadventure

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

ARTICLE BY HERBERT HOOVER

Mr. MILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Herbert Hoover, which was published recently in Collier's:

[From Collier's for April 27, 1940]

RUSSIAN MISADVENTURE

(By Herbert Hoover)

The safety and defense of the United States in a world armed to the teeth does not wholly consist of being properly armed ourselves nor of maintaining our neutrality in the present wars.

It depends upon maintaining the respect of other nations. It depends upon our giving vigorous moral support to decent standards of conduct between nations. It depends upon our freedom from the pitfalls of power politics. It depends upon our keeping free of propaganda and interference in our domestic affairs by foreign governments and foreign ideologies.

In other words, our safety and defense depends greatly upon the wisdom of our foreign policies.

In these lights I propose to analyze Mr. Roosevelt's recognition of the Communist Government of Soviet Russia, and its consequences to the American people and to mankind.

The events of the past 6 months have further illuminated this policy and point to two major reasons for a reexamination now.

Errors in foreign policies often cannot be fully corrected. But because errors are made is no sign that nothing can be done about it. When we see that the consequences result in continued disintegration of decent standards in the world and at home, we should at least reassert our position on these standards.

The recognition of Russia is a test of statesmanship. With two-thirds of the world at war, vast problems will arise daily, the solution of which will determine our peace abroad and our peace at home. The capacity and judgment in the past should be examined before we elect leadership for the difficult years before us.

Recognition or nonrecognition of new governments and the exchange of ambassadors or ministers is one of the protections to international decency that nations have developed over centuries. These measures are not merely to provide afternoon teas for cooky-pushers in foreign service or avenues for the redtape of ponderous verbiage in communications. These are measures designed to safeguard nations from grave consequences.

At once let me make it quite clear that in analyzing the recognition of Russia and its consequences I am not advocating war with Russia. Nor am I advocating that we in the remotest degree interfere with the internal affairs of Russia. That is the business of Russia alone.

When our neighbors choose to live a life of disrepute, we do not shoot them up. But we can hold up the moral and social standards in the community a little better if we do not associate with them. Or take part in their parties. Or invite them into our homes. Or present them to our children.

Recognition of new governments is thus more than a reestablishment of legalistic or trade relations. It is a sign that we believe they are respectable members of the family of nations. It gives to them right of entry into our homes. It gives them a recommendation to our neighbors.

Further, let me say that I am not interested in red-baiting. I have no anxiety that the Communists will pull off a Communist revolution in the United States. That is not what happens. What does happen is that a people get annoyed and indignant over Communist sabotage of national life and poisoning of the wells of liberty. Then in a rage they go Fascist and put the Communists down by cruelty and violence. Or in milder form they go vigilante. Both of these reactions are the defeat of liberty. That is the Communist contribution to the abandonment of democracy in a number of nations outside Russia. Communism everywhere has paved the way for fascism. And daily we see the two systems approach the same form of sheer tyranny and despotism.

We may summarize some first-hand history.

For a number of years before the Great War I, as an American engineer, practiced my profession in Russia. In the building of large industrial works I came to know only too well the sufferings of a people under the Czarist despotism. I came to know the gentle character of the great mass of the Russian people. I knew their strivings toward better family and community life. I saw their rising aspirations of liberty. I saw their frustrations against the repression of an intolerable aristocracy.

Finally, in 1916, due to the internal demoralization of the Great War, the Czar was compelled to recall the parliament (the Duma) of the people to ward off rebellion. At that I rejoiced. In March 1917 the courageous men of this parliament overthrew the Czarist government. These were not Communists—they were liberal-minded patriots. They created a representative republic under Kerensky. I felt that even the dreadful losses of the Great War might have compensations in the glow of rising liberty that dawned across the bleak Russian steppes.

In November 1917, however, the Communists, as the Bolshevik Party, in cooperation with Czarist forces, overthrew the democratic government. A bloody curtain descended upon the Russian people. The hope of liberty in Russia had been assassinated. The four modern horsemen of hate, terror, atheism, and imperialism were started on the march in the world.

MASSACRE, NOT REVOLUTION

The Communist revolution was not a revolt against the Czarist regime. It was a massacre under the softer word "liquidation" of all the liberal men and liberal women in Russia. Nearly every member of those brave parliaments who raised the banner of liberty against the Czarist regime was executed without a semblance of justice or compassion. The remaining few still live in exile abroad.

Incidentally, this Communist government deserted the United States in the Great War and gave support to our enemy.

We move on to 1919.

With the Armistice arose the question of the recognition of the Communist government of Russia by the United States. President Wilson requested from me a memorandum upon the matter. It contained these lines:

"* * * The Bolsheviki most certainly represent a minority * * * as such they constitute a tyranny that is the negation of democracy * * * they have resorted to terror, bloodshed, and murder to a degree long since abandoned even amongst reactionary tyrannies. * * * We cannot even remotely recognize this murderous tyranny * * * without transgressing on every national ideal of our own. * * *"

Woodrow Wilson, in fact, needed no such advice. In August 1920 his views and those of the Democratic Party were ably reviewed by Secretary of State Bainbridge Colby—which I condense:

"* * * at the moment when the work of creating a popular representative government based upon universal suffrage was nearly completed, the Bolsheviki * * * an inconsiderable minority of the people, by force and cunning seized the powers and machinery of government, and have continued to use them with savage oppression. * * *

"* * * The responsible spokesmen * * * have declared that * * * the very existence of bolshevism * * * depends * * * upon revolution in all the other great civilizations, including the United States.

"Moreover, it is within the knowledge of the Government of the United States that * * * the Third International * * * is heavily subsidized by the Bolshevist Government from the public revenues of Russia, has for its openly avowed aim the promotion of the Bolshevist revolution throughout the world.

"* * * There can be no confidence * * * if pledges are to be given * * * with a cynical repudiation * * * already in the mind of one of the parties.

"We cannot recognize * * * a government which is determined and bound to conspire against our institutions."

IN THE NAME OF HUMANITY

And now we come to 1921, and the 12 years of Republican administrations.

A great famine descended upon south Russia. The lives of 20,000,000 people were threatened. This famine was in large part due to the undermining of national productivity by the Communist Government. But the Communist leaders appealed to America in the name of humanity. They had expropriated hundreds of millions of American savings invested in Russia. They had repudiated their debt to our Government. But we, being a democracy, listened only to the cry for compassion. We had no desire to punish the Russian people for the wickedness of their oppressors. It fell to me to organize and direct the distribution of more than $75,000,000 worth of American food to those helpless people. We saved the lives of those millions.

And now, after all these years, opens a revealing incident. It appears from disclosures before the Dies committee that during that famine, under a false-front organization, "The Friends of Soviet Russia," absolutely controlled from Moscow, the Communists in the United States in competition with the American relief organizations raised $1,000,000 from the American public for relief of Russia. They now confess that they never sent a cent to Russia but used it for Communist propaganda in the United States. There is

no better commentary on the morals or cruelty of the Soviet Government.

During this period, from 1919 to 1933, the Moscow Government was busy everywhere in the effort to destroy democratic governments. These destructions were a large part of the rise of nazi-ism in Germany and of fascism in Italy. In England Soviet officials were arrested and expelled for conspiracy against the Government.

The Republican administrations for 12 years refused to give the Soviet Government recognition, despite constant propaganda on its part and that of its fellow travelers.

During this time we held to the ground, first, that the Communist government of Russia, with its foundations in cruelty, terror, destruction of liberty and religion and murder, should not be given the dignity and respectability of recognition from free men. Such recognition would increase its destructive power against all free nations and all free men.

Second, that such recognition would open the floodgates of Russian-subsidized Communist propaganda and conspiracy upon the American people.

And third, we knew from a thousand evidences that promises were valueless from a government that openly flaunted all the decencies of men.

While it was not our business, yet such recognition would further cement the hold of 2,000,000 Communists upon 150,000,000 suffering people in their own country.

Thus four Presidents and four Secretaries of State concurred in these views.

We move on to November 16, 1933.

On that date President Roosevelt recognized Soviet Russia.

The same conditions still prevailed in Russia as when President Wilson denied recognition and they had been confirmed by 14 years of bloody terror. They had been confirmed by the constant effort of Moscow to destroy democratic government everywhere.

Upon that recognition by President Roosevelt there was this explicit agreement:

"* * * the Government of the Union of Soviet Socialist Republics (agree) to respect scrupulously * * * to refrain from interfering in any manner in the internal affairs of the United States * * * to refrain and to restrain all persons * * * under its direct or indirect control * * * from any act * * * liable in anyway whatsoever to injure the tranquillity, prosperity, order, or security * * * or any organization or propaganda * * * in any part of the United States, its Territories or possessions. * * * Not to permit the formation * * * of any organization or group * * * which has as an aim the overthrow * * * of the political or social order * * * of the United States * * *."

President Roosevelt, in announcing this great step, said:

"I trust that our nations henceforth may cooperate for their mutual benefit and for the preservation of the peace of the world."

SIX YEARS OF OUR "GOOD NEIGHBOR"

We move on to 1940 and inspect the consequences.

We have now had 6 years of these good-neighbor relations with the Soviet Government.

Overnight we were flooded with conspiracy to overthrow our institutions. The number of actual members of the Communist Party in our country increased at once by 100 percent. But these numbers were trivial. Of more importance is that under the sympathetic attitude of this recognition a score of camouflaged "fellow traveler" and "front" organizations grew apace, controlled by inner cells of Communists. A dozen of them have been exposed, which influenced ideas among millions of people who did not know their origins and control. I need not relate the whole horrid chapter.

As to the fidelity of the Communist Government to its agreement, the unanimous report of the Dies committee, based upon exhaustive research and testimony, says:

"* * * The Communist Party is a foreign conspiracy masked as a political party. * * * The party's activities constitute a violation of the treaty of recognition."

That is the one made by President Roosevelt in 1933. The report continues:

"* * * The Communist Party, under instructions from the Comintern (Moscow), has from time to time pursued policies in direct violation of the laws of the United States. * * * Moscow has from the very beginning of the Communist Party in the United States supplied the party here with funds for its subversive activities."

Now let us look at the Communist government at work against nations of free men in its "cooperating * * * for the preservation of the peace of the world."

On August 22, 1939, the world was startled by an alliance of Fascist Hitler and Communist Stalin. This was no surprise to thinking people to whom the blood brotherhood was well known. It was embarrassing to a vast number of pseudoliberals who had tried to envisage fascism as the sole living devil of civilization.

Nine days after this injunction these governments simultaneously attacked independent Poland. They destroyed the freedom of a great people.

Fourteen days later the independence of Latvia and Estonia was destroyed.

We move on again for 60 days. On November 30 last came the unprovoked attack by Russia upon little Finland. Here the might of 160,000,000 Russians was thrown against 3,500,000 peace-loving and liberty-loving Finns. Do I need to describe these scenes? Where before in all civilized time has the slaughter of women and children been applied in an attempt to force the surrender of courageous men?

Is all this "cooperation for the peace of the world"?

We may explore certain other consequences of this recognition of Soviet Russia directly upon American life.

As a sop for the recognition, an appeal was made to the cupidity of the American people. We were told in 1933 that upon this recognition Russia would buy a vast amount of American goods. A good part of American business was brought to support recognition by huge promises of new business.

What is the record? During the almost exactly 6 years from the day of Russian recognition down to the day Poland was attacked we sold a total of about $200,000,000 worth of goods to 160,000,000 people in Russia. That is less than 7 percent of what we sold 10,000,000 people in Canada in the same period. It is a curious commentary that in the 6 years prior to the recognition we sold Russia almost $500,000,000, or more than twice as much.

The copybooks one time said that good does not come out of evil.

Nor should I neglect to mention another item. Prior to 1934 we refused to allow the import of Russian gold. Since recognition we have bought directly and indirectly over $300,000,000 in gold from Russia at $35 per ounce. A large part of this gold is produced by the bleeding fingers of hundreds of thousands of farmers who have been condemned to Siberia for no reason but that they wanted to farm their own farms. That gold is produced by forced labor. It helps the Soviet Government finance the destruction of small nations.

And another commentary on this whole bloody trade is that in the 5 months since Poland was attacked our sales of goods to Russia have increased 300 percent. That represents a large addition of gasoline, copper, alloys, etc., to aid in the subjugation of the liberties of the Finns and the Poles or other peoples.

LABOR PAYS THE PRICE

But there are still more overriding consequences. One result of recognition of the Soviet Government is its interference in American domestic life.

That recognition in 1933 was vigorously protested by such responsible leaders of American labor as William Green, John Frey, Matthew Woll, and others as endangering the whole American labor movement. It was protested by thinking men and women everywhere.

Benjamin Stolberg, in a notable article a few months ago, gave an illuminating exposure of the subsequent Communist penetration of American labor unions under Moscow's direction, and the consequences:

"They organize whispering campaigns of unprintable character-assassination against critics. They bring pressure to bear on every worker. * * * In unions which have employment departments they never send a known anti-Communist to a job. * * * They try their best to get him fired. * * * Their two principal techniques are organized confusion and organized terrorism. * * * The Communists have never hesitated either to break strikes or to precipitate irresponsible walkouts. * * * The Communists called almost 200 unauthorized sit-downs.

Similar evidence has been given by labor leader after labor leader struggling on one hand to maintain the fundamentals of free men against the Communists and on the other to maintain the rights of labor with employer.

The free speech and free press that are essential to liberty give the Communists the full right to expound a fantastic philosophy under which free speech would be suppressed. But they have not been content with peaceful exposition. They have repeatedly organized disturbances of the public order as a means of propaganda.

"Hunger marches" of well-fed men, stimulating riots, were a specialty of the Communist front "unemployed councils" in various parts of the country.

THE TRUTH ABOUT THE "BONUS MARCH"

It is now established by their own confessions that it was the Communist front Workmen's Ex-Service League that organized the "bonus march" of deluded veterans on Washington. After Congress had refused their proposals and the administration had paid the fare home of all veterans who had come in good faith, the Communists provoked attacks upon the police in the streets of the National Capital. At that time we identified hundreds of Communists among them who were not veterans at all.

The District authorities finally demanded troops to prevent the killing of men in these riots. After the troops took charge, not one shot was fired, not one man injured.

The lie that a Republican administration had slaughtered innocent veterans of the American Army was made a part of the campaign in 1932.

These are only samples.

There has been much interference in our American political life. Not content to follow democratic processes by organizing their own open political party and seeking change of government through the ballot, they, their fellow travelers, and their false-front organizations have been active within other political parties. I do not for a moment suggest that the New Deal is Communist. But it has neither refused their aid nor properly exorcised them from New Deal support. It is unnecessary to recite the now publicly known labors of Earl Browder, Moscow, and the Communist press to attain this end.

And not the least of their services were as distributors of sewer literature, lies, smears, slander, and libel, with which they flooded

the ignorant. They emerged into the role of organized poisoners of the minds of the American people.

If it were not for the backdrop of tragedy there might be grim humor in President Roosevelt's wishes and warm congratulations to the Soviet Government on its seventeenth anniversary.

Of far deeper importance than all this is the corruption of the spirit of liberalism itself. The basic philosophy of our national life is liberalism in its historic sense. The first pillars of liberalism are intellectual and spiritual liberty. That is freedom of thought, speech, press, and worship. Through representative government, equality of rights, government by law, not by men, we sought that minorities and individuals may live in security. Around this structure were built all the details of justice, of trial by jury, of regulation against oppression and exploitation.

Essential to intellectual and spiritual liberty is also economic freedom. That is the right of men to choose their own jobs, to undertake their own adventures, to receive and enjoy the reward of their own efforts, to save for their families and for their old age.

We stand for economic liberty, for free enterprise regulated to prevent abuse, not because it is a property system or a capitalist system or a profit system or a chamber of commerce slogan. We are for it because we know that it is inseparable from intellectual and spiritual freedom. It has been proved a thousand times that economic liberty cannot be suppressed without suppressing every other liberty. And the most monumental proof of all time is communism and its great exemplar is Soviet Russia.

Liberalism calls for more than even intellectual, spiritual, and economic liberty and the security of these rights. It calls for respect for the dignity of men. It calls for the development of the individual character in men and women, free of fear and filled with hope. It calls for mercy, for compassion, for tolerance. It holds that the sum of individual accomplishments and character of men makes the sum of human progress.

Having stated these perhaps commonplaces of liberalism, does anything of this sort exist in Russia under communism?

What have been the reflexes of this clash in fundamentals upon American liberalism? We have always possessed a large group of sympathetic, idealistic minds who are impatient with the slow and ofttimes discouraging processes of democracy in remedy of injustices. They sincerely welcome each new human hope.

From the outbreak of communism in Russia the ranks of American liberals were at once split. A considerable group gave sympathy and credulity to the Communist revolution, sincerely believing it was the new hope for Russia. Soon they were justifying every atrocity, every phase of this despotism. From the gradual drinking of this poison men who believed themselves liberals fell into support of collectivism in some form. At once went up the cry of "recognize Russia." It became a slogan whereby those who did not bow down were denounced as "reactionary."

In any event, we have seen a strange hybrid that can be called "totalitarian liberalism." We have seen it in so-called liberal publications. We have seen it in some college professors. We have seen it in some misled youth. We have seen it in the halls of Congress. We have seen statism planted in the American Government.

THE NEED AND THE REMEDY

This attitude of the mind—the belief that the expansion of government dictation creates liberty—appears to be the philosophy of these totalitarian liberals.

And yet many such people become indignant if one suggests they are not liberals. Some of them in the past few months have drawn back in horror from the picture now exposed. Our newspaper columns are full of explanations and some forthright apologies.

Today the need among intellectuals in the United States is to conserve liberalism from this totalitarian aberration. For a demon has entered into the minds of many liberal men and women that, like the demon of the Gadarene swine, will plunge them and us over a precipice.

What does all this add up to?

Soviet Russia, since the New Deal formally granted recognition to Stalin's government, has been poisoning vigorously the intellectual and spiritual life of this country. Moscow has maintained in this country a vast propaganda machine, not to make us friendly to Russia but to control and dominate the political and economic life of America. It seeks to foment race hatred among those of our own citizens whom they call the minorities—that is, the Negroes and the foreign-born. It seeks to stir up class hatred among the American people.

Soviet Russia through this machine seeks to influence the attitude of the United States in its relations to other countries that would involve us in power politics.

The facts that I have related become plainer every day. Yet we are holding in friendship the "red" hand that grabbed a part of Poland and forced a treaty that despoiled Finland.

The recognition of Soviet Russia was a gigantic political and moral mistake. It was not a mistake proved from change of circumstance. It was a mistake obvious from the beginning.

Would it not establish self-respect, would it not contribute to reestablish moral standards in a sorry world, if we took some action?

To withdraw technical recognition at this time of a world aflame might be misinterpreted as warlike. But the moral equities would be at least reasserted if we withdraw our Ambassador and left the technical representation of a Chargé d'Affaires. Why are we more tender of tyranny in Communist Russia than in Nazi Germany?

We criticize some of our youth because we say they are "red." We criticize certain labor unions because we say that they are dominated by Communists. We arrest certain Americans because they serve Soviet Russia in this country illegally. Yet we do not stop to think that it was our own Government that set the mark of respectability on Soviet Russia and the things these people advocate.

Fair Labor Standards Act Amendment

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

LETTER FROM P. K. GRAVELY

Mr. COOLEY. Mr. Speaker, I ask unanimous consent to place in the RECORD a letter which I recently received from the president of the China American Tobacco Co., of Rocky Mount, N. C., Mr. P. K. Gravely.

I have known Mr. Gravely all of my life, and I have a very high regard for his views.

In the hope of prevailing upon the Members of the House to adopt the amendment to the Fair Labor Standards Act proposed in the Norton bill, which provides an exemption of employees engaged in handling, drying, stripping, grading, redrying, fermenting, stemming, packing, and storing leaf tobacco I am submitting for your consideration the letter I received from Mr. Gravely in which he discusses the effect of the present law upon employees.

CHINA AMERICAN TOBACCO CO.,
Rocky Mount, N. C., April 15, 1940.

Hon. HAROLD D. COOLEY,
Member of Congress, Washington, D. C.

DEAR SIR: I have just received the copy of the Barden amendments to the wage and hour law, known as H. R. 7133. I want to say I hope you and your colleagues will support these amendments to the end that they may be enacted into law.

I am interested in them from the standpoint of a leaf-tobacco dealer and exporter and it is that feature of the amendments which concerns me most. I know more about the class of labor employed in that business than the other labor involved under the amendments and am in better position to express an opinion as to the effect upon the laborers as well as upon the leaf-tobacco dealers or employers.

Since the enactment of the original law there has been a very decided swing toward the installation of machinery to do the work of the laborers, particularly the stemmers, but also among all the other classes of labor employed.

In the past tobacco season, during which we operated under the wage and hour law, the entire industry handled the largest crop of tobacco ever produced without employing any additional laborers. It was done by machinery.

In my own company we handled 33⅓ percent more tobacco than in previous years and yet employed less labor. That was done by the use of machinery. We are now contemplating the purchase and use of still additional machinery for the coming season.

In the use of machinery there are more female employees used than men employees, and under the wage and hour law as it operates at present the female employees actually earn more money per person than heretofore, but there are employed a greatly reduced number.

Likewise, under the present law the male employees earn more wages per hour but they are not receiving the benefit of overtime as in former years when wages were less, and, consequently, are not earning more money per week than they did in previous years. They are, consequently, the losers. Although they are the heads of the families they are actually earning no more money than in previous years, and in many instances less per week.

The initial cost of the installation of machinery is a great burden on employers, but once the machinery is installed it is a matter of economy to add to it and use it because it reduces the number of employees required, until ultimately I believe the number of employees will be reduced to a minimum; and the class of labor necessarily used in this community by the tobacco industry is the class which actually is in need of more employment at less pay per hour.

During the past year the tobacco industry has handled the largest crop on record and we are now faced with a greatly reduced crop, not only for the ensuing year, but more than likely for several years to come. If the labor in the industry has not been benefited during the past year we naturally may expect they cannot possibly be benefited under the wage and hour law during the years immediately in front of us.

Unless there is some relief for the employees in the tobacco industry of this section I have grave fears for them in the future. I am sure the employers of labor can and will overcome the increased hourly wage by the use of machinery; in fact, I know it has been done in a great many instances. I believe the employers would rather see a change in the law for the benefit of the employees, and for my own part that is the point with which I am most concerned.

I hope you will pardon the length of this letter but I wanted to give you my ideas, in the hope that you may find something therein of usefulness. I can, if you think it is beneficial, give you some facts and figures to substantiate the things I have mentioned herein.

With my kindest regards, I am

Yours very truly,

P. K. GRAVELY, *President.*

Farm Tenancy

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

Mr. JOHNSON of Oklahoma. Mr. Speaker, when I last addressed this House a few days ago I discussed in brief the situation with reference to the appropriation to continue the farm-tenancy program in the country and called attention to the fact that the House conferees on the Agricultural Department appropriation bill, would bring the so-called farm-tenancy amendment among others back to the House for a vote probably this week.

In my brief talk to this House, I pointed out that the Senate had put a loan provision in the bill which authorizes the R. F. C. to lend $50,000,000 next year to farmers of the Nation to assist them in the purchase of farms for homes.

At the conclusion of my last remarks on the subject I requested all Members especially interested in continuing the farm-tenancy program to meet Monday of this week to discuss ways and means of organizing in order to make sure that the farm-tenancy amendment would have a fair opportunity to be discussed and voted upon and passed by this House. Mr. Speaker, I am glad to report that about 50 Members, representing some 30 States, met last Monday to discuss farm tenancy and the other 10 Senate amendments to the bill in question in which a vast majority of those Members representing agricultural districts are also interested. Aside from these 50 Representatives in Congress who attended our meeting I have had over a dozen letters and many telephone calls from other Members who were unable to attend the meeting assuring me of their loyal support of all of the 11 Senate amendments to the agricultural appropriation bill.

I cannot at this time discuss all of the 11 amendments in question, but I do wish to say that our farm group is especially interested in parity payments to farmers, the continuance and expansion of the popular surplus-commodities set-up, the water-facilities program, the loan to the R. E. A., in addition to continuation of the farm-tenancy program.

Many Members present expressed the belief that a goodly number of the Members of Congress who had not heretofore supported a direct appropriation for the farm-tenancy program will support the Senate amendment of permitting such loans to be made by the Reconstruction Finance Corporation. It has been pointed out that there is not a more careful or conservative official in the entire Federal administration than Hon. Jesse Jones, Chairman of the Reconstruction Finance Corporation.

May I again call the attention to Members that soon the House will have an opportunity to decide whether to destroy or to continue on a conservative basis the Bankhead-Jones farm tenant loan program. A relatively small appropriation for this program, under which able and energetic tenants can borrow money for the purchase of farms, is one of the important items in the agricultural appropriation bill, on which the conference committee was unable to agree.

It is possible that some Members of the House are not thoroughly familiar with this program simply because it has never been the subject of criticism or partisan discussion. With the possible exception of the Civilian Conservation Corps and the National Youth Administration, no measure enacted in the last decade, or no governmental agency or set-up, has won such widespread acceptance in all sections of the country and among the members of both parties. Even the most outspoken enemies of the New Deal have usually refrained from serious attack on the Bankhead-Jones farm-tenant program. Abcut the only objection has been that it does not reach a sufficient number of farmers to make a dent in the solution of the perplexing farm-tenant problem.

The reason for this general acceptance is clear. These loans to help tenants buy farms of their own constitute a cautious, conservative method of making small capitalists and landowners out of one of the most unstable elements of our population. Because it gives deserving tenants a stake in the country, it is an extremely effective method of combating radicalism and discontent. Moreover, it is accomplishing this purpose with little or no drain on the Treasury, since the borrowers are repaying their loans promptly and in many cases even ahead of schedule.

As an illustration of the widespread support which the Bankhead-Jones farm tenant loan program has gained throughout the whole United States, I would like to call to your attention a few excerpts from editorials recently published in leading newspapers and farm magazines of the country.

Jacksonville (Fla.) Journal, March 6, 1940:

Congress, ostensibly economy-minded in an election year, has stricken the appropriation of $50,000,000 for the farm tenant purchase plan, now in its third year of operation, apparently abandoning one of the best pieces of legislation of the Roosevelt administration. * * * Economy in government is much to be desired, but there are so many other ways that expenses could be reduced without striking at a plan which can do more fundamentally for the American way of life than any other conceived by the New Deal.

Troy (N. Y.) Record, December 28, 1939:

One of the least publicized, but one of the most commendable innovations of the New Deal, is the tenant purchase loan plan which permits farmers of ability to emerge from the farm employee or sharecropper class into the landowner class.

Mobile (Ala.) Register, March 2, 1940:

Farm tenancy is on the increase in the United States, and for Congress to withdraw Federal support from the corrective program at this time is like withholding serum during an epidemic. * * * Of all the money allotted agriculture by the Federal Government, none is put to more worthy or careful use than that to reduce the number of farm tenants. Loans are limited; they are not promiscuously granted. Nor is over 5 percent of farm-tenancy allotments used for administrative purposes. * * * Farm tenancy long has been one of the Nation's major problems. Federal attempts to eliminate this economic evil must not be abandoned at a time when satisfactory strides are being made toward its eventual correction.

Jacksonville (Fla.) Times Union, March 7, 1940:

Congress, it would seem, could find many items in the huge appropriation bill from which to cut $25,000,000 instead of lopping off that sum from the funds to aid farm tenants and sharecroppers in buying land. Soundness of this program has been demonstrated. The money is not advanced as a gift but as a loan, and the record of repayments shows comparatively few delinquencies. It is much better than the F. H. A. record. Instead of striking out the appropriation, experience should teach the Congressmen that the better plan would be to increase it to several times the amount that was proposed. As operated during the last 2 years the program has more than justified its existence.

Wisconsin Agriculturist, February 24, 1940:

Spokesmen for reducing the Federal fund for giving well-selected tenant farmers a chance to buy farms at 3-percent interest, amortized for 40 years, raised the cry in Congress that such work was futile and slow. * * * To argue that a small start in such loans, well placed and supervised, is useless sounds exactly like the old arguments advanced to discourage the rural-delivery bill, Federal highway aids, and C. C. C. camps. Luckily, others do not take this defeatist attitude.

Nashville (Tenn.) Southern Agriculturist, March 1940:

To taxpayers who have been increasingly and justifiably alarmed by the rapid and uncontrolled growth of the national debt during

the past few years the current activities of the economy bloc in Congress are a source of renewed hope. The fly in the ointment, however, is the tendency to slash the Budget at the expense of the farmer. * * * Particularly is it unfair to invalidate the almost self-liquidating Tenant Purchase Act, cornerstone and symbol of a new day of owner-operated farms in the South, by failure to vote the comparatively small appropriation asked for its continuance.

Atlanta (Ga.) Constitution, February 20, 1940:

It would appear, from some actions of the economy bloc in Congress, that the popular demand for reduction of Federal expenditure is, as have so many other fundamentally commendable movements, being used by some political factions to serve selfish purposes. * * * Elimination of funds for continuance of the farm-tenant purchase plan is a startling case in point. Of all the developments in the national agricultural program there is none more soundly based or holding forth greater promise of ultimate benefit to the Nation and its people than this. * * * There is more wisdom in a program which seeks to reestablish the landless upon their own home farms than in all the plans for subsidies, for equalization, and for crop bounties combined. Of all the efforts of the Federal administration to improve the economic lot of the rural population of the country, there is none which can be of greater value than this program to make farm owners, once again, out of worthy, but landless, farm workers.

Austin (Tex.) American, August 30, 1939:

There have been only a few delinquencies. Payments thus far are ahead of maturities. Credit for such a marvelous record must go not alone to the lending agency for its exercise of sound discretion in making the loans, but to the tenants. The record is sufficient to show that among tenants there are many who appreciate Government aid, and who are capable of making a farm of their own profitable.

Atlanta (Ga.) Journal, February 1940:

Penny-wise and pound-foolish economy was seen at its worst when Congress struck out the appropriation for helping farm tenants become farm owners. That was like canceling a fire-insurance policy to reduce the cost of a building's upkeep. * * * For 2 years now the program has been operating, under the Farm Security Administration, with highly satisfactory results. * * * It is not a burden added to the cost of government, but a bulwark for national economy and security. The great majority of the loans will be repaid, and the farm ownership they make possible will net the common weal returns valuable beyond measure Far from destroying or stinting such a project, Congress should give it liberal support.

Greenville (S. C.) News, February 1940:

Shall the farm-tenancy program be stopped? While looking with genuine approval upon the congressional efforts for greater economy in Government spending, numerous citizens and newspapers of the South regard with regret the total elimination of the relatively small item to carry on the work of reducing farm tenancy under the provisions of the Bankhead-Jones Act. * * * The program is meeting a real need and placing thousands of families in possession of their own farms. * * * There cannot be any question that if this program is successful in reducing the number of tenant farmers by turning them into successful farm owners an inestimable benefit will accrue to the country.

Birmingham (Ala.) Age-Herald, February 10, 1940:

There is every indication that a large proportion of the purchasers of homes will carry through their obligations successfully for themselves and the Government. This program combats a deep-seated, basic, and highly dangerous evil of long standing. It is a conservative attempt to reverse a trend that, unless checked, is surely fraught with gravest disaster for this country. What do you think would become of this country if increasingly our farmers continued to lose their means of making a living? It would be a calamity for our whole way of life. Yet, the House of Representatives has voted to discontinue, at this critical stage, this promising attack on a fundamental evil. Such action seems almost incredibly short-sighted. Surely a wiser reconsideration of this decision should come.

Nashville (Tenn.) Tennessean, February 22, 1940:

To us it seems ridiculously short-sighted of the present Congress to restrict, if not completely halt, the one most constructive program begun for restoration of ownership of the soil to the tillers who must gain their living therefrom and supply the Nation's needs of agricultural products—the farm-tenant loans made through the Farm Security Administration. Funds for the continuance of this program have been cut from the Budget by the lower House; an effort will be made in the Senate to repair the omission, and the general citizenry, we think, should evince great interest in full restoration of the sinews of the program. * * * We can see no economy whatsoever in the restriction. The farm-purchase loans, in the scant time since Congress authorized them 3 years ago, have proved as nearly self-liquidating as any federally financed project.

Greensboro (N. C.) Record, February 28, 1940:

Farm tenancy has long since come to be recognized as one of the greatest handicaps of our national economy—particularly so in the South. * * * Under the Bankhead-Jones Act many capable and deserving farmers are being assisted in buying farms of their own on long and favorable terms.

Chattanooga (Tenn.) Evening Tribune, April 16, 1940:

Something real is being done about tenancy. The Farm Security Administration has embarked upon a long-term program to make farm owners out of tenants. This involves much more than merely buying a farm for a man, taking his notes, and forgetting him until the sheriff puts him out. It means careful selection of the tenant risk; stocking the new farm with the essential animals and equipping it with the minimum tool needs. It means educating the selected tenant in the methods of subsistence farming and supervising his efforts toward a better way of life. This program represents the most effective effort being made today to get rid of peasantry in America.

Clyde Harold Smith

MEMORIAL ADDRESS

OF

HON. RALPH O. BREWSTER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of Hon. CLYDE HAROLD SMITH, late a Representative from the State of Maine

Mr. BREWSTER. Mr. Speaker, under leave to extend my own remarks in the RECORD in connection with the memorial exercises for Representative CLYDE H. SMITH, of Maine, I include the following tributes paid to him at the exercises in his memory at Skowhegan, Maine; also an address delivered by Representative SMITH as a young man of 21, when a member of the Maine Legislature, at memorial exercises for Hon. Thomas B. Reed, a former Representative from Maine and a former Speaker of the House.

SERVICES FOR REPRESENTATIVE CLYDE H. SMITH AT SKOWHEGAN, MAINE, APRIL 11, 1940

REMARKS BY REV. THOMAS S. CLEAVER, PASTOR, THE FEDERATED CHURCH, SKOWHEGAN, MAINE

We have gathered in this home this afternoon to pay our respect and tribute to one whose name is known to many from Maine to California. At the service which was held in Washington his associates in the United States Congress and Senate paid tribute to his worth as a statesman.

When we come to this hour which is common to mankind we would want to be remembered by our family, loved ones, and friends. No one wants to be forgotten. We are all eager for immortality, here as well as in the hereafter, and we want to be remembered at our best.

Today I must speak of him as I knew him and met him in this town, where he lived for so many years, where he did so many fine things, and where he was loved by all.

Skowhegan has lost a good citizen. At all times he did his level best for its welfare. He not only gave a full measure of his time, energy, and talents to this town but also to this great State in which he was born and where he served through many years with marked ability.

The name of CLYDE H. SMITH is known from Kittery to Fort Kent. In these more recent years he has represented our district most acceptably at Washington.

We are known to our fathers by different traits of character. Our fellow townsman had a rare faculty of making friends with all classes of society. The words of Sam Walter Foss come to my mind in this connection:

"Let me live in a house by the side of the road,
Where the race of men go by;
The men who are good and the men who are bad,
As good and as bad as I.

"I would not sit in a scoffer's seat
Or hurl a cynic's ban.
Let me live in a house by the side of the road
And be a friend to man."

A natural outcome of his ability to make friends was his constant desire to be of service to his friends, to the unfortunate and needy and unemployed. His heart went out to the man who found it hard to make ends meet. He always seemed to be at his best when he could help somebody. While he never was a Boy Scout, he had learned to do a good turn daily. Moreover, he carried his friends' well-being on his heart, and out of a clear sky conferred many favors and kindnesses.

The genuine and sincere hospitality of this man and his good wife could not be surpassed. They were gracious hosts and left no stone unturned to make their friends feel at home both here and

in Washington. This trait can best be expressed by one word—others.

"Lord, help me live from day to day
In such a self-forgetful way
That, even when I kneel to pray,
My prayer shall be for others.

"And when my work on earth is done
And my new work in heaven's begun,
May I forget the crown I've won,
While thinking still of others."

One of the finest examples of teamwork that I have witnessed was that which existed between our fellow townsman and his wife. They shared their daily experiences. There was a delightful give and take, both in the home and public office. His heartaches and disappointments, his joys and successes have been hers. May God's richest blessing and his divine comfort and the peace which passeth all understanding ever be hers. May the memory of this many-sided man continue to bless and inspire her and us as the years come and go.

If he could say a few words, I feel sure that he would couch them in the words of Robert Louis Stevenson:

"Though he that, ever kind and true,
Kept stoutly step by step with you
Your whole long, gusty lifetime through,
Be gone a while before,
Be now a moment gone before,
Yet, doubt not, soon the season shall restore
Your friend to you.

"He has but turned a corner; still
He pushes on with right good will
Through mire and marsh, by heuch and hill
The self-same arduous way—
That self-same upland hopeful way,
That you and he through many a doubtful day
Attempted still.

"He is not dead, this friend; not dead,
But, in the path we mortals tread,
Got some few trifling steps ahead,
And nearer to the end,
So that you too, once past the bend,
Shall meet again, as face to face, this friend
You fancy dead.

"Push gayly on, strong heart! The while
You travel forward mile by mile,
He loiters with a backward smile,
Till you can overtake,
And straining his eyes, to search his wake,
Or, whistling as he sees you thru the brake,
Waits on a stile."

Mankind has always believed in the immortality of the soul. He knew that his work was not done. He leaves it for others to complete. Now, we must learn the discipline of living with the spirit of our loved ones and friends. Death is all gain to him. It is true that we have lost the sound of his voice and the touch of his hand and the joy of his fellowship. But, we must carry on and bring to pass his ideals and unrealized dreams. This makes us richer in capacities for understanding and service in helping others and stronger because we have shared a common sorrow.

"There is no death! the stars go down
To rise upon some other shore,
And bright in heaven's jeweled crown
They shine forevermore.

"There is no death! the forest leaves
Convert to life the viewless air:
The rocks disorganize to feed
The hungry moss they bear.

"There is no death! the dust we tread
Shall change, beneath the summer showers,
To golden grain, or mellow fruit,
Or rainbow-tinted flowers.

"There is no death! the leaves may fall
And flowers may fade and pass away;
They only wait through wintry hours,
The coming of the May.

"And near us, though unseen,
The dear immortal spirits tread,
For all the boundless universe
Is life—'there are no dead.'"

PRAYER AND POEMS PRESENTED BY REV. ALBERT I. OLIVER, MINISTER OF THE CENTENARY METHODIST CHURCH, SKOWHEGAN, MAINE

GOD'S TOMORROW

(A poem by John Oxenham)

The night is very black and grim,
Our hearts are sick with sorrow—
But on the rim of the curtain dim
A pulsing beam, a tiny gleam,
Whispers of God's tomorrow.
Beyond the night there shines a light,
Our eyes are dim with sorrow—
But Faith still clings, and Hope still springs,
And Love still sings of happier things,
For Life is flighting strong new wings
In search of God's tomorrow.

O God, Lord and Father of us all, we turn to Thee in our need, for in Thee we may find help that no one else can give. We realize that Thou hast wondrously endowed us with gifts of body, mind, and soul to enable us to attend to the duties of life as we make our way on through the years. But in an hour like this, we discover that all these ordinary powers of ours are quite inadequate to meet the more serious experiences of life, to solve its more difficult problems, and to face these great realities of life and death and immortality. So we turn to Thee, and pray that Thou wilt bestow upon us in this hour Thy divine help, granting unto us the strength and wisdom and courage as Thou seest there is need.

Our hearts are heavy as we think of the things that are not—but we find comfort and peace in our confidence in the things that still are. We believe that Thou art, that Thou art Father of us all, that we are Thy children, and that we may come to Thee as any child turns to its parent for comfort, protection, and help. Faith is still ours, and hope, and love. Friendship is ours, and life is ours. We cling to these things that still are, and thank Thee for these great gifts.

We thank Thee for this man, for his courageous spirit, for his busy, active days, for the outreach of his life out beyond himself, into the needs and interests of other lives. We thank Thee that we live in a land where a life like his is possible, a land where life may be freely expressed as his was in so many different directions of value.

And now we pray that Thy richest blessing may rest upon this entire company of people assembled here this day. May Thy spirit come to these friends and neighbors who by their presence and gifts of flowers are seeking to express their sympathy for those who mourn his loss. Thank God for our friends who stand by in our hours of need—this is a gift of life that really is. May Thy spirit, too, rest upon these who have been associated with him in town and State and Nation—these with whom he has taken counsel in the guidance of civic affairs. And upon those who belong to the inner circle of family life—those, who by ties of blood and marriage, stand a little nearer to his life—upon these may Thy spirit rest in abundant measure. And especially upon her who, as his companion, shared with him the cares and responsibilities of his life, may Thy spirit come with comforting power, upholding her and keeping her not only in this present hour but in the days to come.

Upon us all may Thy spirit rest, prompting us so to live that when life shall close for us we shall be entitled to the approval of those who have known us best, as well as Thy divine favor.

We ask all this in the name of our Lord and Master Jesus Christ.

GOOD-BYE, TILL MORNING

"Good-bye, till morning come again";
We part, if part we must, with pain,
But night is short, and hope is sweet;
Faith fills our hearts, and wings our feet;
And so we sing the old refrain,
"Good-bye, till morning come again."

"Good-bye, till morning come again";
The thought of death brings weight of pain;
But could we know how short the night
That falls and hides them from our sight,
Our hearts would sing the old refrain,
"Good-bye, till morning come again."

Memorial address on the life and character of THOMAS BRACKETT REED, former Speaker of the United States House of Representatives, in the house of representatives at Augusta, Maine, at a joint session of the Maine Legislature on January 28, 1903

REMARKS OF HON. CLYDE H. SMITH, REPRESENTATIVE FROM HARTLAND

Your Excellency and gentlemen of the assembly: It is not my purpose to attempt any extended eulogy on the illustrious life work of this illustrious statesman. It is not for me to seek to penetrate the veil and speak of him in that sphere as husband and father, as neighbor or townsman. More eloquent lips than mine can tell that which was his noblest calling and highest attainment; his love and affection for family and home. Others are here to tell the story of his kindness and loyalty to friend and kinsman. It is sufficient for me to contribute but a word, to bring a single flower of tender memory, to add my little wreath of affectionate admiration in behalf of his sacred memory. Who of us that have not observed while scanning the blue heavens above, with her millions of sparkling worlds, scattered sparingly here and there, a majestic star, pouring forth her richer and more radiant rays, surpassing all others. How true we find this of mankind. The laws of creation, having heir to us now and then a great and natural leader, towering far above his fellow beings, conspicuous among the distinguished sons reared from the rugged hills of the old Pine Tree State, is one whose name is not only familiar to the children of our every village, hamlet, and town, but of the South beneath her sunny skies, in distant California amid her fields of golden rocks, and yea, in far away New Zealand the name of Thomas Brackett Reed is written there.

A soldier has fallen. A hero is dead. Not while on the battlefield, amid the rush of contending parties; nor while in gallant leadership, leading his party onward and onward in her every charge, with victory ever in hand, for he had laid down the gavel,

and ceased to participate in the great political arena of his life. But we can never forget how we have known of him in this very hall, a leader of leaders, champion of champions. How we have known of him at Washington, confronted with the fiery blasts of jealousy and a divided house. How we have known of him as emancipating his people from the shackles of a filibustering contingent in the National House of Representatives. How we have known of him when our very hearts were beating that he might be selected as our standard bearer and chief magistrate over the grandest Nation ever visited by mankind. But he had met his final conqueror, and sank beneath his icy breath. Though silent is the grave, death can claim no victory. For that master mind, the handiwork of the eternal God, will shine brighter day by day, while others may grow dim with the space of time. His works are ended. No man can tell the results of his labors. But from memory's shrine his name can never be effaced. The dreams of childhood and visions of old age vanish. Flowers bloom, blush, and fade away. Stars fall from the heaven and leave no trace behind them. But a life like Thomas Brackett Reed can never run its course and be forgotten, and when the fettered fangs of eternity were bearing his soul away, his life was just beginning.

Wallace Edgar Pierce

MEMORIAL ADDRESS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of Hon. WALLACE EDGAR PIERCE, late a Representative from the State of New York

Mr. MICHENER. Mr. Speaker, when WALLACE E. PIERCE left us the Congress lost one of its most promising Members. One's ability of accomplishment in the Congress depends primarily upon one thing; that is, he must have the confidence of his colleagues. It matters not how capable, industrious, or clever a Member may be, if he lacks integrity of character, his associates here soon find it out. Although Mr. PIERCE had not yet finished his first term when he answered the final summons, he had established himself in the confidence of his colleagues. The fact that he succeeded and was sponsored by an illustrious predecessor—the former chairman of the Rules Committee and minority leader, Bertrand H. Snell—was most helpful to him. He lived up to every prediction made by Mr. Snell. He received the unusual honor of being assigned to the Judiciary Committee during his first term, and it was in this committee where I became intimately acquainted with him. He was a gentleman in every particular. He was an outstanding lawyer—made so by broad and practical experience. He was a resourceful debater. He possessed splendid judgment. Unlike many Members, he knew when to speak and when not to speak. He was, therefore, effective and appreciated.

His own congressional district, the great State of New York, and the country at large lost a worth-while Member of Congress when WALLACE E. PIERCE was called away.

Thomas Sanders McMillan

MEMORIAL ADDRESS

OF

HON. PAUL H. MALONEY

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of Hon. THOMAS SANDERS MCMILLAN, late a Representative from the State of South Carolina

Mr. MALONEY. Mr. Speaker, on this day when we are called to assemble and pay tribute to those of our colleagues who have been called into another service by their Creator, our hearts again are filled with the deepest sympathy for their loved ones, whom we join in sorrow.

Among the illustrious names of Members of the Hall of Congress who departed this life last year is the name of THOMAS S. MCMILLAN. Mr. Speaker, this House lost one of its most capable and energetic Members in the passing of THOMAS MCMILLAN.

When I entered as a Member of this great body some years ago, TOM MCMILLAN was one of my first congressional acquaintances, and as the years went on I saw much of him, and I learned much from him and much about him. He was a real gentleman who worshiped his family, loved his friends, and was loyal to his constituency and their interest to the last degree.

TOM MCMILLAN was an energetic worker and he had much ability and influence that he used to great advantage for the common good; we miss him, Mr. Speaker.

His life was one of service, he has gone, but his deeds remain and will be here many years to come, to evidence his unselfish service.

I think TOM MCMILLAN's life was a true example of the life of a good citizen as exemplified in the following words of a philosopher:

He worked every day like he was going to live forever,
And lived every day like he was going to die tomorrow.

Should Relief Administration Be Returned to the States?

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, May 1 (legislative day of Wednesday, April 24), 1940

ARTICLE FROM THE WASHINGTON DAILY NEWS

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix articles appearing in the Washington Daily News for April 27, 1940, entitled "The American Forum: Should Relief Administration Be Returned to the States?"

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of April 27, 1940]

THE AMERICAN FORUM: SHOULD RELIEF ADMINISTRATION BE RETURNED TO THE STATES?

THE QUESTION

(By Theodore Granik, director, the American Forum)

In 1935 the relief policy of the Roosevelt administration was crystallized in the program of W. P. A. From the outset the program has been beset with controversy.

1. Has the W. P. A. program been a success or a failure?

2. Should administration or management of relief be vested in the States?

3. Would Federal grants-in-aid for relief, administered by the States and localities, be more efficient, more economical, and more nonpartisan than the present W. P. A. program?

These questions are being asked by every citizen and debated on every political forum. They are likely to become an election issue. The opposing views of two outstanding national figures, Members of the United States Senate, are set forth in these articles, written exclusively for the American Forum, as the question comes under renewed discussion in Congress.

"NO," SAYS WAGNER

(By ROBERT F. WAGNER, United States Senator from New York)

The oft-repeated cry that relief should be "returned" to the States in itself raises no substantial issue. The Federal Government has not forcibly taken the problem of relief from any State; nor has it ever prevented any State from assuming the full burden of relief and meeting it in its own way.

The Federal Government has assumed a large share of the relief burden upon the overwhelming demand of the States and localities

themselves, under the impact of economic conditions affecting the economic welfare of the Nation as a whole.

This demand for substantial Federal participation continues unabated. The low level of direct relief benefits now paid by the localities—averaging less than half the W. P. A. wage payments per worker for the country at large—and the recurring crises in relief administration in Ohio and other States, scarcely inspire confidence in the ability of the States to take on any larger share of the relief burden.

The fact is that under pending legislation sponsored by Senator TAFT and others, the Federal Government would assume two-thirds of the cost of all relief assistance—direct relief as well as work relief—with the Federal appropriation of $1,250,000,000 next year. Manifestly this is a plan, not to return relief to the States, but rather to impose on the Federal Treasury a larger proportion of the total relief burden than it currently bears.

The localities play an important part in the financing and administration of relief under the present set-up. In addition to bearing the entire cost of direct relief, each State must now contribute at least 25 percent of the aggregate cost of W. P. A. projects within its borders. Practically all W. P. A. projects are sponsored by States and localities, and are selected by these local agencies according to local needs. Finally, the W. P. A. workers on each project are certified as to need by the local relief authorities.

At the same time, the W. P. A. program has all the advantages of centralized administrative and engineering control—efficiency of management, savings in overhead expense, and flexibility in shifting project operations from locality to locality depending on rapidly shifting needs. These advantages accord with the essentially national character and effects of mass unemployment, which is often greatest where local resources are least able to bear the strain.

Of every Federal dollar expended under W. P. A., only about 3 cents go toward administrative costs, 10 cents go for materials, and 87 cents go directly into the pockets of W. P. A. workers as wages earned on the job. Even if the works program were continued under local auspices, it could not possibly achieve these economies in administration. Experience under F. E. R. A. between 1933 and 1935, as well as under existing local relief programs, indicates clearly that administrative costs under any proposed Federal grant-in-aid program would be at least three times as great as the Federal administrative cost under W. P. A.

Such a grant-in-aid system would be operated in practice by 48 separate States delegating authority to thousands of local subdivisions. It could only result in confusion where there is now efficiency and order; high administrative cost where there is now Federal economy, and local political pressures where there is now rigid nonpartisan administration, enforced by the criminal sanctions of the Hatch Act.

In 4½ years of successful operation, W. P. A. has developed 250,000 separate projects. The program has produced rather than consumed wealth. Over 450,000 miles of highways have been constructed or improved. Over 33,000 school buildings and 1,600 hospitals have been newly built or modernized. Thousands of other permanent national assets—armories, bridges, waterworks, airports—have been constructed throughout the country, for the use of this and future generations. Health, welfare, recreation, and cultural projects have brought countless benefits to people in every walk of life.

The wages paid W. P. A. workers, and the vast funds expended for materials, have invigorated every line of private enterprise; W. P. A. has been of special assistance to hard-pressed small-business men in the retail trades. The job skills of millions of American workers, unemployed through no fault of their own, are being maintained until they can again be absorbed by private industry. The confidence, morale, and health of millions of families have been fortified by employment of the breadwinner on useful public improvements.

In the preservation of its human and material resources, no democracy could have made a better investment or enjoyed so rich a return.

The contention that the return of relief administration to the States and localities would bring substantial economies, can only be sustained by drastically cutting work-relief wages, or by scrapping the entire works program and substituting the philosophy of charity.

The American people have again and again expressed their opposition to leaf-raking projects, or the return to the bread line, the soup kitchen, and the dole. With democracy on trial here and throughout the world, we cannot afford to say to millions of men and women that they shall have neither jobs in private industry nor the help of their Government in earning a decent livelihood in a self-respecting and useful way.

Because W. P. A. has not absorbed all the able-bodied unemployed is an argument for larger Federal appropriations, which I have advocated; it is no argument for dragging our sound, successful W. P. A. program down to the level of local direct relief.

The W. P. A. program embodies the progressive economic and social ideals translated into national action by the Roosevelt administration. It represents a policy tested by experience, and found essential to the maintenance of business stability and the satisfaction of human rights.

"YES," SAYS TAFT

(By ROBERT A. TAFT, United States Senator from Ohio)

For 5 years the Federal program of relief has been frozen under a system which at huge expense can carry only a fraction of the army of unemployed. In adhering stubbornly to the W. P. A. system, now thoroughly discredited, the New Deal has become reactionary in its resistance to all changes and improvements in its plans.

Last year the total expense was reduced from two and a quarter billion to about one billion and a half for the current year. At the beginning of this session we were told that only a billion dollars would be required for the year ending July 1, 1940. But now the administration is apparently back of a proposal to increase this by another half billion dollars.

The truth is that the W. P. A. system is extremely expensive and yet inadequate. It does not meet the problem, but it increases tremendously the public debt.

W. P. A. is not really relief; it is a Federal work program. Politics being what it is, it is necessary to conduct that program in practically every county in the United States, whether it is really necessary or not. Furthermore, regardless of certifications by local authorities, many men apparently get on W. P. A., even in the cities, who are not relief cases.

From November 1938 to November 1939, W. P. A. cases in Cleveland were reduced from 75,000 to 30,000. Fifteen thousand went on city relief; 15,000 were absorbed by industry; but 15,000 apparently found odd jobs or other work, indicating that they never need have been on W. P. A.

Furthermore, when a particularly acute relief situation has arisen, as in Cleveland, the apportionment of W. P. A. jobs was not sufficient to take care of the extraordinary unemployment situation existing there, and threw back on an already overburdened city a large number of relief cases.

W. P. A. proceeds on the unsound premise that the Federal Government will look after employables, leaving unemployables to the States. As a matter of fact, because of the great cost, the Federal Government has never taken care of all the employables. Furthermore, there is no such distinction. We should never admit that there is any class of unemployables for whom some work cannot be found.

Relief is a single problem, covering employables and unemployables alike. Administration must be unified, and also unified with the employment services and unemployment insurance.

A man who loses his job should first be helped by the employment agency to find a new job. After a brief interval he should draw unemployment insurance. When that is finally exhausted, he should go on direct relief. If private work is still unavailable, there should be some form of work relief.

The needs of each man must be met by a sympathetic administration in the district where he lives. Any Federal organization becomes hidebound with rules and red tape. Our experience with W. P. A. shows that it is likely to be saturated with politics.

The best form of administration we ever had was that before the W. P. A. began, when relief was operated by cooperation between local authorities with community chest personnel and Federal funds.

Relief has always been a local responsibility. There is only one excuse for Federal interference, and that is the limited financial resources of the States and local governments, resulting from their restricted powers of taxation.

Their revenues are already absorbed in current needs for county, city, and school services, and they are unable to meet the extraordinary cost of relief in a depression. The fact that the Federal Government has to put up some of the money is no excuse for Federal administration.

The only sound solution to the relief problem is to return relief to the States, with a Federal grant amounting perhaps to two-thirds of the total cost of direct and work relief. This percentage might be increased in special cases, after a hearing before a Federal board.

If the locality has to put up some of its own money, it will not engage in unnecessary work projects. The law should condition the Federal grant on each State's setting up a complete plan of relief under civil-service personnel, which does not discriminate between race, color, or creed, and provides both direct and work relief.

The total number of cases would be reduced in some districts, and the cost per case will be substantially lower, if we can judge by the relief systems now administered in many cities. There will be much greater equality between the different recipients of relief, and a much more coordinated plan for dealing adequately with the whole field of relief.

The Federal Government should assume some special responsibility for the transient problem which it has badly neglected.

A plan substantially like the one I suggest has been urged on the President by the community chest organizations of the United States for several years, but no step has been taken to consider a scientific method of dealing with relief. It would take some time to make the change. Apparently, if the present administration remains in power, it will never be made.

Operations of Federal Housing Administration

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, May 1 (legislative day of Wednesday, April 24), 1940

LETTER FROM STEWART McDONALD

Mr. MEAD. Mr. President, I ask unanimous consent to publish in the Appendix of the RECORD a letter from the Administrator of the Federal Housing Administration, Mr. Stewart McDonald. This letter presents a brief summation of the splendid record of this effectively administered Federal agency.

In the field of home building this agency has made a most remarkable contribution. As an aid to the building industry its efforts have been noteworthy. In creating employment opportunities it has accomplished every objective its sponsors hoped for. The Administrator and his associates of the F. H. A. merit our commendation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FEDERAL HOUSING ADMINISTRATION,
Washington, April 29, 1940.

The Honorable JAMES M. MEAD,
United States Senate, Washington, D. C.

MY DEAR SENATOR MEAD: The semiannual summary of F. H. A. operations reveals that 377,831 families in New York have received loans of $360,355,615.67 for home-financing purposes. These loans were made by private lending institutions and had been insured by Federal Housing Administration as of the close of business December 31, 1939.

Of this amount 342,598 families obtained $183,279,506.67 in order to improve, repair, and remodel their properties under the property-improvement provisions of Title I of the National Housing Act.

In addition, F. H. A. insured loans totaled $177,076,109 in New York for the purpose of financing home ownership for 35,233 families.

At the present time approximately twelve million people in the United States are receiving the benefits of the F. H. A. program.

The F. H. A. insured mortgage has been a most instrumental factor in developing new-home construction, the year 1939 breaking all records in volume of loans insured. The 1940 volume thus far exceeds even last year, and I feel confident in forecasting that 1940 will show the greatest small-home building program since 1927.

Sincerely yours,

STEWART McDONALD,
Administrator.

A Great American Institution

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, May 1 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO, BEFORE WEST VIRGINIA LIFE UNDERWRITERS ASSOCIATION

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered before the West Virginia Life Underwriters Association by the able Senator from Ohio [Mr. TAFT], at Charleston, W. Va., on April 19, 1940, on the subject "A Great American Institution."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure to come to Charleston, the capital of a great State looking west across the Ohio River to my native State of Ohio. West Virginia's interests are largely the same as those of Ohio, and the natural channels of transportation connect our cities. We suffer jointly from the depredations of a great river. Of course, West Virginia is to blame, because that river at low water is entirely your property and lies within your boundaries. Cincinnati has taken a great part in the development of the coal, oil, and gas fields of West Virginia and is accused of having more business interest in West Virginia than in Ohio.

It is an honor to be invited to address the Association of Life Underwriters. You are members of a profession which is well known in America, but not much in the rest of the world. You represent in this State one of the greatest of American institutions, embodying the processes which have made America what it is today, thrift, saving, and investment in private enterprise.

The size and the growth of the life-insurance business is almost unbelievable. In 1906 the assets of the legal reserve companies were about $2,900,000,000. On the 1st of January 1939 they were about $27,700,000,000, multiplied 10 times in 33 years. The face amount of the insurance in force has multiplied 30 times in 50 years, from $4,000,000,000 to $120,000,000,000. The lives of over 60,000,000 individuals are covered by insurance. In 1937 the total income of life-insurance companies amounted to $5,257,000,000, only slightly less than the total ordinary receipts of the United States Government. Of these life-insurance receipts, $3,731,000,000 represented payments voluntarily made by policyholders, money saved and set aside to protect their families and their own future. Life insurance is a great savings institution, not merely an insurance plan. The net increase in assets—that is, the receipts less the payments on policies—the net savings of the policyholders has been approximately a billion and a half dollars a year during the past 3 or 4 years, money put aside by millions of individuals and invested for their benefit in securities and mortgages.

America has been built up by the thrift and industry and daring of its people. If every cent earned had been spent as soon as earned, there would be little today in this country except wilderness or waste. It is because people have been thrifty and have saved money and invested it in improved farms, in buildings, in factories, in machinery, in railroads, in steamships, in utilities, in public buildings that America is a civilized country. It is because Americans have been willing to put their time and money into new enterprise, and into new projects, and into new inventions that America has grown more rapidly than any other country has ever grown, and in 150 years has become the greatest and most powerful nation in the world. This is the process which has developed the country and increased the population and given jobs to millions of people. It is because this process has largely come to an end during the past 10 years that we are still in the midst of a depression, with 10,000,000 citizens unemployed and a smaller total income than 12 years ago.

Now we hear that saving is no longer a virtue but a vice. There is said to be an excess of savings because money is piled up in the banks. How foolish. In the first place, excess reserves are created by the inflationary processes of government borrowing and purchase of foreign gold, not by any real savings. In the second place, they would melt rapidly away if anyone were willing to invest money in equities, speculative or otherwise. A very mild attack of prosperity and business confidence would exhaust the available capital of the Nation. They say it takes $7,000 of capital to give a man a job, and we have a lot of men who want jobs.

Life insurance has been one of the great means of carrying out the process of stimulating production. It presents in the most appealing way the advantage of saving. It brings home to every husband and father the plight of his family in case of death and in old age. It affords a fund which can be more safely and wisely invested than any individual can invest savings. The funds thus saved have assisted in the construction of public utilities of all kinds; they have stimulated the construction of homes; they have encouraged the development of industry.

Life-insurance reserves must be safely invested, and so ordinarily they have not been available for investment in common stocks and those involving risk. But to a certain extent, all capital is one reservoir, and the flow of life-insurance money into bonds makes available capital which individuals can invest in the speculative enterprises so essential to further progress. We lack today the capital required for speculative enterprise, due in part to the unwillingness of individuals to save, due probably in greater part to their unwillingness to invest in new business under present Government policies.

We see today the institution of life insurance under attack. There is no doubt in my mind that the New Deal philosophy which dominates the Government at Washington is hostile to life insurance. It has not dared to propose its destruction, but there is a clear indication that the Government proposes sooner or later to strangle it with bureaucratic regulation. It is not surprising that this hostility should exist.

In the first place, the New Deal has been animated by a spending philosophy. The doctrine was openly proclaimed that we could spend ourselves into prosperity. Money was poured out not so much for relief or public works as to create purchasing power to prime the pump. Statements of President Roosevelt and of Mr. Eccles, Chairman of the Board of Governors of the Federal Reserve System, show that this fallacy still dominates the thinking of the Government. A deficit of $4,000,000,000 a year shows that it is still in full swing.

No theory has been more clearly disproved by results. The spending of $20,000,000,000 of borrowed money, in addition to all

taxes collected, only led to the depression of 1937; only failed to solve the unemployment problem. Obviously any brain truster who believes in Government spending must equally believe in private spending. If the Government is to create a deficit to stimulate buying power, then private saving and thrift will obviously counteract the Government's efforts. The new dealers would rather have inflation than investing. The billion and a half dollars saved every year through life insurance represents probably one-half to one-third of the genuine savings of individuals in this country today.

In the second place, the New Deal philosophy, while satisfied with Government regulation of a whole industry where an abuse occurs, prefers Government operation of any specially important function. It has started a so-called insurance plan of its own in the old-age-pension title of the Social Security Act. The only trouble is that it doesn't perform any of the best functions of life insurance. The premiums are obtained through a pay-roll tax, a compulsory saving. There is no such thing. Thrift must be voluntary or it is not thrift. Compulsory deductions from pay-rolls are taxes, not savings. The man who suffers that deduction is inclined to save nothing else because the Government is going to look after his old age and his family. Real thrift is discouraged.

The wise man, however, will do his own saving. The Government plan is not sound as an insurance plan. To provide old-age pensions in the future, taxes will have to be raised to supplement the income from the reserve. The expense is so great that old-age pensions will never be more than enough for a bare living because of the taxpayers' objection to supporting other people.

The plan does not perform the investment function of life insurance. The reserve is invested only in Government bonds. That is, the Government lends itself the money collected and spends the money to pay current deficits. Life-insurance companies have been subject to the same kind of criticism, for they have invested their money in $5,000,000,000 of Government bonds. The savings of the people have gone in part to pay Government deficits; but the pay-roll taxes go that way 100 percent.

As a matter of fact, the old-age reserve plan is no substitute for insurance. It ought to be recognized as an old-age pension plan. I don't believe a whole nation can set up a real reserve except perhaps for a year ahead. We might as well recognize that the only people who can support those who live without working are the people who are working at or about the same time. A reserve only provides a fund, regardless of safeguards, constantly at the mercy of politicians who wish to spend it. We might as well pay old-age pensions without requiring contribution, and pay them as we go out of current taxation. But let's keep the Government out of the insurance business. It does not promote thrift, and it provides no funds for investment in needed enterprise.

In the third place, life insurance has been subject to attack on the theory that it concentrates excessive power in a few people, who use it for their own advantage. Fortunately the revelations produced by the Securities Exchange Commission before the Temporary National Economic Committee have failed to prove that any real danger exists. They have shown companies carefully and honestly managed for the benefit of the policyholders; they have shown a service which no Government can give. The agency system has been attacked as being too expensive for the policyholders. The Government, it is said, would have had no such expense. But the Government would never have increased the volume of life insurance as it has been increased; the Government would never have produced real savings at the rate of a billion and a half dollars a year during the depression.

Reading the hearings before the Temporary National Economic Committee, one cannot help feeling that the insiders would like to destroy the system of life insurance by private companies, or subject it to such complete detailed control by the Government that it would be operated practically by Government officials. We are now considering before the Banking and Currency Committee a bill to regulate investment trusts. Some regard it as a preview of what the insurance companies are to receive from the Securities Exchange Commission. It overrides all questions of interstate commerce and state control. It requires a license for all directors and officers. It prescribes detailed rules of action, and gives the Securities Exchange Commission power to make still more detailed regulations. It forces capital structures to be changed, and leaves wide discretion to the Securities Exchange Commission to say what dividends shall be paid. Elaborate provisions aim at the removal of directors who might conceivably have some interest which might conceivably be conflicting.

If this bill is passed, it is an excellent precedent for Federal regulation of insurance companies. The abuses in your industry are not as bad as those in investment trusts. You are already subject to state regulations as most investment trusts are not. But these are minor differences to those who yearn to extend Federal power.

The idea that excessive power exists in the directors and officers of these companies seems a mere excuse for transferring that power to the Government. The vision of a few men sitting around a table in New York, determining the economic course of this country has always seemed ridiculous to me. They would have no effective means of putting their conclusions into force if they ever attempted to reach such conclusions. The Government, with all its power, found under the N. R. A., and since the N. R. A., that it is almost an impossible task for any man or group of men to direct the lives and daily transactions of millions of men and women in a tremendous nation like the United States. The idea that a few men can do it with no government behind them is fantastic.

There is, however, a real danger in the concentration of economic power. But it is not the danger of concentrating that power in the directors of life-insurance companies; it is the danger of the concentration of all economic power in a few Government officials. Such concentration is just as likely to be used for selfish purposes; it is more likely to be used for political purposes; it is less likely to be used for the benefit of the policyholders.

The truth is that the motive power behind the attack on life-insurance companies is supplied by those who wish to change the whole American system of individual enterprise. Life insurance, advertising, and salesmanship are criticized because they provide the present system with life and growth, and make it succeed.

The American agency system is a typical example. It has sold thrift and individual self-reliance to the people of the United States against every force that was operating through the midst of the depression. It has contributed to our standard of living just the way the automobile, electrical appliances, the radio, and other modern inventions have contributed to our standard of living and our increased national wealth. These are present satisfactions. People see them and want them, and yet there would not be many sold and these industries would not have developed as they have except for advertising and salesmen.

Of course, salesmanship is even more essential in the case of life insurance. No matter that its principles are humanitarian, and that application of these principles produces great good for the individual and for the community. It is harder to persuade a man to forego some present enjoyment than it is to sell him the means of enjoying himself. People save because the advantage of saving is pointed out to them and sold to them by the life-insurance agents. The spendthrift philosophy has met little organized resistance during the depression except from the life-insurance agents.

I wonder what the condition of many families would be, what the cost to all the rest of us as citizens would be, if the life-insurance agent had failed to seek them out and to divert their thoughts from today's immediate needs to tomorrow's possible emergencies. I wonder how many of these families would have gone into bankruptcy or on W. P. A. if there had been no agency system to carry to their doors the benefits of life insurance. The depression would have been less severe, the hardships of individuals easier to bear, the demands on Government less, if life insurance had grown even more rapidly than it did.

We owe a debt of gratitude, therefore, to the agents for their work. The people of West Virginia owe a debt of gratitude to your association for educating and training the life-insurance agent so that he may know his job. You have raised his standard of performance.

The agency system is worth the money that it costs. Present attacks on life insurance are likely to become less violent. But I should still advise you to keep a close watch on Washington. Your policyholders need protection from Government regulation. They need protection from inflation of the currency which would destroy their life's savings. You will find many more friends in Congress than were there 2 years ago, and you will find those friends more active.

Life insurance is an inspiration to democratic government. So long as the people insist on its continuation, so long as they are willing to put aside present satisfactions for the future welfare of their family, we can look forward with confidence to a country which will grow. So long as the industry stands on its own feet, does a good job, we can know that it will not degenerate into a bureau of the Government. So long as the dead hand of bureaucracy leaves some independence and elasticity to the life-insurance companies, life insurance will remain one of the greatest of American institutions.

Louisiana Strawberries and the Chain Stores

EXTENSION OF REMARKS

OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 1 (legislative day of Wednesday, April 24), 1940

ADDRESS BY JAMES H. MORRISON

Mr. ELLENDER. Mr. President, I ask unanimous consent to publish in the Appendix of the RECORD a recent address made by Mr. James H. Morrison, an attorney of Hammond, La., at the American Legion strawberry festival held at Gonzales, La., on April 20, 1940. Mr. Morrison discusses a problem of major importance which now faces the strawberry and other fresh-fruit and produce growers of Louisiana and other States of our country.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The more than 9,000 berry growers of the State of Louisiana who make up the largest strawberry belt in all the world may have many problems, but the biggest problem that you face in your endeavors to provide yourselves and your families with the necessities of life is to market your strawberry crops at a fair and justifiable profit in the face of the unfair, unjust, illegal, and disgraceful trade practices of the Nation's three largest food chain stores, namely: Atlantic & Pacific Tea Co., Kroger Grocery & Baking Co., and Safeway Stores. Each of these chain stores has its own buying subsidiary. The Atlantic Commission Co. is the buying subsidiary of the Atlantic & Pacific Tea Co., the Wesco Foods Co. is the purchasing subsidiary for Kroger Grocery & Baking Co., the Tri-Way Produce Co. serves in a like capacity for the Safeway Stores, and the buying power of these chains and their subsidiaries represents such a great power that the average American citizen has no conception of its vastness. With their almost unlimited buying power, these chains not only buy for their own group of chain stores, but they also buy for jobbers throughout the United States.

Here in Louisiana, where shipping and marketing of the 1940 strawberry crop has just begun with less than 1,000 cars out of an anticipated 4,000 already shipped, the price you farmers have received for your berries has been far from satisfactory. The principal contributing factor for this unsatisfactory price that you have received has been the use of Louisiana strawberries by these major food chain stores as "loss leaders." In using the term "loss leader" I mean the chain-store practice of taking a product such as strawberries, which is appealing to the retail consumer, advertising and selling this product without the usual or customary profit, and in many instances, at a price less than the actual cost.

The purpose of the chain stores in so doing, of course, is to attract customers into the thousands of retail stores owned by them that are located throughout the country. Louisiana strawberries are a "natural" for these chains to use as "loss leaders." When the snow has melted in the North and with the first sign of spring, the only fresh fruit available is the pretty sun-red strawberry. Louisiana strawberries have little competition, since the quality is the highest, due to the expert and expensive method of grading and packing them. Every housewife in the North is delighted to know that she can purchase Louisiana strawberries in her locality. Because of this unusual demand, a special low price on strawberries will pack the customers in. The chains know this and use these strawberries as "loss leaders" to fill their stores with customers. Because of the high quality, these strawberries cannot be produced by the grower to sell at the price that these chains sell them.

This "loss leader" practice by the chain stores has a depressing and ruinous effect on the price of strawberries or any fresh-fruit product that is so sold as a "retail sales bait." The housewife is the victim of a "come on in" scheme, where she walks into one of these chain stores and buys "cheap" strawberries (sold as a "loss leader"), together with other articles that she pays a real profit on. The real profit on these other commodities more than offsets the loss on the strawberries used as a "loss leader."

Ultimate result of this practice by the chain stores, which is a definite violation of the Robinson-Patman Fair Trade Act passed by the Congress of the United States in 1936, is that the price you farmers receive for your produce gets lower and lower because of the fact that independent retail merchants who have to compete with the chain stores also naturally have to try to meet the chain-store prices. Because of the loss that must be sustained by the independent retailers to compete with the chain stores in the sale of strawberries, the independent retailer handles as few strawberries as possible, and does so only to accommodate his regular customers.

Food chain stores purchase but 15 to 20 percent of the Louisiana strawberry crop, yet their practices during the past several years have ruined, and are again this season ruining, the markets of the remaining 80 to 85 percent of the crop.

Many years ago a farmer could buy a new Ford automobile for $500. Today that farmer here pays over $800 for a Ford automobile. Why? Because the Ford automobile is merchandised by a smart industrialist who has sold the people on the idea that a better "low-priced" automobile should sell for $800 instead of $500. This industrialist was highly organized in the selling, and no chain stores sold his Ford as "loss leaders." As for the Louisiana strawberry farmer, the opposite is true. Today this farmer gets less for his strawberries while his production costs have increased. Why? Because he is disorganized and the chain stores help merchandise and sell his strawberries. Before these chains used his strawberries as "loss leaders" the farmer sold his product for more money than he does today. If the chains had used the Ford automobile as a "loss leader," like they have the Louisiana strawberries, instead of Ford automobiles selling for $800 or over, the Ford would be selling for $300 instead. And don't forget that the farmer is a consumer. When the farmer makes money he buys the products of industrial labor. When he doesn't, the industrial plants are idle and people are unemployed.

The proof of the pie is in the eating. Before the chains used your strawberries as "loss leaders" you made money. Today, with a higher cost of production and a better product, you don't make money. The chain stores call their "loss leader" practice "streamline distribution." What you farmers need is less of this so-called "streamline distribution" and more of the old, homespun, independent retail merchandising.

The price of most commodities depends on the law of supply and demand, but because of the chain-store "loss leader" practices this whole marketing principle does not apply to the Louisiana strawberry crop for the reason that, regardless of the supply, no matter what the demand, when your berries are used as "loss leaders" the market is depressed.

I do believe that I am being ultra conservative when I say that in the past several years the "loss leader" practices of the three major food chain stores in America has deprived you farmers of receiving at least $15,000,000 more for your crops than you did receive. Think of what this revenue would have meant to the prosperity and well-being of the people of this part of Louisiana. Think of the products that you could have bought for $15,000,000.

Our Louisiana strawberry belt, of which you men are the backbone, was until 1932 the third richest agricultural area in the United States of America. Today many of you, your fellow farmers and your neighbors, are but a few fence posts from poverty. The sad economic degeneration and diminished income of this section is due principally to the exploitation of your toil and your strawberry crops by the illegal practices of the chain stores.

The plight of you Louisiana strawberry growers has been brought about by the unscrupulous, unfair, and unlawful practices of the Atlantic & Pacific Tea Co., Kroger Grocery & Baking Co., and Safeway Food Chain Stores.

However, you strawberry farmers are not alone in your plight. What these chains are doing to you they are doing to every fresh fruit and vegetable farmer in the United States. The fresh fruit and vegetable-farming industry is larger than the cotton-farming industry, the wheat-farming industry, or the corn-farming industry. When the fresh fruit and vegetable farmer doesn't make money he can't spend money, so United States industry loses a tremendous consumer's purchasing power. For the few pennies that a laborer saves in buying a "loss leader" may result in his being laid off because the farmer who produced that "loss leader" product couldn't make a profit and couldn't buy the tractors or other products of industrial labor that that laborer's work produced.

Thus, as long as these chains use your strawberries as "loss leaders" you berry growers can never expect to make a profit on your labor of producing them. What then can be done to stop this "loss leader" practice by these chains? The Robinson-Patman Act was passed for that purpose. But does it? No. I hold in my hand a copy of the Commercial Appeal newspaper, dated April 18, 1940, where the Kroger Grocery & Baking Co. sold Louisiana strawberries in their Memphis stores for 4½ cents per pint, which figures $1.08 for a 24-pint crate. The lowest strawberries have sold this season per 24-pint crate in carload lots has been $1.50 f. o. b. Louisiana. The transportation charges to Memphis would have to be added to this price. This is just an example of what is happening in many States where these three large chain stores operate. There is pending before Congress now the Patman bill. This bill will dissolve these three gigantic chains or make them help support a government by taxation; that gives them the only opportunity in this world to build an empire to enrich themselves at the expense of the fresh fruit and vegetable farmers, who are becoming poorer each day.

These chain stores are not necessarily just big businesses. They are gigantic empires that day by day and week by week are producing an unbalance in our Nation's economic system, and, unless they are checked, the result of their practices may become so disastrous that it will completely ruin our whole American system of distribution and of business.

These monopolistic manipulators of merchandise must be checked. They must be made to obey the laws of our Nation, and if there are petty technicalities behind which they can hide in their program which is pauperizing hundreds of thousands of farmers in America, then our Federal trade laws must be made more stringent. You farmers and hundreds of thousands of other fresh fruit produce growers like you must look to the Congress of the United States for protection and for a fair chance to make a profit out of the products of your toil if our American mode and manner of life are to survive.

Let us all hope, work, and pray that the Patman chain-store bill will be enacted by our Congressmen.

Ems Dispatch; Ribbentrop Version

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 1 (legislative day of Wednesday, April 24), 1940

ARTICLE FROM THE NEW YORK HERALD TRIBUNE

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the New York Herald Tribune entitled "Ems Dispatch; Ribbentrop Version."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune]

EMS DISPATCH; RIBBENTROP VERSION

(By T. H. Thomas)

Herr von Ribbentrop came forward as an intruder among the career men of German diplomacy—a fresh and unconventional product of the new governing classes. But he is learning the game. It was no light matter to have to shift ground completely within 3 weeks. After landing in order to protect Norway's innocence, it was not easy to set up a wholly different set of motives as a historical explanation. But he has at least moved quickly. In 1914 the German Foreign Office suddenly found itself without presentable motives for a military undertaking which had been decided upon 16 years before.

The Kaiser's promise to support Austria was given (on July 5) without consulting the Army or Navy. But the word was passed quickly around and, on July 17, a week before the Austrian ultimatum to Serbia, the Foreign Office was privately informed that the general staff was waiting and ready. General von Moltke and his deputy chief of staff were both on leave, but the latter took the precaution of inquiring informally at Vienna as to the arrangements of the Austrian staff for the impending attack on Serbia. In forwarding the reply to the Foreign Secretary, General von Waldersee added: "General von Moltke expects to return to Berlin on the 25th instant. I shall remain here ready to jump; we are all prepared, here at the general staff. In the meantime, there is nothing for us to do."

Moltke returned to Berlin on July 26, just before Austrian mobilization was ordered, and when the Austrian Government had not yet considered seriously the German idea of declaring war on Serbia immediately. After gathering the latest news, he wrote his wife next day that the crisis would not come before a fortnight. With this unhurried prospect before him, Moltke drafted the text of an ultimatum which the Foreign Office might present to Belgium in the event of war. At this date (July 26) Austria seemed far from declaring war, so that even the preliminary rumors of French or Russian mobilization had not come in; and the German plan of campaign was based on the conviction that the French Army would concentrate for a decisive battle in Lorraine.

But, for lack of a better reason, a certainty of French aggression through Belgium was the best Moltke could offer as a public explanation of the motives impelling Germany's long-arranged campaign. He personally had the strongest hopes that England would remain aloof (even a fortnight after war actually broke out he still believed that no British Army had landed in France). But on July 26 Moltke was struggling with a wholly hypothetical situation, and to make his ultimatum fit all contingencies he included the still unmobilized British Army among the hordes of soldiery marching on the Belgian frontier. In workmanlike fashion he put in brackets the words alluding to British participation, so that they could be easily struck out if things turned out that way. (The careful editors of the Kautsky documents saved even the brackets.) With all this foresight, the ultimatum began as follows:

"The Imperial Government is in receipt of reliable information to the effect that French forces intend to march on the line of the Meuse via Givet and Namur. This leaves no doubt as to France's intention [after joining with an English expeditionary force] to advance against Germany through Belgian territory.

"The Imperial Government cannot rid itself of the fear that Belgium, in spite of the utmost good will, will be unable to repel without assistance so considerable a French-[English] invasion with enough chance of success to afford an adequate guaranty against the danger to Germany. It is essential, for the self-preservation of Germany, to anticipate the hostile attack. The German Government would, however, feel the deepest regret if Belgium were to regard as an act of hostility the fact that these moves by Germany's opponents force her, for her own protection, to enter Belgian territory."

Plans for advancing across Belgium had been in force ever since 1898—16 years before the "reliable information" Moltke now suggested to the foreign office. By 1898 the steady increase of the Germany army, made possible by Caprivi's military law, was coming into play, and Schlieffen could bring into line far larger forces than those at the disposal of the elder Moltke. The German Army, in fact, had outgrown the legitimate Lorraine frontier—it became necessary to spread out into Belgium in order to deploy the effective strength of the army at the outset. In the first book, which set forth in print the development of Schlieffen's plans, General von Kuhl made this point clear: "The space between Switzerland and Luxemburg was too narrow for modern million-armies. The theater of war had to be widened if such masses of troops were to be deployed." The army of 1914 was much larger than that of 1898, and the roads through Belgium were all the more needed for quick action against France.

But these reasons were unlikely to appeal strongly to the Belgians when the hour arrived, and no one at Berlin had devised an explanation which could be offered to the world at large. In 1905 Prince Bülow had suggested a point-blank 6-hour ultimatum—quite in the Hitler manner, but now, even 20 days after the Kaiser had opened the box of Pandora, the foreign office had overlooked the problem of a public justification of their impending crashing of the gate at the Belgian frontier. Moltke's contribution was accordingly welcomed with alacrity, and during the next 2 days his draft was worked over by the Chancellor, Von Jagow, Zimmermann, and Herr von Stumm, of the foreign office.

As soothing efforts at London were still under way to persuade England to remain an outside spectator, von Stumm deleted the allusions to British participation in the impending outrage, and various minor changes were made in Moltke's draft. A fair copy was finally written out by Count von Mirbach, and on July 29 this perfected document was sent off by special messenger, as a sealed enclosure within a letter of instructions to the German Minister at Brussels. The Minister was ordered not to open the sealed enclosure until he received telegraphic orders. In the meantime it was to be kept safely locked up—like a freighter filled with German troops, waiting at anchor in a Norwegian harbor.

But sad confusion now arose. Late in the evening of July 31, after sending off the canned ultimatum to Brussels, Bethmann-Hollweg sent for the British Ambassador and made the famous bid for British neutrality in which he disclosed the prospect of the German move through Belgium. Having thus let the cat out of the bag, and with the Belgians already setting to work to put the Liege forts in order, Bethmann realized that as things stood the excuses neatly written out in the sealed ultimatum would not hold water: Germany was not at war with France, and it was a matter of public knowledge that France had not yet ordered mobilization. Even 2 days later, on the evening of July 31, when Bethmann had completed the draft of his declaration of war on Russia, Viviani had not yet mobilized the French Army. The ultimatum ready and waiting in the legation at Brussels was completely stymied.

To break through this impasse Bethmann dispatched to Paris his ultimatum summoning the French to declare promptly whether or not they intended to remain neutral; in case they did, they were to be spurred into action by demanding the fortresses of Toul and Verdun as a pledge of neutrality. Viviani obligingly ordered mobilization for the following day (August 1), but Bethmann could wait no longer. On the next day, without waiting to regularize the situation (according to the principle he had laid down) by first declaring war on France, he telegraphed the Legation at Brussels to open the sealed ultimatum and present it. "Please assure the Belgian Government most earnestly that there is absolutely no doubt of the accuracy of our information as to the French plans."

In this telegram there appeared a detail which Herr von Ribbentrop may well have noted with close attention: "The Belgian Government must be left under the impression that all of the instructions relating to this affair had reached you for the first time today." Having watched the building of German military railways opposite its frontier ever since 1898, the Belgian Government did not accept this impression. But with true foreign-office thoroughness, on the copy of the ultimatum written out for publication in the press a week or so later, Herr von Stumm altered the date to August 2.

For an untrained beginner, Herr von Ribbentrop has stepped fairly quickly into the Bismarckian tradition.

National Defense

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 1 (legislative day of Wednesday, April 24), 1940

ARTICLE BY RAYMOND CLAPPER

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a most timely and most interesting article by the pen of Mr. Raymond Clapper. The article is entitled "United States Defense," and was published in the Washington Daily News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES DEFENSE

(By Raymond Clapper)

WASHINGTON, April 13.—I sat down at dinner not so long ago beside a young lady who promptly turned a bright smile at me and asked, "Are you an isolationist?" The proper answer is, "Damned if I know."

What is more futile than the parlor arguments which rage between "isolationists" and "interventionists"? The terms don't mean anything. It is pointless and academic to attempt to decide upon wise policies for the United States by trying to fit them to labels like "isolationism" or "interventionism." That is trying to think backward. How can you say a policy is wise or unwise by labeling it as "isolationist" or "interventionist"?

Only one consideration counts—national self-interest. First of all, national self-interest, as I see it, rests primarily upon military

and economic defense of the Western Hemisphere. If that is not properly attended to nothing else will help us much in the long run. If it is properly attended to, then our activities beyond that become secondary, desirable in some cases, but not vital.

As the war proceeds it is apparent that we shall have plenty to engage our attention in the matter of military and economic self-defense of the Western Hemisphere. We may face more situations like that created by the German occupation of Denmark. Greenland is a Danish possession which is strategically situated on our side of the Atlantic, almost touching Canada. Greenland was one of the stepping stones used by the Italians in the mass flight of Marshal Balbo to the United States. President Roosevelt's expressions of American interest are sufficient to provide the tip-off that this Government would not look with favor upon German occupation. Regarding Iceland, which is just to the east of Greenland, Winston Churchill told Parliament that "no German will be allowed to set foot there with impunity."

If Germany should take Holland, we certainly would not permit the German flag to go up in the Dutch West Indies. Several questions of that kind may be raised if the war spreads.

Then we have, right at our border door, a not too nice Mexican situation. This Government has been patient and conciliatory toward Mexico over the seizure of oil property. Finally, when private negotiations having failed, Secretary Hull suggested arbitration, the Mexicans flew into a rage. A Mexico City dispatch to the New York Times reports a demonstration of 20,000 Mexicans carrying banners denouncing the United States and urging closer relations with Soviet Russia. One poster showed a Mexican worker on top of an oil derrick, squirting oil into Uncle Sam's eye, with the caption, "Here's your oil. Take it."

The American Embassy was guarded, but no incident was reported. President Cardenas said the demonstration was "the most moving and greatest I have ever seen." He said Mexico had a "just cause which the whole nation must defend."

With Japan pressing southward toward the Straits Settlements and the Dutch East Indies, our sources of rubber and tin there are none too secure. Encouragement is being given here to development of rubber in Central America. Some form of subsidy from the United States will be needed if this development is to get anywhere.

Any number of trade problems are reaching the acute stage in South America, where export trade, interrupted by the war, is producing economic trouble that may become political in time. Beyond that is the question of trade relations between these countries and the European powers after the war, when all, whether victors or losers, probably will be on an authoritarian basis with strict trade and exchange controls.

What has any of this to do with isolationism or interventionism? If we keep our eyes fixed upon the requirements of our national self-interest, bearing in mind that this rests primarily upon the military and economic integrity of the Western Hemisphere, there is less danger of our becoming lost in a fog of parlor dialetics which attempts to translate the practical realities of our situation into metaphysical patterns.

Achievements of the Roosevelt Administration

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, May 1 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. JAMES A. FARLEY TO NEW YORK YOUNG DEMOCRATIC CLUB

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by the Honorable James A. Farley at a dinner tendered him by the New York Young Democratic Club, Inc., on their twenty-fifth anniversary, at the Hotel Astor, New York City, on April 18, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

To the members of the New York Young Democratic Club I am deeply grateful for the compliment they pay me at this their twenty-fifth anniversary dinner. To them and their friends who have come together here I find it difficult to express in words my feelings. An extra pulsation of satisfaction always is generated by a reception in one's own city. That you, who know me best and have been my friends for a longer time, are here in such numbers and with such evidences of warmth and friendship is to me a source of encouragement and inspiration. I will never forget this happy occasion.

Though many of us may be a generation older than our hosts of the evening, I am sure that all cling to the idea that we are still young. We elders, mellowed some by experience, are just as interested in the problems of humanity as are those of the generation pressing so closely behind. But whether young, middle-aged, or old, in the light of what we have learned during the past 10 years, we are probably unanimous in the opinion that the progress of our country can best be assured only by keeping in power a liberal Democratic administration.

Do you remember the year of 1929? We were 11 years younger then—possibly half a life time for some of you—and certainly an important part of it for all of us. Then we accepted the stock market as the barometer of business. Bulging prosperity for those at the top gave those at the bottom three meals a day and an occasional movie. I will not pause to discuss my views that those at the bottom might reasonably expect more. Be that as it may, the top blew off in 1929 and crashed in on the bottom. For the next 2 years we were fed on the hopes of prosperity just around the corner. By 1932 we decided that this prosperity was indeed just around the corner but it was parked there waiting for the red light to change to green, and the red ink to change to black. Fifteen millions were unemployed and the purchasing power of most of the Nation had almost completely vanished.

The Roosevelt administration moved through the green light in 1933. A prostrate country was lifted to its feet. Confidence revived. The Government dutifully used the public's money for the public's benefit. Business immediately improved. Interrupted only by readjustment fluctuations, the trend has been upward ever since.

Despite the progress, we have not entirely rehabilitated the wreckage handed over to us by the Republicans. We still have more than a million young people out of school and out of work. It takes an average of 19 months for many of them to find any kind of desirable job. Marriage is becoming a matter of economics instead of the sacrament of happiness.

Such a situation seriously dislocates the economy of the Nation. Our political system is menaced so long as our youth is a liability rather than an asset. Idleness destroys morale and produces resentment.

The Roosevelt administration has been fully aware of the problem and is doing its utmost to alleviate the condition. The C. C. C. camps have taken thousands of young men out of the haunts of idleness and placed them at useful work in wholesome surroundings. The National Youth Administration has assisted young men and young women who wished to train themselves better for the future. Indeed, the youth of America can be thankful that during these problematical years they have had as their champion no less a personage than President Roosevelt.

Such measures as I have mentioned are only temporary expediencies. The real problem must be solved by completing the processes of economic readjustment so that our system will be in tune with all the needs of our present-day concepts of liberal government if capitalistic democracy is to survive. However, even these emergency steps have served to impede definitely the spread of subversive propaganda among our young people. In this connection let me advise our juniors to think things through. Be guided by logic. Think freely but do not think loosely. Draw your distinctions sharply. Do not be misled by destructive theory. Be liberal but be sensible. There is a whale of a difference between free thinking and loose thinking, and between liberalism and radicalism. Loose thinking and radicalism have no place in America.

There is no doubt that the terrific upheaval between 1929 and 1932 accelerated the normal speed of the readjustment that started with the change of administration in March of 1933. This was the result of a necessity begotten by lack of foresight during the twenties. So serious was this necessity that the laws relating to economic rehabilitation were legislated with a celerity that was as much of a shock to business as it was a surprise to labor. That the benefits flowing from this legislation have not been fully harvested is admitted. To achieve its objectives is the most pressing task confronting us today.

We may well refresh our memories as to the evils of the outworn system of conservative economy which was responsible for the chaos of only 10 years ago. Even the most partisan Republican admits the errors of the Harding-Coolidge-Hoover era. That was a fool's paradise, with its exploitation of both capital and labor, its inflation of values beyond all reasonable bounds, its rampant speculation, its wasteful overproduction, and its insane optimism.

It is stupid for anyone to even intimate that the genius and enterprise which brought us from struggling colonies to our world position of preeminence cannot, if properly directed, bring forth a balanced economy wherein 130,000,000 citizens may live and prosper. Only two obstacles stand in the way.

The first of these is selfishness. In order to retain advantages they had under the old order there are individuals and groups who would impede the progress of the new order with every means at their disposal, blind to the fact that should their efforts succeed they would achieve the dubious victory of being themselves destroyed in the wreckage.

The other obstacle is ignorance. There are people who refuse to recognize true conditions. Theirs is the type of blindness that was typical of the power-drunk monarchies of pre-World War Europe and of the dictator cliques which today are responsible for the terrible conditions prevailing abroad. Lust for economic

power in this New World of ours can bring about results just as disastrous.

Liberal laws have been legislated to prevent such an eventuality. The administration of these laws is beset by the difficulties that usually accompany the adjusting of any basic change in the economic machinery before it will function as intended. But if our citizenry rises to its responsibilities with the initiative and energy for which we are noted we have nothing to fear. Our whole course of action should be controlled by a single admonition. We must always strive to do what is best for America and we must do it in the American way.

The solution of our economic problem appears to me to be a simple one. Why not bring together in frank discussion the leaders of industry, transportation, finance, agriculture, and labor? Let them submerge their selfishness. Let them acquaint each other with their problems. If they do, and are frank with each other, I am confident that out of such a discussion a workable plan that will fit in with the liberal economy of the present day can be formulated. This solution is possible and sound.

There might be some difficulty in bringing about a meeting of the leaders of such divergent groups. Public opinion alone can do this. If the owners of industry and transportation, the depositors of banks and the policyholders of insurance companies, the tillers of the soil and the workers in the ranks can be informed of the necessity of harmony among their leaders, then, and only then, will these leaders learn of the power of public opinion. Once sensitive of this power, they will soon find the answer to the pressing problems that disturb us on our economic front.

The Government has shown the way; let the leaders outside of Government travel by that way, and we will soon reach our destination. Thus will democracy work in our economic system as it has worked in government for a century and a half. Then we will have our era of good feeling.

There are young men traveling our land today who are magnifying the faults of the immediate past, while at the same time shielding behind a curtain of silence the greater faults of the little more distant past. In metaphor they condemn but suggest no correctional procedure. They speak words of brave import, tuneful to the ear, but empty of substance. They attract the curious as does a clowning Barrymore, with phrases as devoid of logic. Their spearhead would go to the battles with all the fire of youth minus the weapons of experience. Such is the optimism of inexperience, when ambition overcomes common sense and aspiration dares the impossible.

Better can reasonable youth aid in promoting a meeting of minds among the leaders of the various components of our economic system along the lines I suggested. Young men and young women are present in every one of our many groups of endeavor. Let these young people carry the message of cooperation among their fellow workers and keep pounding on the subject until a weight of mass influence reaches the top, and it will not be long before there is a meeting of minds in high places. Then, and only then, will our complex economic machinery produce the contentment and prosperity its designer intended. Once the end is attained, unemployment will no longer be a problem, budgets will balance themselves, taxation will cease to be a burden, and living will be easy. Further legislation is not needed to bring about this era of good feeling. Leadership can do it; leadership in government, supported by cooperative leadership all the way down the line.

If this era can be brought about within our borders, it will, by its example, be a contribution to world peace more potent in its possibilities than anything that has ever occurred since the inception of the capitalistic system.

Our great Nation is an empire of States. Our population is a mixture of every race. We have diverse ideas and diverse interests. Yet we live together in peace and tolerance. America can thank the whole world for contributions to our greatness. Let us so conduct ourselves that all the peoples of the world can be thankful for America.

We stand 100 percent behind the Roosevelt policy of foreign relations. We want no part of the war in the other hemisphere and we will permit no part of it to come to this hemisphere. We are as one in building up our defense forces to protect the peace of the Americas; and we are likewise as one in demanding that these forces be kept at home. We devoutly pray that the power plutocrats will soon be forced out by their own peoples so that the world can go back to its way of progress under normal conditions. When that day comes, the people of America will be glad to cooperate with any nation that is sincerely desirous of promoting peace and amity among all the peoples and for all time.

You have done me a great honor in having me here tonight. We are all of the same mind as to what are our aims. We all seek the best course toward their achievement.

I offer a program of cooperation as an admirable way out of our difficulties. Cooperation among the Thirteen Colonies brought forth our Nation. Cooperation among individuals built our cities, our industries, and our railroads. Cooperation among the farmers built rural America to a preeminence that is the envy of agriculture the world over. Cooperation of the workers have built their great labor unions. Cooperation has built our charities, our universities, our hospitals, our churches, our press and our radio facilities, and our social organizations. During the century and a half of our growth from Colonies to Empire, cooperation has been the foundation of our success. Why look further afield? We now have the laws to make easy the use of cooperation. Let our leaders sincerely try to use it and I prophesy that the America of the future will be a land of progress in keeping with the best traditions of the America of the past.

Federal Home Loan Banks

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

Mr. WOODRUFF of Michigan. Mr. Speaker, one of the most far-reaching and dangerous pieces of legislation that has been proposed to the Congress in many a day is H. R. 6971, a bill to amend the Federal Home Loan Bank Act, Home Owners' Loan Act of 1933, title IV of the National Housing Act, and for other purposes.

The bill has been before the House Banking and Currency Committee for some time, and missed being tabled in committee by 1 vote. The measure is very ably described by the minority members of the committee. As they set forth in their report, the purpose of this bill is to set up a Nation-wide banking system, to monetize mortgages, and to centralize the management of credit under a politically controlled Federal bureau.

No more dangerous step could be taken by the United States Congress than to put under the control of the New Deal bureaucracy in Washington the credit facilities of the United States. The New Deal bureaucrats, judging from past experience, would not fail to use this new power freely and on every occasion possible more firmly to entrench themselves in control of governmental affairs.

This bill represents the type of power cunningly contrived by the master minds in the New Deal bureaucracy to take control in ever-increasing degree of the Government and of business.

The Federal Home Loan Bank Act was approved June 22, 1932. It was enacted to provide a more flexible means by which building and loan associations, savings and loan associations, cooperative banks, homestead associations, insurance companies, and savings banks might furnish credit for home building. It was never intended to apply to big multiple-dwelling projects.

Under the supervision of the Federal Home Loan Bank Board, created by that act, 12 home loan banks were formed, with a minimum capital of $5,000,000 for each bank subscribed by the Secretary of the Treasury.

The act provides that these banks might make advances to their members on the security of home mortgages. As an indication of the intent of Congress that this act was primarily to encourage home ownership and was not designed to invade the investment field, the term "home mortgage" was defined as a mortgage on real estate upon which there is located a dwelling of not more than four-family capacity.

This new bill would remove this limitation and authorize each Federal home-loan bank to make advances to its members on collateral secured by any first mortgage. This would put the members of the Federal home-loan bank system in direct competition with banks, insurance companies, and other institutions making first-mortgage loans on business as well as home properties.

Federal home-loan banks are authorized to issue bonds and debentures. This proposed bill would authorize the Secretary of the Treasury to purchase these obligations and the bonds issued for this purpose would have to be treated as a public transaction. Thus the Secretary of the Treasury would not only subscribe to the capital of the Federal home-loan banks, but he would be authorized to obligate the United States Treasury for payment of all the bonds and debentures of such banks. This would create a contingent public-debt liability equal to the aggregate amount of the

capital, bonds, and other obligations of the Federal home-loan bank.

It has been properly said that credit is the lifeblood of the Nation. To allow any individual, or any group of bureaucrats, to control the national credit, as this bill proposes to do, would be to place in the hands of that individual, or those bureaucrats, powers which, if improperly used, could create economic chaos.

This is another concrete evidence of the necessity for constant vigilance on the part of the people and on the part of the Members of Congress to prevent these designing New Deal bureaucrats from thus cunningly arming themselves with more and more powers by which to maintain themselves in control of affairs. The bill will be the subject of a terrific battle in the House.

Present Set-up of Federal Civil Aeronautics Should Be Retained

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

Mr. RANDOLPH. Mr. Speaker, the proposal to reorganize the Civil Aeronautics Authority and to return the regulation of civil aeronautics to the Department of Commerce will, unless it is defeated, represent a serious set-back to the safe and sound development of civil aeronautics in this country.

The Senate Committee on Commerce, in its important investigation of the old Bureau of Air Commerce in 1936 and 1937, found that one of the faults of that Bureau was that in the investigation of aircraft accidents which it conducted it was in effect investigating its own work. Hence impartial reports and recommendations and criticism were not forthcoming from these investigations. Instead politics entered into the appraisal of the cause of accidents.

INDEPENDENCE WILL BE GONE

Under the proposed reorganization the independent Air Safety Board, which Congress made an independent agency for the investigation of accidents, will be abolished. Thus once more the Department of Commerce will be investigating itself.

It is no answer to say that under the reorganization the new Civil Aeronautics Board will be able to exercise its function of investigation independently of the Secretary of Commerce. It is true that the order of reorganization provides that the function of investigation will be exercised independently of the Secretary.

But the new Board will be making the rules under which the operation of aircraft will be conducted. Thus in its accident investigations it will be investigating itself.

Moreover, under title VII, section 702, of the Civil Aeronautics Act there are four functions with respect to the aircraft accidents. Not all of those functions are investigation.

They are: First, investigation of the accident. Second, making the report concerning the accident. Third, making recommendations, not concerning the accident, but concerning matters to prevent accidents in the future. And fourth, making special studies of aeronautical safety.

The new Board will be independent of the Secretary under the reorganization order only with respect to the single function of investigation. It will not be independent with respect to making the report and publishing the report, making the recommendations and publishing the recommendations, and making the special studies, all of which are separate and distinct from the investigation.

VITAL TO AIR SAFETY

Yet these other functions are vital to safety in the air. Their free and independent exercise is of first importance. But they cannot be exercised freely and independently under the proposed reorganization. They must be exercised under the direction of the Secretary of Commerce.

In other words, the control of a political department, which was so roundly and justly condemned by the Senate Committee on Commerce, is being restored with respect to a matter which should be absolutely free of all considerations except the truth.

Such a reorganization should not be permitted by Congress. The independence of the Civil Aeronautics Authority and the integrity of the Civil Aeronautics Act and of the Air Safety Board should be preserved and protected.

Poll Tax Designed To Preserve Minority Control

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

Mr. GEYER of California. Mr. Speaker, many people believe that the purpose behind the poll-tax requirement in Southern States is to disfranchise the Negro, but actually the tax results in a minority control reminiscent of the controlled plebiscite in Nazi Germany. This point is ably set forth in the following excerpt from an article by John Moutoux in the April 4 Washington Post:

Dr. C. Van Woodward, author and historian, visiting professor of history at the University of Virginia on leave from the University of Florida, recalled that when enactment of a poll-tax law in Alabama was debated in the legislature proponents argued that it was designed to eliminate from the polls the weak and vicious, or again, the vicious and the ignorant.

"The poll tax," said Dr. Woodward, "was designed to disfranchise a class—the agrarian masses."

"The result of this disfranchisement," he said, "has been that the poorest sections of the South, where the people are most in need of liberal social legislation, are represented in Congress by the most conservative Members who do not at all represent the sentiment of the majority of the people in these sections."

The same point is also made in an article by Ernest Lindley in the Birmingham (Ala.) News, April 3. The following excerpts from this article also stress the fact that the whole country has an interest in the South's fight over the poll tax because of the authority wielded by Senators and Representatives from the poll-tax States:

The whole country has an interest in this effort to abolish poll taxes in Federal elections, because of the immense authority wielded by the Senators and Representatives from the poll-tax States. These 8 States provide the chairmen of 5 of the 12 most important committees in the House and 5 of the 11 comparable committees in the Senate. * * *

Most of the present poll taxes were enacted during the period of Populist unrest. While the emotions surrounding race supremacy were mobilized to bring about their adoption, discerning Southern observers have asserted that one of the main purposes, if not the primary one, was to preserve political control in the hands of the conservative property-owning classes.

Anyway, the poll tax keeps the vote from white men as well as Negroes.

In his address to the Southern Conference for Human Welfare, Barry Bingham, publisher of the Louisville Courier-Journal, decries the fact that the poll-tax requirement automatically debars from voting the very people who are in greatest need of the vote. An excerpt from his address reads as follows:

The thing that shocks me is that "interest in the affairs of the state" has to be measured in terms of the money in a man's pocket. If he hasn't the cash to pay his poll tax he automatically falls into the group who are supposed to have no interest in the affairs of the state. And who is there to say that such a man is any less patriotic, or any less conscientious as a citizen than his richer brother? Since when was patriotism measurable in terms of dollars and cents? The very man who cannot afford to vote because of poll-tax restrictions is the man who needs to vote the most. He needs to maintain his little stake in this democracy. He needs to help elect men who will try to improve the lot of the underprivileged. What is the psychological effect on these struggling Southerners without enough money to pay a poll tax when

they are classed as undesirable citizens, people unworthy of being allowed to vote, just because they are short on cash? Does it give them much love for democracy, or doesn't it make them into potential victims of the forces that would overthrow democracy?

I have said that the real purpose of the poll tax is to keep people from voting, rather than simply to raise money. That argument is borne out by the methods of collection that are employed in the Southern poll-tax States. No bona fide revenue measure is subjected to such curious treatment. Alabama and Mississippi, for instance, legally forbid the enforcement of poll-tax collections, though before the tax was tied up to the suffrage, both States did a regulation job of enforcing its collection. In other words, if a man does not offer to pay his poll tax at a certain specified time, it is actually against the law for the State to try to collect that tax from him. What is the answer to that? It can only mean that the State is more interested in keeping the poorer class of citizens from voting than it is in raising funds from this source for its schools.

Seventy-five Years of Negro Progress

EXTENSION OF REMARKS

OF

HON. CLARENCE J. McLEOD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

Mr. McLEOD. Mr. Speaker, the past 75 years has seen many great and wonderful changes in the life and culture of the Negro people of the United States. This period has rightly been called the era of Negro freedom and citizenship. At this time it is well for all to stop and examine the accomplishments and progress of our colored citizens, as it is only then that we can fully appreciate the full significance of their contributions to the building of our American institutions.

Today our colored citizens can look back with pride upon three-quarters of a century of unbroken progress—a progress which is reflected in every field of human endeavor; a progress which is destined to carry them upward and onward to greater triumphs.

These 75 years, which we now celebrate, have seen the birth and development of a new racial self-respect. A whole people have been reborn. Thus it is that over 12,000,000 colored people now look forward with renewed confidence to all that is best in the life and future of this great American Republic.

The most casual glance at American history will reveal and emphasize the importance of this people in the building of our Nation.

The first contribution of the Negro to the development of America was toil. They cleared the forests of our Southland, drained the swamps, prepared the soil for the production of its staples, and dug from the earth coal, iron, and precious metals. These workers shod horses, cast farm implements, made vehicles, constructed boats, and built railroads, which provided the South with a network of transportation facilities. Today, of the 48,000,000 gainful workers employed in this Nation, more than 5,000,000 of these are of the colored race.

In spite of low wages, lack of credit in many sections of the land and intolerant handicaps, they have built homes, churches, and schools worth more than $2,000,000,000. Likewise, in agriculture, progress has been most impressive as colored people now own more than a million farms.

In all our history there are no pages more heroic nor more thrilling than those dealing with the exploits of the colored man as a great soldier. In all campaigns and in all branches of the military establishment they have served their country well. We recall their valiant deeds at Port Hudson, Fort Pillow, Fort Wagner, and the sieges of Richmond and Petersburg. We remember the brilliant work at Santiago and the equally brilliant charge at San Juan Hill during the Spanish-American War. In both engagements the colored soldier acquitted himself with unusual distinction. In the Mexican campaign the Tenth Cavalry and the Twenty-fourth Infantry distinguished themselves at Carizal and were heralded as the heroes of the hour. During the World War colored troops and officers held sectors at St. Mihiel and Verdun with such singular success as to win the highest praise of the commanding general.

In peace or war, in victory or danger, the colored soldier through all our wars has demonstrated a loyalty and a bravery that ranks as the highest manifestation of patriotism. All Americans are justly proud of these heroes.

Looking into the field of education we are at once reminded of the great names which are landmarks in the progress of our American school system. The founder of Tuskegee Normal and Industrial Institute, Booker T. Washington, is one of the best-known men in the history of education in America. The impetus he gave to the movement for higher education among the colored people has gained such momentum through the years that we now have such fine institutions as Howard University, Wilberforce, Morris Brown University, LeMoyne, Morgan College, and many, many other advanced schools of higher learning.

The trend toward higher education among the colored race has been most impressive in the past decade. It has spread throughout the land, until today there are over 42,000 students graduating each year from our 108 schools for colored people.

While at toil, the Negro entered the field of science and invention, and his inventive genius has been given world-wide recognition. Colored artisans assisted Eli Whitney with his cotton gin, and McCormick with his reaper. James Forten perfected a machine for handling sails; Henry Blair patented his two corn harvesters; Granville T. Woods stimulated industry with his electrical patents; Elijah McCoy, of Detroit, brought machinery nearer to perfection with his many lubricating appliances for engines; Norbert Rillieux revolutionized the manufacture of sugar with his vacuum pan; Jan E. Marzeliger gave the shoe industry the lasting device for making shoes with machinery. Dr. George W. Carver, of Tuskegee Institute, has amazed the scientific world in developing hundreds of new and practical products from the plants and clays of the South. All of these men have lent honor and distinction to their race by their scientific creativeness.

As we look out over the fields of literature, oratory, and art, we cannot but realize that colored people are natural artists. We find the name of Phyllis Wheatley; we read the works of Paul Laurence Dunbar, James Weldon Johnson, and Henry Highland Garnet, and are delighted with the descriptive detail which brightens every page. Others, such as Charles Waddell Chesnutt, W. E. Burghardt DuBois, and William Stanley Braithwaite, have added to America's wealth of great literature.

The field of oratory still rings with the voices of Frederick Douglass, the patriot; J. C. Price, the master of eloquence; and Booker T. Washington, the educator.

In art, the masterful works of such artists as Edward M. Bannister, Henry O. Tanner, William E. Scott, Lois M. Jones, and many more assure us that the colored American is on the threshold of great things in fine arts.

Of the value of Negro music, the testimony is almost universal that the colored race is the master of harmony and spiritual feeling in song. It has been the inspiration for such great artists as Marion Anderson, Roland Hayes, Florence Cole Talbert, Anita Patti Brown, Caterina Yarborough, and Paul Robeson.

In organization and business the colored people have moved forward rapidly through the virtues of thrift and self-reliance. Such organizations as the National Negro Business League, founded in 1899, the Association for the Study of Negro Life and History, organized in Chicago in 1915 by Dr. Carter G. Woodson, the National Association for the Advancement of Colored People, and many other similar groups reflect the progress in cooperation and self-advancement which has taken place within the past 75 years.

The last 20 years in particular has witnessed the advance of many Negro business enterprises. The race has excelled in medicine, law, dentistry, banking, and insurance, and the other essential occupations which go to make for racial happiness and economic success.

As we look back upon these 75 years of uninterrupted social and economic progress on the part of the American colored people it becomes increasingly evident that if such progress is to endure it must continue to be nurtured upon the tenets of democracy. Every true, patriotic American knows in his heart that the United States is the hope of the world. Into its civilization and glory have entered not one but many races. All must shoulder the obligations a democracy places upon its people if they are to enjoy liberty's benefits. In such a country as ours the Government can recognize no difference of race, creed, or class, providing all are working for the maintenance and general welfare of the Nation.

The eyes of this troubled, war-weary world are upon us. We stand as one of the last remaining democracies. All races, creeds, and colors which go to make up the American fabric of living must unite still closer under the banner of tolerance and freedom and, by our discerning actions and thoughts, exemplify the true meaning of democracy.

Amendment of the Wage-Hour Law

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

Mr. BRYSON. Mr. Speaker, the Barden amendments come before this House as a challenge, a fresh threat to the right of millions of low-paid industrial workers to enjoy an improved standard of living. Reject these amendments, I urge, because they are both economically unsound and socially backward.

The economic soundness of the Fair Labor Standards Act lies in the fact that under its provisions wages for thousands of low-paid industrial workers are increased; and increased wages means increased purchasing power which in turn means increased consumption. It all adds up to the benefit of farmers, as well as other groups, who find industrial workers able to purchase the products of farm and factory.

But the Barden amendments—which are being advanced under the guise of helping the farmer—work in reverse order; that is, they begin by reducing wages for thousands of low-paid industrial workers now covered by the act, and reduced wages will mean reduced purchasing power, which in turn will mean reduced consumption, all of which will add up to the detriment of farmers, as well as other groups, who will find the market for their products curtailed as a result of reduced purchasing power. What a fallacy, what an economically unsound theory, this idea that you are going to help the farmers by hurting the industrial worker.

Farm labor does not come under the provisions of the wage-hour law, but this has been inferred time and again in the arguments of proponents of the Barden amendments. Of course those familiar with the operation of the Fair Labor Standards Act realize that it does not apply to farm labor; but the pity of it is that a great many people throughout the country are being misled on this point. Much good might be done if the whole truth about the Barden amendments were more generally known.

In this connection, Mr. Speaker, I wish to read and have inserted in the RECORD the main points of an article by Raymond Clapper which appeared in the April 25 issue of the Washington Daily News:

HELPING THE FARMER

Neither political party would attempt to repeal outright the Wage and Hour Act, which seeks to place a floor under the lowest-paid employees and to protect decently minded employers from wage-sweating competitors. The principle is one of the heritages of the N. R. A., and its social desirability has been affirmed in Supreme Court decisions.

No, this and many other pieces of social legislation won't be repealed outright, but they can be gutted by destructive amendments. That is what is being attempted this week against the wage-hour law, through the Barden amendments.

These are not amendments to improve the workability of the law but to exempt large groups of low-paid employees from its modest standards. It is being done under the guise of "helping the farmer." But farm labor is not under the act, and the proposed amendments seek to exempt employees of packing houses and other establishments which process farm products. Why the packing-house employer should be excused from paying a minimum of 30 cents an hour while the textile-factory employer is held under the law is not clear. But that is the kind of inequality that is proposed by the Barden amendments.

A study of the Barden amendments made by the Wage and Hour Administration shows estimates of the numbers of employees exempted under the act as it stands and under the proposed amendments. In dairy products, 22,000 employees are exempted, but the Barden amendment would exempt 254,000. Exemptions in fruit and vegetable processing would be increased from 68,000 workers to 321,000 workers. Timber and lumber, not exempt now, would have 110,000 employees exempt. In all, the army of employees exempt from wage provisions, now numbering 256,000, would be increased to 1,183,000.

They would not have to be paid the minimum of 30 cents an hour which, for the 42-hour week permitted under the law, means a wage of $12.60 a week at full time—$650 a year for the lucky man who has a full year's work. It is from that not very onerous requirement of paying the help $12.60 a week that groups of employers are seeking to escape by their intensive lobbying here for the Barden amendments.

Secretary of Agriculture Wallace has cut the ground out from under the argument that these amendments are needed in the interest of the farmer. He takes note of the point that higher wages or shorter hours in creameries, canneries, packing plants, groceries, or other concerns engaged in processing or marketing farm products would increase the spread between producer and consumer and lead to either lower prices to farmers or smaller sales.

In answer, Mr. Wallace says that changes in the ability of consumers to buy have much greater effect on farm prices than do marketing costs. Workers receiving 30 cents an hour or less spend almost half of their income for food and clothing. If their pay is cut, half of that must come out of expenditures for farm products.

As Mr. Clapper points out, not even the Republicans, who spend so much of their time directing shafts of criticism at the accomplishments of the present Democratic administration, would attempt to repeal outright the Wage and Hour Act. Opponents of the Fair Labor Standards Act realize that public opinion is too solidly alined with the principles and objectives of this and other great pieces of social legislation to permit an open frontal attack. In a speech several weeks ago I remarked that it was at least significant that every serious attempt on the life of the wage-hour law had been of an indirect, nicely concealed nature.

I am no advocate of these Barden amendments, because, in effect, they tell low-paid industrial workers that their families must live on less than $12.60 a week, or $650 a year. To employers who are willing to pay fair wages, they say you cannot be protected against wage-sweating competitors. I am not going to support any proposal which says to the laboring man you are not entitled to a salary of $12.60 a week. Nor will I support any measure which would let down and leave unprotected the employer who is making an honest effort to pay his employees a decent wage—such employers are certainly entitled to protection against the "chislers."

If we approve the Barden amendments, which are supposed to exempt employees of packing houses who are processing farm products, how long will it be before we are asked to extend these exemptions to textile-mill employees who are processing cotton? Start taking steps backward, and it will only be a matter of time before the legislative gains of recent years are wiped out.

This attempt to destroy the Fair Labor Standards Act is economically unsound and socially backward. I say hurl it back; cast it aside. In doing just that, not only shall we remove a threat to the right of millions of low-paid workers to enjoy an improved standard of living but we may also set the tide firmly against all efforts to thwart the forces of social and economic progress in America.

Transportation Bill Should Be Defeated

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

Mr. ALEXANDER. Mr. Speaker, according to the schedule for the week's activities in the House, the conferees' report on the so-called Wheeler-Lea transportation bill, S. 2009, is due to come up for consideration next Friday or shortly thereafter.

There is little justification for such speed in this case, the conference report having barely been given us, but it is apparently realized by the sponsors of this legislation that opposition to the bill is growing so rapidly among the folks back home, who are the ones really to be considered in this or in any other legislation, for that matter, that they must put it over as a fast one or not at all.

It is the consensus of opinion among the average person, of which category I am glad to say we still have a preponderance in this country, that this bill, if made into law, will completely finish the job of ruining the railroads, as well as to decrease jobs for railroad employees. Perhaps that is actually what is intended to be accomplished, that is, the final financial collapse and ending of the present private ownership and operation of the railroads—and in place of it Government purchase and operation. But I do not believe the sponsors of this bill among the railroad owners, executives, and bondholders desire that objective.

However, we must admit there are large numbers of people satisfied that not only railroads but all public utilities should be taken over by the Government, and on that basis they could gladly—even gleefully—hope for the passage of S. 2009, because it will result, not in the hoped-for salvation and rehabilitation of the carriers by rail but, instead, in their final demise as a part of our struggling capitalistic system.

As I say, to large numbers of people that would not be an unhappy event, but I do not believe it is at all in the interest of Mr. and Mrs. Average Citizen to, in the meantime, say over a period of 15 years or so while the railroads are gradually losing their revenue-producing business, also kill off the water carriers and truck carriers, who would be brought under the Interstate Commerce Commission and thrown into the jackpot by this bill along with the poor railroads, who have been in such a spot for years.

It takes no prophet or seer to see what the net result of such action on the part of Congress will be if we pass the Wheeler-Lea bill. All big concerns, as protest against such action and the hoped-for and planned higher rates all around, will immediately provide their own fleets and haul their own freight in whichever manner is most economical. Pipe lines will also increase by leaps and bounds, and they already have taken a considerable percentage of the transportation business.

Industrial and commercial activities will be more and more concentrated in the hands of a few large concerns as a result of the moves above described, because the little fellow would be unable to finance the purchase of his own fleet or to provide sufficient freight of his own to operate it profitably, as would the larger concerns.

In turn this would result in the loss of more and more business in the less densely populated areas, such as our own in the landlocked Northwest, and more and more concentration in the seaboard areas.

For the reasons above listed every Member of the House should think twice before voting for the adoption of any such bill, and especially should the Members from the Northwest areas be on their guard, as we are already seriously and definitely handicapped and discriminated against by the rule of the Interstate Commerce Commission under which we are now operating. Why turn complete control of all forms of transportation over to the same oligarchy and thus complete the job of destruction?

From the large number of letters and petitions I am receiving daily opposing this legislation I have selected and ask consent to insert two of them herewith as being representative of the viewpoint and opinion of the people of my State, and I hope we may have a majority of the Members with us in support of the attitude expressed. The letters are as follows:

MINNEAPOLIS, MINN., *April 29, 1940.*

Hon. JOHN G. ALEXANDER,
House Office Building, Washington, D. C.

DEAR SIR: For more than a year we have been very much concerned over the so-called Wheeler-Lea transportation bill. We are today in receipt of a copy of the new bill reported from the Conference Committee under S. 2009. If anything, this bill is worse than either of the original House or Senate bills. It discriminates most unfairly against water transportation as well as against carriers upon the highways. The passage of such legislation is most inimical to all business. During the past 6 or 7 years we have persisted in a constant revision of laws until today it is hardly likely that most of us really appreciate where we are at in connection with certain of such legislation. It is no more than just that further consideration of an important matter such as the revision of the Transportation Act should be given more consideration than is apparently the desire of those who are promoting this new bill. Some of us who have bought transportation for a good many years realize just what would come to us if it is carried into effect. We hope to have your very earnest opposition either to eliminate it altogether or to at least postpone for several months a further consideration of the matter. We shall be very glad to hear from you at your early convenience.

Yours very truly,

JANNEY SEMPLE HILL & CO.
H. M. HILL.

[Minnesota Highway Users Conference. L. A. Rossman, president; H. M. Whisman, vice president; J. R. Schroeder, secretary; W. F. Lynch, treasurer; John M. Keefe, field representative; directors: G. C. Axelrod, Ivan Bowen, Howard Brissman, E. Ray Cory, Hugh M. Craig, Pierce Fleming, Robert Gray, E. E. Hadlick, Gordon Healow, T. A. Horrocks, Lou Hosking, H. A. Jackson, W. J. Kay, W. F. Lynch, Arthur Randall, L. A. Rossman, Milton Rosen, Joseph R. Schroeder, P. J. Schroeder, E. H. Sherman, A. K. Tice, H. M. Whisman, Frank W. White, Edgar F. Zelle]

MINNEAPOLIS, MINN., *April 23, 1940.*

Hon. JOHN G. ALEXANDER,
House Office Building, Washington, D. C.

DEAR MR. ALEXANDER: S. 2009 and its companion bill in the House, known as the Lea bill, proposing voluminous changes in proposed regulation by the Interstate Commerce Commission of various transportation facilities, are now ready to be reported out of conference committee.

We view with the utmost alarm the further reports that Senator WHEELER and other sponsors of this bill, backed by the administration, intend to press for immediate enactment.

So complicated a measure (200 pages or more of highly technical matter) ought not even be brought to a vote unless or until the individual Members of Congress have adequate opportunity to study its provisions and analyze its effects. Likewise your constituents, including ourselves, should have an opportunity to know something about this bill so that we can advise you as to our views.

Therefore, we urge that you unite with other Members of Congress to demand that when this bill is reported out, it be printed and an adequate period of time (at least 30 days) be given, so that all Congressmen and their interested constituents can study its provisions and decide whether or not they represent proper legislation.

If the sponsors of this bill will not extend this courtesy then we urge that you do all in your power to defeat the bill. Regulation of transportation already is overcomplicated and 200 pages of new legislation to further burden an already overworked Interstate Commerce Commission and to further confound and confuse our citizens who are interested in transportation should not be enacted unless good cause is clearly shown and proven.

In addition it must be kept in mind that this bill was originated by and is being sponsored and pushed by the railroads in their own selfish interests.

Very truly yours,

JOSEPH R. SCHROEDER,
Secretary.

Acquisition of Forest Lands

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 1, 1940

STATEMENT BY HON. HOMER D. ANGELL, OF OREGON

Mr. ANGELL. Mr. Speaker, recently a subcommittee of the Committee on Agriculture held hearings on H. R. 6853, which I introduced in the House, which bill has for its purpose the giving of authorization for the acquisition of forest lands adjacent to and over which highways, roads, or trails are constructed, in order to preserve or restore their natural beauty, and for other purposes. I appeared before the committee and made a statement in behalf of this legislation, and I ask unanimous consent to extend and revise my remarks and include therein my statement before the subcommittee, as follows:

Mr. ANGELL. Mr. Chairman and gentlemen of the committee, I thank you for this opportunity to speak briefly in support of H. R. 6853, which I introduced in the House, and which is a companion bill to S. 231, which passed the Senate on June 13, 1939.

This bill is for the purpose of giving authorization for the acquisition of forest lands adjacent to and over which highways, roads, or trails are constructed, or which are hereafter to be constructed, wholly or partially with Federal funds, in order to preserve or restore their natural beauty, and for other purposes.

Our early work in constructing our highway systems throughout the United States was concerned chiefly with the roadbeds themselves. The project was so immense and funds meager that it was impossible to find revenues with which to carry out a completed project by landscaping in connection with road construction. It has now, however, come to be recognized generally that roadside improvement is a necessary element of highway construction. The joint committee on roadside development of the American Association of State Highway Officials and the Highway Research Board have made the following recommendations with reference to roadside improvement:

"1. Every road-building agency should include a person competent to design and carry out roadside-development work. His work should be considered an essential part of the design, construction, and maintenance.

"2. Absolute control of the highway right-of-way and all its appurtenances should be vested in the highway authority.

"3. Highway authorities should have power to acquire adequate right-of-way for present or future roadside development. They should also be empowered to keep or acquire title or easements in strips or parcels of land along the highway for the benefit and enjoyment of the public.

"4. Highway authorities should budget a definite part of their funds for roadside development and its maintenance.

"5. There should be cooperation by the highway authorities with individuals, organizations, and local communities interested in roadside development."

The Bureau of Public Roads has recognized the necessity of roadside improvement and beautification and the preservation of the natural scenic beauties of our highway borders, and has not only cooperated with the States in beautifying our roadways as well as preserving the natural scenic attractions, but has, in some instances, required minimum expenditures of Federal-aid funds for public highways.

Section 6 of the rules and regulations for carrying out the emergency road construction provided for by the National Industrial Recovery Act even provided certain classes of work as worthy of prior consideration in the planning of the program for expending the $400,000,000 appropriated by the act, and listed for preferential consideration the appropriate landscaping of parkways or roadsides on a reasonably extensive mileage. On June 30, 1933, the Chief of the Bureau of Public Roads issued a memorandum to district engineers, as follows:

"It will be required that each State highway department include in its program of construction on the Federal-aid highway system a definite number of projects that will provide for the appropriate landscaping of parkways or roadsides. Projects of this character should preferably be selected adjacent to the corporate limits of the larger cities in the State, particularly where sufficient right-of-way is available to undertake work of this character. This work shall embrace the selective cutting or pruning of existing growth; the removal of stumps, dead material, etc.; the obliteration of borrow pits, traces of old roads, and other construction scars; the flattening of slopes; the rounding of slope intersections; the seeding or sodding of shoulders and slopes; and the planting of a sufficient amount of suitable material to accomplish a reasonably comprehensive roadside improvement. The planting of trees at regular intervals without regard to their environment or the composition of adjacent plant growth will not be considered as satisfactory roadside-improvement work. Properly qualified landscape architects or horticulturists should be employed by the State highway departments to determine the proper kinds of plant material to be used in different soil and climatic conditions and the most effective arrangement or grouping of such material for any particular location."

While no maximum limit has been fixed on the amount of the Federal funds available to a State that may be used for roadside work, State highway departments have been notified that not less than 0.5 percent of the sums allotted to each State must be reserved and expended for such purpose. This, however, is a minimum required to carry out the rules and instructions of the Bureau of Public Roads.

This legislation provides that a sum not to exceed 5 percent of the moneys appropriated by Congress for carrying out the provisions of law relating to the Federal-aid highway system may be used for the purpose of preserving, restoring, improving, and protecting the natural beauty along the highways, roads, and trails constructed or to be constructed, wholly or partially with Federal funds. The expenditure is directed to be made by the Secretary of Agriculture in acquiring forest lands or interest therein, by purchase, gift, devise, or condemnation, adjacent to highways, roads, and trails now constructed or over which they are hereafter to be constructed.

Lands thus acquired are limited to an area within one-quarter mile from the exterior boundary of the right-of-way. The option is left with the highway department of each State as to whether, and the extent to which the act shall be put into effect. Under existing laws there is no authority vested in the Secretary of Agriculture to expend these moneys for such purpose.

In many States, and particularly in the West, our highway systems pass over virgin forest areas abounding in great natural beauty and scenic effects. Large trees, shrubbery, and other natural growth which will cost large sums to reproduce are being ruthlessly destroyed along the roadsides of many of these highways. In my own State of Oregon roadways crossing the coast range and the Cascade Mountains, running north and south, and the Siskiyou in the south, proceed through virgin forests the beauty of which is unsurpassed anywhere. In extreme south, bordering the Roosevelt Highway and other connected highways, are growing a large number of magnificent redwood trees. Many of these giants of the forest were growing before Christ was born. They are the oldest living things on earth. Tourists from all parts of the world journey over our magnificent highways to view these wonder trees. Many of them are now being destroyed. There is no provision in law to use these highway funds for the purchase of the areas bordering our highways for the preservation not only of the beautiful redwoods, but also of the Douglas fir, Fort Orford cedar, sugar pine, and various other types of trees which adorn our highways in the West. Last year I had occasion to pass over one of our scenic driveways leading from the Willamette Valley to the Pacific Ocean on what is known as the Grand Ronde Highway. It passes through a beautiful stand of virgin forest in the coast range. I was grieved to see that logging operations were in progress which were denuding these lands bordering the highway of the natural growth of fir and other types of trees, leaving only stumps, debris, fallen and broken timber to greet the eye of the motorist.

With the law under discussion in force, the highway department of our State, in conjunction with the Federal Government, could purchase sufficient areas bordering this highway to make it a thing of vast beauty and preserve the aesthetic values of an outstanding highway. To restore the roadside lands to their natural state or to make sufficient plantings and landscaping for beautification to approach its original state would require immense sums of money many times larger than the funds received from the commercial timber now being logged along the highway. As Joyce Kilmer wrote:

"I think that I shall never see
A poem lovely as a tree.
A tree whose hungry mouth is prest
Against the earth's sweet flowing breast;
A tree that looks at God all day,
And lifts her leafy arms to pray;
A tree that may in summer wear
A nest of robins in her hair;
Upon whose bosom snow has lain;
Who intimately lives with rain.
Poems are made by fools like me,
But only God can make a tree."

We pride ourselves on our excellent highway systems throughout the United States. They are of immense value. In many States the tourist trade is the most beneficial activity we have. The funds expended by tourists traveling our highways more than compensate for the costs, not only in surfacing of the highways but in landscaping and beautification. From the purely commercial standpoint we will be making a good investment to authorize the expenditure of the moneys provided by this bill for acquiring roadside areas for beautification, landscaping, and preservation of the natural scenic beauties of our roadways.

The additional areas thus acquired would serve a double purpose: First, to prevent billboards and unsightly advertising, improper roadside stands, and other commercial enterprises; and, second, to provide ample areas for parks, parking facilities, recre-

ational areas, and service areas, supervised and properly located so as to preserve the aesthetic values of the highways.

I trust you gentlemen of the committee will approve this legislation so that it may be speedily enacted before this session of Congress adjourns.

Amendments to Wage-Hour Bill

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 1, 1940

Mr. VOORHIS of California. Mr. Speaker, so far as the proposed amendments to the wage-hour bill are concerned, I can state my position very briefly. I believe an exemption for bona fide agricultural workers is necessary because of the fact that farmers are not in a position to control the prices at which they sell their products and because agriculture as a whole receives far less than its fair share of national income. But I am against wholesale amendments for canneries, and similar establishments processing agricultural commodities. Almost all manufacturing could eventually be taken out from under the law if we set about denying protection to all workers who are employed in working on products the raw material for which came originally from the farm. The Barden bill would exempt many thousands of workers in industrial establishments simply because they work on raw materials which came originally from the farm. Therefore, I am against it.

I am also of the opinion that a clear distinction should be made between the obvious reasonableness of exemptions from the hours provision for certain establishments dealing with perishable and highly seasonal commodities and the very different question of proposed exemption from the minimum-wage provisions. On the matter of wages not only does it seem to me that 30 cents an hour is certainly as low as any worker should be paid but I also find that the enforcement of such a minimum would be to the clear advantage of those employers now paying 30 cents an hour or more.

In the matter of citrus packing, for example, authoritative figures recently released show that whereas over 21 percent of all workers in the Nation employed in packing citrus fruit receive less than 30 cents per hour, only 3 percent of those employed in the State of California receive less than that amount. It appears obvious to me that the competitive position of the California citrus industry would be improved if a 30-cent minimum wage were brought about for the Nation generally.

This Wage and Hour Act has been intended all along to protect, not the well-paid, but the lowest-paid workers of the Nation. These are the people whose consumption of farm commodities would rise if they had a few dollars a month more to spend, for they are the people whose families need more food.

The Walter-Logan Bill

EXTENSION OF REMARKS
OF
HON. ALBEN W. BARKLEY
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Wednesday, May 1 (legislative day of Wednesday, April 24), 1940

ARTICLE BY HON. JAMES M. LANDIS

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article written by the Honorable James M. Landis, former head of the Securities and Exchange Commission, and now dean of the Harvard Law School, on the Walter-Logan bill. The article is published in the Harvard Law Review for May 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Harvard Law Review for May 1940]

CRUCIAL ISSUES IN ADMINISTRATIVE LAW

(One of a series of public lectures, under the auspices of the faculty of the Harvard Law School, delivered on March 27, 1940, in Langdell Hall. The text is as delivered; footnotes have, however, been added which have availed themselves of material subsequent to that date)

THE WALTER-LOGAN BILL

"Crucial Issues in Administrative Law" is one of those large topics that permits one to deal substantially with anything that he chooses in a broad and indeterminate field. For administrative law is such a field with very little of moment in it that cannot be thought of in terms of a crucial issue. So a topic such as this would permit a speech upon the merits or demerits of the National Labor Relations Act, a harangue upon the wonderland of bureaucracy,[1] or a discourse upon tendencies toward absolutism in this country as manifested by the New Deal programs of economic and political reform.

It interests me that this should be so, that this is an area where epithets and encomiums play such a part. For surely the rise of the administrative process is by all odds the most significant development in legal history in the last century; yet its implications, its significances are handled by scholars as if these issues were political in nature rather than fit for careful, scientific scrutiny. It becomes important to understand why this is so.

At least two reasons may be adduced. The first is that differences of political faith exist among us as to the principles underlying many of the economic reforms of the last decade. In the main, these reforms have relied upon the administrative process for their realization. Because we hesitate somewhat to take issue upon the basic questions of principle that they raise—such as the desirability of imposing a duty to bargain collectively upon industrial management, or the subordination of the private control of such matters as investment banking and security exchanges to the supervision of public authorities—the focal points of attack and defense become the administrative measures employed for translating these principles into reality. It is not accident, for example, that the American Bar Association flanked by regional and local chambers of commerce is alined in an effort to curb the development of the administrative process; and that the National Lawyers' Guild has thrown itself athwart that movement. It is not possible, for example, to view the recently proposed amendments to the National Labor Relations Act as simply intended to deal with procedural defects and not recognize that the outcry against the procedure is made partly by those whose desire is radically to alter substance. The scene is thus confused by these strong cross-currents of political and economic stress, that not only muddy the possibilities of scientific inquiry but at the same time tend to traduce them.

A second reason for the lack of the scholarly approach to this subject is the newness of the rise of the administrative process and the lack of knowledge concerning it. Until 1930 students of the subject were few and far between, the literature was scanty and generally poor in quality. Leaders in the legal profession had infrequently come in contact with the process, for it was still operative only in specialized fields. How rarely the subject has been the continuing concern of our law schools is illustrated by the fact that today of the 80 teachers of the subject, only 8 or 10 percent have lived with it for more than a period of 10 years, and of these 8, 2 are active only in the Philippine Islands and 2 are part-time teachers, so that of the regular members of law-school faculties who are concerned with administrative law, the experience of only 4 or 5 percent goes back more than a decade.[2] This percentage contrasts strongly

[1] It is worth remembering that Mr. O. R. McGuire, the chief draftsman of the American Bar Association bill (progenitor of the Walter-Logan bill currently before Congress) claims to be co-author with former Solicitor General Beck of the latter's Our Wonderland of Bureaucracy (1932). But cf. p. XIV (1933 ed.) The thesis of that book is difficult to portray in brief, but it avowedly sought to be America's counterpart to Lord Hewart's New Despotism (1929). One will remember its condemnation of the Interstate Commerce Commission as affording the best illustration "of the pernicious effects of excessive interference by Government in business" and guilty of "mischievous activities," its recommendation for the abolition of the Federal Trade Commission, its conclusion that the Tariff Commission was not only unconstitutional but also "the greatest potential menace to the protective tariff that could be devised." Pp. 155, 160, 196 (1933 ed.). It is odd—to say the least—that in the light of these conclusions the author of this legislation should from the beginning exempt two of these three agencies from its operation.

[2] These figures are taken from the Directory of Teachers in Member Schools of the Association of American Law Schools for 1939–40. The figures are, of course, casual and incomplete, but they do serve to illustrate the experience of the law schools with administrative law as a subject for instruction and research.

with similar percentages that prevail in other fields. In evidence the same figure runs to 44 percent, in partnership and real property to 50 percent, in contracts to 55 percent, and in that most elusive subject of international law, we hit the high ratio of 60 percent. The concern of the bar with administrative law reveals the same trend. It took the first 2 years of the last decade to accumulate 2 bar association addresses upon the subject, whereas last year alone produced 14, exclusive of my own several utterances in the general field.[3]

These casual figures stand rather starkly against the fact that today one administrative agency alone disposes of 42,000 cases per year,[4] more than half as many as the whole Federal judicial system taken as a whole,[5] and that the total number of controversies determined by the Federal administrative agencies runs to several times those determined by the Federal courts.[6] Nor are these controversies so adjudicated negligible in significance. They range all the way from claims for veterans' benefits to inquiry into the way in which our present system of private government of public enterprise discharges its major responsibilities.

The scene of administrative law is thus a large one. Moreover, it is a variegated one, for one of the chief pressures lying behind the development of administrative agencies was the desire to introduce a modicum of expertness into the disposition of those controversies that had been entrusted to them. Thus, where the tendency in the development of the judicial branch of our Government has generally been to create tribunals with an over-all jurisdiction, the reverse has been true of administrative development. For the railroads we created the Interstate Commerce Commission, for private finance the Securities and Exchange Commission, for aviation the Civil Aeronautics Authority. Just as the architect follows different conceptions when creating a railroad station and building a hangar, the administrative agencies we have created have had both their organization and procedure shaped largely by the tasks with which they were confronted. It would be silly, for example, to build the same structure for a bank as for a railroad station; equally absurd is it to insist that the details of organization and operation of the Federal Communications Commission and the Federal Reserve Board shall be alike.

And yet just as the architect, whatever his structure, must follow certain laws in his planning, because stresses and strains have a known calculable quantity, certain principles run through this field of administrative law. What they are, what their range of application is, what we know from experience and study as to their worth—these are, perhaps, the questions that give real content to any study of the subject. An effort to articulate them and to weigh them should certainly be the purpose of any scholarly scrutiny of the subject; for their discovery is obviously a prelude to any measure of "reform" that pretends to be based upon other than political and casual considerations.

A few efforts in this direction have been made during the past decade. Because the Lord Chief Justice of England in 1929 launched an attack upon the development of what with characteristic judicial calm he called the "new despotism," an eminent committee was created by the Lord Chancelor of England to examine into the rise and consequences of administrative law. In 1932 this committee reported, absolving the administrative in the main of the charges that the Lord Chief Justice had heaped upon it, making an attempt to enunciate certain principles that ought to govern its growth and adding some few practical suggestions for the alteration of its procedures.[7] Despite the fact that this report was received in this country with that uncritical praise that we are accustomed to heap even upon the minor performances of our British cousins, it has, in the opinion of most observers, little value beyond the minutes of evidence that underlie it.[8] There for the first time is a series of convenient working papers that tell of the operation of the various administrative authorities, their difficulties, their successes, and their failures. From an examination of these it might be possible in the light of that experience to evolve some blue prints along which the administrative process might be patterned. But it seems superficially wiser to turn to our own experience and see whether there is food there for thought, or—to mix the metaphor—a hewing out of concepts that might be deemed to govern in this field.

Beginning in 1933, the American Bar Association, through a special committee, started an examination of the field.[9] It suggested one bill which so split both its committee and other professional groups who had a concern with it, that support for that line of attack was withdrawn in 1939 in favor of a new bill[10]—

---

[3] These figures are taken from the Index to Legal Periodicals. Incomplete as they are, they demonstrate the quantum of literary output upon the subject. Their patent inadequacy illustrates again the unfamiliarity of index-makers with the new topic of administrative law.

[4] This figure has reference only to the cases coming before the Board of Veterans' Appeals. See McAllister, Administrative Adjudication and Judicial Review (1940) 34 Ill. L. Rev. 680, 683. The complete dispositional work of the Veterans' Administration has considerably greater volume. "Well over 100,000 claims come before the Veterans' Administration for adjudication each year. During the fiscal year 1939, action was taken on original compensation and pension claims, excluding reopened claims and cases involving termination, claims for increases, and insurance, in a total of 73,232 cases. It has been said, 'more cases [are] decided by the Veterans' Administration than by all the courts combined in an equal period of time.'" Attorney General's Committee on Administrative Procedure, The Veterans' Administration (1939) 4, citing McGuire, Criticisms of the System of Administrative Tribunals (1938) 12 U. of Cin. L. Rev. 147, 151.

[5] The Attorney General's figures for the year 1937 would indicate that the Federal judicial system as a whole (excluding the "legislative courts") disposed of 76,886 cases that year.

[6] See Blachly & Oatman, Administrative Legislation and Adjudication (1934) II.

[7] (1932) Cmd. 4060.

[8] For a scholarly and critical weighing of the methods employed by the committee in evolving the broad and sweeping conclusions contained in its report, see Jaffe, Invective and Investigation in Administrative Law (1939), 52 Harv. L. Rev. 1201.

[9] See 58 A. B. A. Rept. (1933) 197, 407. The original committee was appointed in May 1933 and consisted of Louis G. Caldwell (chairman), Pierce Butler, Jr., Walter F. Dodd, O. R. McGuire, and Melvin G. Sperry. Messrs. Butler, Dodd, and Sperry were succeeded that year by Messrs. Thomas B. Gay, Felix Frankfurter, and Charles B. Rugg. The report of this committee in 1934 recommended among other matters the establishment of a Federal administrative court and the abolition of the existing independent boards and commissions. 59 A. B. A. Rept. (1934) 538. This report was not signed by Professor (now Mr. Justice) Frankfurter, the committee stating that, due to his absence in Europe, he had been unable to participate actively in the work or to examine the report. Id. at 564, n. 1. Despite this explicit statement, Mr. Walter, the chairman of the subcommittee of the Committee on the Judiciary of the House of Representatives, twice stated upon the floor of the House that the revised bill, the Walter-Logan bill, had the support of Mr. Justice Frankfurter. See CONGRESSIONAL RECORD, April 15, 1940, at 4535; April 18, 1940, at 4733.

Mr. WALTER made the same statement with reference to Mr. Louis G. Caldwell, the former chairman of the Special Committee on Administrative Law of the American Bar Association, despite the fact that Mr. Caldwell is publicly on record as opposed to the bill. See Appendix of the CONGRESSIONAL RECORD, p. 2122.

Mr. WALTER'S irresponsibility of statement in this debate is almost beyond belief. Twice we find him stating that the bill and the work of the American Bar Association with reference to administrative law originated in 1932. See CONGRESSIONAL RECORD, April 15, 1940, at 4535; April 17, 1940, at 4655. The statements were made to call the House's attention "to the fact that this bill was proposed in 1932, before there was anything known as the New Deal," a statement that carried currency with other Members of the House. Cf. e. g., Mr. CREAL in CONGRESSIONAL RECORD, Apr. 17, 1940, at 4662. Actually the special committee on administrative law of the American Bar Association was created in May of 1933. See 58 A. B. A. Rep. (1933), 407. The Walter-Logan bill in anything like its present form saw the light of day in 1937. See 62 A. B. A. Rep. (1937), 789. Again Mr. WALTER stated that the bill had the endorsement of every bar association in America, "except one, and that is the Lawyers' Guild." See CONGRESSIONAL RECORD, Apr. 18, 1940, at 4738. The printed record of Mr. WALTER'S own subcommittee contains the unanimous report of the committees on administrative law and on Federal legislation of the Association of the Bar of the City of New York disapproving of the bill. See hearings on H. R. 4236, 76th Cong., 1st sess. (1939), 124. Misstatements of this character, in which the debate abounds amply, justify the following statement of former Chairman Caldwell: "Notwithstanding these obvious defects in the bill, its proponents are making the most astounding claims, and bar associations throughout the country (including the American Bar Association) have endorsed the bill, apparently, on the basis of the claims rather than its actual contents. Among the claims that are frequently heard are that the bill is aimed against the prosecutor-judge combination, that it cures administrative absolutism, that it provides an opportunity for hearing where none is now available, that it curbs the agencies, and other extravagant assertions. So far as the quasi-judicial functions of agencies are concerned, it would appear that, on the contrary, none of these claims is well founded. With minor exceptions, it is difficult to know just what agencies and what quasi-judicial functions are reached by the bill that are not already equipped with at least equal and usually superior machinery." Appendix of the CONGRESSIONAL RECORD, p. 2123.

[10] In 1936 the committee's resolutions in behalf of a Federal administrative court were opposed by the Federal Bar Association, the Customs Bar Association, the patent and trade-mark section of the American Bar Association, and the committee on Federal taxation of the American Bar Association. 61 A. B. A. Rep. (1936) 221, 225, 233, 234. A compromise resolution referring the matter back to the committee but expressing general approval of its endeavors was adopted. Id. at 235. At the midwinter meeting of the house of delegates of the American Bar Association in 1937, the committee with the assent of the board of governors offered a resolution authorizing it to prepare a bill to establish a Federal administrative court and to have it introduced in Congress but with the curious proviso "that for the present at least such bill shall be without the official approval of the American Bar Association, the house of delegates, or the committee on administrative law." Id. at 1042. A substitute resolution was, however, adopted authorizing the committee to draft a bill for presentation to the summer meeting. Both a report and a draft of a bill were prepared. These threw over the proposal for an administrative court and suggested instead a draft embodying the outlines of the present Walter-Logan bill. Id. at 789. The draft was referred back to the committee after the association's summer meeting by

the so-called Walter-Logan bill [11]—now pending before Congress.[12] Ordinarily a detailed examination of a bill is only a matter of limited concern. But this, a bill purporting to be the fruit of years of work by a learned and nonpolitical organization and avowedly covering a vast area of administrative action, deserves more than mere cursory or casual treatment.[13] Indeed, one would hope that here at last a real effort is being made to deal with the soft spots of the administrative process, and that principles for the direction of its evolution have here been carved out. So one needs no excuse to turn to this bill as illustrating the truly crucial issues of administrative law.

Perhaps the way to begin an examination of any bill is to follow the technique suggested by the King of Hearts in Alice in Wonderland; that is, to begin at the beginning and go on until you come to the end and then stop. But this method proves quite useless for our purpose. If we begin at the beginning—the title to the bill—we learn that it is "to provide for the more expeditious settlement of disputes with the United States and for other purposes." Unless the phrase "for other purposes" conceals something of real moment, I assume that the real crucial issues of administrative law, that lurk beneath such phrases as "bureaucracy" and "absolutism," do not center about the theme of expedition, which Webster tells me is synonymous with ideas such as promptness, haste, and dispatch.[14] Surely the present outcry is not one against the want of speed and haste; nor will the antiabsolutist, or absolutionist, as the most vociferous purveyor of that phrase has recently amended it,[15] be satisfied merely with the introduction of further haste and hurry.

The King of Hearts' method having failed, we might try to reverse the process and begin at the end. This, indeed, seems to look quite promising, for the very last subsection eliminates from the operation of the bill numerous administrative agencies. Whatever the provisions of the bill may be, then its general program of reform has no extension to this catalog of exempted agencies. Why, the natural inquiry is, should this be so? Several obvious answers come to mind. One is that the antiabsolutist principles of the bill may need no application to this group of agencies because their procedures already contain the kind of safeguards that the bill seeks to impose upon the others. Another may be that we know so little about the workings of these excluded agencies that it might be best to let them go—to use a nautical analogy—upon their shake-down cruises before we start to redesign their procedures. A third—a rather ugly one—is that political considerations of the type from which the scholarly approach should be immune may have dictated these exemptions.

To examine these hypotheses as to the principle of inclusion and exclusion that governed the writing of this section, it is best to turn to the category of the agencies that are exempted. They include the conduct of military and naval operations and courts martial—presumably a group of cases where traditionally different principles for the administration of justice have almost immemorably held sway and where a measure of absolutism, even in times of peace, has always prevailed. This exemption one can readily understand, but as I go on with the list, I find the catalog continues as follows: The Federal Reserve Board, the Comptroller of Currency, the Federal Deposit Insurance Corporation, the Federal Trade Commission, the Interstate Commerce Commission, the Department of State, certain aspects of the Department of Justice, matters relating to the internal revenue, customs, patent, trade-mark, copyright, or longshoremen and harbor-workers laws, or any case where a party has been denied a loan or an agricultural grading service, or has failed to receive appointment or employment by an administrative agency.[16] As one surveys that list, the natural inquiry is, What intelligible principle underlies it?

Perhaps the principle is in part the theory that the controversies determined by these agencies are not appropriate to general procedural treatment and judicial review. That is certainly true of the case specified of a party who has failed to receive appointment or employment from the agency to which he may have applied. But consider the case of the party who fails to receive an administrative promotion or reclassification of the type to which he claims he is entitled under the applicable rules governing promotions, wage scales, and the like. Certainly, unless every traditional canon of statutory interpretation is to be thrown into the discard, here is a matter not upon the excluded list and subject to the mechanisms for administrative and judicial review provided for by the other sections of the bill.[17] A controversy over a refusal to employ is therefore not justiciable; a controversy over a refusal to continue employment or to promote would seem otherwise. But, I wonder to myself, can I fairly draw this concept from the bill—for I suddenly begin to realize that my young man who is denied his promotion fares differently depending upon the agency with which he is associated. The Federal Trade Commission, for example, and the Securities and Exchange Commission, are identically organized so far as regulations promulgated by the Civil Service Commission affect their employees. Yet the former is an exempted agency whereas the latter falls within the provisions of the bill. The result of this, of course, is that the failure of an employee in the former to get an administrative promotion gives rise to no justiciable matter, whereas the same controversy in the latter agency brings into operation all the other machinery of the bill providing for administrative and judicial review. This, I feel sure, even Alice would regard as somewhat queer and, perhaps, comment upon it in severer terms.

But let us throw this illustration aside as being one of those casual oversights in draftsmanship that characterize even the best of legislative ideas. Perhaps some exemptions are truly dictated by the principle that the administrative determinations are not rightly justiciable in character, or, if they are, that adequate and appropriate means for their review has already been provided. To test this thesis, we might take the exemption provided for the Department of State. Toward the close of the last decade the program of the Lucy Stoners met little sympathy at the hands of that venerable Department. The customary action pursued by the Department of State in those days was to deny a passport to such married women as insisted upon refusing to take the name of their husbands. To the individual the denial of a passport may be a truly serious matter, not involving merely the privilege of a pleasant summer but going to matters that strike at the opportunity to pursue one's living or the dictates of one's heart. Should this type of administrative action be the subject of judicial review, and, if it should be, is there now adequate provision for such review? The question raised by the Lucy Stoners is obviously one of law and not of fact. It would seem as definitely capable of judicial review as questions relating to the exclusion or deportation of aliens. But it is almost impossible to say today how that question would be raised in court, even if it could be so raised.[18] Yet the bill excludes any consideration of what appropriate action could be taken with reference to this by its blanket exemption of the Department involved.

Perhaps, however, the bill, though failing to include some administrative actions that should rightly be made the subject of judicial determination, at least does not include those where for very definite reasons final action is left with the department concerned. Suppose we test this hypothesis by turning to the Board of Veterans' Appeals. This Board is the important appellate branch of the Veterans' Administration that handles annually some 42,000 cases. Except with reference to claims arising under insurance contracts—a minor category of the cases involved—the decisions of this Board were made final.[19] Some principle, other than a mere desire to be arbitrary, must presumably have underlain this congressional determination. But since the Veterans' Administration is a nonexempted agency, it follows that all these 42,000 cases are now opened up for judicial scrutiny. I confess, therefore, to not being particularly surprised when I read the statement of the Administrator of that agency that "the proposed legislation would not only prove to be an expensive practice from the standpoint of the Veterans' Administration but would materially interfere with prompt and efficient administration of benefits."[20]

Perhaps, here again we have another mere oversight even though its effects are rather weighty, dealing as it does with almost a quarter of the administrative business of the Federal Government. So we might try again to test this hypothesis by reference to an

---

a motion which, however, approved the principles of the report and the contents of the bill subject to such later approval as might be given it by the board of governors. Id. at 290. That approval was later given and the bill was introduced in Congress. 63 A. B. A. Rep. (1938) 334. That bill, however, was still not accepted by the house of delegates at its annual meeting in 1938. It again referred the bill back to the committee. Id. at 156. The committee once more reported the draft bill with minor changes to the house of delegates at its January meeting in 1939 and this time secured the approval of the house. Id. at 518. See also (1939) 25 A. B. A. J. 93–102.

[11] The bill was introduced in the Senate as S. 915 and in the House of Representatives as H. R. 4236, 76th Cong. In the House it has since become H. R. 6324. As such by a renumbering of sections and the addition of definitions it corrects in part the patently poor draftsmanship of the American Bar Association committee's bill.

[12] Since this lecture was delivered the bill passed the House of Representatives by a vote of 282 to 97. See CONGRESSIONAL RECORD, April 18, 1940.

[13] The fact that the bill had the sponsorship of the American Bar Association, a nonpolitical and learned association, was relied upon greatly during the House debate. See CONGRESSIONAL RECORD, April 16, 1940, at 4591, 4592, 4598; April 17, 1940, at 4668.

[14] That the title of the bill is a misnomer is substantially admitted both by the reports of the special committee of the American Bar Association on administrative law and sponsors of the bill in the Congress, for both agree that delay may be entailed by its provisions, however justifying that delay by the better dispositions that would thereby result. Some query, however, naturally attends attaching a misleading title to a bill.

[15] See McGuire, Opposition to the Administrative Law Bill (1939), 23 J. Am. Jud. Soc. 143, quoted from Lane and Blair-Smith, The S. E. C. and the Expeditious Settlement of Disputes (1940), 34 Ill. L. Rev. 699.

[16] The list of exemptions in H. R. 6324 differs somewhat from that in the draft of the American Bar Association and that differs again from the bill as it passed the House of Representatives.

[17] Mr. WALTER made the statement in the House that the words applying to the failure to receive appointment or employment would also cover the cases of failures to receive promotions. (See CONGRESSIONAL RECORD, April 17, 1940, at 4657.) But every traditional principle of statutory construction would exclude such an interpretation.

[18] *Cf. Perkins* v. *Elg* (307 U. S. 325 (1939)).

[19] See 44 Stat. 828 (1926), 38 U. S. C. sec. 620 (1934). *Cf. United States* v. *Williams* (278 U. S. 255 (1929)).

[20] Hearings on H. R. 4236, 76th Cong., 1st sess. (1939), 114.

important and well-known administrative tribunal, the Federal Communications Commission. Congress by statute has vested in the Court of Appeals for the District of Columbia exclusive jurisdiction of appeals from the Communications Commission in regard to the grant or denial of licenses to construct or operate radio stations.[21] The purpose of thus centralizing review over actions always national in their scope and involving a consideration of the interrelation of other claimants in one integrated system of radio network seems obvious. But this centralization of appellate jurisdiction falls before the provisions of the association bill, which scatters this review among the 11 circuit courts of appeals. To pass upon the wisdom of such a change is not within my competence, but it seems fair to ask for some articulation of the reasons that may have dictated it.

The principle of exemption hardly rests then upon a distinction between justiciable and nonjusticiable controversies. It may rest, however, upon the adequacy of existing procedures for judicial review provided elsewhere. To test this hypothesis we might examine further the administrative powers of the Department of State as we have before. But, in order not to be partial, let us turn to the Comptroller of the Currency. A rigid examination of the national banks is constantly being conducted under the supervision of the Comptroller's office. These reports, which reflect the condition and the operations of a bank, are not made public. They furnish the basis, however, for criticism by the Comptroller of the bank's practices. Banks are required to conform to the Comptroller's suggestions. A sanction that the Comptroller possesses to enforce his suggestions is his power to make public the report of the bank's condition. Such a power is an enormous power, for the publication of this report by undermining public confidence may destroy the bank. When one turns to the statutes to discover what judicial restraint, if any, there exists upon the exercise of this truly significant power, the statutes as they stand are silent.[22] Neither court, manner, nor scope or review is mentioned, and a genuine doubt exists as to whether any review can be had anywhere. Yet here the bill is also silent, thus hardly leaving a basis for inferring that the principle of its exemptions rests upon the adequacy and clarity of the existing procedures for review.

That this principle does not govern the carving out of the area to which the bill is applicable is apparent when one examines the exemption that it blandly affords to the Interstate Commerce Commission. The original Interstate Commerce Act was signally deficient in providing for the manner in which the various orders of the Commission were to be subjected to judicial supervision. The method of review by a bill for an injunction in a Federal district court developed outside the confines of the act. The abuse of judicial powers in this connection led, after the unhappy experience of a commerce court, to the present three-judge statutory court with direct review to the Supreme Court of the United States. The institution works well enough in actual practice because in its major outlines it resembles the prevailing type of review now provided by statute for appeals to the circuit courts of appeals from the various independent statutory agencies, with the difference that a review by right and not by grace is provided in the Supreme Court. What virtues the three-judge statutory court device possesses over the prevailing type of review in a circuit court of appeals has always puzzled me. The existing device possesses the obvious defect of calling district and circuit judges away from their district work in order to constitute an ad hoc circuit court of appeals. It maintains the anomaly of a review by right in the Supreme Court where only a review by certiorari is provided over comparably significant orders of the Securities and Exchange Commission and the National Labor Relations Board. As one surveys this institution, clearly the consequence of historical accident, there could be a justifiable inclination to make judicial review over the Interstate Commerce Commission synchronize with the prevailing characteristics that pertain to judicial review over the orders of comparable independent agencies. But this patent anomaly remains untouched.

The search for principle thus tends to fade as one examines the scope of this exempting section. Instead not only are old anomalies preserved but new and truly curious ones are created. What, then, is the principle that underlies the patterning of the area of operation of this proposed legislation? Some suggestive ideas may be developed from cataloging some of the major administrative agencies to which it applies. These are the Securities and Exchange Commission, the Federal Power Commission, the Communications Commission, the Federal Security Agency, the Secretary of Agriculture, particularly in connection with his work under the Commodity Exchange Act, the Packers and Stockyards Act, the Food, Drug, and Cosmetics Act, the Agricultural Adjustment Act, and the Agricultural Marketing Agreements Act, the Wage and Hour Division of the Department of Labor, the National Labor Relations Board; need I go further to indicate just why the threat of absolutism is deemed to be found in these newer administrative agencies and not in the older ones?[23] Motifs in symphonic movements are more frequently carried by the sinuous thrilling of the violins than by the blaring of the brass.

It is clear that no one can defend today our variegated scheme for judicial review of administrative action, sometimes invoked by appeal directly to the circuit courts of appeals and by way of grace to the Supreme Court, sometimes by bills for injunction before a three-judge statutory court and then by way of right to the Supreme Court, again by a bill for an injunction before a single district judge, then to the circuit court of appeals, then by way of grace to the superior court, or the variation of this latter scheme by writ of habeas corpus, by criminal indictment, or mandamus.[24] To remold this scheme, to preserve the variations where reason calls for them, is one thing. But to assume that the suggestions advanced come even close to this goal is to confuse promise with fact.

The suggestions, however, seem to do worse than heretofore surmised. With regard to the agencies to which they are applicable, they follow, it is true, the prevailing method of review in the circuit court of appeals upon the record made before the agency below. But at the same time specific provision is made for maintaining simultaneously the existing procedures for review, whatever they may be, both as to forum, manner, and scope. Instead of one complicated system for review, a second system is now added. Nothing archaic or confusing is swept away; no old learning as to the tricks of appellate practice is jettisoned. Instead, a new, coordinate system is introduced. This truly amazes.

What, in general, is that system? To discover it we shall follow our initial practice of reading from end to beginning rather than beginning to end. The court of review is well defined—a choice being possible between the Court of Appeals of the District of Columbia and the appropriate circuit court of appeals. But two other questions remain: (1) The actions subject to review, and (2) the scope of that review.

First, as to the actions made subject to judicial review: The traditional type of administrative action subject to judicial review is normally described in existing statutes as an "order." Judicial interpretation has by now fairly definitely confined its meaning to the final adjudicative mandate of the administrative agency, so as to prevent both cost and delay by reviewing an administrative proceeding piecemeal. Occasionally some difficulty has arisen with reference to the content of the term "order," as was true of so-called valuation orders of the Interstate Commerce Commission[25] or so-called certification orders of the National Labor Relations Board,[26] and of so-called negative orders until the recent decision of the Supreme Court in the Rochester case.[27]

These difficulties, if one can judge by the reported cases, have proved far less an obstacle than those surrounding the term "final judgment," which still remains the test for judicial review by the Supreme Court of the actions of the inferior Federal courts and the State courts. But this known, catalyzing concept of "order" is thrown aside by the new proposal for the concept of "decision,"[28] which is defined as "any affirmative or negative decision, order, or act in specific controversies which determine the issues therein

---

[21] 48 Stat. 1093, 47 U. S. C. sec. 402 (1934).

[22] 48 Stat. 192 (1933), 12 U. S. C. sec. 481 (1934).

[23] Singularly outspoken on this question was Congressman Cox, of Georgia, one of the chief proponents of the legislation. Compare the following colloquy on Mr. FORD's attempted effort by amendment to add the National Labor Relations Board and the Wage and Hour Division of the Labor Department to the list of exempted agencies:

"Mr. Cox. Mr. Chairman, I rise to say for the benefit of the gentleman from California [Mr. THOMAS F. FORD] that these are the two agencies which are most responsible for the pending bill.

"Mr. THOMAS F. FORD. And for which this bill was framed to cripple.

"Mr. Cox. And ought to get." CONGRESSIONAL RECORD, April 18, 1940, at 4732. Considerations of this character have their place in legislative assemblies but hardly in bar associations. Yet the explanations of the Special Committee on Administrative Law of the American Bar Association hardly give one comfort that other than logrolling dictated the framing of this section. Thus, it reports that "the proposed exclusion of internal revenue, customs, patents, trade-mark and copyright matters from the entire act is in keeping with an agreement reached at Kansas City and again at Cleveland with the association's committees on taxation and on customs and the section on patents, etc.," and that "Indian-land matters have been excluded due to requests on behalf of some members of the Oklahoma Bar." 63 A. B. A. Rep. (1938) 620. Of the conduct of the association in this connection Mr. L. G. Caldwell, the former chairman of the Special Committee on Administrative Law, says: "Most of them [the exceptions] are due simply to the fact that at the Kansas City meeting of the American Bar Association in 1937, all Federal agencies which had representatives at the meeting and which protested loudly enough were included in the list of exemptions as approved by the association. One independent agency, the Federal Trade Commission, secured its exemption by a similar process after the bill had been introduced in Congress." Appendix of the CONGRESSIONAL RECORD, p. 2224.

[24] See generally McAllister, Statutory Roads to Review of Federal Administrative Orders (1940), 28 Calif. L. Rev. 129.

[27] *Rochester Tel. Corporation* v. *United States*, 307 U. S. 125 (1939).

[28] The term "decision" is to be found in the Communications Act of 1934, 48 Stat. 1093, 47 U. S. C. § 402 (1934), but the context there makes plain its meaning as contrasted with its use in the proposed bill.

involved." True, there must be a final decision, but the introduction of such a new concept is inexplicable save upon the supposition that its intention is to broaden the scope of administrative acts that shall be subject to judicial review. A decision by the administrator of a resettlement project denying a particular tenant a renewal of his lease is not an order. Is it a decision by nature amenable to judicial review? A refusal of the Securities and Exchange Commission to amend a regulation so as to exempt a particular type of holding company from the operation of one or more provisions of the Public Utility Holding Company Act is certainly not an order, but is it a decision? A refusal by the National Labor Relations Board to institute a particular proceeding upon the complaint of a discharged employee is not an order. It may, however, be a decision. These illustrations suffice to show the nebulous character of the concept and the danger it involves of departing from that stern admonition of Mr. Justice Stone that "courts are not the only agency of government that must be assumed to have capacity to govern."[29] Indeed, to inject the courts into a host of controversies either petty in character or unamenable to judicial determination is to run afoul of traditional concepts of judicial power and to endanger the dignity and efficacy of the judicial process itself.

I pass to the second question as to the scope of judicial review. Normally the scope of judicial review over administrative action is limited to questions of law and to whether or not the findings of fact underlying the administrative conclusion are based upon substantial evidence. This rule—the substantial-evidence rule—is not of legislative origin, despite its inclusion in the more recent statutes dealing with judicial review.[30] Its creation was, rather, the work of the judiciary. One can trace its evolution in the deportation cases, in the Interstate Commerce Act cases, in the early cases reviewing the actions of the Secretary of War in connection with his jurisdiction over bridges and purprestures. It evolved naturally as an appreciation arose of the undesirability of trying cases de novo in the courts and of the value of having the tribunal, informed by experience, assume a real responsibility for weighing and considering the facts in the fields where it had a peculiar competence.

Under the proposed legislation administrative orders are to be set aside in this connection upon two grounds: (1) That the findings of fact are clearly erroneous or (2) that the findings of fact are not supported by substantial evidence. A difficulty of interpretation immediately arises in this connection. Is there any difference between findings of fact being clearly erroneous and findings of fact not being supported by substantial evidence? At first glance, it would seem difficult to think of a finding of fact being clearly erroneous if there was substantial evidence to support it. But this view would eliminate the whole content of the first standard, and it is a well-known rule of statutory construction that redundancy is not to be imputed to the legislator. One possible differentiation is to regard a finding as being clearly erroneous, even though there is substantial evidence to support it, because the reviewing court does not consider that the substantial evidence is credible. If one accepts this view—and it is the only alternative to redundancy that seems perceptible—the result would in substance make for independent judicial determination of the facts.[31] That is an end devoutly sought by many members of the bar, particularly those whose distrust of the administrative process in its newer fields is deep and intense. If that be the result of this proposal, it is, perhaps, the most important innovation in the bill.

There are a very few situations now in existence where, as a result of constitutional considerations, independent judicial determinations of fact are required. I have had occasion before to comment upon the judicial constructions and attitude that evolved this doctrine, and I have also had the temerity to prophesy that a reversal of that doctrine will occur the next time the Supreme Court has an opportunity to consider it.[32] I need not repeat those comments here. But the implications of such a rule generally applied are large in regard both to the issue of expedition and the place to be accorded to the administrative process as a whole. Upon the question of expedition, I need refer only to the operation of the rule of independent judicial determination of fact in the field of rate regulation as sketched by Mr. Justice Brandeis in his concurring opinion in the St. Joseph Stock Yards case.[33] He detailed there at length its effects in expanding the size of records, in increasing the opportunities for delay, in piling up costs and effort. "Congress," he protested, "concluded that a wealthy and litigious utility might practically nullify rate regulation if the correctness of findings by the regulating body of the facts as to value and income were made subject to judicial review. For that conclusion experience," he added, "affords ample basis."[34] What the rule has done in the way of making for delay in those few fields in which it is operative is now a matter of history; that it would promote the same delay elsewhere is not only foreseeable, but certain.

But the implications of the adoption of such a rule strike far deeper than the issue of expedition. They strike at the very heart of the administrative process itself. For the creation of the administrative has been responsive to the desire for expertness both in the development of policy and the sifting of the underlying facts upon which the shaping of policy must rest. To subject this fact finding again to independent judicial determination is to make pointless the process itself. Arbitrariness no one can defend; but against arbitrariness of judge, jury, or administrator, the substantial evidence rule is ample bulwark. To press further and to impose not only a vast new duty of judicial review over administrative decisions and over administrative fact finding is, to use the words of Mr. Justice Frankfurter, "to disregard the origin and purposes of the movement for administrative regulation and at the same time to disregard the traditional scope, however far-reaching, of the judicial process."[35]

I pass the other stated grounds for judicial review, for, in the main, with the exception of the last residuary bequest to the judiciary that it shall reverse an administrative decision if it "is otherwise contrary to law"—a completely unknowable command—they represent standards now in effect. So still reading backward over the bill, I come to its provisions concerning the manner in which matters should be heard within the administrative agency itself. Here, perhaps, lies the core of what should be our concern with the administrative process. Fair and adequate disposition down below is, perhaps, more important that adequate supervision from above. Just as the capacity of our judicial system to administer justice is better tested by the work of its nisi prius judges than by the doctrine hewn out by many and expensive appeals, the capacity of our administrative system is best tested by the ways that it provides for the doing of justice within itself.

Two types of administrative procedure are provided by the bill, one for the single-headed administrative agency such as the Department of Agriculture or the Department of Labor, the other for the multiheaded agency such as the various independent regulatory commissions. Just why one type of procedure is the ideal type for an administrative agency headed by a board of three or more and another type is the ideal type for an agency headed by one administrator, is somewhat of a puzzle, but let us pass that to consider the type suggested for the single-headed agency. The purpose of prescribing adequate procedure for the initial stages of a controversy is obvious, but the test of any mechanism of procedure lies in whether it secures its objectives of fair, adequate, and prompt consideration of the matters involved.

The suggested mechanism requires the creation within the single-headed agency of an intra-agency board of three individuals of whom one, at least, shall be a lawyer and its chairman. It then provides that when any person is aggrieved by a decision of any officer or employee of that agency, a complaint may be made to this board which shall then conduct a full and fair hearing as to the matters involved. Perhaps, it is best to stop at this point and examine the bearing of this simple device. Again, one notes here the use of the term "decision," thereby admitting reference of matters not heretofore believed within the justiciable class to judicial methods of determination. The refusal to promulgate a rule, the refusal to render advice with reference to the meaning of a statute, indeed the refusal to make an appointment with a complainant at a particular time and place, all may fall within that concept of decision and thus call into operation this intra-agency reviewing board. It is important to note, moreover, that the use of the term "final decision" is carefully avoided, thus permitting endless prolongation of any contested controversy by resort to this internal administrative review at every point where decision is involved. Interlocutory administrative review is both clearly envisaged and encouraged, and this under the guise of seeking to promote "expedition."

But, perhaps, more serious than this is the misconception of the working of the administrative process embodied in this suggestion. It is patent that underlying the conception of the creation of the intra-agency boards of review is the conception that significant decisions are made by officers or employees. The reverse, however, is generally true. The deportation procedure long established in the Department of Labor will suffice to illustrate this point. Upon information and belief a warrant is issued by the Secretary or Assistant Secretary of Labor charging that the alien is deportable upon specified statutory grounds. The apprehended alien is then held or released on bail or on his own recognizance, pending examination upon a rule to show cause why he should not be deported. Thus far no decision other than the initial tentative issuance of the warrant by the head of the Department has been made by any officer or employee. The examination is then conducted before a local immigration inspector, who transmits the stenographic record of the examination with or without his own comments to the central office in Washington. Opportunity for representation of counsel together with the right to cross-examine and adduce witnesses has generally been accorded the alien upon

[29] Dissenting in *United States* v. *Butler*, 297 U. S. 1, 87 (1936).

[30] For a collection of statutes embodying this rule, see McAllister, Administrative Adjudication and Judicial Review (1940), 34 Ill. L. Rev. 680, 691, n. 35.

[31] This is the view taken by the minority of the committee. See H. Rept. 1149, pt. 2, 76th Cong., 3d Sess. (1940), 11. The majority makes no mention of its understanding of the phrase. The American Bar Association's special committee justifies its use of this phraseology by reference to Rule 52 of the New Federal Rules, but still gives no hint as to the purpose for including this standard in addition to the substantial-evidence standard. See 63 A. B. A. Rep. (1938) 612.

[32] See Landis, The Administrative Process (1938) 141. Cf. *South Chicago Coal & Dock Co.* v. *Bassett*, 60 Sup. Ct. 544 (Feb. 26, 1940).

[33] *St. Joseph Stock Yards Co.* v. *United States*, 298 U. S. 38, 73 (1936).

[34] Id. at 93.

[35] *F. C. C.* v. *Pottsville Broadcasting Co.*, 60 Sup. Ct. 437, 442 (Jan. 29, 1940). The particular expression quoted is used in another connection, but the thought is apposite.

the original examination.[36] Thus far, however, no decision has been made by any officer or employee of the Department. The central office, upon this record, may suggest that further testimony be taken and thus remand the case to the local office for further hearing. Otherwise it is forwarded to the Board of Review. Thus far again no decision has emanated from any officer or employee of the Department. At this stage a second hearing is held before the Board of Review, the alien or his representative being entitled to inspect the record complete with the comments thereon that may have been made up to then. The Board of Review, after hearing the case, reports its observations upon the matter to the Assistant Secretary of Labor in charge of the Immigration Laws. Still no decision has been made by an officer or employee of the Department. The Assistant Secretary of Labor, if he then is convinced that a ground for deportation exists, issues an order for the execution of the warrant, and thus for the first time a decision has been made by an officer or employee of the Department.[37] Here then is the first moment where the operation of the mechanism for an intra-agency board would come into play.

We can then trace the operation of the new proposal at the instance of the complaining alien. Once more the case goes to an intra-agency board. Written findings and a decision are then made and these in turn are subject once more to the approval, modification, or disapproval of the head of the agency, the Assistant Secretary of Labor. The fundamental misconception of the bill is patent as one describes this process, for now two intra-agency or administrative appeals, coordinate in quality, have been introduced in a system that already provides for one. Not expedition but delay has been the result.

This procedure of the Department of Labor is not unique. It is characteristic of a great portion of the whole Federal administrative process that "decisions," except the minor ones—to call this witness and not that, to postpone this hearing for a day, to exclude this or that evidence—are not made by officers or employees but by the head of the agency involved after a long preliminary process that provides prior administrative revision but not prior administrative adjudication. This procedure, for example, is characteristic of that which prevails in the Department of Agriculture as regards the regulatory function of the Secretary under such acts as the Packers and Stockyards Act and the Commodities Exchange Act. It is the procedure that was pointedly outlined to the bar by the Supreme Court of the United States only recently in the first two Morgan cases.[38] And yet it has been fundamentally misconceived by the proponents of administrative reform with the curious results that have just been described. Reform of the internal administrative procedure is one thing; but the road of reform is hardly to leave it as it is and superimpose upon it one further hierarchy of internal administrative appeals.

It is impossible for me to complete my project of beginning at the end and ending at the beginning of this proposal and seeing what principles it evolves for administrative reform. I am afraid that the search for them would continue as elusive and as surprising as that already made. Instead, it might be worth while to sketch in brief a general blueprint of the manner in which a search for those principles might be made.

Clearly two general problems stand out in considering the general question of administrative reform. The first relates to the internal procedure of the administrative both as regards its exercise of its rule-making power and its exercise of its adjudicatory power. The second problem concerns the relationship of the administrative to the other three departments of Government. I say three advisedly, for I think that lawyers, merely because they are lawyers, tend to concentrate only upon the relationship of the administrative to the judiciary, believing that the proper solution of that problem will bring an end to all ills. But it is clear that the relationships of the administrative to the executive and to the legislative are at least of equal importance, for policy and supply derive directly from the legislature, and personnel, with all that that implies, together with a modicum of policy, are the content of the administrative-executive relationship. Furthermore, these relationships tie in with each other, for modification that may outwardly seem merely procedural in character may have profound and unanticipated effects because of its alteration of these basic relationships.

Consider, for example, the common suggestion made that the prosecuting and adjudicating functions of the administrative should be divorced from each other and placed under different heads.[39] This idea stems naturally from the judicial system with its district attorney and the court. But the analogy applied to the administrative mechanism, because of its alteration of the relationship between the administrative and the executive, carries implications not present in the judicial system. There the prosecuting attorney, save in a negligible number of States, is avowedly a political official. If elected he runs upon a political platform; if appointed he changes with every change in the political fortunes of his master. Why we tolerate and thrive under such a system, I leave to the political scientist to answer. But to introduce that system into certain branches of the administrative, even at the assumed gain of divorcing prosecution from adjudication, gives one some pause and leads to the inquiry as to whether internal systems for that divorcement cannot be devised which will leave unchanged the relationship between the administrative and the executive.

The problems surrounding the relationship of the administrative to the executive and the legislature are far more difficult to grasp and define than those affecting its relationship to the judiciary. This latter relationship breaks down upon analysis into three issues: (1) The problem of the category of administrative acts that should be subject to judicial review; (2) the manner for invoking that review; and (3) the scope of that review. Historic and traditional concepts of judicial power help to answer the first; considerations of expediency tend to dictate the manner of review; and considerations that have reference to the relative expertness of administrator and judge should govern the scope of review.[40]

With these considerations in mind, a survey of the operations of the administrative process should be undertaken. Where and how and in what manner are those general canons departed from? Such a survey would have merit; arbitrarily excluding older agencies because of vested interests in the procedures they have evolved and turning the blunderbuss upon the new, as the existing proposal does, has none. In such a fashion and only in such a fashion will the problem of adequately molding this relationship ever come about.

The other major problem of the internal procedures of the administrative with regard to its rule-making and adjudicatory powers is far more difficult of analysis. Procedure tends frequently to blend itself with substance. Errors of substance, when exposed, tend to blacken the whole procedural mechanism from which they emanated. For example, critics of the decision of the National Labor Relations Board in the Fansteel case[41] quite generally attribute that result to administrative procedures when at most it was an error of law of the type that judge after judge in the lower courts makes daily without bringing the judicial procedures into disrepute. Any true consideration of internal administrative procedure must divorce the substantive result from the manner in which it was arrived at, and do so conscientiously and without bias.[42]

But when we come to a consideration of the principles that should govern administrative procedure, we find only vague generalities. "Full and fair hearing" is a common phrase and yet its content is not easy to define. The Supreme Court of the United States in the Morgan cases and in the Mackay Radio case[43] enunciated certain conceptions which have affected internal administrative procedure greatly, but which in their application to certain situations not envisaged by the Court have left the circuit courts of appeals in considerable confusion.[44] How much help may the administrator employ in studying the record? How safeguard him and his staff from going beyond the record? What staffs may he employ in that connection? What decisions may he delegate? None of these questions, for example, are yet answerable. Nor is the slow process of litigation the method for answering them, for the judicial answer that evolves out of the litigious process is limited to insisting upon the minimum requirements of fair procedure whereas the goal should be the maximum requirements of fair procedure consistent with the efficient discharge of administrative responsibility.

---

[36] The question as to the extent to which the right of cross-examination must be accorded the alien is now before the Supreme Court. *Singh* v. *Haff*, 103 F. (2d) 303 (C. C. A. 9th, 1939); cert. granted, 308 U. S. 533 (1939).

[37] See Van Vleck, The Administrative Control of Aliens (1932) 83.

[38] *Morgan* v. *United States*, 298 U. S. 468 (1936); *Morgan* v. *United States*, 304 U. S. 1 (1938).

[39] This problem, which has been conceived by many as the central problem of administrative law, is only casually dealt with by the Walter-Logan bill.

[40] "The determination of utility rates—what may fairly be exacted from the public and what is adequate to enlist enterprise—does not present questions of an essentially legal nature in the sense that legal education and lawyers' learning afford peculiar competence for their adjustment. These are matters for the application of whatever knowledge economics and finance may bring to the practicalities of business enterprise. The only relevant function of law in dealing with this intersection of government and enterprise is to secure observance of those procedural safeguards in the exercise of legislative powers which are the historic foundations of due process." Mr. Justice Frankfurter concurring in *Driscoll* v. *Edison Light & Power Co.*, 307 U. S. 104, 122 (1939).

[41] *N. L. R. B.* v. *Fansteel Metallurgical Corporation*, 306 U. S. 240 (1939).

[42] In the House debate on the bill, for example, much was made of the fiery language of Mr. Justice Sutherland in *Jones* v. *Securities and Exchange Commission*, 298 U. S. 1 (1936), without recognition of the fact that the quoted language was obiter dictum of a kind subject, according to traditional conceptions of the function of courts, to criticism; without notice of the fact that a vigorous dissent was entered by three justices; and without appreciation of the fact that a slight alteration of circumstance would justify the very practices of the Commission condemned in that case. Cf. *Resources Corporation International* v. *Securities and Exchange Commission*, 97 F. (2d) 788 (C. C. A. 7th, 1938).

[43] *N. L. R. B.* v. *Mackay Radio & Tel. Co.*, 304 U. S. 333 (1938).

[44] Cf. *Eastland Co.* v. *F. C. C.*, 92 F. (2d) 467 (App. D. C. 1937), certiorari denied, 302 U. S. 735 (1937); *N. L. R. B.* v. *Biles-Coleman Lumber Co.*, 98 F. (2d) 16 (C. C. A. 9th, 1938); *N. L. R. B.* v. *Cherry Cotton Mills*, 98 F. (2d) 444 (C. C. A. 5th, 1938); *N. L. R. B.* v. *Am. Potash & C. Corporation*, 98 F. (2d) 488 (C. C. A. 9th, 1938), certiorari denied, 306 U. S. 643 (1939); *Cupples Co. Mfrs.* v. *N. L. R. B.*, 103 F. (2d) 953 (C. C. A. 8th, 1939); *Inland Steel Co.* v. *N. L. R. B.*, 105 F. (2d) 246 (C. C. A. 7th, 1939).

Here is no simple field to which answers can be made by speculation in vacuo or by reasoning from abstract principles derived from one's reactions to the growth of undemocratic governments elsewhere. There is certain to be no simple patent formula in this field. There has proved to be no such formula in the judicial process. Fair procedures governing the trial of a breach of the peace differ from those where the charge is a felony. The variant jurisdictions and procedures of the variant courts in the judicial hierarchies of our States volubly testify to the absence of one single, simple formula. Administrative procedures designed to determine whether or not a public utility holding company should be broken down into integrated operating units are certainly not those that should be brought into play to consider whether a cosmetic has been properly labeled. For both, however, a full and fair hearing should be the tradition of our system, and yet obviously the content of that concept must vary.

How then are answers to be made? Here again there is no solution but the painful device of overhauling critically each phase of the administrative process, made more painful because the very canons that should govern must still in the main be discovered. In some situations the issue to be determined may not be amenable to the customary procedures of judicial determination and thus the criterion of a full and fair hearing requires the discovery of others. Only of one thing can one be certain and that is, that to apply the procustean formula suggested by the association's pending propcsals is to cut off here a foot and there a head, leaving broken and bleeding the processes of administrative law.

The blueprint I sketch, it is true, presents only primarily a scholar's challenge and that challenge will offer no opportunity for ringing speeches against the rise of arbitrary power for the postprandial delight of bar-association audiences. Nor will it furnish a base for fervent denunciations of things as they are by those candidates for public favor who still toy with the hope of making things as they were. But the acceptance of such a challenge seems the only prelude possible to achievement. In 1933 I had the opportunity of watching fairly closely the evolution of a piece of legislation put together with war cries and shouts. No intensive survey had antedated it; no working papers had been consulted so as to delimit the scope of its operation. It, too, was superimposed upon an existing administrative scheme with only fleeting concern given to the problem of its joints. It, too, was shot with exceptions dictated by the happy thought of the moment or the desire not to come to grips with vested interests that it necessarily affected. When in *Schechter Poultry Corporation* v. *United States*,[45] the Supreme Court of the United States declared the National Industrial Recovery Act unconstitutional, it expunged from the statute book an act that was bound to fail of its high purpose because behind it was none of that understanding essential to the effectiveness of reform. It is this need of understanding which must be uppermost. Its want posits the truly crucial problems not only of administrative law but of all measures of law reform. It and it alone offers the royal road to attainment.

House Joint Resolution 509 and House Joint Resolution 519

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

STATEMENT BY HON. HOMER D. ANGELL, OF OREGON

Mr. ANGELL. Mr. Speaker, I recently appeared before the Committee on Merchant Marine and Fisheries, which held hearings on House Joint Resolution 509 and House Joint Resolution 519, introduced by Congressman BUCK, of California. Under unanimous consent to extend and revise my remarks I include my statement before the committee.

STATEMENT BY HON. HOMER D. ANGELL, OF OREGON, BEFORE THE COMMITTEE ON MERCHANT MARINE AND FISHERIES, APRIL 24, 1940

Mr. Chairman and gentlemen of the committee, I thank you for this opportunity to appear before your committee in support of House Joint Resolution 509 and House Joint Resolution 519, introduced by Congressman BUCK, of California.

The district which I represent, the Third District of Oregon, has within it the port of Portland, which is the outlet for intercoastal and foreign shipping through all of the Columbia River territory.

This legislation has for its purpose the suspension of section 510 (g) of the Merchant Marine Act of 1936 during the present European war, which section restricted the use of vessels in the laid-up fleet of the Maritime Commission. It has particular reference to intercoastal shipping from the Pacific coast.

A very serious condition has arisen there by reason of the sale and charter of many vessels which formerly were used in intercoastal trade. The demand for these ships by foreign shippers, growing out of the needs of the European war, has practically robbed the west coast of its shipping facilities. At the present time it takes from 3 to 4 weeks for west-coast shippers to secure shipping space either for east-bound or west-bound cargoes.

One-fifth of the lumber produced in the Northwest goes through Panama Canal, and averages one and one-half million tons annually. Forty-six percent of the softwoods used in lumber production originates in Oregon and Washington, for eastern consumption. Federal records show that one-third of the ships formerly used in this intercoastal industry have either been sold or chartered out of this traffic. As a result, curtailment of production on tidewater mills in the Pacific Northwest has been reduced over one-third, owing to lack of bottoms for handling the intercoastal trade. As a result, it is curtailing production. Indications are that this summer during the building period there will be a very marked advance in building operations, not only in carrying forward the Federal Housing program, but also in various other industrial activities which require considerable quantities of lumber products. The war trade has developed a considerable demand also for lumber. Low-cost housing requires large quantities of lumber products, as low-ccst building utilizes lumber largely for construction. Unless shipping facilities for intercoastal trade are made available, there will be a critical shortage of lumber production, with the failure of quantities with which to carry forward these programs. As a result, not only will mills in the Pacific Northwest be shut down and large numbers of laborers thrown out of employment but various allied industries will be curtailed and building operations generally slowed up, resulting in increasing the unemployment rolls.

One of the large forest-product industries in the Pacific Northwest is the chemical pulp industry, which manufactures high-grade pulp material used in various types of high-grade paper, rayon, plastics, and other similar products. This pulp is made largely from hemlock and waste material from lumber operations, much of which would be entirely lost unless devoted to this or a similar use. From sixty to seventy million dollars are invested in this industry alone in the Pacific Northwest. It manufactures some 800,000 tons per annum, requiring 780,000 man-hours alone to produce the logs. Thirty-five percent of the cargoes originating in this industry are water-borne. Twenty-five thousand tons of shipping space are needed but only 10,000 tons are available under existing conditions. These cargoes all go to the eastern seaboard.

The purpose of this legislation is to lodge in the Maritime Commission sufficient power to make available vessels which, under existing law, are now tied up. They are old, outmoded ships, but could be utilized in this emergency to prevent serious interruption of an essential industry in the Pacific Northwest. Shippers have entire confidence in the effectiveness of the Maritime Commission to meet and solve this situation, if power is given them under proper legislation.

The situation is so critical that it is most essential that immediate action be had so that the House may pass the necessary legislation without delay so it may go to the Senate for action before Congress adjourns.

Philadelphia Raids of the Dies Committee

EXTENSION OF REMARKS

OF

HON. JAMES P. McGRANERY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

STATEMENT FROM CITIZENS OF PENNSYLVANIA

Mr. McGRANERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

The guaranty against "abridging the freedom of speech, or of the press" and the protection from "unreasonable searches and seizures" contained in the Bill of Rights of the United States Constitution, form the basis of freedom and democracy for the American people. Any attack on these principles is an attack on the American people as a whole and strikes at the very foundation of their rights.

The actions of the Dies committee and in particular the conduct of its agents in raiding the headquarters of the Communist Party and the International Workers Order in Philadelphia on April 2 constitute a threat to these rights. Federal agents acted under cover of a State warrant; everyone who entered the offices was held incommunicado till the raid was over; those who were subpœnaed

were not allowed to get in touch with their attorneys; material not mentioned in the warrant was illegally confiscated. The practice of such methods by the very agencies empowered to defend the Constitution aims a double threat at our national security and freedom.

As stanch supporters of democracy, we urge that steps be taken to prevent a recurrence of these invasions of the privacy of American citizens. The President, the Civil Liberties Unit of the Department of Justice, and the House of Representatives should use their powers to terminate such practices.

Federal Farm Loan System

EXTENSION OF REMARKS

OF

HON. GEORGE S. WILLIAMS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

RESOLUTIONS BY THE SUSSEX COUNTY NATIONAL FARM LOAN ASSOCIATION, GEORGETOWN, DEL.

Mr. WILLIAMS of Delaware. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions adopted at a meeting of the board of directors of the Sussex County National Farm Loan Association, held at Georgetown, Del., on April 25, 1940:

Whereas there is now pending in the Congress of the United States a bill, known as the Wheeler-Jones bill (S. 3509; H. R. 8748), under which, inter alia, the cooperative features of our Federal farm-loan system would be abolished and absolute power and control with respect thereto concentrated in the Government; and

Whereas there is now pending in the Congress of the United States another bill, known as the Gillette-Kleberg bill (S. 3480; H. R. 8825), to provide for the establishment of the Farm Credit Administration as an independent agency of the Government, under the direction and control of an independent bipartisan board; and

Whereas the Sussex County National Farm Loan Association of Georgetown, Del., was organized under the Federal Farm Loan Act and has functioned as a part of the present cooperative Federal farm-credit system for a period of 18 years, serving approximately 300 members and Federal farm-loan borrowers in Sussex County, Del.; and

Whereas we believe the best interests of agriculture will be served by preserving, strengthening, and improving the present cooperative Federal farm loan credit system, and by establishing the Farm Credit Administration as an independent agency of the Government; now, therefore, be it

Resolved, That we do hereby oppose the Wheeler-Jones bill (S. 3509; H. R. 8748) in its entirety, and we do hereby request and urge our Senators and Representatives in Congress from Delaware to work against and vote against the enactment of said bill, for the following reasons:

1. We are opposed to this bill because it would abolish the cooperative features of our present Federal farm-loan system and deny the land banks and existing borrowers, as well as future borrowers, through the system, any voice or participation in the control and operation of the system.

2. We are opposed to the centralization of power and control in the Governor of the Farm Credit Administration, as provided for in this bill.

3. We are opposed to this bill because we believe it would establish unsound credit practices.

4. We are opposed to this bill because it would establish a bureaucratic Government lending agency in the place of an independent cooperative credit system we now have.

Further resolved, That we do hereby favor the passage of the Gillette-Kleberg bill (S. 3480; H. R. 8825), to establish the Farm Credit Administration as an independent agency of the Government, under the direction and control of an independent bipartisan board, and we do hereby request and urge our Senators and Representatives in Congress from Delaware to support and vote for said bill.

Further resolved, That the president of this association is hereby directed to forward copies of these resolutions, which the secretary-treasurer is hereby directed to certify, to our Senators and Representatives in Congress from Delaware.

Army Promotion Bill

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

Mr. ANDERSON of Missouri. Mr. Speaker, I have listened with great interest to the debate on the floor of the House this afternoon on the Army promotion bill, H. R. 9243. I am happy to learn that the speakers on both sides of the aisle agree with me that this is an excellent bill and have not offered a single criticism or objection to it.

As you know, H. R. 9243 received the unanimous approval of your Military Affairs Committee. Prior to the acceptance of this bill many solutions to the problem of promotion stagnation were offered, but had to be rejected because of the many elements involved. The experience and labor which went into this bill goes back nearly 20 years. In 1920, when thousands of officers were commissioned in the Regular Army, it became apparent that sooner or later steps would have to be taken to enable these officers to obtain a normal rate of promotion. These officers, who entered the Army between 1917 and 1920 were of approximately the same age. At the present time they number over one-third of all of the officers in the Army. They are junior lieutenant colonels, all of the majors, and the 900 senior captains. It would take many of these captains, who entered the Army at approximately the

same time as the lieutenant colonels, about 14 years to reach the grade of lieutenant colonel. It must be evident to all of you that something must be done to correct this condition. H. R. 9243 is a simple and logical cure. This bill is not offered because of any particular group of officers in the Army or because it merely assists many officers in obtaining additional rank. The bill is primarily to strengthen the national defense.

During the last war the colonels in our Army who were in command of combat regiments averaged 43 years of age. The reports of every nation engaged in that war show very clearly that the only officers who can stand combat conditions are young men. The officers who will lead the troops in the field must be young and vigorous or they cannot stand the constant grind and pressure. Older officers become fatigued and are unable to make the quick decisions so necessary to successful campaigns.

Under the present law, these World War veterans, who are now captains, will be 62 years of age before they become colonels. This is too old. It is very necessary that the officers of our Army be given a normal rate of promotion so that they will have experience in the various grades at an age when they are most suitable for those grades. In time of emergency, some of the young majors may be put in command of regiments; but what experience have those majors had at commanding a regiment? If this bill is passed, the officers of our Army are assured a normal rate of promotion, because they are promoted after a definite number of years' service. At the present time, a second lieutenant is promoted to a first lieutenant after 2 years of service. He is then promoted to a captain after 7 years' service. This bill does not change this, but continues it so that the captain is promoted to a major after 17 years' service; to a lieutenant colonel after 23 years' service; and to a colonel after 28 years' service. The only restriction placed on the number of officers in a grade is that of colonel. Here the limit is set at 705, which is the number of colonels now in the Army. It was necessary to set this limit, because the War Department found it very difficult to find suitable stations for more than that number of colonels.

At the present time some of our officers will not be promoted as rapidly as I have stated, because the bill requires that an officer serve 6 years in the grade of major and 5 years in the grade of lieutenant colonel. This was necessary or some officers would practically skip these grades. If an officer has served an excessive time in a junior grade, he is given credit toward the required service in the higher grade of 1 year for every 2 years he serves in excess of the required time in the junior grade.

On the surface you might assume that promotions in this manner would add greatly to the cost of our Military Establishment. This is not the case, because under the present law an officer's salary does not depend entirely upon his grade but upon his length of service. Under the present law a captain with 17 years' service draws a major's pay and a major with 23 years' service draws a lieutenant colonel's pay. This bill simply promotes these officers when they reach the pay period of the higher grade. For example, the 900 senior captains in our Army today are drawing majors' pay because they have been in the Army over 17 years. Under this bill these officers would become majors and draw the same salary they are drawing today. For the first 4 years the average cost will be about $300,000 and for the next 12 years will save about $2,300,000 a year.

This bill also makes it mandatory for all officers to be retired at the age of 60 except brigadier generals, who are to be retired at 62 and major generals at 64. A provision of the bill authorizes the Secretary of War to retain 5 percent of the colonels until they reach the age of 62. The present law requires all officers to retire at 64. This change was incorporated in the bill for several reasons. In the first place, the Armies of Great Britain, France, and Italy retire their colonels before they reach the age of 60—so such a requirement in this bill is not without precedent. In the second place, every colonel in our Army, who has reached the age of 60, has been jumped one or more times for selection to brigadier general, and at 60 he will not be selected because of his age. In the third place, unless some requirement of this kind is contained in the bill, the grade of colonel will be filled with older and older officers.

I know that all of you will agree with me when I say that this is a fair and just bill. It does not work an undue hardship on any officer. Many of these World War veterans would have very little opportunity for promotion unless a bill of this kind becomes law. Not only the veterans of the World War but all of those officers who entered the Army since 1920 find themselves blocked by the World War "hump" and are faced with years of service in the junior grades. The passage of this bill will relieve this situation and will greatly increase the efficiency of our national defense.

Some Accomplishments and Purposes of the Democratic Party During the Past 8 Years

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 30, 1940

ADDRESS BY HON. W. C. CAUDILL

Mr. FLANNAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Senator W. C. Caudill, of Pearisburg, Va., before the Ninth District Democratic Convention at Bristol, Va., on April 6, 1940:

Ladies, gentlemen, and fellow citizens, I am happy to greet you with good will and personal felicitations, and to remind you of some accomplishments and purposes of the Democratic Party during the past 8 years.

As I speak to you I feel very much like a guide in a museum trying to show to a group of visitors the treasures of the building, but provided with only a small box of matches in the way of light. He would strike a match, hold it for an instant before a picture or a statue or a case of jewels, and then it would flicker out, and another match, in the same feeble way, would provide just the hastiest glimpse of another beautiful and valuable object. So in trying to tell you a little of the theme which is so broad, I can give you only a bare and rather kaleidoscopic introduction.

No man can entirely compass my subject in all its magnitude. I suppose that you will listen to me in the spirit of that small boy in the country who came in and told his mother he had set the old brindle hen on 2 dozen eggs. "Why," she said, "you don't expect her to hatch 2 dozen eggs, do you?" He said, "No; but I just wanted to see the old thing spread herself."

No person should attempt to address an intelligent audience unless he can do at least one of several things. He should be able to (1) impart new information, or (2) rehearse that which is already known, or (3) stimulate thought by asking questions, or (4) bore his audience until they take a good nap and be wide awake to appreciate the next speaker they hear.

It is at least with the hope of doing the latter that I bring to you the recital of some accomplishments and purposes of the Democratic Party during the past 8 years.

I appreciate the privilege of appearing before you, but I must confess that my feelings of pleasure are somewhat dimmed by the enormity of the task assigned me. Surely anyone who will today attempt to speak upon our modern problems is either a very brave person or he must approach the job with fear and trembling. For these very good reasons I am not going to attempt to deliver a complete address to you, but shall merely invite you to think along with me about these great problems. If we can somewhat clarify our thinking on this subject and bring some degree of order out of the chaos, we shall not have wasted our time. I am sure we can all agree that individual happiness must be based upon a reasonable degree of prosperity, of conscientious thought and planning about money matters, and efficiency in conducting business affairs. The same is true of a nation; our present and future happiness depends upon a conscious recognition of our problems and a courageous and thrifty program to overcome them.

The object of my address is to proclaim the accomplishments of the Roosevelt administration as the most constructive and far-reaching program attempted by any administration within the memory of any of us, and the most effectively responsive to the demands of a great emergency that was ever inaugurated in this or any other country.

Eight years ago our country was in bad circumstances. Agriculture was prostrate, industry in collapse, and financial institutions

bankrupt. These conditions of misfortune had risen because Congress and legislation had been dominated, manipulated, and controlled by the bourbons of great wealth at the expense of the farmers and the working people.

The farmers are now enjoying a prosperity they have not had in many years. Industry and business have been taken out of the red and are now earning a profit. The banks have been saved from utter collapse. These benefits are the product of Franklin D. Roosevelt's leadership, and such beneficial policies in no way contravene the liberty of the American people.

The Roosevelt regime is not opposed to fair profits by industry and business—a theme that has been sounded frequently of late by those who speak for the President. The New Deal constitutes no threat to wealth. It does not seek to confiscate it or to injure business. On the contrary, it seeks to improve it. It does not deny to anyone the fullest opportunity honestly and legitimately to acquire wealth or to enjoy it.

It seeks to give to everyone, including the average man, a greater measure of prosperity, peace, and better living for himself and his posterity.

If the public debt has been increased there is at least something to show for it in comparison with Hoover's increase of $4,500,000,000 and negligible results.

Let no one be terrified by the rising clamor of complaint from the politician outside of office who wants to get in, or from the once-again vocal representatives of privilege who find their privilege being forcibly removed.

When you realize the progress toward a real recovery that has been made since March 1933 you will probably have no more patience than I have with the partisan critics who are clamoring that the administration has no program or does not know where it is going.

The individual businessman must determine what part he wishes to play in this recovering Nation of ours. He can play the part of a beast of prey, or he can be a partner in the great task of providing his fellow men with the materials of life.

We are choosing between a moral order of life based upon the principles inherent in the charter laid down for us by the man who founded this Republic, and a renewed disaster ending only in chaos. There can be but one choice.

There are two aspects of the agricultural problem as we have it today. One is to produce enough. The other is to market the products of the farm at a price that is reasonable and fair.

The farmer has taken care of the problem of production. He has produced an abundance. A fair price to be maintained over a period of years, is the problem that cries for solution.

When manufactured products exceed the demand, factories slow up or shut down so as to permit demand to catch up with production. That is possible in manufacturing industries, because such industries are controlled by a comparatively small number of men. They are well organized and can get together on short notice.

Not so with agriculture. When the prices of farm products fall, because of over-production, the farmer does not decrease his production; instead he increases production. He does so because it is his only method of meeting fixed and urgent expenses. He must live, he must pay taxes and interest. He must buy necessities. Therefore, we have in agriculture the exact opposite of what happens in other industries. In industry, when demand falls off, production falls off; in agriculture, when demand falls off, production increases.

Unless we keep this simple law of agricultural economics clearly in mind, we cannot intelligently deal with the farm problem.

And while we have been cutting down price-destroying surpluses, we are using the meat from the cattle and hogs bought from the farmers to feed not only the bread lines in the larger cities, but also the stranded farmers in the stricken areas.

We have brought back farm prices. The price thermometer of what the farmer sells has been rising steadily and will soon reach the point fixed by the agricultural recovery program. Our farm problem is now well on the way to solution. We are now concerned with maintaining year after year, a fair price level which will give us long years of continuous prosperity instead of the disastrous ups and downs that have almost destroyed us in the past.

Farmers are just now getting their eyes open. They understand that the administration program is not only honest and sincere, but that it works, and that it is the only practical solution in sight.

The farmers of America have a firm, fast, and true friend in Roosevelt. For the first time in our history the eyes of Washington are turned with sympathetic understanding upon the farmer and the serious problems that in late years have fallen to his lot.

Look back with me for a minute to that day in Washington when President Roosevelt took the oath of office. Americans then heard the clear, strong voice of command, and they took heart. They lifted up their heads and thanked God that here at last was the confident voice of courageous, constructive leadership.

You remember how the silly Republican assurances that conditions were improving, when the blind could see that they were growing worse, finally were greeted with cries of derision. And how the quack promise, reiterated constantly as the night grew darker, that prosperity was "just around the corner," was hooted into silence. Such was the leadership to which you are invited to renew allegiance, a leadership too blind to see, too ossified mentally to think, too paralyzed to act, too weak and fearful to face and tell the truth. Isn't that your recollection?

Which would you prefer—to stand with these reactionaries for privilege for a few, or to move forward to a sounder and more equitable prosperity than we have ever had before?

What do voters want this year? Do they want more hokum and bunkum, do they want evasions and oratory, do they want drivel and ranting? No! The people are earnest about things today. They have passed and are passing through critical times. They are interested in vital things. What the people want is straight-from-the-shoulder talk, the sort of sincere talk that tells things and does not evade.

The people want, as never before, to put the best citizens in office. They see that this is a crucial period in the life of the Nation. They see the world in turmoil and anything possible. They see that strong, intelligent men, men of superb judgment, men of purpose and high principle, are needed in high places. The citizens realize that the ballot is a thing of tragic importance; that politics is vastly more than a scramble for office among the self seekers. And they are thinking these things as they look the candidates for office over, listen to their sayings, and observe their actions and scrutinize their records.

Americans have the vote. They are the masters of their own destiny. If they have bad government, it is because they stand for it. They have the right to think for themselves, form their own conclusions, and vote for whom they please. And their vote will be counted. An American citizen is the greatest achievement of man.

In our country and in our times no man is worthy the honored name of statesman who does not include the highest practicable education of the people in all his plans of administration. He may have eloquence; he may have a knowledge of all history, diplomacy, jurisprudence, elevated rating, and by these he might claim in other countries, the rank of statesman, but unless he speaks, plans, labors, at all times and in all places, for the culture and edification of the whole people, he is not—he cannot be—an American statesman.

The amelioration of the condition of mankind, and the increase of human happiness ought to be the leading objects of every political institution and the aim of every individual, according to the measure of his power, in the situation he occupies.

Our fight is for the Democratic Party. The party for you and for your neighbor, for the average man and woman of this country, for the farmer, for the laborer, for the merchant, and for the banker. We are all one. We are all together in this serious fight in which we are engaged, and we must not let any other party or faction, new or old, halt us on our way.

Republican advice brought us only misery in the days of Hoover, and there has been nothing in the record that shows that their advice is any better now than it was then. They were the engineers of ruin then; what is your guaranty that they won't be the same now? I tell you frankly, and I speak with every bit of sincerity I can muster, the Old Guard isn't in step with any measure of the New Deal. They are against relief—they cannot but understand the very vital problem of feeding the hungry and housing the homeless, and yet they protest against the humane function and duty of the Government to take care of its people. They are against recovery, for they protest and shout extravagance at every expenditure that is calculated to bring an ordered stability to the industrial and agricultural world. They are against reform, for they fight tooth and nail for the preservation of customs and practices that fed their greed for so many generations in a day that, I hope, has gone forever.

I count them like the Bourbons of Napoleon's time; they cannot learn, neither can they forget.

When they set up their wails of unconstitutionality and usurpation of liberty and other high-sounding and equally meaningless protests, the real reason is not hard to understand. They are against the spirit of the New Deal; they are against the rights of the many as opposed to the privilege of the few; they are against it without sincerity of purpose or honesty of mind.

Charges have been made recently that the Democratic Party has taken away the liberty of the American people. Truly, what a ridiculous label to place upon a party, a party to which human liberty has always been a cardinal tenet. One hundred and forty years ago Thomas Jefferson first enunciated the liberal doctrines that definitely took form as the Democratic Party organization. That party still survives, and by harmony and cooperation we can keep it in power.

Human life came from the soil. Tradition has it that a Greek giant received his strength from touching the ground. At any rate, man gains strength of character from contact with the earth. Since the days of Abraham the farm and ranch have been the groundwork of all human progress.

The keystone of the Democratic Party is a recognition of this age-old fact. In spite of genius, in spite of individuals, in spite of machines and combinations, cotton remains the clothing of the masses, no substitute has been found for a beefsteak, and bread still remains the staff of life.

What were the conditions when the present administration took charge and what caused these conditions? For many years selfish groups had sought to ignore these simple rules of life. They secured control of the Government. They manipulated the finances of the country. They unloaded worthless securities on the public. They pyramided holding company upon holding com-

pany. They bled the agricultural sections white and exploited industry as ruthlessly, and caused a lopsided development in America. They forgot the average man.

What were the results? This headlong speed of an engine without a governor had almost produced chaos by 1932. Banks were closing by the thousands. Hundreds of thousands of farm and city homes were being foreclosed, smokestacks were rusting in idleness and millions of blameless people were shuffling in the breadlines—helpless, hungry, and despairing.

What has the New Deal administration done to remedy these appalling conditions? First, it has furnished a leader, a leader who is unafraid, one whose heart is right, one who lifted up his eyes so that he could see all the way across this broad, big country. With that engaging candor which is characteristic of him, he has taken the American people into his confidence and caused them to become interested in their Government. He mapped a program of action, a program that neither he nor any other thinking individual expected to be 100-percent perfect, but one that in his own language has made more hits than errors.

A few years ago, the President delivered an address at the Commerce Building in which he made a significant statement which should not pass without grateful commendation by the women of America. He was defending national planning, and in the course of his remarks, as reported by the press, pointed out that Federal Government must act as "father and mother" to the States. The expression is unique in Presidential utterances and in masculine circles. What I admire is his sense of balance. The country needs "mothering" as well as fathering. There has been too much of one element and too little of the other. Creative ideas which men might never have are locked up potentially in the minds of women, which if released and blended with masculine views, would give birth to a higher expression of intelligence than would be possible with either element alone. This furnishes a scientific clue to the best method of achieving national balance.

In the words of Susan B. Anthony, a woman grown wise in statecraft through a lifetime of struggle and observation, until men and women "stand upon a plane of perfect equality of rights and privileges, there can be no such thing as a fair solution or adjustment of the issues of the day, either great or small; in other words, that these cannot be satisfactorily and permanently settled through the judgment and decision of only one-half of the people."

Roosevelt has led the way, and more and more he will be aided by others. The aims of the New Deal will never be changed, nor will the Democratic Party be frightened from the solid position it now occupies, representing the American people and nullifying any claims that it is becoming un-American.

Is it un-American to feed the hungry? If it is, then Americanism as I know it has become stunted and stultified.

Is it un-American to be a good neighbor, to lend a helping hand to those other Americans, and there are millions of them, who, through no fault of their own, found themselves not wanting for luxuries but for bread? If it is, then they preach a different brand of Americanism from mine.

Is it un-American in a land of plenty to see to it that the benefits of prosperity are shared by all and not merely the privilege of the few? If it is, then the word has degenerated into a catch phrase and has become the shibboleth of a dream that failed.

Is it un-American to see to it that the weak are not exploited by the strong, to give the laboring man the right to bargain, and, mind you, only the right to bargain? Then, if it is, America has failed in its high purpose and government among men has become a sham and a shackle.

Is it un-American to strive to make this land of ours a land of peace, contentment, and happiness, far from the maddening hates and alarms of the older world? If it is, then we have permitted the torch of liberty to grow dim and sputter in the dead ashes of our own lost faith and indifference.

Air Safety for the Government

EXTENSION OF REMARKS
OF
HON. STEPHEN BOLLES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 1, 1940

Mr. BOLLES. Mr. Speaker, the National Safety Council was founded in 1912 and has since then devoted its efforts to promoting the safety of life and limb.

It is an impartial organization, which has for many years been an active force in improving safety in all our social and business activities.

It regularly makes awards and grants certificates in recognition of outstanding accomplishments in the improvement of safety.

This year, on April 8, it awarded a certificate of special commendation to the Civil Aeronautics Authority on account of the remarkable record made by the Authority during the last year in improving safety in air transportation.

Never before has the National Safety Council made such an award to any agency of the Federal Government.

This unprecedented action of the National Safety Council recognizes that the Civil Aeronautics Authority has made an unprecedented record. That record shines like a beacon among the achievements of Government in recent years.

The National Safety Council's praise of the Authority is echoed on every side in the press and among the public.

The proposal to reorganize the Authority and return civil aviation to the Department of Commerce will be a blow at the power and position of the Authority.

The record speaks for itself.

No step should be taken to impair the work of the Authority.

The proposed reorganization would be a disastrous mistake.

Gold and Silver Policy

EXTENSION OF REMARKS
OF
HON. GEORGE S. WILLIAMS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 1, 1940

EXCERPT FROM ADDRESS BY HON. ALBERT JAMES

Mr. WILLIAMS of Delaware. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following portion of the keynote speech of Hon. Albert James at the Republican convention at Dover, Del., on April 24, 1940:

GOLD AND SILVER POLICY

If we are to go forward in '40, if we are to defend our national currency, we must call a halt to subsidizing the rest of the world through purchases of foreign silver and gold at the expense of the American taxpayer.

No better summary of this situation can be found than that made by our own Senator JOHN G. TOWNSEND, Jr., who has so ably led the Nation in advocating a sound foreign and domestic monetary program. He says: "The alarming increase in the Nation's gold hoard, due chiefly to a torrential inflow of the yellow metal from abroad, constitutes a problem of real and pressing importance. There is no doubt that it will be impossible to again dispose abroad of the gold we have been importing, unless at a material loss. To value this gold on the Treasury's books at $35 an ounce complies with the statutes of Congress, but conceals the fact that this value is a fictitious value.

"The gold we buy, like the silver, is paid for with American wealth. In 1929, this country attained a high degree of business activity on a gold stock valued at $4,000,000,000. In 1934, after the price of gold had been lifted, virtually overnight, by 60 percent, we had a $7,000,000,000 gold stock. Today our national gold pile has grown to $18,412,000,000. More than $11,000,000,000—a sum so large that it is hard to conceive—has been added since January 1934.

GOLD STOCK

"How this country could ever get rid of that $11,000,000,000 increment in its gold stock without a shameful loss is impossible to foresee. The problem of future gold acquisitions should be examined with a view to early formulation of a policy in keeping with our national requirements."

Senator TOWNSEND also says, "The Silver Purchase Act of 1934 should be repealed at once, and all purchases of foreign silver terminated without further delay. While, as is claimed, the Treasury of the United States is not out of pocket a penny as a result of the foreign-silver program, under it foreigners have received approximately $1,000,000,000, and as they have spent that money they have carried away real American wealth in exchange. The country, as distinct from the Treasury, has paid, and paid dearly for this program, and will continue to pay so long as it remains unrepealed.

"To defend the silver program by saying that foreign-silver buying helps our export industries is just deluding ourselves. If the purchase of foreign silver at 35 cents an ounce were 'good because it makes employment here,' it would be sensible to argue that the buying of foreign silver at 10 times that price would make 10 times as much employment here. But that is not sensible.

"It is not a question of whether or not silver is worth 35 cents an ounce. When we have absolutely no conceivable need for monetary silver, the metal simply is worth nothing to the American people who are bearing the burden of the program.

"Since the spending by foreigners of newly printed silver certificates here is merely a form of unashamed inflation or dilution of the currency of the United States, it should be emphasized that inflation robs the poor, the workingman, the pensioner, the widow, and endowed institutions like universities and hospitals, which cannot speculate against changes in the value of the currency.

"When the Nation owns more than $18,442,000,000 of gold, there is no just excuse for the purchase of foreign silver."

Two National Problems—To Maintain Peace—To Pay the Debt

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

Mr. THILL. Mr. Speaker, there are two grave problems confronting the American people: One is, how to stay out of war; the other is how to pay the national debt. Everywhere we hear good Americans deploring war and its awful consequences and expressing a strong hope and desire for peace in this country. We also hear them talk of the tremendous national debt which has piled up quickly during the last 8 years.

Let me point out that this country has practically reached its legal debt limit. We are now about $45,000,000,000 in the red. If we were to take 45,000,000,000 dollar bills, lay them end to end, and side to side, we could construct a roadway 25 feet wide that would not only run around the earth, but 10,000 miles out into space. This gives us a good picture of our debt burden. And when we start paying back, as we will have to do someday, where will this money come from? It will come from the pockets of the people in the United States. We know that somebody will have to dig down deep to put back into the Treasury $45,000,000,000 plus the interest that is accruing. Somebody will have to do it. And the sad part of it is, that somebody includes you. Just think of it, every day your Government is spending $15,000,000 more than it takes in. Every time the clock ticks, every second, this administration is spending $293. Every hour it spends $1,000,000. I know that the average man does not appreciate the fact, that when we talk about the public debt, we are talking about a financial situation in which he must be vitally interested since he owes part of it.

A short time ago a letter from the President was read to Congress. In this message Roosevelt asked that the sum of $975,000,000 be appropriated for W. P. A., and this sum was to be placed at his disposal during the 8-month period starting July 1, 1940, and spent as he saw fit, if necessary. The Woodrum amendment, now a part of the law, and written into the law because of mishandling of W. P. A. funds in 1936 and 1938, requires such funds to be prorated over the entire fiscal year like funds in other departments. Those who unfortunately need the help of W. P. A. funds do not wish to see a repetition of what happened during the election years of 1936 and 1938, when large numbers of men throughout the country were added to W. P. A. pay rolls in September and October, only to be dropped after early November and left without work throughout the freezing and most trying months of the year. This appropriation bill has not as yet come before the House, but the President's unusual request gives me an opportunity to repeat my frequently stated position concerning the handling of the W. P. A. This is another bureau of the Federal Government which has been built up with a bulging personnel of high-salaried Washington officials who have been reckless in using the funds at their disposal for administrative expenses. Last year the records showed that they spent for telephone and telegrams alone about $150,000 monthly—get that, $150,000 month after month. We must cut down the heavy telephone and telegraph charges and excessive administrative expenses, so that the dollars appropriated will go a longer way in helping to take care of the needy.

Now, let us take the Civilian Conservation Corps, with its 270,000 enrollees, for an example. In 1940 they and their families will receive $101,185,000 in pay, while the 32,000 individuals who are on the administrative pay rolls will draw in salaries $58,234,000. The administrators will take an amount more than one-half of the total cash paid the enrollees.

A break-down of this large sum of money discloses that the average cash pay received by the Civilian Conservation Corps enrollees themselves, is only $374 per annum; whereas those charged with the administration of the C. C. C. program receive an average annual salary of $1,797, nearly five times as much as the boys for whose benefit the program is primarily intended. Too much of the money is spent at the top and too little of it gets down to the bottom where it is needed.

You and I want to see this money spent to relieve distress and not for excessive overhead; spent for worth-while projects, and not for those for which there is little or no necessity. I am just as much concerned over the plight of those who must seek relief from W. P. A. and other agencies as anyone can be, but I demand that a stop be put to the present needless waste. I want the money spent on actual relief. So do you.

There is another kind of debt, which is chiefly a moral obligation, due those individuals who suffer today because of the wars this country has heretofore waged. This debt, in one sense, will always remain unpaid, because it is beyond human compensation. I refer to what we owe the sick, crippled veterans, those killed in action, and their widows and orphans. A bill (H. R. 9000), which provides for pensions for widows and orphans of World War veterans, will soon be brought before the House of Representatives for consideration. Legislation of this type is a timely reminder to all of us, what a terrible price war makes us pay. It seems to me that so long as this country goes to war just so long will its taxing power be used for payment of pensions to veterans and their dependents. There is a solution to this problem. That solution can be summed up in these words, "Stop having wars." I am no defeatist, and I believe this can be done. However, it means a willingness on the part of our manufacturers to forego good war profits; it means getting along without war prosperity; it means remaining neutral when war propagandists work night and day to enmesh us; it means a careful attitude on the part of our State Department in handling our affairs with the warring nations; it means adequate national defense against potential enemies so no one would dare attack us. If we concentrate on our own security, we will remain at peace; and if we remain at peace we can rest assured that there will be no veterans conscripted, wounded, and killed. We can rest assured that all citizens will have opportunity to make a living in peace, rather than to have a select group of men serve their Government as gun fodder, while others receive high war wages, salaries, and profits; and finally we can rest assured that no additional pensions for veterans or their dependents will be required. Until then, history tells us, there is no assurance against paying war pensions.

I believe that the overwhelming majority of the people of the world want to live in peace. They want to give their energy to the arts and sciences, to agriculture and manufacturing, that they may enjoy life by creating and building. They do not want to produce military planes, bombs, machine guns, poison gas, and cannon for the destruction of property and human beings. They believe as did the signers of the Declaration of Independence "that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness." People crave for that peace which will give them a common opportunity to live in security, to maintain and rear their families, to guarantee for themselves and their children the right to live as God had

intended them to live, in peace and love for one another. But how dark is the picture today, with many parts of the world at war. Men of supposedly civilized nations are striving with all the cunning they can command to kill one another. It seems that the world has forgotten the sacred message of love, peace, and sanctity of human life.

We as Americans cannot be blind to this mad travesty of civilization. But we can and must stay out of the wars now going on in the world.

War propagandists in this country seek by vicious means to involve us in the European conflict. Through the radio and the press, they circulate deliberate falsehoods with emotional appeal to excite our sympathy or stir up hatred of such intensity that it might induce us to stifle our strong desires for peace and take up arms for war.

We must avoid the snares of these paid warmongers and actively work to keep the United States at peace. Those who guard their country's welfare will follow the precepts stated by the Father of his Country in his Farewell Address:

> Excessive partiality for one foreign nation and excessive dislike for another cause those whom they actuate to see danger only on one side and serve to veil and even second the arts of influence on the other. Real patriots, who may resist the intrigues of the favorite, are liable to become suspected and odious, while its tools and dupes usurp the applause and confidence of the people, to surrender their interests * * *.
>
> Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?

Jefferson, too, was most outspoken against involvement in Europe. He said:

> I have ever deemed it fundamental for the United States never to take an active part in the quarrels of Europe. * * * They are nations of eternal war.

We cannot disregard those words of wisdom and advice. We as Americans owe a sacred duty to our country to preserve those liberties which our forefathers willed to us. It is our job to make democracy work here rather than to enter wars over there.

We should detest war for the lies it lives, for the deaths it brings, for the hatreds it arouses, for the dictatorships it creates, for the starvation that stalks after it, and for the undying misery produced by it. As Americans, first, last, and always, we should pray and actively work to preserve peace for the United States.

There can be no more fervent prayer from the lips of a patriot than the following written by my respected friend, William Tyler Page, former Clerk of the House of Representatives:

THE AMERICAN'S CREED

> I believe in the United States of America as a Government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign Nation of many sovereign States; a perfect Union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity, for which American patriots sacrificed their lives and fortunes.
>
> I therefore believe it is my duty to my country to love it; to support its Constitution; to obey its laws; to respect its flag; and to defend it against all enemies.

Tenant Purchase Program

EXTENSION OF REMARKS

OF

HON. MALCOLM C. TARVER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

EDITORIAL FROM THE ATLANTA CONSTITUTION OF APRIL 29, 1940

Mr. TARVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Atlanta Constitution for April 29, 1940:

[From the Atlanta Constitution of April 29, 1940]

TENANT PURCHASE PROGRAM

The House of Representatives is expected to vote this week on restoration of funds for the Bankhead-Jones farm-tenant program.

It is important to the future of this country that these funds be restored. The House Appropriations Committee reported the bill out some months ago without the tenant purchase program. A vigorous fight to restore it was lost, probably because it came late at night and when many Members were absent.

The Senate then amended the bill to provide for $50,000,000 during the next fiscal year in the important program of making farm owners out of desirable and carefully selected tenants. This amendment was approved without a single dissenting vote.

The House now must vote. If it again refuses to provide for the program, one of the most successful of the farm-program features will have been lost. It will halt the steady progress which is being made in stabilizing the small farmer on the land at a time when the problems of tenancy and farm-labor migration already are serious.

No burden would be imposed on the Federal Treasury for these loans as the Reconstruction Finance Corporation advances them and the loans are self-liquidating.

As evidence of the fact the program is working, those who had borrowed during the first year of the act paid back their maturities at the rate of 165 percent. Many were able to make substantial payments in advance. In addition to the fact the plan is working the Government further is guaranteed because of the first-mortgage loan on the real estate.

Action of the House in striking out this important, and successful, feature of the farm program was a distressing move and one which should be corrected.

An Appeal for Intimidation

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

Mr. HOFFMAN. Mr. Speaker, on several occasions the attention of the House has been called to the picketing which has been carried on at the cafeteria which is operated in the Methodist Building, just across the street from the Supreme Court Building.

You may remember that, although 13 of the 28 employees who work in this cafeteria belong to a union, there is no labor dispute between those employed and the owner of the cafeteria. The only dispute which exists is between the union to which they belong and the owner of the cafeteria. The employees are not making any demands as to wages, hours, or working conditions. The union is making certain demands, and what it is trying to do, and what Mr. Mink, its representative, is apparently trying to do, is to get himself or the union in a position where it can levy dues upon the young men and women who work there.

The pickets have carried placards which contain false statements, but here is what to me is the latest in intimidation. In a letter on the letterhead of the Methodist Federation for Social Service, sent out to some tenants in the Methodist Building, that organization, through its secretary, makes an appeal to the tenants to force Mrs. Mueller to submit to arbitration the demands of this union agent.

Now, remember, there is no dispute between Mrs. Mueller and her employees, but the union, or Mr. Mink, whichever it is, has horned in, and this organization sends out a letter which, after requesting the recipients to urge Mrs. Mueller to submit to arbitration, contains this sentence: "In case she does not, will you consider other methods of inducing her to observe the spirit of the Social Creed of the Methodist Church?"

Just what do the words "other methods" in this sentence mean? Does this organization, using the name of the Methodist Church, imply that, if Mrs. Mueller does not yield to the "urging," those who reside in the building do something more drastic to her? Do they want her tarred and feathered, coerced by threats? Or just what do they want us to do to her?

So that you may have the situation in mind, I insert the letter, and my reply thereto, which reads as follows, and note especially the last paragraph of the federation's letter:

Our Washington, D. C., members have requested me to call your attention to the fact that the labor situation in The Dining Room, Inc., which is located in the Methodist Building, 110 Maryland Avenue NE., is a clear violation of the statements of the Methodist Church in regard to labor problems.

In an election supervised by the National Labor Relations Board the employees of The Dining Room, Inc., chose the United Cafeteria Workers Union as their representative to negotiate with the management as to wages and other working conditions.

The union then signed an agreement, presented to them by a representative of the Bureau of Conciliation of the United States Department of Labor, to submit the dispute to arbitration. The union also agreed not to insist on the closed shop.

The management of The Dining Room, Inc., however, when asked by the representative of the Bureau of Conciliation to submit the dispute to arbitration, refused. By so doing, Mrs. J. C. Mueller, the manager, acted contrary to the 1908 Social Creed of the Methodist Episcopal Church, which declares: The Methodist Episcopal Church stands for the principle of conciliation and arbitration in industrial dissensions. She also acted contrary to the 1912 Social Creed of the Federal Council of the Churches of Christ in America, which declares: "The churches must stand for the right of employees and employers alike to organize, and for adequate means of conciliation and arbitration in industrial disputes."

Will you please urge upon Mrs. J. C. Mueller that she submit her controversy with her employees, organized into the United Cafeteria Workers Union, to arbitration? In case she does not, will you consider other methods of inducing her to observe the spirit of the Social Creed of the Methodist Church?

Sincerely,

CHARLES C. WEBBER,
Executive and Field Secretary.

APRIL 26, 1940.

Mr. CHARLES C. WEBBER,
Executive and Field Secretary, The Methodist Federation for Social Service, 150 Fifth Avenue, New York City.

DEAR MR. WEBBER: Many thanks for the copy of the mimeographed letter of April 18, referring to the operation of The Dining Room, Inc., which is located in the Methodist Building, which is located 100 Maryland Avenue, not 110, this city.

Apparently you know as little about the conditions in the dining room as you do about its location.

Having lived in the Methodist Building for 3 years, am fairly familiar with the services rendered by the cafeteria and I know personally several of the employees. I am not familiar with the "statements of the Methodist Church in regard to labor problems." However, I do know what is fair, just, and reasonable and why a church organization, or perhaps more accurately, probably just a few busybodies using the name of the church, should attempt to drive a woman who is trying to earn a living, give jobs and pay wages, out of business, is something that I cannot understand.

If you are familiar with the facts, you would know that of the 28 employees, but 13, and several of those because they were overpersuaded, joined the union. You should know that there is no dispute between the management and the employees. Apparently you are not familiar with the fact that the union and its officials are the ones who are making the complaint; that they are the ones who want to collect dues of the girls who work in the cafeteria. The dispute, if there is any, is between the union, or perhaps Mink, and the woman who is trying to operate the cafeteria.

The person who tried to operate a cafeteria in this building, prior to the time Mrs. Mueller took over, failed.

What you are apparently trying to do now is to intimidate her and destroy her business.

I will speak to Mrs. J. C. Mueller, as you describe her, but my advice will be that she still has a right to try to conduct her business without submitting to either your domination or the tribute-levying activities of Mr. Mink.

Just what do you mean by the last sentence of your letter, which reads as follows:

"Will you please urge upon Mrs. J. C. Mueller that she submit her controversy with her employees, organized into the United Cafeteria Workers Union, to arbitration? In case she does not, will you consider other methods of inducing her to observe the spirit of the social creed of the Methodist Church?"

Just what are you trying to get at; do you want me to threaten her; do you want me to tell her that I will no longer patronize her cafeteria if she does not submit to Mink's demands or do you want me to go in and "bust her in the nose"; the latter course would be no more unfair, no more un-American, no more unjust than the suggestion in your letter to me.

Perhaps your letter can be explained by noting that one of the secretaries of the organization is Harry F. Ward; was not he an official in the American League for Peace and Democracy?

You might suggest to Bishop Francis J. McConnell, connected as he is with the American Civil Liberties League, that he get his organization to act in behalf of Mrs. Mueller and of her employees, who are denied their civil rights by Brother Mink.

In conclusion, please advise just what the last sentence in your letter, which I quoted, means; that is, if Mrs. Mueller does not yield to the "urge" which is put upon her and, if your letters bear fruit, just what do you want the tenants in the building to do to her?

Sincerely yours,

CLARE E. HOFFMAN.

Of course, everyone realizes that the Methodist Church, as a church or as an organization, has nothing to do with such a letter as this. It only illustrates how an organization can assume a name and pretend to be something that it is not.

As pointed out in my reply, you may recall that Harry F. Ward was one who received considerable publicity as an official of the American League for Peace and Democracy.

President Roosevelt Friendly to Grays Harbor—The Real Facts Regarding the Olympic National Park

---

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

Mr. SMITH of Washington. Mr. Speaker, few communities in the United States were hit harder by the Hoover depression than Grays Harbor, Wash. By the end of 1932, industry and business had come to almost a complete standstill. The few industrial plants still operating were running only 3 days a week. The relief load for the unemployed had become so heavy that the cities, school districts, and county were facing bankruptcy. School warrants were going begging at a big discount. Banks and financial institutions had failed and closed their doors. Savings and loan associations had suspended payment. Thousands of citizens were unable to pay even their water and light bills. In the harbor cities, 1,100 families were not paying rent, according to W. O. McCaw, realtor, of Aberdeen.

Although owners are unable to keep up taxes and repairs, they do not desire to evict. The welfare board here has been offered a free supply of surplus oranges from California. Schafer Bros. of Montesano have offered to bring a large supply of these oranges in their next northbound ship. (Hoquiam Washingtonian, April 23, 1933.)

Hundreds of citizens who had purchased houses on contract lost their homes. Merchants and businessmen had extreme difficulty in surviving. The losses, misery, hardship, and suffering of those years will never be forgotten by the people of Grays Harbor. Had these conditions continued, Grays Harbor and all its people would have been ruined.

HOW PICTURE CHANGED UNDER ROOSEVELT ADMINISTRATION

Immediate steps were taken in 1933 by the Roosevelt administration to alleviate and correct these unhappy and terrible conditions. Work relief for the unemployed was provided, and the financial load shifted from the cities, school districts, and county to the Federal Government. Consequently these local units of government are today in the soundest financial condition in their history.

Numerous activities to create new purchasing power were carried on. Conditions improved so rapidly that by October 13, 1936, the Aberdeen Daily World published the following headline: "Basic harbor industries reach six-year high in pay roll and employment," and in the news article stated:

Employment in logging camps has reached a new peak for recent years; sawmills have the largest crews employed since the curtailment began in 1929, with trained keymen in demand.

At the present time in 1940 there are more men employed, and they are receiving higher wages, than at any previous time in the history of Grays Harbor. Bank and savings and loan deposits were insured by the Federal Government, and as a result these institutions are flourishing. Instead of banks failing, a new bank has been established in Aberdeen.

Useful projects of permanent value and lasting benefit to the communities have been constructed through the aid of the Federal Government—streets, sewers, flood-control dikes, schools, gymnasiums, playgrounds, stadiums, cemetery beautification, soil conservation, and other public improvements too numerous to mention.

From 1919 to 1934 the citizens and taxpayers of Grays Harbor paid annually $58,000 for dredging the inner channel of Grays Harbor, amounting to approximately a total of $1,000,000. In 1934 we had this burden shifted to the Federal Government, not through the W. P. A. or the P. W. A., but regular river and harbor appropriations, approved by the Army engineers and the powerful Rivers and Harbors Committee, on which we have been represented since 1933. In the past 6 years this action has resulted in a total saving of $348,000 in actual cash to the citizens and taxpayers of Grays Harbor. This sum is more than the entire cost of paying all the salaries of all the county officials of Grays Harbor County during this period.

For many years our citizens have realized the importance of securing high-water jetties, which have been advocated by such prominent citizens as Judge William E. Campbell, Phil J. Mourant, Werner A. Rupp, the late John W. Clark, and the late Phil S. Locke, and, of course, our highly efficient port manager, W. J. Murphy, and port commissioners, Capt. Matt Peasley, C. N. (Bud) Wilson, and Frank H. Lamb. Every attempt failed until 1935, when my resolution was approved by the Army engineers and by the Rivers and Harbors Committee after extended hearings, and construction of the south jetty was commenced. Nearly $5,000,000 has been expended and we are making fine preliminary progress in getting work started on the north jetty, at an estimated cost of $2,365,000, or a total investment by the Federal Government of over $7,000,000.

The present national administration has provided the people with the Bonneville hydroelectric project, the legislation for which I had the honor to sponsor in the House, and our citizens will soon be enjoying the benefits of low-cost Bonneville electricity. This project will prove a boon to our local communities and result in much industrial development throughout southwest Washington.

THE OLYMPIC NATIONAL PARK

Notwithstanding this record of service and accomplishment for Grays Harbor, a few politically minded persons have the effrontery to circulate the malicious propaganda that President Roosevelt and the Washington congressional delegation, including myself, have conspired to injure Grays Harbor by the establishment of the Olympic National Park. This park is located almost wholly within Clallam and Jefferson Counties, the district of the gentleman from Washington, Congressman WALLGREN, not within our district. The so-called Queets corridor is in Jefferson County, where 16 families are said to be affected. The main area in Grays Harbor County is a small strip within the national-forest, primitive, or wilderness area at Lake Quinault, already withdrawn from commercial use by the Forest Service, and not subject to any cutting. In other words, no commercial timber in Grays Harbor County has been included within the area of the park. There are only 12,664 acres in Grays Harbor County included within the area of the park, consisting of 835,411 acres. The timber in Grays Harbor County which is included is 318,555,000 board feet, out of the total estimated timber stand in Grays Harbor County of 16,685,000,000 board feet. It has been acknowledged that the remaining timber around Lake Quinault makes Lake Quinault one of the most beautiful scenic spots in the State of Washington. Are there vandals who would want to destroy this timber and give us another desolate picture similar to the one we behold in traveling between Hoquiam and Lake Quinault? What are the true facts in regard to this entire park matter?

Establishment of the park was first proposed in Congress in 1904, when Theodore Roosevelt was President. In 1909, President Theodore Roosevelt set aside an area of 620,000 acres as the Mount Olympus National Monument. On October 5, 1927, by proclamation of President Calvin Coolidge, this area was closed to hunting and trapping and the Aberdeen Daily World stated: "It will become a great game preserve."

On March 28, 1935, the bill to establish the Olympic National Park was introduced by the gentleman from Washington, Congressman WALLGREN, at the request of the National Park Service, because the area was in his district, this being a departmental bill, otherwise it would have been introduced by the chairman of the Public Lands Committee. On April 2, 1935, I notified in writing the committee chairman that I desired to be heard whenever committee hearings were held, and on April 3, 1935, received his written acknowledgment. Committee hearings were not held until a year later, so those who desired to oppose the park had an entire year in which to organize opposition in each of the six congressional districts and throughout the State.

The committee hearings were held April 23–May 5, 1936, and were the most complete ever held on a park bill in the history of Congress, comprising 304 closely printed pages. I testified at considerable length and although not a member of the Public Lands Committee was granted the unusual courtesy of asking questions of the witnesses. I am placing in the Aberdeen, Hoquiam, Montesano, and Elma public libraries copies of these hearings, so they will be available in the reading rooms to those citizens who may desire to read same.

F. W. Mathias, at that time manager, Grays Harbor Chamber of Commerce; managing secretary, Hoquiam Chamber of Commerce, and manager, Aberdeen Chamber of Commerce, testified as follows:

Mr. MASSINGALE. There is a considerable supply of timber there, is there, yet?

Mr. MATHIAS. It will never run out.

Mr. MASSINGALE. Up to the park area?

Mr. MATHIAS. Up to the park area.

Mr. MASSINGALE. How long, in your estimation, will it take to exhaust the merchantable timber lying between the southern proposed boundary of this park and that Grays Harbor River line?

Mr. MATHIAS. It would depend on what you will use it for, whether saw logs or pulp.

Mr. MASSINGALE. Just figuring on the use to which it has been put until now.

Mr. MATHIAS. Up until 1926 the principal industry in Grays Harbor was the manufacture of lumber, doors, shingles, and that type of product. Now we have changed our operations very materially. Instead of producing a lot of lumber, our biggest production now is in plywood, veneer, pulp, paper, and furniture. We are using types now that were never considered, that were not even carried on the tax rolls or used.

Mr. MASSINGALE. Figured on the basis that that timber is being used now, how long in your estimation would it take to exhaust that region down there of timber?

Mr. MATHIAS. It will never be exhausted.

Mr. MASSINGALE. The mills will have an inexhaustible supply?

Mr. MATHIAS. Absolutely.

Mr. MASSINGALE. Without going into the park area?

Mr. MATHIAS. Without necessarily going into the park. It depends upon the type. For veneer you have to use a large tree. For pulp you use a small tree.

Mr. MASSINGALE. Is there any need for the lumber interests to be complaining about the extension of the park area because of the exhaustion of timber?

Mr. MATHIAS. Well, we want more pulp and paper mills and we are trying to get them.

Mr. MASSINGALE. That is all.

Mr. Mathias' testimony was corroborated by witnesses representing the United States Forest Service and the State of Washington. (See hearings.) Witnesses of the United States Forest Service pointed with pride to the fact that they conserved and protected the timber and other national resources against commercial exploitation better and more effectively than the National Park Service could do, which was borne out by the figures submitted by them showing that the amount of logging permitted within the Olympic National Monument during the past 30 years was infinitesimal. They showed how unlikely it would be under their system of selective logging permitting only the cutting of isolated and widely scattered trees that any firm could afford to spend millions of dollars in constructing a common-carrier railroad to carry on such limited operations.

Witnesses from Port Angeles and Clallam and Jefferson Counties were present and testified in favor of the park, which

was highly significant in view of the fact that 98 percent of the area was in their counties and their congressional district. In other words, Grays Harbor "fell down" completely on the very essential task of arousing opposition to the park in her two neighboring counties in which the park was to be located. These witnesses from Clallam and Jefferson Counties also made it very clear that if there was to be any commercial development it would be by interests in their counties and not by interests in Grays Harbor or any other outside counties. The Public Lands Committee reported the bill favorably.

The late Speaker, Joseph W. Byrns, refused to recognize the author of the bill to bring it up under suspension of the rules, so it would have to be passed by unanimous consent. I quote from an editorial published after it had failed to pass, in the Aberdeen Daily World, Tuesday, June 30, 1936:

The Wallgren park bill did not pass at the recent session of Congress, a fact which was due in large part to the watchfulness of Congressman SMITH, who stayed on the floor every minute during the last 2 weeks of the session to prevent action by unanimous consent.

In 1937 park legislation again came before Congress and it was again delayed by every possible parliamentary maneuver in order to give those who were opposed to it still further opportunity to influence and organize public opinion in the State against it. How utterly they failed is proven by the fact that the other five Congressmen and two Senators from the State of Washington, acting in accord with what they had reason to believe were the wishes of their constituents, favored the big park.

In 1938 I secured a reopening of the committee hearings to afford Gov. Clarence D. Martin an opportunity to come to Washington, D. C., and be heard before the Public Lands Committee in behalf of the State of Washington. These hearings were held April 19, 1938, and both Governor Martin and Hon. Ben H. Kizer, chairman of the Washington State Planning Council, testified at length. That same day Governor Martin, Mr. Kizer, Senators Bone and Schwellenbach, the gentleman from Washington, Congressman Wallgren, and I conferred with President Roosevelt at the White House. At that conference it was agreed that the park bill was to pass the House unchanged and be reduced in the Senate with the proviso that after the lapse of 8 months from the date of its passage the President, after consultation with the Governor of the State of Washington, might by proclamation increase the acreage to 898,292 acres. This procedure agreed upon at the White House was followed. The bill in that form was signed by President Roosevelt June 29, 1938.

This action came more than 3 years from the time the first bill was introduced in Congress, and 8 additional months were then allowed the State of Washington, through the Governor, for still further presentation of its case. As a matter of fact, it was not until December 9, 1939, that the final consultation took place at the White House between President Roosevelt, Governor Martin, Mr. Kizer, and Hon. George F. Yantis, regional member of the National Resources Board, to agree upon the final boundaries. On January 4, 1940, President Roosevelt issued his proclamation. This was approximately 5 years from the time the first bill was introduced in March 1935. The State of Washington and Grays Harbor had that length of time in which to be heard. Governor Martin's statement issued to the Associated Press is as follows:

MARTIN SATISFIED ROOSEVELT IS COOPERATIVE ON PARK PLAN

OLYMPIA, December 12.—Governor Martin said today he is "completely satisfied" President Roosevelt's attitude toward the Olympic National Park is one of "cooperation and mutual benefit."

The chief executive conferred with the President in the National Capital for 2 hours Saturday on the permanent boundaries of the Olympic Peninsula playground.

He said the State is willing to cooperate on the basis of the President's expressed ideas, that he hopes any action taken will be justified, and that any errors can be taken care of in the future.

"Our industries and resources will not suffer," the Governor said.

He pointed out that $100,000 in Federal money already has been spent in the park, on roads, trails, etc., and that some day in the not-distant future the State will have a wonderful recreation area there.

The Governor said the President is not greatly concerned over manganese in that district, at present; that most of the ore deposits on the peninsula are outside the park area, and that any mine claims within the area, which had been proved, are perpetual, so there was "little to worry about in that regard."

"There was no disposition on the part of any of the Federal officials to embarrass us in any way in regard to our resources and industries," the Governor said, "and the policy of the State and National Government regarding timber outside the park is for administration on a common and cooperative program of selective reforestation and conservation."

Thomas B. Hill, State supervisor of mines and mining, has recently pointed out that the manganese deposits, which it is hoped are not of too low grade to be commercially mined, are located outside of the park area. I also secured incorporation of a proviso in the law which permits for the next 5 years the location and development of mining claims, such as there might be, within the park area.

From the testimony of Mr. Mathias and others, we have a sufficient quantity of hemlock pulpwood outside of the park area without any regrowth to supply six or seven 200-ton pulp mills, and we only have one mill on Grays Harbor now. In a recent letter one of the leading pioneers of Grays Harbor wrote me that the time and energy expended in misrepresenting the park proposition and in seeking to alarm and discourage the people for purely political effect, might better be devoted to obtaining a few new pulp and paper mills to utilize the raw materials which are to be found in such abundance outside the park area. He added, significantly, that we should also endeavor to secure other industries as a result of our low-cost Bonneville electric power.

In view of the fact that politics have been injected into this issue, I am going to cite some indisputable facts which are therefore not altogether irrelevant; in fact, they are most pertinent to this whole park matter.

Practically the entire area of the Olympic National Park is within Clallam and Jefferson Counties in the Second Congressional District, represented by Congressman WALLGREN, as we have previously noted. This fact has constituted a most serious handicap to those on Grays Harbor who have opposed the park. Whose fault is that? My friends, Clallam and Jefferson Counties used to be in our congressional district along with Tacoma and Pierce County. They were a part of our congressional district until the 1930 reapportionment and redistricting acts.

The political opposition to my distinguished predecessor in Congress was largely from Tacoma in Pierce County. It continued to grow until it became quite formidable and dangerous. In fact, in 1928, Senator HOMER T. BONE came within 1,500 votes of defeating my predecessor. Thereupon a movement was launched to redistrict western Washington in order to create a new congressional district to give Tacoma her own Congressman. This, it was thought, would remove the most serious threat to my predecessor's continued service in Congress. To bring this about, western Washington had to be redistricted and consequently Clallam and Jefferson Counties were eliminated from our district and made a part of the district northwest of Seattle and tied in with Everett and Bellingham. The entire Olympic National Monument—now converted into a national park—was considered to be of such slight concern and small importance to Grays Harbor that it was unceremoniously "booted" clear out of the Grays Harbor district. That was a few years after President Calvin Coolidge has "closed the 615,000-acre tract to hunting and trapping and make it a great game preserve." (See, again, Aberdeen Daily World, October 5, 1927.) This was also before these same politicians on Grays Harbor had "discovered" how important and valuable it was to become for political purposes 12 or more years later. So far as I can ascertain, neither the press nor anybody else on Grays Harbor made any protest. Those on Grays Harbor who now "view with alarm" should explain it to our people if they can.

As the foregoing recital of facts establishes, my actions throughout the entire park controversy need no defense from me or anybody else. I could quote from hundreds of communications praising my efforts which I have received from leading civic, industrial, and labor leaders on Grays Harbor, but I will quote only from two.

In 1937–38 the Grays Harbor Chamber of Commerce sent out over the State an Outline Concerning the Wallgren Bill, prepared by Mr. F. W. Mathias, and its concluding paragraph read as follows:

Congressman MARTIN F. SMITH has, practically single-handed, fought this fight and is deserving of credit for his interest in protecting the welfare of this State.

On February 7, 1938, Mr. William V. Appel, president-manager of the Aberdeen Chamber of Commerce, wrote me as follows:

No one knows and appreciates more than we do the fine work you have been doing for us against the Wallgren bill.

Fellow citizens of Grays Harbor, we all have many reasons to agree with the opinion recently expressed by Mr. R. W. Beck, manager of the Grays Harbor Utility District:

Grays Harbor is in an admirable strategic position for industrial development. It has a very good harbor, an abundance of various raw materials, especially minerals, oil, and timber, within a relatively short distance of that harbor, and in the near future it will have plenty of power at a cost comparable to any place on the northwest grid. With these advantages, and provided they are recognized and developed by concerted community effort, Grays Harbor can expand in a way undreamed of "when lumber was king."

The F. B. I. Pledge for Law Enforcement Officers

EXTENSION OF REMARKS
OF
HON. AARON LANE FORD
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 1, 1940

Mr. FORD of Mississippi. Mr. Speaker, under leave to extend my remarks, I include the Federal Bureau of Investigation pledge for law-enforcement officers:

Humbly recognizing the responsibilities entrusted to me, I do vow that I shall always consider the high calling of law enforcement to be an honorable profession, the duties of which are recognized by me as both an art and a science. I recognize fully my responsibilities to defend the right, to protect the weak, to aid the distressed, and to uphold the law in public duty and in private living. I accept the obligation in connection with my assignments to report facts and to testify without bias or display of emotion, and to consider the information coming to my knowledge by virtue of my position as a sacred trust, to be used solely for official purposes. To the responsibilities entrusted to me of seeking to prevent crime, of finding the facts of law violations, and of apprehending fugitives and criminals I shall give my loyal and faithful attention, and shall always be equally alert in striving to acquit the innocent and to convict the guilty. In the performance of my duties and assignments I shall not engage in unlawful and unethical practices but shall perform the functions of my office without fear, without favor, and without prejudice. At no time shall I disclose to an unauthorized person any fact, testimony, or information in any pending matter coming to my official knowledge which may be calculated to prejudice the minds of existing or prospective judicial bodies either to favor or to disfavor any person or issue. While occupying the status of a law-enforcement officer, or at any other time subsequent thereto, I shall not seek to benefit personally because of my knowledge of any confidential matter which has come to my attention. I am aware of the serious responsibilities of my office, and in the performance of my duties I shall, as a minister, seek to supply comfort, advice, and aid to those who may be in need of such benefits; as a soldier, I shall wage vigorous warfare against the enemies of my country, of its laws, and of its principles; and as a physician, I shall seek to eliminate the criminal parasite which preys upon our social order and to strengthen the lawful processes of our body politic. I shall strive to be both a teacher and a pupil in the art and science of law enforcement. As a lawyer, I shall acquire due knowledge of the laws of my domain and seek to preserve and maintain the majesty and dignity of the law; as a scientist, it will be my endeavor to learn all pertinent truth about accusations and complaints which come to my lawful knowledge; as an artist, I shall seek to use my skill for the purpose of making each assignment a masterpiece; as a neighbor, I shall bear an attitude of true friendship and courteous respect to all citizens; and as an officer, I shall always be loyal to my duty, my organization, and my country. I will support and defend the Constitution of the United States against all enemies, foreign and domestic; I will bear true faith and allegiance to the same, and will constantly strive to cooperate with and promote cooperation between all regularly constituted law-enforcement agencies and officers in the performance of duties of mutual interest and obligation.

Grays Harbor Jetties—Inner Channel of Grays Harbor

EXTENSION OF REMARKS
OF
HON. MARTIN F. SMITH
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 1, 1940

Mr. SMITH of Washington. Mr. Speaker, when I entered upon my service as a Member of Congress in 1933 and succeeded in obtaining membership on the Committee on Rivers and Harbors, I had two very difficult tasks, to the performance of which I had pledged my best and untiring efforts. The first was to secure, if possible, a reversal of the previous unfavorable engineering reports and failure to secure committee and congressional action on the Grays Harbor high water jetty projects, which we of Grays Harbor had sought without success for 20 years. I introduced a resolution for review of the unfavorable reports, and after obtaining its adoption by the Rivers and Harbors Committee, succeeded in my endeavors to have the Board of Army Engineers, Washington, D. C., go to Grays Harbor and make a personal inspection of the condition of the harbor and observe the extent to which the old jetties constructed 30 years ago had been beaten down and washed away. When the district and division engineers handed down conflicting reports, it became even more difficult to obtain the desired reversal of the previous rejections of the project by the entire Board of Engineers, but this was finally accomplished. Complete hearings were then held before the Committee on Rivers and Harbors, before which I made a full presentation of the project. These hearings are being inserted herein. After receiving the approval of the committee the project was subsequently included in the omnibus river and harbor bill, and the project was authorized by Congress and items included for its construction in appropriation bills, until, altogether, $4,925,000 has been expended to date for the reconstruction of the south jetty, and the first $500,000 has been secured to commence the construction of the north jetty, at an estimated cost of $2,365,000, a total investment by the Federal Government of approximately $7,290,000 on a project which had been abandoned and was considered hopeless until I came to Congress.

My second task was to save, if possible, the citizens and taxpayers the cost of dredging the inner channel of Grays Harbor. This was also an extremely difficult task. From 1919 to 1934 the citizens of Grays Harbor paid annually $58,000 for dredging the inner channel of Grays Harbor, amounting to approximately $1,000,000, which we paid in millage on our taxes on our homes, businesses, and farms. In 1934, after following through the protracted procedure, and finally gaining the approval of the Rivers and Harbors Committee of the engineers' reports, and then securing the legislative authorization by Congress and adoption of the project, and the necessary appropriations, we had this burden shifted to the Federal Government. In the past 6 years this action has resulted in an actual total saving to the taxpayers, home owners, businessmen, and farmers of Grays Harbor County of $348,000 in cash money, which we have not had to pay in taxes as we had done in the past. This saving of $348,000 is more than the entire cost of paying all the salaries of all the county officials of Grays Harbor

County during this period, and the saving to date already would amount to the salary which would be paid to me as a Member of Congress by all the people of the United States for a period of 34 years, if the people of Grays Harbor and southwest Washington should see fit to keep me in Congress that long. I am also inserting the hearings before the Committee on Rivers and Harbors on this project, following the hearings on the jetty project.

Influence in Congress depends upon seniority of service on important committees. I now rank sixth, out of a membership of 27, on the powerful Rivers and Harbors Committee, having started in at the bottom of the ladder in 1933. It is also my privilege to be chairman of the Pensions Committee, which gives me added rank and prestige in the House. I also am serving on the important Committee on Education, vital to the students and faculties in our public schools and colleges, and on the Indian Affairs and War Claims Committees.

Serving in Congress may be compared to attending school—the longer the term of service the more efficient the Representative, thus reflecting indirectly the standing of the people of the district which he represents. As Champ Clark, a former Member of the House from Missouri, and its Speaker, who established a record of honorable service, once said:

> It is a high honor to be a Representative in Congress, if only for one term, and with the number of terms the honor increases in geometrical rather than arithmetical proportion. A Member's usefulness to his country should increase in the same proportion. A man has to learn to be a Representative, just as he must learn to be a blacksmith, a carpenter, a lawyer, or a doctor * * *. Congressmen—that is, useful and influential Congressmen—are made largely by experience and practice.

River and Harbor Bill

HOUSE OF REPRESENTATIVES,
COMMITTEE ON RIVERS AND HARBORS,
Washington, D. C., February 28, 1935.

The committee met at 10:30 a. m., Hon. J. J. MANSFIELD (chairman) presiding.

GRAYS HARBOR, WASH.

The CHAIRMAN. Gentlemen, we will take up Grays Harbor, in the State of Washington. Mr. SMITH, I understand you wish to say something on this project.

STATEMENT OF HON. MARTIN F. SMITH, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF WASHINGTON

Mr. SMITH. Mr. Chairman and gentlemen, Grays Harbor is in my district in southwest Washington, and the project now comes before the committee on a resolution which this committee adopted in September 1933 to consider the advisability of reconstructing the north and south jetties of Grays Harbor, as recommended by the engineers, to an elevation of 16 feet.

The district engineer, in his report, recommended the reconstruction of the south jetty to an elevation of 12 feet and extending it 1 mile. The division engineer took issue somewhat with the recommendations of the district engineer, and recommended in accordance with my resolution, which was adopted by the committee, the reconstruction of both jetties, but advised against extending them. Then the Board of Engineers followed the recommendations of the division engineer, and General Markham ratified the recommendation of the Board.

The CHAIRMAN. That is, to reconstruct both of them?

Mr. SMITH. That is, to reconstruct both jetties.

The CHAIRMAN. But not extend either?

Mr. SMITH. Not extend either one. The estimated cost is $4,565,000.

Grays Harbor is about 45 miles north of the mouth of the Columbia River, where the Chehalis River enters into the head of the bay. The inner channel of Grays Harbor extends about 11 miles from the ocean, and our ports of Hoquiam and Aberdeen are about 6 miles from the channel.

The CHAIRMAN. You have not that marked on the chart, have you?

Mr. SMITH. Yes; these ports are about 17 miles from the sea. We have Aberdeen here [indicating], and Hoquiam here [indicating], and we have the Chehalis River and the channel and the jetties about in here [indicating]. These jetties were first built in 1902.

The CHAIRMAN. How are they constructed? Are they constructed of stone?

Mr. SMITH. Yes; some 30 years ago.

The CHAIRMAN. About how long are those jetties now?

Mr. SMITH. The north jetty is 16,000 feet and the south jetty is 13,734 feet.

The CHAIRMAN. One is about 2 miles and the other about 3 miles long?

Mr. SMITH. Yes.

Mr. BOLTON. Where do those jetties show on the map?

General PILLSBURY. Here [indicating] is the north jetty, and here is the south jetty.

Mr. CARTER. Gentlemen, it looks like that south jetty runs through the end of the peninsula.

General PILLSBURY. Yes; it is my understanding that the coast has built out since both of these jetties were completed.

Mr. COLDEN. Mr. Chairman, may I ask what is the depth of water in the channel?

Mr. SMITH. When dredging is carried on in the summer, which is discontinued during the winter months, it is from 26 to 30 feet.

The CHAIRMAN. How much?

Mr. SMITH. From 26 to 30 feet, and then there is considerable shoaling in wintertime, down to about 24 feet.

The CHAIRMAN. How much draft is required for those large vessels loaded with lumber?

Mr. SMITH. Twenty-eight feet and more.

The CHAIRMAN. Twenty-eight feet?

Mr. SMITH. Yes; 28 feet at least. Grays Harbor has developed into one of the leading lumber ports of the Pacific Northwest, and——

The CHAIRMAN. You mean the ship draws 28 feet?

Mr. SMITH. Yes.

The CHAIRMAN. Then you want several additional feet added to it for safety?

Mr. SMITH. Yes, indeed; under the keel. In 1927 we shipped out of Grays Harbor 1,500,000,000 feet, board measure, of lumber, and the tonnage increased from 1,300,000 tons in 1923 to a maximum of 2,700,000 tons in 1926, falling off to 480,000 tons in 1932, but increasing to 676,000 tons in 1933, and I have just received the figures for 1934, and it has increased now again to 900,000 tons, and we expect, from the way we are starting the year, that it will mount to 1,250,000 and possibly 1,500,000 tons this year, because of the increased commerce—I just had a report on it, and in January we had the highest shipments we have had for 4 years—since 1931.

Mr. COLDEN. Mr. Chairman, may I ask the Congressman a question?

The CHAIRMAN. Yes, Mr. Colden.

Mr. COLDEN. At the rate you are now marketing your lumber, how long will that timber supply last?

Mr. SMITH. It is estimated now that we have, in close proximity to Grays Harbor, and by practicing reforestation, which would be manufactured and shipped out of that harbor, 39,000,000,000 feet, consisting principally of Douglas fir, spruce, hemlock, cedar, and some pine.

Mr. COLDEN. You are marketing at about the rate of 1,000,000,000 feet a year?

Mr. SMITH. Yes; but we are practicing reforestation and sustained-yield program, and those who should know are of the opinion that, with that program carried on, we can cut 1,000,000,000 feet a year, indefinitely.

Mr. COLDEN. Under whose auspices is this reforestation going on?

Mr. SMITH. A part of it is in the Olympic National Forest, by the Government, and by private timber owners.

The CHAIRMAN. How old would the trees have to be in order to be marketed for lumber, in reforestation; do you know the age; is it 40 years?

Mr. SMITH. Well, 40 years for hemlock, for pulpwood. We are developing a very important pulpwood industry, and we have built in Hoquiam, my home city, a pulp and paper mill, at a cost of $6,000,000, one of the most up-to-date mills in the United States, and we are expecting to have another mill constructed in Aberdeen, probably. We have an almost inexhaustible supply of hemlock pulpwood in that territory.

The CHAIRMAN. What type of paper does that make?

Mr. SMITH. Well, it makes a very high grade of book and stationery paper, and Hammermill Bond paper is made in the Hoquiam plant of the Grays Harbor Pulp & Paper Co.; and now they have been experimenting and they are making rayon very successfully.

Mr. DONDERO. Do I understand that you want these two jetties reconstructed?

Mr. SMITH. Yes.

Mr. DONDERO. I notice the district engineer advises against that. He says dredging would be far cheaper, does he not?

Mr. SMITH. He does in regard to the north jetty, Mr. DONDERO.

The CHAIRMAN. The division engineer and the board all ruled against him.

Mr. SMITH. Yes; he was in doubt about the north jetty. He recommended the reconstruction of the south jetty and to extend it 1 mile, which would cost over $4,000,000, which would be just about the equivalent of what this project would cost that is now recommended by the board, to reconstruct both, to an elevation of 16 feet, without extending them.

Mr. COLDEN. Mr. Chairman, may I ask this question: Is it necessary to reconstruct the jetties to an additional height?

Mr. SMITH. As a matter of fact, the jetties now have been beaten down by the sea until they afford but little protection, as shown in the engineer's reports.

Mr. COLDEN. Your idea is to raise them, then?

Mr. SMITH. Yes; to 16 feet.

The CHAIRMAN. Does the water run over them, the waves run over them?

Mr. SMITH. They do in some places, Mr. Chairman, at some times of the year, and, of course, the sand—a deplorable feature of the present situation is, that the sand washes through and fills up the channel, because these jetties do not serve their designed purpose now, and do not exclude the sand from the channel.

The CHAIRMAN. Do they not wash the sand over the top of the jetties?

Mr. SMITH. They do; yes.

Mr. CARTER. Would the new jetty be built in the same alignment as the old, and would the old serve as a foundation for the new?

Mr. SMITH. Well, I think that is really an engineering question that General Pillsbury could answer.

General PILLSBURY. Yes.

Mr. CARTER. So you would have that old foundation still?

Mr. SMITH. Yes; we would.

Mr. CARTER. Did not the Rivers and Harbors Board of the War Department visit this harbor about a year ago?

Mr. SMITH. They did, yes; and they made a personal inspection at that time, before making their favorable recommendation of the project.

Mr. CARTER. What is that river we see on the map running into the head of the bay; is that the Chehalis River?

Mr. SMITH. That is the Chehalis River; yes.

Mr. CARTER. I have heard, at various times, something about a canal across that peninsula, would it take off from this bay, or the Grays Harbor region, a canal from Columbia River to Puget Sound?

Mr. SMITH. It would. It would go from Grays Harbor to Puget Sound, from Grays Harbor to Willapa Harbor, and from Willapa Harbor to the Columbia River.

Mr. CARTER. Would it go up the Chehalis River; would that be the direction it would take, or do you know, or has it been surveyed?

Mr. SMITH. It has, by engineers of the State canal commission, but would not affect this project.

Mr. CARTER. No, no, I appreciate that, but I was wondering if you knew about it.

Mr. DONDERO. What would be the population of the territory around Grays Harbor?

Mr. SMITH. The surrounding population is 80,000, and Aberdeen is the largest city, which has a population of about 22,000, and Hoquiam has about 12,000.

The CHAIRMAN. Where are they located on that map there?

Mr. SMITH. They are located there [indicating on the map], right on the harbor.

Mr. DONDERO. Have local interests been contributing anything toward past improvement of the harbor?

Mr. SMITH. They have spent, in dredging the inner channel, over $800,000—the port of Grays Harbor has.

Mr. DONDERO. Over what period of years?

Mr. SMITH. That is since 1919, and they have spent, to provide turning basins, an additional $600,000, over $600,000, and the port of Grays Harbor has built a terminal costing an additional $600,000. The local taxpayers have contributed nearly $2,000,000 to that project.

Mr. DONDERO. There is a port commission there, is there not?

Mr. SMITH. Yes; the Port of Grays Harbor.

The CHAIRMAN. Well, that is pretty good cooperation.

Mr. SMITH. I think it is, Mr. Chairman, considering the size of the communities.

The CHAIRMAN. Where does your lumber go, export or import?

Mr. SMITH. Well, it is both export and domestic. You might be interested in the figures on that.

From the last report, the 1934 report, showing the out-bound lumber ships from Grays Harbor, we shipped to California 71,207,181 feet; to Puget Sound, Wash., 6,000,000 feet; China, 56,861,000 feet; to Japan, 68,583,000 feet; the west coast of South America, 11,211,000 feet; the east coast of South America, 1,850,000 feet; the east coast of the United States, 41,619,000 feet; the east coast of Canada, 2,083,000 feet; to Europe, 15,531,000 feet; Australia, 4,210,000 feet.

The vessel tonnage of lumber shipments in 1934 was 736,376 tons, and there were 282 vessels that transported that lumber out of Grays Harbor.

Mr. DONDERO. Mr. Smith, what is the nearest port to Grays Harbor of any large size?

Mr. SMITH. Willapa Harbor.

Mr. DONDERO. How far is that?

Mr. SMITH. Seventeen miles. We have had a tremendous development, I think, in vessel tonnage and cargo from Grays Harbor since the port was established, justifying all of the expenditures that have been made by the Federal Government, and the recommendations that the United States Army engineers have made in the past, and which I think indicates also the action this committee has been taking from time to time, because every time we have made an improvement we have had a corresponding increase in commerce, until when conditions were normal, starting from 1924 down to 1929, we were shipping in tonnage considerably over 1,000,000 tons each year in cargo, and in feet, board measure, of lumber, considerably in excess of 1,000,000,000 feet each year during those years, from 1924 to 1929, including 1929.

The CHAIRMAN. Can you give us some illustration of what 1,000,000,000 feet of lumber is? What is a large ship cargo; how many feet?

Mr. SMITH. I beg pardon, Mr. Chairman, but I did not hear your question.

The CHAIRMAN. We do not know—or I do not know—how much a billion feet of lumber is. That means a foot square and an inch thick, does it not?

Mr. SMITH. Yes.

The CHAIRMAN. How many feet ordinarily constitutes a ship's cargo, or can you give us any idea of that?

Mr. SMITH. I may have some figures on it.

The CHAIRMAN. What is the average weight of a shipload of that lumber; what does it weigh?

Mr. SMITH. In shipping to California we had a cargo of 71,000,000 feet in 91 vessels. That would be about three-quarters of a million feet to a vessel, so a billion feet might require a fleet of a thousand ships of that cargo shipment.

Mr. COLDEN. Mr. Chairman, may I ask the gentleman from Washington a question?

The CHAIRMAN. Yes, Mr. Colden.

Mr. COLDEN. What are the possibilities for farming and dairying and fruit raising in the area adjacent to Grays Harbor?

Mr. SMITH. They are very good, and there is considerable dairying carried on now in Grays Harbor County and in the adjoining counties, and poultry raising and vegetable and fruit growing, and we have considerable fishing and fish canning in that immediate vicinity.

Mr. COLDEN. Are you shipping out any of these products?

Mr. SMITH. We are shipping some of these products; yes. Of course, our principal item is lumber.

The CHAIRMAN. Lumber and pulp?

Mr. SMITH. Yes.

Mr. CARTER. Do you ship any shingles?

Mr. SMITH. We ship some shingles to California; yes, Mr. Carter, and considerable quantities to other points.

The CHAIRMAN. How long has the paper mill been in operation?

Mr. SMITH. Four years I think.

The CHAIRMAN. Has it shipped out anything yet?

Mr. SMITH. It has shipped considerable. I think I can give you the figures, Mr. Chairman. The water shipments of Grays Harbor Pulp & Paper Co. amounted to 21,365 tons in 1930, 23,413 tons in 1931, and 16,085 tons in 1932. They employed 506 persons.

We have 71 sawmills and woodworking plants and 31 logging camps in the vicinity of Grays Harbor; and in normal times, they have 6,000 persons employed, and the pay roll is over $20,000,000, the value of products over $50,000,000.

Mr. DONDERO. Have you rail facilities there?

Mr. SMITH. We have three railroads, I will say to the gentleman from Michigan, the Chicago, Milwaukee & St. Paul, the Northern Pacific, and the Oregon & Washington.

Mr. DONDERO. All of the products of this locality do not go out by water?

Mr. SMITH. No; they do not; but they do, mostly.

Mr. DONDERO. Some are shipped by rail?

Mr. SMITH. Yes; some are shipped by rail, that is very true.

The CHAIRMAN. I presume everything for the eastern portion of the United States goes by water?

Mr. SMITH. It does.

Mr. CARTER. Everything that cannot be shipped by water is shipped by rail; and everything that can be shipped by water is shipped by water, I imagine?

Mr. SMITH. Yes; it is shipped by water, if possible. Of course, the largest percentage of our products are shipped by water.

Mr. DONDERO. What is the amount of the Government's investment in this harbor now?

Mr. SMITH. I think, altogether, between $4,000,000 and $5,000,000. The jetties originally cost $2,750,000, I think.

I submit to the committee that the recommendations of the engineers should be adopted by the committee. I think there are very few projects that possess the merit that this project does.

I am reminded of the statement of the gentleman from Ohio, Mr. BOLTON, which he made yesterday in regard to the importance of the commerce and tonnage in any harbor as a justification for an appropriation by the Federal Government, and I think that should be the test, and certainly we can meet that test in regard to this project, because we know that we have had the commerce in the past, and we know we are going to have it in the future.

Mr. DONDERO. And if this committee does not grant your request, you can go into the Public Works Administration and get it anyhow?

Mr. SMITH. I might say that the present status of this project is that it has already been recommended to the Public Works Administration by General Markham, and last July, after we had had the reports from the district and division engineers and the Board, and the general himself recommended the project, it was sent to the Public Works Administration, where it has been pending ever since, but, of course, I would like to have it adopted by this committee and have it included in our omnibus rivers and harbors bill.

Mr. DONDERO. That is the report, and that is why I asked the question.

Mr. SMITH. Yes; that is correct.

Mr. BOLTON. Grays Harbor is one of the important ports in the State of Washington, is it not?

Mr. SMITH. It is; yes.

Mr. BOLTON. Can you put in the record the amount of taxes paid, and also the internal-revenue taxes paid by the State?

Mr. SMITH. I will be glad to do that, and if there are no further questions, I desire to conclude and thank the committee.

(The statements referred to are as follows:)

Internal-revenue collections in State of Washington, fiscal years 1928–34

Year	Income taxes	Miscellaneous taxes	Processing taxes	Totals
1928	$12,156,274.22	$582,722.85		$12,738,997.07
1929	13,424,220.27	596,067.65		14,020,287.92
1930	13,643,704.92	659,575.39		14,303,280.31
1931	10,629,177.47	736,867.94		11,366,045.41
1932	5,371,200.87	369,685.47		5,740,976.34
1933	3,375,084.35	1,879,810.93		5,254,895.28
1934	3,592,337.63	6,555,467.68	$4,015,377.64	14,163,182.95
Total	62,192,069.73	11,380,197.91	4,015,377.64	77,587,665.28

Value of taxable property in State of Washington

[Statement compiled by State Tax Commission of State of Washington]

Year	Assessed value on assessors' books	Actual value found by State board of equalization
1928	$1,243,720,291	$2,826,515,578
1929	1,250,903,787	2,855,928,422
1930	1,263,470,429	2,893,230,930
1931	1,248,893,714	2,858,217,474
1932	1,055,099,896	2,413,783,120
1933	991,366,369	2,259,852,124
1934	965,151,234	2,171,556,620

The CHAIRMAN. Gentlemen, if there is no further question of Mr. SMITH, we will hear General Pillsbury.

STATEMENT OF BRIG. GEN. GEORGE B. PILLSBURY, ASSISTANT CHIEF OF ENGINEERS, UNITED STATES ARMY

General PILLSBURY. Grays Harbor is one of the important harbors of the Northwest. It was improved by the construction of two jetties, one of which is about 33 years old, completed about 33 years ago, and the other of which was completed some 22 years ago.

Those jetties have been beaten down by the sea until they are no longer effective. In the report presented to this committee in 1927, we considered very fully the advisability of restoring the jetties, but considered that it would be better to attempt to maintain the entrance channel by continuous dredging, at an estimated cost of $250,000. That dredging has failed to secure a safe channel for the entrance of large vessels, and with the progressive deterioration of the jetties, the department is now convinced that the proper method is to incur the larger cost of rebuilding them and raising them.

Mr. COLDEN. Mr. Chairman, may I ask the general a question?

The CHAIRMAN. Yes.

Mr. COLDEN. General, how do you propose to prevent the sand from drifting through the jetties?

General PILLSBURY. The jetties are very massive, reaching to a height of 16 feet above low water, and it has been our experience that sand will not go through a well-constructed jetty.

Mr. COLDEN. That is, you have got to block the openings.

General PILLSBURY. Yes; they are to be built very compactly.

The CHAIRMAN. Gentlemen, when this work is completed, how will the jetties compare with what they were when they were originally completed?

General PILLSBURY. They will be higher.

The CHAIRMAN. Higher?

General PILLSBURY. Yes; the original jetty on the north side was brought up to an elevation, upon high tide, of about 9 feet above low water. The south jetty was brought up only to midtide, which would be an elevation of about 4½ feet, and it is now proposed to raise it up to 16 feet above low water, or about 7 or 8 feet above high tide.

Mr. COLDEN. Mr. Chairman, may I ask the general a question?

The CHAIRMAN. Yes.

Mr. COLDEN. Where would you secure your rock for building those jetties?

General PILLSBURY. It is secured from the back country.

Mr. COLDEN. Brought in by rail?

General PILLSBURY. Brought in by rail; yes. There are, within the region, good rock quarries.

Mr. SMITH. Mr. Chairman, if you will allow an interruption, I might say there is rock available in Lewis County, and Thurston County, from whence some of the rock that was used originally was brought.

The CHAIRMAN. How far is that away?

Mr. SMITH. Mayfield, in Lewis County, is about 60 miles from Grays Harbor, and Tenino, in Thurston County, is about 70 miles, and there are rail connections to both of those points, from which some of this rock would come, and perhaps closer in Grays Harbor County.

Mr. CARTER. Mr. Chairman, may I ask a question of the general?

The CHAIRMAN. Yes, Mr. Carter.

Mr. CARTER. Did the Federal Government build the first jetties originally, General?

General PILLSBURY. Yes.

Mr. CARTER. Do you know the approximate cost of the jetties?

General PILLSBURY. $2,750,000. The report, beginning with page 1360, gives the report on Grays Harbor and the bar entrance.

Mr. CARTER. Oh, yes; I see. And the total amount appropriated to June 30, 1934, there, is $5,613,000?

General PILLSBURY. Yes; a large amount has been spent for the maintenance of the channel, in addition to the cost of the jetties.

Mr. DONDERO. May I ask the general a question?

The CHAIRMAN. Yes.

Mr. DONDERO. I ask, Do the engineers, in the general policy as to the cost of maintenance of the channel, consider what they believe is proper or excessive, or does it depend on the locality?

General PILLSBURY. I think it depends on the locality.

Mr. DONDERO. There is no general rule?

General PILLSBURY. No; there are two aspects to that. After the improvement has been undertaken and the industry established on a waterway, we consider it our duty to maintain the channel as long as the commerce is carried on it, even though it may not be fully economically justified, until Congress directs the abandonment of the project, in exactly the same way that a railroad is required to maintain a branch line, even though that branch line may not return a profit.

I do not think that we would have the authority to discontinue a public utility as long as it is in use, for the benefit of the locality, any more than a railroad has the right to discontinue a branch line without the authority of the sovereign.

Also there are projects which do not return an adequate sum, but they are in use, and until Congress has directed the abandonment we consider it our duty to maintain them.

Then it depends a great deal upon the value of the commerce. A port shipping, we will say, refrigerated food—a small commerce of 50,000 tons might mean a very great saving in the transportation costs.

Mr. BOLTON. But the Office of the Chief of Engineers said it would be ready to proceed similarly to the way a railroad asks for it?

General PILLSBURY. Yes; various recommendations have been made to Congress for the abandonment of projects, but few of them have been abandoned. There were some, some years ago, that were abandoned.

Mr. BOLTON. Figuring the maximum tonnage of 4,000,000 tons per year, there would be a maintenance of about 5 cents a ton?

General PILLSBURY. Yes.

Mr. BOLTON. Compared to the Great Lakes rate of 2 mills, it seems high, does it not?

General PILLSBURY. It is high; yes.

Mr. BOLTON. Or in connection with the Mississippi at 20 cents a ton?

General PILLSBURY. Yes; but of course the value of the product that is transported will run, I suppose, somewhere about $30 a ton for this lumber.

Mr. CARTER. Obviously, from the record, you do not figure on any maintenance of these breakwaters, or jetties, do you?

General PILLSBURY. After they have been built up as proposed, we expect that they will be very permanent and that very little maintenance will be required.

The north jetty at the mouth of the Columbia River was built to approximately what we propose here. It has been 20 years since it was built, and it has not deteriorated at all. Those jetties where the waves break over are subject to very material disintegration.

Mr. CARTER. And that is the way you account for the deterioration of the present jetties?

General PILLSBURY. Yes.

Mr. CARTER. These others being high, 16 feet above high water——

General PILLSBURY. They will not be subject to the particular deterioration that those low jetties were.

Mr. CARTER. Although there may be some from time to time?

General PILLSBURY. There might be some; yes; from time to time.

The CHAIRMAN. My impression is that the jetties at Galveston, for instance, require very little maintenance, in the absence of hurricanes; is that correct, General?

General PILLSBURY. Very little.

The CHAIRMAN. Yes; and you do not have these hurricanes on the west coast, but you have heavy seas?

General PILLSBURY. We have very rough seas out there.

RIVER AND HARBOR BILL

HOUSE OF REPRESENTATIVES,
COMMITTEE ON RIVERS AND HARBORS,
Washington, D. C., May 2, 1934.

The committee this day met, Hon. JOSEPH J. MANSFIELD (chairman) presiding.

GRAYS HARBOR AND CHEHALIS RIVER, WASH.

The CHAIRMAN. Gentlemen, we have before us the Grays Harbor project, in the district of Mr. SMITH, who is a member of the

committee. Do you wish to make a statement in regard to this project, Mr. SMITH?

STATEMENT OF HON. MARTIN F. SMITH, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF WASHINGTON

Mr. SMITH. Mr. Chairman, I would like to make just a brief statement before yielding to General Pillsbury to answer any questions that the members of the committee may see fit to ask.

Grays Harbor in normal times is one of the largest and most important lumber ports in the United States, and the two principal cities of Hoquiam and Aberdeen are located on Grays Harbor. I live in Hoquiam, the smaller of the two cities, which has a population of approximately 13,000 or 14,000, and Aberdeen has a population of about 23,000. Altogether the population of the immediate tributary territory is close to 85,000.

The port of Grays Harbor has been established for over 20 years, and the channel has been steadily deepened from a depth of probably 18 feet to the present depth of 31 feet in the bay channel and the present objective of 28 feet in the inner channel. The cost of maintenance of the inner channel has been defrayed by local interests since 1919 in addition to the large expenditures made for improvements and terminals. The port of Grays Harbor is no longer able to maintain the inner channel. There has been a steady increase of commerce, and maintenance of the inner channel is, of course, absolutely necessary. Our port officials, large shippers, and industrial and business interests justly feel that this burden should be now assumed by the Federal Government.

I would now prefer that General Pillsbury answer any questions in regard to technical phases of the project.

Mr. COLDEN. I would like to ask you to repeat the amount of the investment made by those cities.

General PILLSBURY. Eight hundred thousand dollars.

Mr. COLDEN. It has been a municipal enterprise?

General PILLSBURY. It is a port district. I think it is supported, as most districts are, by taxes on the property benefited, and also by revenue from the port facilities which they furnish.

Mr. COLDEN. May I ask you to what extent the Government has cooperated?

General PILLSBURY. The Government has cooperated by providing the channel over the ocean bar which affords access to the bay, and the local interests have enlarged the channel in the upper bay to afford access for deep-draft ocean vessels to those lumber ports.

Mr. MARTIN. It is proposed for the Government to take over what has been done locally?

General PILLSBURY. Yes, sir; the maintenance of the channel.

Mr. MARTIN. And relieve the local interests of the maintenance of the channel?

General PILLSBURY. Yes, sir.

Mr. SMITH. The port district has expended as much as $800,000 to date.

Mr. MARTIN. How can they stand that?

Mr. SMITH. It is raised by local taxation.

Mr. GREEN. They want the Government to assume that?

Mr. SMITH. No; they want the Government to assume $58,000 in addition to the present maintenance cost.

General PILLSBURY. That is the amount estimated in addition to the main channel.

Mr. GREEN. You do not mean $800,000 annually, do you?

Mr. SMITH. No; they have spent that much to date.

Mr. MARTIN. How much altogether has been expended locally?

Mr. SMITH. Several million dollars.

Mr. GREEN. It is believed that the Government will have to spend how much every year?

General PILLSBURY. $58,000 is estimated for the maintenance of the inner channel.

Mr. DEROUEN. It is $58,000 over the present cost.

General PILLSBURY. Yes, sir. The present cost of maintaining the channel over the bar is $212,000 per annum, and if we take over the maintenance of the interior channel to the head of the bay, the cost will be increased by $58,000.

The commerce ranged from 1931 to somewhat over 2,000,000 tons per annum over the bar. For 1931 it was about 1,000,000 tons.

Mr. DEROUEN. I see that for 1926 it was over 4,000,000 tons.

General PILLSBURY. I think that probably included logs, as well as the amount that went over the bar in deep-draft ships.

Mr. MARTIN. How much water do you have over the bar?

General PILLSBURY. About 28 feet. In summer, when it is dredged, it is over 30 feet, but during the winter, when the dredge cannot operate on account of the swells of the North Pacific, which are considerable, it shoals up somewhat. They start in again about this time and dredge the channel out. At the beginning of the year, I believe, it is about 26 or 28 feet.

Mr. PARSONS. You mentioned the port district, and stated that they derived revenue from taxation. Is there any tax levied on the tonnage in the harbor? Is that the principal source of this revenue, or for any portion of it?

Mr. SMITH. No; it is raised by local taxation. It is direct property levy.

Mr. PARSONS. It is not a rate charge or tariff charge?

Mr. SMITH. No.

Mr. MARTIN. The property owners have to pay the tax.

Mr. DONDERO. What rate of taxation does this port district have to impose to raise that money, per thousand dollars?

Mr. SMITH. Several mills.

Mr. MARTIN. Is it not more than that?

Mr. SMITH. I would not be certain. Last year I think it was about 4 mills.

Mr. BEITER. What would be the assessed value of the property to raise $800,000 at that rate? What is the assessed value of the property?

General PILLSBURY. I think you will find that the $800,000 was raised by a bond issue, without doubt. It was expended in deepening the channel, and also in providing for those anchorages at the termini in those towns.

Mr. SMITH. That is correct.

Mr. GREEN. If the tax district has had to raise $800,000, how can we maintain it for $58,000?

General PILLSBURY. They started out with a channel 18 feet deep, and they have enlarged it to 26 feet. It is simply a question of holding what we have.

Mr. GREEN. In other words, a part of that sum went for improvements and a part of it for maintenance?

General PILLSBURY. Yes, sir.

Mr. GREEN. That is, a part of the $800,000?

General PILLSBURY. Yes; quite a considerable portion of it went for improvements.

Mr. SMITH. I will say to the gentleman from Florida that the only part of the sum that is for maintenance of the inner channel is the $58,000 per annum, which we are asking the Federal Government to assume.

(Thereupon, after some time spent in executive session, the committee adjourned to meet tomorrow, Tuesday, May 2, 1933, at 9:30 o'clock a. m.)

Dr. R. R. Sayers

EXTENSION OF REMARKS

OF

HON. JAMES G. SCRUGHAM

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

Mr. SCRUGHAM. Mr. Speaker, I desire to make of record, certain facts in regard to the appointment by the Secretary of the Interior of Dr. R. R. Sayers as Acting Director of the Bureau of Mines. Dr. Sayers is a member of the American Institute of Mining and Metallurgical Engineers.

He was virtually an employee of the Bureau of Mines for 14 years, during which he was detailed to the Bureau from the Public Health Service. He became chief of the Safety and Health Branch of the Bureau of Mines and was identified with its outstanding success that has received generous national recognition from miners throughout all parts of the United States.

In this service Dr. Sayers directed one of the largest groups of Bureau of Mines employees, including those engaged in health research, mine safety, mine rescue and first-aid training. With Bureau engineers he personally went underground in a large number and variety of mines, collecting data and conducting studies upon the deleterious effects of rock dust, humidity, high temperature, mine gases, and gases produced from explosives. His research concerned with the health and safety of miners led to his establishment of clinics in mining camps for the detection, study, and prevention of tuberculosis and silicosis. Some of these clinics are now permanently maintained by State or local authorities, assisted by mining companies. In these activities Dr. Sayers gained knowledge of many mining operations and made many friends among miners and operators.

Dr. Sayers had been a physical chemist before he became a doctor. This proved of value in much of the work described and also in experiments for the use of helium in compressed atmospheres to be breathed by men, such as tunnelling, caisson work, deep-sea diving, and escape from sunken submarines.

The qualifications of Dr. Sayers are nonpolitical. He has played an important part in mining. He knows the field, the background, and the personnel of the Bureau of Mines. He is experienced as a Government administrator.

Mr. Ickes deserves commendation for making this nonpolitical appointment to a position where the qualifications of Dr. Sayers are obviously suitable.

Instructive Visiting Nurse Society

EXTENSION OF REMARKS

OF

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

RADIO ADDRESS BY HON. FRANCES P. BOLTON, OF OHIO

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered over the radio by the gentlewoman from Ohio [Mrs. BOLTON]:

Birthdays are wonderful days—full of gay laughter, of happy ingathering of relatives and friends. They are days of eager anticipation of what is to come—of quiet consideration of what has been—that the years ahead may be rich with the fruit of understanding.

We are here to celebrate—not a first birthday, nor a sixteenth, nor a twenty-first. No; infancy, childhood, and youth have been passed through by our birthday child and the wonderful middle years are coming up above the horizon.

We, who are members and friends of this Instructive Visiting Nurse Society of Washington, are met here together to proclaim this anniversary day when our society is reborn into new life, the deepened, enriched life of full maturity; for life—we have been told—but begins at 40.

Forty years. And who knows just how long was the prenatal period that preceded this birth? For nothing in all the world just happens suddenly out of nowhere.

Who can count the men and women who dreamed of a world without pain, a world where all children laugh, where the old folk sit smiling their wisdom to the sun, and youth sings its way into productive maturity? Were they not all precursors of today's programs of public health? Who knows the birth pangs suffered by those who sent the first nurse on her way? And who cares? For like all mothers, once the babe is safely here, the agony becomes the glory of a deeper understanding.

But let us pause a moment and give thanks for those whose dreams bore such fair fruit, asking that we be given wisdom to keep faith with them.

They were but a small band of courageous people who dared to take hold of their vision, shape it, discipline it, meet its discouragements, and offer its joys to all who reached out in poignant need. How much we owe them. Yet they ask only that we take hold of that same vision in our turn and fashion it to meet tomorrow's dawn.

Forty years ago there were but 130 visiting nurses in all these United States. Most of these had stepped out into wholly unblazed trails, without maps of any sort. Courageously they had set their feet upon the way and kept their eyes upon the stars. What courage it took.

Have you ever stopped to think of what the problems were with which they had to cope in those early days? They went into the homes of the needy to give bedside care to the sick. Many carried bags of supplies weighing 30 and even 40 pounds. They rode bicycles, they walked, they rode in street cars, in season and out of season, tirelessly pursuing their heartful way. And at each bedside there was more than just pain to be alleviated, more than just physical care to be given. The agonized questions of the patient and of the family had to be answered as well: "What does it mean, nurse?"—"I can't be sick, there are the wife and kids."—"Oh, nurse, I can't leave my baby—make me well, oh make me well!"—"Show me how to take care of the baby—he frets so—he doesn't eat—he cries all the time and lets nobody sleep."—"Say nurse, look at Johnnie—he's all bruck out."

Natural, simple questions—but what momentous portent was theirs, for they had to be answered, and the answering became teaching and through such teaching the bedside nursing of the first visiting nurses became the public-health nursing of today.

Have you talked with some of these pioneer nurses and have they told you what it was that kept their courage high when the weariness of body, heart, and mind almost overcame them? Have you seen the light come into their faces when they spoke of the laymen and women with whom they counseled, with whom they shared the many problems of their pioneering? They were not alone, they were upheld and strengthened by their boards—for public-health nursing, whether it was called visiting nursing, community nursing, district nursing, or public-health nursing, has been since its inception, the combined work of doctors, nurses, and laymen.

I, who have but lately become associated with this splendid organization, can say with truth that the board of the Instructive Visiting Nurse Society of the city of Washington and its staff of 78 nurses are indeed keeping faith with those who made possible the first visiting nurse in the District. You will go far to find finer cooperation, truer consecration to the work in hand, and a higher concept of community needs and possibilities. To be a part of it, though of necessity an all too inactive part, is one of the rare privileges of my Washington life.

Now let us look for a moment at some of the differences in the field of service into which the first nurses went and that which is covered today. They were indeed pioneers, these first women who went into the homes of those who were too poor to go to hospitals or to pay for care in their homes. They went, with no special knowledge of community problems, just to give bedside care. They stayed to discover that to teach a mother how to care for her family, a "little mother" to help, were as essential as the original care of the patient himself. They found that even this care and teaching did not solve the problems, for these were often due to broken families, leaking roofs, open sewers, unpaid rents, inadequate food, alcohol, and drugs.

They were given office space with associated charity agents with whom they discussed the tangible problems of their charges. Some of these problems had to be taken to the police, others to churches, to private individuals, to the schools, and to the courts. Their solution depended largely on the ingenuity of the individual nurse, on her persistence, yes, on her faith, and the faith of her board.

How different now! These 40 years have seen the establishment of departments of health, of out-patient service for obstetrics, of clinics and sanatoria, and of the Federal Public Health Service, as well. School nurses, industrial nurses, and tuberculosis nurses carry their specialized work. But the family's need is still the unit from which all public-health agencies must work, and toward which all efforts must converge. The nurse is the natural interpreter, teacher, friend. The care she gives at the bedside is the key to the heart, to the confidence of the family. What she tells them they believe, for, has she not shown them both her skill and her knowledge? "Without the public-health nurse, the health officer would be as a man deaf, dumb, and blind to the public he must lead to health."—Haven Emerson.

No plan that separates the actual care of the sick from the teaching for health could give the results that have been, and must be increasingly, obtained. Let us adjure all those who are in authority in any and all agencies having to do with public health to keep inviolate this combined service of hand, heart, and mind, lest in an effort toward efficiency of organization the life be lost.

These many changes that have brought to our community living what we all like to feel are more intelligent methods of meeting our problems—our public-health departments of every sort and kind—have bit by bit made it appear that private agencies such as this splendid Instructive Visiting Nurse Society may no longer be necessary; that more people can be cared for by State and Federal agencies. On every hand there is also a lessening of private funds and an increased pressure toward Government absorption. Probably much of this is good. But as there is always an impersonalness about Government, there is a very real danger, for without the nucleus of close personal heartfulness that lives best in our private agencies, the light of public-health service will surely go out. Further Government agencies are dependent upon appropriations, and so are subject to insecurity; and men are seldom free from the temptation of misusing power given through control of funds. Dare we subject our people, our sick, to the results of the possible in this important field? Should we not rather insure the existence of privately managed public-health nursing agencies such as the Instructive Visiting Nurse Society, that they may be the living heart of the great body of service to our sick people?

I realize that the relative merits of privately and governmentally controlled health agencies is one of the controversial questions of today. I am merely touching upon it as there is not time for a careful presentation of the many splendid arguments on both sides. But I do want to suggest that as citizens, we consider well the amazing contribution made by such agencies as this Instructive Visiting Nurse Society before we destroy them. The trail blazing, the experimentation, the close cooperation between the professional men and women in the active field and the laity, is the first step to an intelligent, health-minded public. I want to urge that we do not thoughtlessly relinquish to Government those fields that we as Americans hold to be not just the rights, but the responsibilities of free citizenship. Is it not wise to preserve the so-called private agencies lest we lose an invaluable way by which to prove the values of techniques and treatments? Will there not always be need for training grounds, where, as in all private enterprise the individual takes the risk of the trial and experiment period and after proof, gives it to the Nation?

Standing as we do at this important milestone of our life as a health group, we have no fear of relinquishing to other agencies such parts of our work as can better serve the people by such relinquishment. It is as if they were our children, and we, their parents, rejoice that as living arrows from a bow, they go forth in their own strength. We are perhaps the bow which, as Kahlil Gibran said, "God also loves." In its desire to keep abreast and ahead of community problems, the Instructive Visiting Nurse Society has grown to believe that wherever there is sickness there is the need for nursing care and teaching service, regardless of income. So in addition to the work among the very poor, there has been established an hourly home-pay service, based upon the need

of the patient and the ability to pay. This service grows ever more acceptable as the physicians introduce it to their patients.

In closing I must speak of the nurse herself—the nurse who is the key to the whole great structure of our health services.

Granted that money is an essential, that methods for the coordination of public and private agencies must be worked out, the service to human beings is the actuality, and that is the work of the individual nurse.

Any young woman choosing nursing as her profession should be a happy, healthy, serious-minded creature with a desire to serve her fellow beings, rather than herself. She must be intelligent, for the actual knowledge she must have at her command increases with each fresh discovery in medicine, each change in community methods. Her basic training should challenge every phase of her being—and the special work she will need to equip herself for the public-health field cannot be belittled.

We may have, as we do have, the happiest cooperation with the Department of Health, the local hospitals, the private physicians for our general work, Georgetown, George Washington, and Howard University, in the care of our mothers and babies. We may have coordinated our work with that of the tuberculosis, venereal, and cancer clinics, with the new psychiatric groups—all these may be in our structure—but if the nurse is not of the highest caliber, if she is inadequately equipped, we cannot function. Is that not so?

So, in the public-health field we must help draw into the nursing schools young women of high standards and fine quality. We must see to it that these schools are adequately financed so that they may give the kind of basic training upon which specialized work can be built. And somehow we who have served these many years and know the pitfalls and dangers of a too-swift expansion, we must find ways to convince those less qualified by experience to measure these dangers, that too much dilution ruins the effectuality of the best medicines, and that building too hastily will prove to be building upon the sands.

It is the visiting nurse who sees tuberculosis, cancer, syphilis, pneumonia in the first curable stages. But she must be trained to recognize them and then must persuade the individual to go get the help that modern medicine has to give. It is the nurse who must know the community agencies so well that no moment is lost, for those lost moments take their toll in lives.

So here we stand at this wonderful fortieth milestone looking back, with both pride and humility of heart, at the work done; looking forward with high hope and fresh courage to whatever the future may hold.

We are ready to assume our rightful part in whatever changes need to be made that ever more and more people may have health. Indeed, we are constantly reaching out into the future as we have been given light to see it, adapting and readapting our methods to the fast-moving changes of this changing world. We should be faithless to the trust that is ours did we not move out into the ever-changing stream of today's living. Board members, and nurses, physicians, and lay men and women who help carry this society, we all know that underneath the surface of various methods of public-health services there is in every heart the fundamental desire to alleviate pain, to build health of body and of mind for every child of the future.

So on our birthday let us remember that nature builds slowly those things which endure, and that she makes ample preparation for each fresh growth—that as we move forward we may be building surely, strongly, wisely for tomorrow's dawn.

Amendment of the Wage-Hour Law

EXTENSION OF REMARKS

OF

HON. MARY T. NORTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

TELEGRAMS IN OPPOSITION TO BARDEN AMENDMENTS

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegrams:

ST. PAUL, MINN., *April 30, 1940.*

MARY T. NORTON,

Chairman, Committee on Labor, House Office Building:

In harmony with our support of low-income wage earners through our opposition to Barden amendments to Wage and Hour Act, please advise our labor friends in the House that Great Plains wheat producers have suffered years of accumulated farm operating deficits. Please insist wheat farmers must be protected by inclusion in the agricultural parity appropriation now under consideration.

M. W. THATCHER,

Chairman, National Farmers Union Legislative Committee; President, National Federation of Grain Cooperatives.

ST. PAUL, MINN., *April 30, 1940.*

MARY T. NORTON,

Chairman, House Committee on Labor, House of Representatives:

Representing an unduplicated membership of 350,000 farm families, our joint national legislative committee has determined to vigorously oppose the Barden amendments to the Wage and Hour Act. We consider these proposed amendments against public and farmer interest. Labor represents the bulk of the farmers' market, and farmers are genuinely interested in protecting low-income wage earners.

M. W. THATCHER,

Chairman, National Farmers Union Legislative Committee; President, National Federation of Grain Cooperatives.

The Monopoly Threat in Chain-Store Distribution

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

TESTIMONY OF HON. THEODORE CHRISTIANSON BEFORE A SUBCOMMITTEE OF THE HOUSE WAYS AND MEANS COMMITTEE

Mr. PATMAN. Mr. Speaker, permission having been granted, I am inserting herewith the testimony of the Honorable Theodore Christianson, former Member of this House and three times the Republican Governor of Minnesota, on H. R. 1 before a subcommittee of the Ways and Means Committee of the House, March 28, 1940:

So as to clarify what I am going to say, let me explain at the outset that I have no objection to chain stores as such. If a man or group of men have the capacity, the initiative, or the good luck, to be able to operate two or three or ten stores instead of one, confining their operations to one community and retaining their net profits in that community, I wish them well. I will go further than that: I will say that there is no need for Federal interference with larger chains so long as they operate wholly within one State and thereby keep themselves within that State's jurisdiction and control.

But while I have no objection to chain stores as such, I do object to monopoly, whether in distribution or in manufacture; and I object to it particularly in distribution because, as I shall later endeavor to show, the great danger of monopoly in this country lies in control of the market rather than in control of manufacturing processes.

POTENTIAL MONOPOLY, TOO

And in order still further to define my terms, let me say that by "monopoly" I mean not only actually existing monopoly but potential or threatened monopoly. Actual monopoly is always preceded by potential monopoly, and the only way to avoid actual monopoly is first to prevent potential monopoly. We need to "lock the barn door before the horse is stolen." This, as I shall later show, we have failed to do either in the Sherman law or in the Clayton Act, but can accomplish by the means we are now considering.

The courts have recognized the distinction between actual and potential monopoly; they have held that it is not necessary, in order to justify a law designed to curb monopoly, to prove either that monopoly is an accomplished fact or that it threatens imminently to become such. It is sufficient that the practices and situations sought to be curbed "may reasonably be conceived to be promotive of monopoly and restraints of trade." Thus when the State of Mississippi passed an act prohibiting any corporation manufacturing cottonseed oil or cottonseed meal from operating a cotton gin, the Supreme Court of the United States upheld the statute, not upon the ground that a monopoly had actually been established, but because the legislature was convinced "that it was the practice of corporations operating oil mills and cotton gins to depress the price of ginning, regardless of cost, until local competition was suppressed, or brought to terms, and then to charge excessive prices for ginning and to pay unfairly low prices for seed."

WITHIN CONGRESS' POWER

On the same theory, the court would undoubtedly hold that when A. & P. establishes supermarkets in certain communities and sells at lower prices in those than in other communities in which it operates, and by such destructive competition forces other grocers out of business, the Congress may assume that the ultimate result of pursuing such a policy is to create a monopoly, and may break up, by taxation or otherwise, corporations so circumstanced by reason of size that they can successfully pursue such a policy.

The State of North Dakota passed a law prohibiting motion picture producers or distributors from owning or operating theaters within the State. Although it was shown that only 10 of the 168 motion picture theaters in North Dakota were owned and operated by producers and distributors (and only 2,500 of the 16,000 theaters in the United States), a Federal statutory court, on July 14, 1938, held the law to be a valid exercise of the powers of the legislature on the ground that it was designed "to prevent a practice conceived to be promotive of monopoly with its attendant evils."

THE TEMPTATION TO DESTROY

The court declared that the evidence disclosed "the existence of the power and the temptation of such producers to engage in practices promotive of monopoly and restraint of trade," saying: "It is our opinion that the existence of unusual power to deal with competitors unfairly, when coupled with the opportunity and the temptation to use that power, is probably a sufficient basis for legislative action to prevent the possibility of its exercise. This must certainly be so where there is, in addition, evidence of past aggressions." These words from the North Dakota decision might have been used with equal appropriateness concerning every chain-store system coming under the ban of this bill. So also might the following language: "Legislative as well as judicial action to curb what may honestly be believed to be monopolistic tendencies can be based upon a reasonable and justified fear that a powerful corporation or group of corporations possessing the power to unjustly handicap competition, and faced with the temptation to use that power, may do so if not prevented."

DISPARITY IN BUYING POWER

In arriving at a definition of monopoly, let us consider not only that the term includes potential as well as actual monopoly and that the former as well as the latter justifies governmental action, but that monopoly in distribution does not necessarily imply a situation in which a single distributor is in exclusive control of any consumer market. There may be competition in retailing; yet disparity in buying power, in the opportunity to avail oneself of the big newspapers and the radio for advertising, in ability to lease the best business locations, in financial resources enabling the stronger to force the weaker out of business by temporarily operating at a loss, may be so great as to give a few distributors all the advantages of monopoly. This disparity is increased when distributors become so big and their operations so far-flung that they undertake activities outside of retailing, in many cases controlling production as well as distribution. These assume the pattern of the European cartel; they become "vertical trusts."

The first function retailers of this type assumed, was wholesaling. It is important in that connection to recognize a distinction; they did not eliminate wholesaling; any one conversant with distribution knows that wholesaling is an unavoidable function in getting goods from the manufacturer to the retail store; the chains did not eliminate wholesaling, although they have eliminated many wholesalers; they merely set up their own wholesale agencies, which they generally call regional warehouses.

BECOME MANUFACTURERS, TOO

The next step in the development of the cartel was to take over manufacturing, either by acquiring factories of their own or by taking over the output of factories owned by others. The latter procedure has provided an ingenious method of circumventing the Robinson-Patman Act. Many years ago the two great mail-order houses began acquiring factories of their own. Within the last few years the big grocery chains have gone into manufacturing. I call the subcommittee's attention to advertisements of the Great Atlantic & Pacific Tea Co. in current issues of Good Housekeeping in which is featured the Ann Page brand of tinned, bottled, and packaged foods, which, we are told, is not only sold but manufactured by the biggest grocery chain. Its Eight o'Clock coffee, the sales of which are now greater than those of the three leading so-called national brands combined, is a cartel product, for A. & P.'s control of coffee extends even to the ownership of plantations in Brazil.

The monopolistic effect of the application of the vertical-trust principle to retailing is so well developed in a recent publication of The Progressive Grocer, the leading authority in the food trade, that I take the liberty of quoting from it. Speaking of A. & P., it says: "Through its continuous promotion of private-brand merchandise, on which it makes a handsome profit, the company was able to pile up tremendous private-brand profits that could be used to reduce the retail margin on standard competitive items. A. &. P. strategy was roughly as follows: It vigorously promoted the sale of private brands, particularly coffee, baked goods, canned and packaged foods. Because A. & P. controls these lines from processing to retailing, and has no identical brand competition on them, they yield an excellent profit.

ONE BUYER PAYS ANOTHER'S BARGAINS

"To illustrate A. & P.'s strategy, let us assume that the net profit on private brands in a store, over and above all operating expenses, was 5 percent of sales and that half of the store's sales consisted of controlled brands. The private-brand profit alone was more than enough for adequate compensation of the entire store's operation. That meant that the other half of the store's business, which consisted of competitive brands, could be carried on without any net profit, with a margin that barely covered and sometimes even failed to cover handling costs. The result was that A. & P. could sell from fifty to sometimes more than a hundred competitive items in a superstore at an average margin around 6 percent, with some items priced less than 6-percent margin where State laws permitted.

"While A. & P.'s contention that it never sells competitive merchandise below cost may be true (cost considered as net after all quantity discounts and advertising allowances), shrewd food operators hold that A. & P.'s margin on competitive merchandise is not sufficient to cover warehousing, trucking, and retailing expenses, to say nothing of a net profit. Competing chains whose policy it is to oblige every item to carry its proportionate operating expense and net profit or independent merchants who buy from wholesalers, obviously had difficulty in meeting A. & P.'s prices on those fifty and sometimes several hundred competitive items. The price-conscious consumer was naturally impressed by the low prices that prevailed in A. & P. stores on these competitive lines, and she increased her purchases.

AN ACCOMPLISHED MONOPOLY

"This situation and practice of A. & P. has caused a tremendous stir throughout the food trades in recent months. It has been the universal subject of conversation, from the large manufacturer on down to the tiniest retailer. The accusing finger of unfair competition is pointed at A. & P. Because of a widespread demoralization of legitimate profits and the entire food-price structure, many hold that A. & P., with its billion-dollar volume, has accomplished or is tending toward a monopoly."

To sum up what the Progressive Grocer has said, the Great Atlantic & Pacific Tea Co., by adopting the vertical-trust principle of operation and controlling both manufacture and distribution of its own brands, is able to earn enough profit on those brands to sell the standard brands, in which its nonmanufacturing competitors must deal, below actual cost and thereby to drive those competitors out of the market. It has laid the foundation for the establishment of a monopoly in food distribution, and ultimately in food manufacture.

COURTS KILLED SIMILAR SCHEME

A decade ago the big packers made a more modest application of the vertical-trust principle when they opened a few grocery stores. It will be recalled that they were enjoined in what were known as the Consent Decree cases. When the packers asked to have the consent decree modified, the Supreme Court of the United States refused to do so, saying that the defendants had followed the practice of fixing the prices of groceries so low over temporary periods of time as to eliminate competition by rivals less favorably situated. The Court said: "Whether the defendants would resume that practice if they were to deal in groceries again, we do not know. They would certainly have the temptation to resume it. Their low overhead and their gigantic size would still put them in a position to starve out weaker rivals. * * * When they add groceries to meats, they will do so, they assure us, with substantially no increase of the existing overhead. Thus in the race of competition they will be able by their own admission to lay a handicap on rivals overweighted at the start."

SAME PLAN—DIFFERENT APPROACH

There is a close parallelism between what the packers were enjoined from doing and what the great national chains are doing every day. The Supreme Court was not impressed by what the packers promised to do for the consumer, knowing that the technique of monopoly has always been to acquire control of the market by cutting prices, and then to use that control to raise them. The same tribunal, in the case of *Great Atlantic & Pacific Tea Company* v. *Grosjean*, declared that if in the public interest a legislature deems it necessary to mitigate the evils of competition between small chains and large chains, or to discourage "chains grown so large as to menace the public welfare, it may adopt measures to accomplish those ends." In asking for the enactment of the Patman bill, we are asking Congress to adopt a measure reasonably designed to curb chains grown so large as to menace the public welfare.

Have some of the chains become so large as to constitute a menace? The opponents of this bill will undoubtedly present statistics showing that the number of chain-store units has not increased during recent years. It is admitted that some of the food chains, notably A. & P., have fewer outlets now than they had a number of years ago. It will be pointed out, too, that there has been an increase in the number of independently owned stores. These figures have little significance in the discussion of this question. Many of the additional independent stores are liquor stores which have been opened since repeal, and inasmuch as liquor stores are generally individually owned, their inclusion distorts the picture. The fact that the food chains have fewer outlets than they had is due to their invasion of the supermarket field. In 1939 they closed 5,000 neighborhood stores and opened 1,000 large super-markets. By so doing, they only accelerated the process of concentration.

GROWTH OF SALES

The thing that is significant is not the decrease in the number of chain outlets, nor a possible increase in the number of independents who are willing to enter into competition for a de-

creasing share of the market, but the steady expansion of chain volume. In 1919 the chains did approximately 4 percent of the retail business in the United States; in 1923, 6 percent; in 1926, 9 percent; in 1927, 12 percent; in 1929, 20 percent; and in 1933, 25 percent. We shall have to await the 1940 Census to get definite figures on the proportion of business done by the chains at the present time, but it will probably be about 30 percent.

Sears, Roebuck & Co., which in 1931 had a gross volume of $316,294,562, last year had sales aggregating $657,061,593. In other words, its sales had more than doubled in 8 years. That the rate of its sales increases is accelerating is shown by the fact that 1939 volume exceeded 1938 volume by 23.3 percent.

Montgomery Ward sales were $198,118,920 in 1931; in 1939 they were $501,819,199—an increase of 153.3 percent in 8 years. Its increase of 16.7 percent last year followed an even more spectacular growth the year before.

A BILLION DOLLARS' SALES

A. & P.'s sales last year passed $1,000,000,000, exceeding the previous year's total by 15 or 16 percent. In 1939 the combined volume of chain grocery and combination food stores jumped 9 percent, while that of their independent competitors declined 1.6 percent. Last year the chains did 37 percent of all business done in grocery and combination food stores, and it is a comparatively simple mathematical task to determine in how many years they will do all the business, if they continue to grow at the present rate.

As long ago as 1935, the chains did more than 90 percent of the five-and-dime business, 50 percent of the shoe business, and 28.8 percent of the drug business in the country.

LOOK AT THE CITIES

While these figures are startling, they fail to present fully the progress of the chains in concentrating business; for they are national averages, and as such they include the sparsely settled and more remote areas which the chains had not yet really invaded. The true picture can be had only by seeing what the chains have achieved in the great cities. I have here a table, compiled from figures assembled in the census of distribution for 1935:

Percentage of business done by chains in various cities

	Groceries	Drugs	Shoes	Variety
Boston	53.4	29.8	56.1	97.7
Buffalo	47.8	26.3	72.9	93.1
Chicago	56.8	47.5	69.7	98.4
Cleveland	60.2	49.9	63.4	97.2
Los Angeles	49.5	33.8	68.7	92.3
New York	41.2	26.8	64.6	94.0
Pittsburgh	50.3	44.6	63.0	97.8

As chain expansion continues, it is logical to assume that chain business will reach the same proportions in the fields that have heretofore been neglected as in those which have been exploited; and that with more and more independents eliminated, the chains' domination will also become even more pronounced in the cities I have cited.

FIVE CHAINS DO 64 PERCENT

Even more significant is the fact that most of the increase in chain business is shown by the great interstate chains with which H. R. 1 is designed to deal. The increase in the volume of A. & P. stores last year was 40 percent greater than the increases of all the other food chains combined. Thus it will be seen that there is not only a very pronounced drift from the independents to the chains, but an even greater drift from the small chains to the great ones. Last year, A. & P. did 12⅔ percent of all the grocery and combination food-store business in the United States: Safeway, 5 percent; and Kroger, 3 percent. The five national chains doing a business of more than $100,000,000 accounted for 64 percent of all the chain grocery and combination food-store business. Of the $2,900,000,000 chain volume, A. & P. alone accounted for 34.6 percent.

THEY SPLIT THE FIELD

And even yet I have presented only half of the monopoly picture. I offer for the RECORD a map prepared by Hector Lazo, executive vice president of the Cooperative Food Distributors of America, showing how the two greatest food chains have divided the United States into two spheres of influence. A. & P. dominates that part of the country which lies east of the Mississippi; the part lying west of the great river is the satrapy of Safeway. This division of the territory may have been purely accidental. There is no disposition to believe that there ever was a meeting, like that between the kings of Spain and Portugal to draw a line of demarcation for the division of the Americas. But the very existence of the line of demarcation is significant for the reason that the fact that the great power exercised by each of them is exercised within one of two jurisdictions, makes the domination exercised by each in its own jurisdiction more complete.

The Federal Trade Commission in the final report of its chain-store investigation throws some light on the methods by which Safeway spread from its home in southern California until it sprawled over the entire western half of the map of the United States and invaded the District of Columbia.

HOW THEY GREW

Safeway Stores in 1928 was operating 465 stores in southern California; Skaggs Cash Stores had 104 stores in northern California, Nevada, Utah, and Wyoming; Skaggs United Stores had 203 stores in Colorado, Idaho, Montana, Oregon, and Washington. That year the three chains consolidated, bringing 772 stores under the control of a new corporation known as Safeway Stores, Inc.

The new corporation the same year acquired the assets of Piggly-Wiggly Pacific Co. with 91 stores in California and Hawaii, and the Bird Grocery Co. with 224 stores in Arkansas, Kansas, Missouri, and Texas. That same year, too, it got control of several other companies by purchasing the capital stock of the Standard Grocery Co., which operated 14 stores in Texas; the Arizona Grocery Co., which already had acquired a subsidiary, Pay'n Takit Stores, and was operating 38 stores in Arizona; the Eastern Grocery Stores, consisting of 67 units in Maryland; the Sanitary Grocery Co., which had taken over the Piggly-Wiggly Stores in Washington, D. C., and was operating 383 stores in the District of Columbia and Virginia.

That was a pretty good year's business, but Safeway had only gotten fairly started. In 1929 it acquired the assets of Sun Grocery Co., with 67 stores in Oklahoma; Skaggs Cash Stores with 7 stores left in northern California; and Piggly-Wiggly Western States Co., with 188 stores in Washington and Utah.

Then it was really getting ready to go to town. By this time Safeway Stores, Inc., was operating 2,529 stores in 20 States and the District of Columbia, Hawaii, and Canada. In the meantime another giant had been growing up out west. In 1929 and 1930, MacMarr Stores, Inc., had acquired some 30 other chains; and after the absorption of these various competitors it had 1,382 stores in 10 States. After MacMarr had done this fine job of mopping up Safeway, in 1931, absorbed MacMarr Stores, Inc. In this case the whale wasn't satisfied to swallow Jonah; it swallowed another whale which had already swallowed 30 Jonahs!

A DRUG MAMMOTH

In drug distribution, too, there have been some economic miracles performed. Drug, Inc., had a subsidiary known as United Drug Corporation, and the United Drug Corporation in turn had a subsidiary known as the Louis K. Liggett Co. The subsidiary of the subsidiary acquired the capital stock of the Bowman Drug chain in California, the Beacon Drug chain in Michigan, and the B. & R. Drug chain in Illinois. It took over the Wolff-Wilson chain in Missouri and the May Drug chain in Pennsylvania. It bought the assets of two Chicago drug chains, the Portes Drug Co. and the McLean Drug Co. That was doing very well for a mere subsidiary of a subsidiary. Then, whether jealous or not, the grandpa of them all, Drug, Inc., acquired the capital stock of the Owl Drug Co., which had been built up through the consolidation and absorption of several chains. And that's carrying the story up only to 1930.

I might tell the rest of the tale, about bankruptcies, reorganizations, and receiverships, but that would only divert me from my present purpose, which is to show that the methods by which the great chains have been built up are the methods monopoly has always used to extend its control and enlarge its dominion.

MUST GROW OR DIE

The great curse of the chain method of operation is that the process of consolidation and expansion must go on. The moment one of these huge entities ceases to grow it begins to die. The tendency toward monopoly is inherent—it is inevitable. First the chains, big and little, put their independent competitors out of business; then the big chains proceed to absorb the little ones; finally the big ones consolidate into great regional or national organizations.

I have cited but two examples, but I might add others illustrating the same trend. The Kroger Grocery & Baking Co.; the People's Drug Stores, Inc.; the Walgreen Co.; and the J. J. Newberry Co. are outstanding examples. I refer the subcommittee to the Federal Trade Commission's final report of its chain-store investigation, calling attention, however, to the fact that it fails to record the consolidations and absorptions of the last 6 or 8 years.

Having established that some of the larger chains have already attained monopoly proportions, at least in some of their fields of operation, and that the chain system is inherently monopolistic; let us see whether there is existing legislation adequate to deal with the situation.

Let us first consider the possibility of action under the Sherman Act. The law, to be sure, carries a broad prohibition against monopoly; but by judicial attrition its teeth have been worn down until they have little effectiveness against the type of monopoly represented by the great chain-store corporations.

LAWS DON'T FIT CASE

In the first place, that law as interpreted does not recognize that there is such a thing as economic monopoly, as distinguished from legal monopoly; under the Sherman law a corporation might have an absolute monopoly in fact, and yet be held not to have a monopoly in law. Also, the Sherman law fails to reach potential monopoly, although the courts, as I pointed out at the outset, have recognized the power of Congress and State legislatures to prohibit practices which may lead to monopoly whether or not monopoly actually results. A legal monopoly must be an accomplished fact in order to come under the ban of the Sherman statute.

Under decisions of the Supreme Court, a corporation might do all the business within its field of operation, it might have absolutely no competition, and yet not offend the Sherman law, notwithstanding section 2 which makes it a penal offense to monopolize or to conspire with others to monopolize any part of interstate and foreign commerce. "The law does not make the mere size of a corporation, or the existence of unexerted power on its part, an offense when unaccompanied by unlawful conduct in the exercise of its power." Under the doctrine laid down in United States against United States Steel Corporation, if one great chain-store corporation should acquire absolute control in its field of distribution, it could be attacked only if it had used unlawful methods in acquiring its monopoly or had exercised its monopolistic powers unlawfully after acquiring them.

LAW OPPRESSES SMALL MEN

The Sherman antitrust law as now interpreted is not adequate as an instrument for dealing with the chain-store situation. On the contrary, it is an instrument for the oppression of independent businessmen and for aiding their monopolistic competitors rather than one for curbing monopoly and preventing economic concentration. Thus an individual may with impunity so price his merchandise as to insure a return covering the invoice cost of the goods plus his cost of distribution; but if two or more individuals agree to do so, they are guilty of conspiracy. But a great corporation, being in the contemplation of the law a "person," may fix the prices to be charged in 15,000 stores. It is unlawful for two individuals operating as such to establish prices for two stores; but it is entirely lawful for a thousand persons, using the corporate device and hiding behind a legal fiction, to decide the price policies of thousands of stores. Thus the Sherman antitrust law enables individuals using the State-conferred power to create an artificial person, to do what the same individuals could not do through a more natural form of association.

What about that other statute designed to prevent monopoly, the Clayton Act? Does it afford an adequate safeguard against excessive economic concentration? Does it give us a means to deal with the chain-store problem?

We have already noted that chain-store consolidations have been accomplished in two ways: First, through the purchase by one company of the physical assets of other corporations; second, through the acquisition by one company of the capital stock of other companies. The first, the acquisition by one company of the physical property of another, is not prohibited by the Clayton Act even though the companies are in competition with each other. The Supreme Court has extended the immunity even further than the statute intended; it has held that there is no power in the Federal Trade Commission to order a corporation which has acquired the physical assets of a competitor after the acquisition of its capital stock in violation of law, to order a divestiture of those assets.

Thus the Supreme Court has opened an avenue for evasion so wide that it would seem that even a group of laymen could avoid the legal obstacle without advice of counsel.

INEFFECTIVE TOWARD MONOPOLY

What does the Clayton Act provide as to the acquisition by a corporation of the capital stock of a competitor?

In general, such acquisition is prohibited, but only when the effect "may be to substantially lessen competition," to restrain commerce in any section or community, or to tend "to create a monopoly of any line of commerce." In view of the practical difficulty of proving in court that the amount of competition in any trade area was substantial before the acquisition, or of measuring the extent of that competition, the limitations in the act make it practically impossible of enforcement. This is particularly true when the acquired companies continue to operate under their own names and in ostensible competition—the same kind of competition that would exist between two stores owned by the same individual and operated in the same block.

So far as I am aware, there is no case of record where the Clayton Act has been invoked successfully to prevent a chain-store consolidation.

HOLD DOWN ADVANTAGES

The efforts of Congress, since the enactment of the Clayton law, have been designed not so much to prevent monopoly in distribution as to deprive chain-store corporations of some of the advantages which they enjoy by reason of their semimonopolistic powers. Thus Congress passed the Robinson-Patman Act, designed to deprive the chain stores of advantages in buying; and the Tydings-Miller Act legalizing fair-trade contracts between manufacturer and distributor, designed to eliminate the use of well-known brands of merchandise as loss leaders. The legislatures of some 20 States have enacted unfair-sales laws to establish a price floor under all merchandise, branded or unbranded, and thereby to prevent powerful companies from putting their weaker competitors out of business by temporarily selling below cost.

We approve of all these measures, but respectfully call attention to the fact that they are inadequate to control the great interstate chains—the classification of chains against which H. R. 1 is directed.

The Robinson-Patman antidiscrimination law protects the individual distributor quite adequately against the small chain which must obtain its goods from the same manufacturers as the small retailer and his wholesale supplier; but it does not protect either the individual distributor or the small chain against big chains which either operate their own factories or take the entire output of factories owned by others, thereby acquiring their merchandise under circumstances in which no question of discrimination can arise.

PRIVATE BRANDS NATIONALIZED

The big interstate chains, having the resources to advertise their own private brands nationally and using the newspapers, the magazines, the radio, and all other means of publicity for that purpose, can raise those private brands to the dignity and reputation of national brands and thereby circumvent the purpose of fair-trade laws. In competition with such distributors, fair trade does not afford adequate protection.

The great interstate chain, which does its own manufacturing or takes the entire output of factories owned by others at prices that rarely cover all the costs of manufacture, can base its 6-percent mark-ups on invoice prices so low that the small distributor, chain or independent, who figures his mark-ups on costs reflecting a fair profit to the manufacturer, is hampered rather than helped by unfair-sales laws.

EFFECTIVE MEASURE NEEDED

Having established that the laws designed to prevent monopoly, the Sherman law and the Clayton Act, are powerless to stop the trend toward concentration; that the laws designed to regulate monopoly are ineffectual to equalize buying and selling opportunities between independents and small chains on the one hand and the great national chains on the other; and that therefore the latter have advantages which must inevitably result in more and more concentration, I feel that you are ready to accept my conclusion that the enactment of some such measure as H. R. 1 is necessary to prevent monopoly and preserve individual enterprise.

I indicated at the outset that I am more concerned about concentrated control in distribution than about concentrated control in production. To the generation that passed the Sherman Act, a "trust" meant a combination of manufacturers to raise prices. That was natural, for at that time there was no such a thing as integrated distribution. Distribution was in the hands of independent wholesalers and retailers, who were too small to dictate to manufacturers. The danger then was that the manufacturer should build a monopoly. To prevent that, the Sherman law was passed; and to that end I believe it is adequate whenever it is enforced.

In the last few decades the picture has changed. Big business has gone into distribution, and has built up entities much more powerful than most of the manufacturers that supply the mass distributors with merchandise.

A number of years ago I was for a time an executive in a manufacturing company. When I entered the business I naively assumed that the chief business of a factory is to manufacture. After 1 week behind my desk, I had made an important discovery: the chief business of a factory is to sell. The sales department is the most important department in a factory.

STRIKE AT NERVE CENTERS

In modern warfare, the attack is directed, not against the enemy terrain as a whole, but against certain strategic centers, such as railroad terminals, aviation fields, communication lines. Whoever controls these, controls the country.

In the American economic system, the strategic points of control are the points of distribution. He who has command of the market holds the front-line trenches of industry. It is because they realize this, that successful mass producers like Henry Ford, Chrysler, General Motors, and International Harvester have kept their products out of the hands of the mass distributors. If Ford had permitted a big chain to handle his automobiles, he probably would have been out of business many years ago; he has survived because he was wise enough to leave distribution to thousands of individual dealers.

If one distributor could get control of as large a share of the automobile market as A. & P. has of the food market, and if there were many manufacturers of automobiles instead of a few strong ones, it would not be long before that distributor, by playing one manufacturer against another, and by bankrupting one after another—as battery companies, for instance, have been bankrupted—would be in control of the manufacture as well as the distribution of automobiles.

DISTRIBUTIONAL CONCENTRATION DANGEROUS

For emphasis I repeat: Concentration in distribution is more dangerous than concentration in production because it can easily result in monopoly in both distribution and production.

I close with the thought with which I began. It is not the chain store as such that concerns me, but the menace of monopoly. The chain store problem is only a part of the greater problem, although, for the reasons I have pointed out, the most important part. The people must destroy monopoly, or monopoly will destroy them; they must insist on thoroughgoing and effective methods. Desultory prosecution, usually of the small monopolists rather than the big ones, will not stop the progress of concentration—a progress that has been accelerated every decade and every year since the Sherman law was enacted.

MUST AVOID COLLECTIVISM

I realize that some will say that the position I take is radical. I assure you I am not radical. My personal stake is in such capitalistic property as land, mortgages, and life insurance. I am

an extreme conservative, so conservative that I am willing to resort to what some would call radical measures to save capitalism from its own follies and excesses. For I am certain that the capitalistic system cannot survive unless the rank and file of the people are permitted to pluck some of the fruits from the capitalistic tree. If we shall remain a nation of individualism and free enterprise, we must avoid private collectivism no less than the Facist and Communist collectivisms of the Old World.

Perkins v. Lukens Steel Co. et al.

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, May 1 (legislative day of Wednesday, April 24), 1940

OPINION OF SUPREME COURT

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD a very able and important opinion written by Mr. Justice Black in the case of Perkins against Lukens Steel Co.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

[Supreme Court of the United States. No. 593. October term, 1939. *Frances Perkins, Individually and as Secretary of Labor of the United States, et al., petitioners,* vs. *Lukens Steel Co., Alan Wood Steel Co., South Chester Tube Co., et al.* On writ of certiorari to the United States Court of Appeals for the District of Columbia. April 29, 1940]

Mr. Justice Black delivered the opinion of the Court.

In exercise of its authority to determine conditions under which purchases of Government supplies shall be made, Congress passed the Public Contracts Act of June 30, 1936.[1] By virtue of that act, sellers must agree to pay employees engaged in producing goods so purchased "not less than the minimum wages as determined by the Secretary of Labor to be the prevailing minimum wages for persons employed on similar work or in the particular or similar industries or groups of industries currently operating in the locality in which * * * the supplies * * * are to be manufactured or furnished under said contract." The Court of Appeals for the District of Columbia has held the Secretary erroneously construed the term "locality" to include a larger geographical area than the act contemplates and has ordered six members of the Cabinet, including the Secretary of Labor, the Director of Procurement, and all other officials responsible for purchases necessary in the operation of the Federal Government, not to abide by or give effect to the wage determination made by the Secretary for the iron and steel industry either as to the complaining companies or any others. In this vital industry, by action of the Court of Appeals for the District of Columbia, the act has been suspended and inoperative for more than a year.

We must, therefore, decide whether a Federal court, upon complaint of individual iron and steel manufacturers, may restrain the Secretary and officials who do the Government's purchasing from carrying out an administrative wage determination by the Secretary, not merely as applied to parties before the court, but as to all other manufacturers in this entire Nation-wide industry. Involving, as it does, the marking of boundaries of permissible judicial inquiry into administrative and executive responsibilities, this problem can best be understood against the background of what took place before the court of appeals for the District acted:

July 11, 1938, all the iron and steel companies in the United States were given notice that the Secretary contemplated proceedings for determining the minimum prevailing wage for their industry. On the 25th and 26th of that month, hearings were had before the Public Contracts Board, also functioning under the act. Many companies, and all of those involved here, were represented in the hearings. Companies from the entire United States filed briefs and submitted information and suggestions, and these producers who are parties here had notice of and actively participated in the various stages of the proceedings. After the hearing, time for filing of briefs was allowed. Following investigation of testimony, exhibits, letters, telegrams, briefs, data from the Bureau of Labor Statistics, and arguments of representatives of both labor and industry itself, the Board, October 27, 1938, made its findings of fact, conclusions, and recommendations: (a) Accepting recommendations of industry and labor, the Board adopted—with minor exceptions—the definition of the steel industry previously in effect under the National Industrial Recovery Act; (b) "the base rates paid to the workers classified as common laborers" was utilized as a basis for finding the minimum wage prevailing in the industry and a common laborer was defined as "one who performs physical or manual labor of a general character and simple nature, requiring no special training, judgment, nor skill"; (c) the view that municipalities be treated as the geographical limit of a "locality" and that different minimum prevailing wage standards be adopted for small as distinguished from larger companies, was rejected. The Board pointed out that "the main channels of trade in the industry take their course far beyond the confines of local producing areas"; that "conventional measurement of miles on the map to outline the marketing areas of the iron and steel producers" was unsuitable; that "geographic location does not limit the efforts of iron and steel manufacturers to secure Government business"; that "the workers being paid wages below the base rates are employed in large-, medium-, and small-size companies and in plants located in all parts of the country"; and that in fixing a "locality" all these factors as well as geographic and economic considerations were relevant.

The majority of the Board suggested two localities, one for the Southern States and another for the remainder of the steel producing States. One member disagreed and insisted upon four localities throughout the Nation, but noted that "the Board is agreed on all the essential facts before it in the case." He recognized that "the law * * * permits the division of the country into localities for the purpose of determining minimum wages. No rule is laid down to define the extent of any localities. * * * A too minute concept of locality would obviously nullify the law, for each plant must necessarily occupy a different locale or site from every other. To reduce the interpretation of locality to its most minute point would be to find a minimum wage prevailing in each plant. * * * When we depart from this interpretation we are immediately thrown upon judgment. * * * Obviously we must look for wage patterns or uniformities. * * * Again judgment must be relied upon for the answer." Excepting to the Board's recommendations, the companies now before this court urged that the Secretary make a finding of minimum prevailing wages with "locality" given the connotation of a subdivision of the respective States as originally provided in the Bacon-Davis Act.[2]

On December 20, 1938, the Assistant Secretary of Labor, acting for the Secretary, heard arguments and received briefs both from industry and labor organizations. He did not adopt the recommendations of the Board in full, but instead divided the industry of the entire country into six "localities," proceeding, however, upon the view that to construe "locality" to mean small political divisions of the States, as the Bacon-Davis Act had done in express terms would render "effective administration of the act * * * almost impossible." It was pointed out that "this narrowly restricted construction of the word 'locality' * * * is contrary to the administrative construction consistently adhered to by the Secretary of Labor in the administration of the act," and that while Congress had closely followed the language of the Davis-Bacon Act in some respects, it had carefully avoided the use of the more narrowly restrictive language of "city, town, village, or other civil subdivision." In the 22 preceding wage determinations under this act the Secretary's administrative construction of the term had been—with a sole exception—that of geographic areas no smaller than those determined for the steel industry.[3] The determination in question was made January 16, 1939, but was not made operative until March 1, 1939, "in order that industry may make necessary readjustments to comply with the decision."

In their bill for an injunction and a declaratory judgment, these seven producers of iron and steel (respondents here) sought to enjoin as individuals and in their official capacities, the Secretaries of the Labor, Treasury, War, Navy, and Interior Departments, the Postmaster General, the Director of Procurement of the Treasury Department, the Assistant Secretary of Labor, and the Administrator of the Division of Public Contracts of the Department of Labor and their "officers, agents, assistants, employees, representatives, and attorneys, and anyone associated with or acting in concert or participation with them, or any of them, and their successors in office and each of them, and their officers," etc. The seven companies named as complainants by the bill did not merely pray relief for themselves against the Secretary's wage determination but insisted that all these Government officials be restrained from requiring the statutory stipulation as to minimum wages in contracts with any other steel and iron manufacturers throughout the United States.

The district court declined to interfere so sweepingly with the administration of the act, even in the temporary restraining order which it granted. Its order ran only against the Secretaries of Labor and the Navy, and specifically limited its benefits to but three of the complaining companies. Recitals in the order indicate that only the Secretary of the Navy had actually solicited bids and that only those three companies were "desirous of bidding." After hearing, this order was dissolved and the court granted a motion to dismiss the complaint for lack of jurisdiction, inadequacy of the complaint, lack of standing to sue, and because the suit was one against the United States without its consent.[4]

[4] The District court's judgment was rendered without opinion.

A stay pending appeal was denied by the district court, but the Court of Appeals for the District of Columbia, Justice Edgerton dissenting, by temporary injunction granted the sweeping prayer that all the Government officials and agents designated in the bill be restrained from continuing in effect the determination made by the Secretary of Labor. By motion for reargument, the restrained officials, represented by attorneys of the Government, asked that the injunction be clarified so as to be "restricted to enjoining enforcement of the determination against parties to this proceeding * * * and * * * not be extended to other bidders, not parties to this action, and who, for all that appears, may desire to abide by the determination." In the same motion, the Government asked that employees who might be irreparably injured be protected by "a bond or other security to pay the minimum wages if the appellants do not eventually succeed in this case."[5] The record discloses no action by the Court of Appeals on this motion or on a subsequent motion to dissolve the temporary injunction.[6] But the temporary injunction, rendering the act wholly inoperative as to the iron and steel industry, was kept in effect and, reversing the district court, the Court of Appeals, Justice Edgerton again dissenting, remanded with instructions that relief as prayed in the bill be granted.[7]

In our judgment the action of the Court of Appeals for the District of Columbia goes beyond any controversy that might have existed between the complaining companies and the Government officials. The benefits of its injunction, and of that ordered by it, were not limited to the potential bidders in the "locality," however construed, in which the respondents do business. All Government officials with duties to perform under the Public Contracts Act have been restrained from applying the wage determination of the Secretary to bidders throughout the Nation who were not parties to any proceeding, who were not before the court, and who had sought no relief.

As a result of this judicial action, Federal officials had no feasible alternative except to make contracts for imperatively needed supplies for the War and Navy Departments without inclusion of the stipulation which Congress had required. The Public Contracts Act, so far as the steel industry is concerned, has been suspended for more than a year, with no bond or security to protect the public's interest in the maintenance of wage standards contemplated by Congress, should the suspension ultimately appear unwarranted or unauthorized. Here, and below, the Government has challenged the right of the judiciary to take such action, alleging that it constitutes an unwarranted interference with deliberate legislative policy and with executive administration vital to the achievement of governmental ends, at the instance of parties whose rights the Government has not invaded and who have no standing in court to attack the Secretary's determination. The manifestly far-reaching importance of the questions thus raised prompted us to grant certiorari.[8]

Of the six "localities" into which the Secretary's determination divided the steel industry, respondents do business in that consisting of Ohio, Pennsylvania, Delaware, Maryland, Kentucky, New Jersey, New York, Connecticut, Rhode Island, Massachusetts, Vermont, New Hampshire, Maine, the District of Columbia, and a part of West Virginia.[9] Their stated grievance was that the construction given to the term "locality" by the Secretary amounted to "a plain error of law in interpreting the act, * * * and, consequently, in purporting * * * to determine the prevailing minimum wages for persons employed in the manufacture * * * of the iron and steel industry in the six so-called localities set forth in this determination [the Secretary] acted arbitrarily and capriciously and wholly without warrant or authority in law." In particular, the complaint alleged "respondents had been selling their products to agents of the United States for many years; they wished to continue to bid on Government contracts; their minimum wages had ranged from 53 cents to 56½ cents per hour; if required to pay 62½ cents per hour minimum rate determined by the Secretary there was grave danger that they would be unable successfully to compete with others for Government contracts; they had a legal right to bid for Government contracts free from any obligation to abide by the minimum wage determination because of alleged illegal administrative construction of 'locality'; and if denied the right to bid without paying their employees this minimum wage they would suffer 'irreparable and irrecoverable damages' for which the law provided no 'plain adequate or complete remedy.'"

In staying the effect of the administrative wage determination, the court of appeals for the district was of the opinion that "the word 'locality' is one of somewhat indefinite meaning," requiring the Secretary to exercise judgment and discretion "within the proper limits of the meaning of locality," but held that the Secretary's determination in this case went "so far beyond any possible proper application of the words as to defeat its meaning and to constitute an attempt arbitrarily to disregard the statutory mandate."

We are of opinion that no legal rights of respondents were shown to have been invaded or threatened in the complaint upon which the injunction of the court of appeals was based. It is by now clear that neither damage nor loss of income in consequence of the action of Government, which is not an invasion of recognized legal rights, is in itself a source of legal rights in the absence of constitutional legislation recognizing it as such.[10] It is not enough that the Secretary of Labor is charged with an erroneous interpretation of the term "locality" as an element in her wage determination. Nor can respondents vindicate any general interest which the public may have in the construction of the act by the Secretary and which must be left to the political process. Respondents, to have standing in court, must show an injury or threat to a particular right of their own, as distinguished from the public's interest in the administration of the law.[11] They claim a standing by asserting that they have particular rights under and even apart from statute to bid and negotiate for Government contracts free from compliance with the determination made by the Secretary of Labor for their industry. Respondents point to section 3709 of the Revised Statutes and to the Public Contracts Act itself.

Section 3709 of the Revised Statutes requires for the Government's benefit that its contracts be made after public advertising.[12] It was not enacted for the protection of sellers and confers no enforceable rights upon prospective bidders.[13] "The United States needs the protection of publicity, form, regularity of returns and affidavit (Rev. Stats., secs. 3709, 3718–3724, 3745–3747), in order to prevent possible frauds upon it by others. A private person needs no such protection against a written undertaking signed by himself. The duty is imposed upon the officers of the Government and not upon him."[14] That duty is owing to the Government and to no one else.

---

[5] Sections of the Public Contracts Act provides that "breach or violation of any of the representations and stipulations in any contract for the purposes set forth * * * shall render the party responsible therefor liable to the United States of America for liquidated damages in addition to damages for any other breach of such contract, * * * a sum equal to the amount of any deductions, rebates, refunds, or underpayment of wages due to any employee engaged in the performance of such contract; * * * Any sums of money due to the United States of America by reason of any violation of any of the representations and stipulations of said contract set forth in section 1 hereof may be withheld from any amounts due on any such contracts or may be recovered in suits brought in the name of the United States of America by the Attorney General thereof. All sums withheld or recovered as deductions, rebates, refunds, or underpayments of wages shall be held in a special deposit account and shall be paid, on order of the Secretary of Labor, directly to the employees who have been paid less than minimum rates of pay as set forth in such contracts and on whose account such sums were withheld or recovered; * * *."

[6] The Government's motion to clarify and restrict the temporary injunction and for security was filed March 29, 1939; the motion to dissolve the temporary injunction was filed April 13, 1939. No specific consideration of these motions by the Court of Appeals for the District of Columbia is disclosed in the record. August 4, 1939, after argument on the merits, that court of appeals, per curiam, Justice Edgerton dissenting, announced that the temporary injunction would be kept in effect, that the judgment of the district court would be reversed and that the grounds for enjoining the administration of the act would be set out in an opinion "to be filed shortly." The opinion of the court of appeals came down October 3, 1939; Justice Edgerton filed a separate opinion in dissent.

Cf. *Colorado Paving Co.* v. *Murphy* (78 Fed. 28 (C. C. A. 8th)). See 38 Op. Att. Gen. 555, 557. Bidders have not been able to contest the award of contracts as bidders or in their capacity as citizens generally (*O'Brien* v. *Carney*, 6 Fed. Supp. 761; *B. F. Cummings* v. *Burleson*, 40 Appellate D. C. 500; *Champion C. P. Co.* v. *Joint Committee on Printing*, 47 Appellate D. C. 141; cf. *Strong* v. *United States*, 6 Court of Claims, 135). And the view that bidders have no standing in the courts has been generally recognized by

Like private individuals and businesses, the Government enjoys the unrestricted power to produce its own supplies, to determine those with whom it will deal, and to fix the terms and conditions upon which it will make needed purchases.[15] Acting through its agents as it must of necessity, the Government may for the purpose of keeping its own house in order lay down guide posts by which its agents are to proceed in the procurement of supplies, and which create duties to the Government alone. It has done so in the Public Contracts Act. That act does not depart from, but instead embodies the traditional principle of leaving purchases necessary to the operation of our Government to administration by the executive branch of Government, with adequate range of discretion free from vexatious and dilatory restraints at the suits of prospecti e or potential sellers. It was not intended to be a bestowal of litigable rights upon those desirous of selling to the Government; it is a self-imposed restraint for violation of which the Government—but not private litigants—can complain. Thus, a wage determination by the Secretary contemplates no controversy between parties and no fixing of private rights; the process of arriving at a wage determination contains no semblance of these elements which go to make up a litigable controversy as our law knows the concept.[16] Courts have never reviewed or supervised the administration of such an executive responsibility even where executive duties "require an interpretation of the law." [17] Judicial restraint of those who administer the Government's purchasing would constitute a break with settled judicial practice and a departure into fields hitherto wisely and happily apportioned by the genius of our polity to the administration of another branch of Government.

This act's purpose was to impose obligations upon those favored with Government business and to obviate the possibility that any part of our tremendous national expenditures would go to forces tending to depress wages and purchasing power and offending fair social standards of employment. As stated in the report of the House Committee on the Judiciary on the bill,[18] "The object of the bill is to require persons having contracts with the Government to conform to certain labor conditions in the performance of the contracts and thus to eliminate the practice under which the Government is compelled to deal with sweatshops."

We find nothing in the act indicating any intention to abandon a principle acted upon since the Nation's founding under which the legislative and executive departments have exercised complete and final authority to enter into contracts for Government purchases. The committee hearings and reports and the construction of the measure by its sponsors disclose no purpose to invoke judicial supervision over agents chosen by Congress to perform these duties. And sections 4 and 5 do not subject a wage determination to such review. Provision for hearings and findings by the secretary with respect to decisions upon breaches of stipulations by contractors, once purchases have been made, is indicative of a lack of intention to create any rights for prospective bidders before a purchase is concluded.

The act does not represent an exercise by Congress of regulatory power over private business or employment.[19] In this legislation Congress did no more than instruct its agents who were selected and granted final authority to fix the terms and conditions under which the Government will permit goods to be sold to it. The Secretary of Labor is under a duty to observe those instructions just as a purchasing agent of a private corporation must observe those of his principal. In both instances prospective bidders for contracts derive no enforceable rights against the agent for an erroneous interpretation of the principal's authorization. For erroneous construction of his instructions, given for the sole benefit of the principal, the agent is responsible to his principal alone because his misconstruction violates no duty he owes to any but his principal. The Secretary's responsibility is to superior executive and legislative authority. Respondents have no standing in court to enforce that responsibility or to represent the public's interest in the Secretary's compliance with the act.[20] That respondents sought to vindicate such a public right or interest is made apparent both by their prayer that the determination be suspended as to the entire steel industry and by the extent of the injunction granted.

The contested action of the restrained officials did not invade private rights in a manner amounting to a tortious violation. On the contrary, respondents in effect seek through judicial action to interfere with the manner in which the Government may dispatch its own internal affairs. And in attempted support of the injunction granted they cite many cases involving contested Government regulation of the conduct of private business.[21] Their cited cases, however, all relate to problems different from those inherent in the imposition of judicial restraint upon agents engaged in the purchase of the Government's own supplies.

The Government can supply its needs by its own manufacturing or by purchase. And Congress can, as it always has, either do the purchasing of the Government's goods and supplies itself or it can entrust its agents with final power to do so and make these agents responsible only to it.[22] Courts should not, where Congress has not done so, subject purchasing agencies of Government to the delays necessarily incident to judicial scrutiny at the instance of potential sellers, which would be contrary to traditional governmental practice and would create a new concept of judicial controversies. A like restraint applied to purchasing by private business would be widely condemned as an intolerable business handicap. It is, as both Congress and the courts have always recognized, essential to the even and expeditious functioning of government that the administration of the purchasing machinery be unhampered. The Constitution prohibits appropriations for the Army for more than 2 years,[23] and by statute contracts for the purchase of departmental supplies are in general limited to 1 year.[24] These prohibitions emphasize the grave importance of leaving the restraint of the Government's purchasing agents to Congress and their executive superiors.

The record here discloses the "confusion and disorder" [25] that can result from the delays necessarily incident to judicial supervision of administrative procedure developed to meet present-day needs of government and capable of operating efficiently and fairly to both private and public interests. In the appropriate words of Mr. Justice Sutherland, "The bare suggestion of such a result, with its attendant inconveniences, goes far to sustain the conclusion which we have reached, that a suit of this character cannot be maintained." [26] For more than a year Cabinet officers and their subordinates have been enjoined from making the Secretary's determination of minimum wages effective. Meanwhile, iron and steel were needed for the Army and Navy. In order that the military program could proceed, the declared policy of the Congress was abandoned under judicial compulsion, and contracts without a minimum-wage stipulation have been awarded for more than $65,000,000 worth of iron and steel products since the injunction issued.[27] If the general law permits prospective bidders to challenge each wage determination of the Secretary in the courts, by a like token all employees affected could obtain judicial review. Such a possibility places in bold relief those conditions which led Congress to proceed in this act upon the belief, to which we have recently alluded,[28] that "legislatures are ultimate guardians of the liberties and welfare of the people in quite as great a degree as the courts." [29]

The case before us makes it fitting to remember that "the interference of the courts with the performance of the ordinary duties of the executive departments of the Government would be productive of nothing but mischief; and we are quite satisfied that such a power was never intended to be given to them." [30]

The district court properly dismissed the bill, and the Circuit Court of Appeals for the District of Columbia was in error in finding respondents with standing to bring this action, in ordering the Secretary's determination restrained, and in holding respondents entitled to declaratory judgment.[31]

Our decision that the complaining companies lack standing to sue does not rest upon a mere formality. We rest it upon reasons deeply rooted in the constitutional divisions of authority in our system of government and the impropriety of judicial interpretations of law at the instance of those who show no more than a mere possible injury to the public. The judgment of the court of appeals is reversed, and that of the district court dismissing the bill is affirmed.

Reversed.

Mr. Justice McReynolds is of opinion that the challenged judgment should be affirmed.

Build America

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 1 (legislative day of Wednesday, April 24), 1940

ADDRESS BY W. GIBSON CAREY, JR., AT MEETING OF CHAMBER OF COMMERCE OF THE UNITED STATES

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address delivered by Mr. W. Gibson Carey, Jr., president of the Chamber of Commerce of the United States, on April 30, 1940, on the occasion of the annual meeting of that organization.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As we gather here in Washington for this twenty-eighth annual meeting of the Chamber of Commerce of the United States, it seems to me important that we review and fix in our minds certain general attitudes and objectives. It is for this reason that, as your president, I presume to outline in my own words what I know by intimate association is a true reflection of the concepts of your officers and directors. I do this, furthermore, with the hope that every man and woman here will be guided in his words, his thoughts, and his actions by these principles.

First, we come to analyze, to study, to learn, and to teach. If, as individuals, our views have been too narrow, too sectional, or too short-sighted, we seek a correction. We represent every part of our Nation and practically every phase of productive life. We accept the interdependence of our people of whatever calling or station. We seek the maximum production of goods and services with the benefits widely and fairly distributed.

Second, our belief in our Republic and its Constitution is unshaken. Nay, by the observation of trends abroad and of the activity of certain small but active elements here, our faith in our constitutional democracy is strengthened an hundredfold. As American citizens, for ourselves and for our children, we dedicate our strength to the preservation of our basic form of government and to the fundamental beliefs and institutions of our ancestors. From these we will accept only such adjustments as are necessary to attune our life to a changing world. These alterations we will ponder deeply and prayerfully that without fail we may preserve the dignity and rights of the individual, the family, and the minority.

Thirdly, we approach life and its problems with good will toward all men and with tolerance. This is the teaching of our religion and of all sound philosophy. Let no one mistake these sentiments for cowardice. It is justice and progress we seek. Every invasion of these must and shall be repelled. Leaders must lead. The requirement is that they be just and right. So, with humility and determination, we who are leaders in business and in many other fields dedicate ourselves to the fullest assumption of our responsibilities and obligations.

My belief is that we meet at a time of great crisis. As is usually true in the affairs of men, the dangers this time vary greatly from those existent at other periods of peril. There may be, nevertheless, some lesson and some inspiration from a brief reference to two great turning points in the history of this country.

In 1787 we were in a deplorable condition. Saratoga, Valley Forge, Yorktown were all of the past. We were free, but we were a perplexed and unhappy people. The Confederation of States was unsatisfactory from nearly every viewpoint and yet with the jealousies existing it was almost impossible to determine what adjustments could be made to improve the welfare of the people, to strengthen our finances, and to stimulate our agriculture, trade, and manufacture. A constitutional convention was called at Philadelphia. To it the States sent delegates to whom each succeeding generation should pay reverence for the result they achieved. When they were about to meet, the young Nation's greatest leader, George Washington, said:

"Perhaps another dreadful conflict is to be sustained. If, to please the people, we offer what we ourselves disapprove, how can we afterward defend our work? Let us raise a standard to which the wise and just can repair. The event is in the hand of God."

Was not that a noble sentiment? There was in that statement dread for further suffering of the people, an exhortation to high accomplishment, and the humility of the Christian gentleman. Perhaps you will agree with me that for us in another day and in our lesser positions, there is a stirring lesson in this incident.

When the Constitutional Convention was closing with the signing of its work, another great American, Benjamin Franklin, made an observation which describes the perplexities of the period so graphically that each of us should have it in mind. But he did more than that. He predicted the rise of the great and prosperous nation which would be built by the work and sacrifice of generation after generation living under the most inspiring type of government ever conceived by men. On the back of Washington's chair was painted a half disk of a sun. Franklin drew this to the attention of the members and then he said:

"I have often and often in the course of the sessions and the vicissitudes of my hopes and fears as to its issues, looked at that behind the President without being able to tell whether it was rising or setting. But now I have the happiness to know that it is a rising and not a setting sun."

Our next great crisis was the Civil War. Despite lingering hardships and despite pride of ancestry, men of the South and men of the North are of one mind today in their thankfulness that our Nation was preserved. As one of southern lineage, I quote proudly to you now the splendid close of Abraham Lincoln's Gettysburg Address. I do so because his words embody the travail and determination of a people and because there must of necessity still reside in them inspiration and guidance for our generation.

"* * * we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that government of the people, by the people, for the people shall not perish from the earth."

In reverie and reverence, before I leave our first two great crises, I wish to repeat, "Let us raise a standard to which the wise and just can repair" and "government of the people, by the people, for the people shall not perish from the earth."

Now it is time for us to speak of our present crisis. We shall do well to approach it cooly, factually, and logically. The three points which I think it is absolutely essential for me to make are—

(1) This is unquestionably a most serious crisis;

(2) It can be solved; and

(3) It is our duty, together with other citizens of good intention in all walks of life to forge the solution.

Having attempted the development of these points it is evident that I must leave a full discussion of many phases of our problems to other speakers who are experts in their various fields.

Our situation in the United States today cannot be disassociated either from the World War or from international affairs. So far as I know all students agree that the loss of life, the dissipation of capital, and the bitterness which gave rise to many errors of judgment are the chief underlying causes of the present strife in the world and of much of our dilemma here. Always it has been difficult to make fair and sensible adjustments of trade and other relations after prolonged conflict.

In our generation this earth is in effect a smaller place due to the growing speed and effectiveness of transportation and communication. By every rule of reason this should be accompanied by a more active trade and a closer relationship and understanding among peoples. But war, the breeder of intense nationalism, tends to offset this evident and proper destiny. Fear and bitterness turn men's minds and ambitions toward self-sufficiency. That very process lowers living standards, which is ever the cause of unrest. Then the stage is set for agitation, for demagogues, for panaceas, for opportunism, for fantasies about race and about unearned rights of nations and of individuals.

As we survey the world today the conditions are frightful. Millions of men in Asia and Europe are in deadly conflict. They are firing their hates and devouring their substance. Saying that we must assist as we may to fair solutions is but expressing the self-evident. For our future nothing transcends the desirability of peace, just and lasting peace, in the world.

Relatively our present status in America is good indeed. I for one would not change our position for that of any nation on earth. Having said that, however, it is but fair to add that we have mismanaged for nearly a decade our abundant resources. I have no desire to carp or to blame. We must, however, look at the situation judicially in order to work out corrections. The following are facts, not opinions:

(1) Our Federal debt is at the appalling level of $43,000,000,000, compared with one billion in 1914, with three billion in 1917, and with seventeen billion in 1929.

(2) Our Federal taxes are this year at the amazing peacetime total of over $5,000,000,000, as compared with $330,000,000 in 1914, eight hundred million in 1917, and three billion in 1929. Despite this we shall have a deficit this year of almost $4,000,000,000.

(3) Never in our history have we had so many on the pay roll of the National Government, excluding our armed forces. We now have nearly 1,000,000, whereas in 1929 the comparative figure was under 600,000. Unfortunately, today there are other millions who are beneficiaries of Federal subsidies and gifts.

(4) The power and scope of the executive branch of our Federal Government exceed by far any limit ever previously contemplated by our people.

(5) Many branches of agriculture are in a sorry plight despite vast and costly attempts at correction.

(6) Most durable-goods enterprises are still operating at unsatisfactory levels.

(7) Unemployment, whatever the actual figures may be, is still an unsolved problem which not only is the root of much unhappiness, perplexity, and bitterness, but also is the excuse for much futile experimentation by the Federal Government.

(8) Capital, though plentiful, is not in sufficiently active use.

There are many other facts which might be listed, but the contemplation of the eight I have mentioned are, I feel certain, more than sufficient in themselves to prove conclusively the existence of a severe crisis. Parodoxically, much of this situation has been engendered by the policies of a Federal Government which has itself, by error after error, continued the so-called emergency, which long since should have passed. By many this is recognized clearly, but it is imperative that all men of understanding and good intention comprehend fully the insidious dangers involved. An open attack or invasion brings men's minds to a focus and stirs them to action. It is the slow dissipation of resources, the gradual undermining of our institutions, and the encouragement of class feeling which are most difficult to check.

Now let us turn to the line of thought which gives rise to my conviction that our situation can be solved. These are my own views for which I take full responsibility.

We are blessed with a most favorable geographic location, with a productive people, and with truly remarkable natural resources. Our country, compared with many others, is but sparsely populated. This is especially so when the productive character of our land and our tremendous mineral deposits are considered.

Our governmental institutions, though somewhat perverted, are still intact. We still have free speech for the unintimidated and we have untrammeled religious observance. Communication and transportation are adequate. Our entire production and distribution system is efficient compared to anything ever known in the world and is suspect, in any basic sense, only by theorists, Socialists, and Communists. It is evident that we have ample capital. We have good schools. These may indulge too much in opinion. They operate probably with too great regard for the average intelligence and with too little for the exceptional mind. They might perhaps in some cases be better used in vocational training. Parents rather than the government still have control of their children. This is of immense importance.

With such conditions, one might well ask what is the trouble? There is no possible general answer save that we have faltered badly in two particulars which are, however, in every generation and every nation prime essentials. The first is leadership; the second is character. In our case, the two are for all intents and purposes one and the same. Perhaps my point is most clearly made if I say we have lacked in the character of those in places of responsibility. Some of this has undoubtedly exhibited itself in every phase of our system. The default which has, however, undermined the country has been chiefly in public life. For a decade we have had either depression or near depression. The major cause of this for 7 years has been political and still is. Opportunism, fanciful economies, threats, inconsistencies, and the assumption by our Federal Government of an ever-expanding authority have kept this Nation in a slough of despond. I make these statements with no partisan connotation. It is quite evident that both parties contain many fine public servants.

As is true in nearly every period, there has been some constructive accomplishment. Our trouble has been that we seem as a people to have been unable to sift the chaff from the wheat and thus to arrive at that net balance of judgment which is required for clear-cut correction. In analyzing this situation, thoughts such as the following come naturally to one's mind.

On the whole we have approved our foreign policy and we have believed in the encouragement of international trade. We have been opposed to any irregular financial practice, we have disapproved monopoly, and we have desired moderate and well-planned social security. Almost to a man we have wanted adequate defense without, however, the specter of aggression. We have wished our farmers to get a square deal and we have agreed that distress must be relieved. These are all fundamentals of sound policy and constructive adaptation to developing circumstance. But what of commissions which investigate, prosecute, and judge? Can we be dreaming as we recall the partisanship, the inefficiency, and the utterly disgraceful conduct of some of these? Can it be imagination that such a group, zealously expanding its function without authority, undertook recently to order the discontinuance of plans for marketing a new development, television? What of Government monopoly and Government competition with its citizens? What of sneers, threats, and attacks for those who opposed because they honestly disagreed? What of punitive taxation? What of production control and of the political use of relief? What of telling citizens how long they may work? And what of so-called pump priming, which has ruined the pump and brought insinuations that the well has gone dry? This is but half the list, but it is enough.

We are told that underneath is the objective of spreading the national income more fairly and thus sustaining purchasing power in a manner to avoid depression and unemployment. What has been accomplished, however, is distress, labor disturbance, general bewilderment, a quickening with Government expenditure of the turn-over in consumption goods, and a deadening in all capital or durable products except those sustained directly or indirectly by public funds. Private capital, which by its very nature and by the nature of man himself demands a chance for a fair profit, has on the whole sought security rather than risk. Criticize this and you but impugn good sense and judgment.

Gentlemen, what we need most in this emergency is sound leadership in government. Parenthetically, I must add that part of the blame for the lack of this rests on our shoulders. For the future, however, through our activity and that of others, we as a people must see that we effect corrections. Here are those which seem most fundamental.

Carefully, but surely, we must reduce Federal expenditure and balance our national Budget including our vast Federal corporations. Then we must begin paying our debt. In due course we should further encourage productivity and the full use of our resources by reducing taxes, which are a first charge on the standard of living of every citizen, because they inevitably are reflected in prices. As we release the present restrictions on business, substitute clear laws, applying alike to all men, for the dictates of unrestrained administrative agencies and reinstate good will and cooperation, we shall develop new industry, improve our present products, and give to our people, through lower prices, more real purchasing power. Then we may once again have good jobs for all those who want to work. Also by this very process we shall have gone a long way toward solving our agricultural situation which will be further aided as ways are found to use more farm products in industry. This statement is, of course, not to be taken as a full agricultural program. Basically, what I am pointing out is that general progress will help the farmer immensely.

If we do these things, we shall occasionally have difficult times as in the past, but with reasonably long periods of prosperity in which to save, with social security and with an unimpaired Federal credit, we shall have little to fear. These are my convictions and my reason for the statement that we can solve our problems despite such unfavorable repercussions as there may be from external conditions. And let us not forget that hand in hand with this solution will go what is of transcending import—the preservation of our liberties. For them our forefathers bled. Surely we in our time can be counted on to play our part whatever sacrifices may be required.

Do I read in some of your faces the thought that such a course is too difficult? Are your minds settling on objections and obstacles? Surely we have in our country pressure groups with hands in the Treasury, surely we have undermined to a degree the character and perspective of some of our citizens, and surely we have to carry a heavier load of taxes than previously. Even worse, we have established certain treacherous concepts of socialism and fascism in our very bosom. We know these things, but we also know discouragement will not help us.

Can we not to a man change our perspective to the end that we may exert true leadership? Can we not consider difficulties for the sole purpose of seeing how to overcome them? Can we also not remember our unusual elements of strength as a people? Our country is one of natural prosperity. Our citizens are basically sound and decent. We have a great void in construction and other durable-goods production to fill. The actual fact is that favorable factors far outweigh any possible deterrents except as may reside in indecision, trepidation, and weakness of soul. It is strength, foresight, and character which will win this struggle. I doubt not that the real leaders of America still have those qualities.

How as men of business may we make our greatest contribution? My deep belief is that we must study to be right in all of our viewpoints and policies, after which we must stand foursquare and firm. True leadership does not equivocate. It, rather, teaches, exhorts, and shows the way both by precept and example. Our policies with labor, stockholders, customers, and the public must be open and fair. We must encourage a stability, balance, and regular growth in our civilization by obtaining much wider understanding of such things as the sources of wealth and the connection between low-cost production and a high real purchasing power. Thrift, work, invention, and leadership have, with the protection of a sound Government and with the sustenance of great resources, built our economic system, and they are the only things which will continue to build it safely and soundly. With this lesson we have had in the last decade, let us never forget that the day is past when we can expect that men and women in government automatically will understand business enterprise and protect it. For the good of our souls, we should admit that we can fairly be charged with lack of foresight and in some rare cases with a degree of selfishness. Our quite human errors, however, have been chiefly those of omission, not commission. It is in the fertile field of citizenship we have failed in the past.

If my words ring true, then let us be done with pessimism for the future. Let the word go out that we work with cheer, with confidence, and with determination to fulfill our obligations. We have need of men who, despite rough waters, bring their crews and their cargoes to a safe haven. Err as they may, such men truly serve. They navigate large ships and small. They know hardship and sacrifice. They dare and they risk on the seven seas. Such men give and demand cooperation. They discipline themselves and they expect it of others. They are in varying degrees interested in education, culture, art, and religion. They are tough of fiber, but soft of heart.

These men of whom I speak actually are inventors, engineers, financiers, successful farmers, professional men, and business managers. Fortunately, they are scattered in every hamlet and town in this country. They have some unusual spark which drives them on. As they grow, their responsibilities to civilization increase in proportion. Most of them are willing and ready to assume their proper burden. It is for that reason that such men—in fact, you men and others like you—can be counted on to build America.

The National Significance of Reclamation

EXTENSION OF REMARKS
OF
HON. CARL HAYDEN
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 1 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. JOSEPH C. O'MAHONEY, OF WYOMING

Mr. HAYDEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD certain extracts from the proceedings of the Eighth Annual Meeting of the National Reclamation Association, held in Denver, Colo., November 14, 15, and 16, 1939. The extracts relate to an address delivered by the senior Senator from Wyoming [Mr. O'MAHONEY].

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Hon. RALPH L. CARR. Delegates to the eighth annual meeting of the National Reclamation Association and friends of the West who are listening on the air tonight, the speaker this evening is a man of whom the West is proud. We selfish people of Colorado deny Wyoming all of the credit for the achievements and accomplishments of the man who has come from Washington to talk with us this evening.

He was a resident of Colorado, a newspaper man in Boulder before he transferred his allegiance to the State which sent him on to Washington.

It is an honor to introduce my friend of boyhood days, the man who has made a name for himself in the National Congress, Senator JOSEPH C. O'MAHONEY, of Wyoming. [Applause.]

THE NATIONAL SIGNIFICANCE OF RECLAMATION

Hon. JOSEPH C. O'MAHONEY. Thank you, Governor Carr, and you ladies and gentlemen of the reclamation association, for this most polite greeting you have given me.

I cannot tell you how deeply I appreciate the great honor which has been conferred upon me by your officers in granting me the privilege tonight to address this organization, to speak to those of you who have assembled here as delegates, and to those interested in reclamation and the development of agriculture who are listening over the radio.

I am not the person who should be in this place tonight. I am speaking, I feel, as a substitute for the great leader of reclamation who comes from Colorado, your distinguished representative from the western slope, who, it seems to me, for almost a generation has been the leader in the effort to build up the West, Congressman ED TAYLOR. [Applause.]

We all regret his absence, and I note with great interest that upon the program tonight the officers and directors of this convention have undertaken to pay him the tribute that is his due. Let me say, therefore, now that the credit for what has been achieved on behalf of reclamation in great measure goes to men like Congressman TAYLOR, men like the Senators of Colorado, my friend ALVA ADAMS, and my friend ED JOHNSON, whose greeting I bring you from the National Capitol.

Times have changed. Things have become so busy at Washington that it is very difficult now for Members of Congress to cut loose from their desks in Washington and come home for vacations. ALVA ADAMS and ED JOHNSON are working in Washington. They send you their greetings, and I know that those same greetings come from the members of the delegations from all of the Western States, Congressmen, and Senators, whether here or absent. They have all united in the great effort to build homes in the West. But let us not forget that their efforts would not be at all successful if it were not for the cooperation which they receive from the executive arm of the Government.

I am happy to see here tonight at the table, Commissioner John C. Page, head of the Bureau of Reclamation. [Applause.]

I wish that I could describe to you the effective manner in which this mild-mannered gentleman directs the efforts of the Committee on Irrigation and reclamation in both the House and the Senate. He comes up to us at our hearings, and seated there without ever raising his voice, with the whole history of reclamation at his command, answers every question, dissolves every objection, and lays the groundwork for the arguments upon which those of us introduce the bills that he and his association arrange, build the credit which we receive when we go home.

I am happy here to greet Commissioner Page, and seated beside him I see his old boss, Dr. Work, former Secretary of the Interior.

I am glad to mention the Secretary of the Interior, and glad to mention Commissioner Page and Mr. Walter, whom I see here in the audience, head of the Denver bureau, because these men represent the continuing nonpartisan efforts of all who join in the movement to build up the West so that it shall become the home of an ever-increasing population, raising families, building schools, building churches, the very foundation of civilization. Without this cooperation from the executive arm, and in this compliment there must be included the present Secretary of the Interior, Harold Ickes, who has displayed an understanding of the reclamation program that has never been excelled. [Applause.] And the President also—President Franklin D. Roosevelt—from whom he has received his inspiration and his direction. [Applause.]

THE GOLDEN AGE OF IRRIGATION

I say to you, my friends of the reclamation association, that the last 6 years in a very real sense represents the golden age of irrigation and reclamation under the agencies of the Federal Government.

Established in 1902 and fostered by all who have gone down from the West, the reclamation policy has experienced a steady growth. But in the last 6 years, from 1933 to date, there has been undertaken a program that exceeds all that has gone before. Twelve States have benefited, 33 projects have been undertaken, and works, the estimated cost of which amounts to $817,400,000, are now under construction.

What is the meaning of this? I did not come here to the reclamation association to tell you of the achievements of the Reclamation Bureau. You know those achievements better than I. You know the details of each of these different projects all through the country. I am talking to you about the large picture and the meaning it has for all of us; not only those who live in the West, but all who live anywhere in the broad expanse of the United States of America.

Reclamation, with its power plants, rural electrification carrying power into the distant and isolated towns, soil conservation, flood control, so well described to you by General Schley of the Army Engineers at one of your sessions, farm security, represented here by the members and directors of this region, farm security with its effort to save those who were the casualties of the great depression, and, finally, the Works Progress Administration using the labor of those who for the time being have been unable to find employment in normal lines, for the construction of irrigation projects where sponsors can be found; and so we look over the grand scope of all of these agencies working together for one great purpose, the building of farm homes.

The message that I would like to convey tonight is that that building of farm homes represents the basis upon which prosperity must be erected. The decline of agriculture has measured the failure of our economy to work, and until we find the means of putting the people back upon the land where they may have their own homes and raise their families, bringing into existence people like you, the salt of the earth, until that is done we cannot hope to solve the grave economic problems which confront us.

Sometimes, I think that because of old habits of thought we fail to realize what has been going on among us. In this period during which the reclamation movement has proceeded gradually from 1902 down to date, there has been going on another great change which has been taking the people away from the farm and carrying them to the city. How many are there who realize that in the last 40 years urban population has increased from only 17 percent of all the people of the United States until now it is over 56 percent? More important than that, the number of people who were classified by the Bureau of Census as rural inhabitants 40 years ago represented almost three-fourths of the entire population. Today they represent less than half.

INCREASE OF FARM TENANCY

More important than that, when more than 71 percent of all of the people lived upon the farms and agricultural workers represented most of the workers in the United States, almost 75 percent of all farm operators were the owners of the farms on which they worked. Today farm ownership has declined until it is scarcely 55 percent, and the number of tenant farmers 40 years ago, representing only about 25 percent of those who were operating farms, today represent almost 45 percent.

This is the change which has been going on among our population, a change which is marked by other startling facts. Do you realize that there are 3,000 counties plus in the United States, and that in 300 of those counties today are concentrated 71 percent of all wage earners and more than 80 percent of all who draw salaries? From the farm to the city. From the land upon which man can make his living with his own hands to the city pavement, where it is impossible for him to support himself and his family unless he has a job in industry and where he is economically free only so long as he can claim that job.

These are changes which have come over us almost without our knowledge, but they are marked by concentration of a character that must make us all pause, not in the sense of criticizing. Let me call to your attention what is to my mind one of the most striking comparisons that can be made.

There are 30 great corporations in the United States, 18 of them railroads or public-utility corporations, 12 of them financial insti-

tutions, each one of which has assets of $1,000,000,000 or more. All 30 together have assets in excess of $50,000,000,000. All of these corporations are efficient entities in our economic machinery. Their managers are doing a good job, but the amazing fact is that they are richer and more powerful than many States. There are 16 sovereign States in this Union, 16 of them, the total assessed property values of which do not amount to $1,000,000,000 each. Thirty great corporations with assets of over a billion dollars each, 16 sovereign States in which all of the assessed property within their boundaries all lumped together does not reach the value of a billion dollars.

More than that: There are 22 States, 22, in each of which all the real property is not worth a billion, 16 in which all property, real and personal, is not worth a billion each, and 22 in which real property alone does not reach that figure.

Here is the story of the decline of agriculture. Here is the story of the great change which has come over the United States. Here is the opportunity that is presented to all of us, you who follow private pursuits, those who are in the executive departments of government, and those of us who have the opportunity for a while to serve in the legislative branch of the Government, here is the chance to build up once more a union between the land and the people so that once again farm-home ownership may be reestablished throughout the United States.

NEW ERA HAS COME UPON THE WORLD

The whole world, I think, is entering upon a new era both here in the United States and abroad, a new era that may be difficult to see, hard, perhaps, to imagine, but a change has come. When this country of ours was founded a hundred and fifty years ago and nations were seeking to establish upon this continent and on other continents colonies from which they could draw raw materials, they were establishing an imperialism that depended upon the importation of commodities of all kinds, of spices, of gold and silver, and what-not from the colonies that were founded. With the coming of the industrial system and the building of factories, a transformation took place. Colonies were no longer valuable for the raw materials they could furnish to the mother land. They became valuable for the exportation of the manufactured goods of the mother land. A curious illustration of this situation is to be found in the development of India.

India, one of the colonies of Great Britain, was used first for her raw materials and later as a market for the exportation of the cotton and other textiles that the English mills manufactured. Beginning, however, about 25 or 30 years ago with improvement of machinery, Great Britain began to export her outworn and obsolete machines to India, and to her other colonies, and then there began to develop in India new industries which were competing with the old industries at home.

And so it is that in our day foreign trade has ceased to have the importance that it used to have. Any nation that now seeks to obtain control over foreign lands is shouldering a burden, because it is shouldering either the necessity for exploiting the inhabitants of the land it seizes or the burden of defending and protecting them. This change is exemplifying itself in every line of human activity whether constructive or destructive. People wonder why it is that upon the western front in Europe the war has been so long delayed. It is not such a great mystery when one considers what has really happened in the world.

In the old days wars were the conflicts of professional armies. They were the conflicts of leaders, military and political, who were seeking to subdue lands for the purpose of wresting their raw materials from them. We have seen the time come when wars are no longer the clash of professional armies, but the conflict of whole peoples.

Science and invention, the same science which makes it possible for my voice to go out over the radio tonight on the waves of ether unimaginable miles beyond this hall, that same science, that same invention with its accumulation of materials to make war has brought about such a change that neither of the general staffs, whether in Germany or in France and England, is willing to pay the price that must be paid if a general attack were made.

WE MUST MAINTAIN PEACE

Finally, it is dawning upon people that war is wholly death and destruction, that peace only is life and prosperity. That realization is clearly felt in Washington. The new aspect of war is so deeply understood that I can say to you tonight that there isn't a corporal's guard in either the Senate or the House who would be willing, under any circumstances, to permit this country of ours to be involved in the foreign war. [Applause.]

But the importance to you, the importance to me, the importance to the Western States, the importance to all of the States of the Union is that in this effort of reclamation undertaken here in the West, the United States is showing the way to all of the world how people may live by constructive rather than by destructive enterprise.

There is our opportunity: Cooperation. There are no classes in America. Industrialists, financial leaders, professional leaders, farmers, and workers of all kinds are bound together by one indestructible tie, and they must work together, not against one another.

In the development of the reclamation program you have one simple fact which tells the story of what this cooperation can do. On the reclamation projects of the United States the population of the little towns and communities are existing upon those projects and is three times the agricultural population of the projects. An agricultural population living on their own lands in their own homes can furnish business for a much larger nonagricultural population. A prosperous agriculture can make this whole Nation prosperous, and until agriculture is restored to complete prosperity there can be no general prosperity.

The great achievement of the National Reclamation Association is that you here in these Western States are showing how people, with their Representatives in Congress, their experts in the executive branch, carrying out the laws of Congress, and the farmers at home may work together to build for civilization and the future. [Applause.]

Hon. RALPH L. CARR. Senator O'MAHONEY, the representatives of all of the West thank you for leaving a sickbed to come to give us this message tonight. We shall always be grateful.

I call him "Joe." I was trying to be a newspaper man 30 years ago when he had already reached that position. He reformed and became a lawyer and then fell by the wayside and went to Congress. [Laughter.]

Strange parallel in our cases, using him as my example, I became what I laughingly refer to as a newspaper man, reformed as he did, tried to be a lawyer and failed, and now look at me! [Laughter.] [Applause.]

And we have a peculiar other condition with us tonight in the form of one of the great men of the West who started out and honestly went through with his early ambition, and as far back as 1895 became a part-owner in a newspaper in his own great town in the State of Montana, and fortunately for him he never reformed. He is still a newspaper man and today for the fifth time he was elected president at this eighth annual meeting—for the fifth time, mark you, he was elected president of this great organization.

I just can't make this clear, friends. I didn't intend to let politics get into this picture, but I am having an awfully hard time to find out for my own satisfaction how JOE O'MAHONEY, born in Chelsea, Mass., and the president of this association, born in that wonderful old State of New Hampshire, should be Democrats. [Laughter and applause.]

And by the same token I am wondering why it is they pass to me tonight the business of introducing a whole parcel of Democrats. Perhaps it is because I love them. I do. I want them to love me some more, too. [Laughter.]

But to get back to the man from Great Falls, Mont., the man who is the very epitome of everything of which we dream, those of us who look for the development of the West by the conservation of our resources by the construction of dams and canals and drainage ditches—O. S. Warden, the daddy of them all, president five times of this organization, Mr. Warden! [Applause.]

O. S. WARDEN. Governor Carr, Senator O'Mahoney, Mayor Stapleton, and friends of reclamation, and ladies and gentlemen, it was not intended that I should do anything in connection with this closing program of our eminently successful sessions here in Denver except to read some letters and present a memorial that we have prepared for your distinguished Member of Congress, EDWARD T. TAYLOR, but Governor Carr makes it necessary for me to say just a word along a personal line.

I am proud that our distinguished Senator O'MAHONEY and I came from back in that eastern country and that we have come out here to preach those great principles of democracy which he says, and which I believe, will save the Nation for Governor Carr. [Laughter and applause.]

Only a word more; it is true that I was born in the State of New Hampshire. It is true that when I finished my school at Dartmouth College I went to Montana intending to stay there for a little while and go back to Columbia Law School. If I had done that, perhaps I would be talking the same kind of stuff that Governor Carr is giving us here this evening. [Laughter.]

As it is, I deteriorated somewhat into being a newspaper man, and now as I come nearer to the end of my human existence, I am delighted to join hands with Senator O'MAHONEY and with Governor Carr and help to make these homes that we have heard described this evening.

I venture only one suggestion, and that is, I think Governor Carr has something on his conscience that is hurting him just a little bit. I think he belongs to a very wonderful minority. [Laughter.] I am going to do what I can to keep it that way. [Laughter.]

But I am willing here and there—once in a while—if we find a good Republican, to give him a few democratic votes (laughter), because that is what keeps democracy safe. I think it would be worth while for Governor Carr to go back and visit his old friend high up in the mountains. If he would sit down there and think it all over, I am not so sure but that he would come home and join the same party that Senator O'MAHONEY and I delight to serve. [Laughter.]

Liability to All Indigents

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 1, 1940

EDITORIAL FROM THE PALLADIUM-ITEM, RICHMOND, IND.

Mr. SPRINGER. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include an editorial which appeared in the Palladium-Item, of Richmond, Ind., on the 29th day of April 1940, which editorial follows:

[From the Palladium-Item, Richmond, Ind., April 29, 1940]

LIABILITY TO ALL INDIGENTS

When a citizen possessing two automobiles appeals to his township trustee for relief to keep his wife and children from going hungry, the taxpayers who dig into their pockets for relief funds have a just right to kick.

At South Bend an unemployed man regained a place on relief lists after being cut off when he pleaded his family was in need. While making this plea he refused to surrender license plates to a passenger sedan being bought by monthly payments, and admitted ownership of a truck being operated on borrowed license plates.

This reliefer told the township trustee his car payments were being met by a C. I. O. leader at South Bend, while the same leader and others were contributing gasoline. Although on relief or public works most of the time since 1930, the indigent two-car owner refused to divulge the amount of his earnings with his truck.

Abuses of this kind cast a shadow over the entire relief system. The family of this "chiseler" is being supported by earnings of many taxpayers who own no automobiles, but have their money invested in homes upon which heavy taxes are assessed. This tax bill is high these days largely because of public relief in its many forms.

The idea has grown in recent years that the Government owes its citizens a living. Persons inclined to adopt this form of thinking must remember that the Government is the people. There is no magic about Government financing. Most funds expended by Government must be raised by levy on men and women who work for a living. These workers are not obligated to provide soft living for others.

Thomas Sanders McMillan

MEMORIAL ADDRESS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of Hon. THOMAS SANDERS MCMILLAN, late a Representative from the State of South Carolina

Mr. FULMER. Mr. Speaker, in the passing of my colleague, the Honorable THOMAS S. MCMILLAN, the State of South Carolina has lost one of its most beloved citizens and Congress one of its most valuable Members.

"Tommie," as he was affectionately called by his numerous friends and colleagues, possessed that type of character and friendly personality which endeared him not only to his friends, but to all those with whom he came in contact.

This was wonderfully demonstrated to me on one occasion when I had the privilege and pleasure of visiting his home city, Charleston, S. C., on an occasion when President Roosevelt visited this old, historic city.

On a parade through the streets of the city and navy yard I had the privilege of riding in the car with my colleague. The streets were lined with his friends and constituents, and Tommie, with his hat in his hand, was continuously saluting them with that gracious, friendly smile and with that friendly greeting which he used so often on the floor of the House, "Hey, Buddy!" On the other hand, there was the joyous shouting on the part of my colleague's friends and constituents with that well-known and commonly used greeting, "Hey, Tommie!"

Prior to the convening of the extra session, Tommie had made a visit to Europe. I remember so plainly, and always shall, when we met in extra session, he came over and spoke to me and our colleague the gentleman from South Carolina, BUTLER HARE. With that gracious, friendly smile, so characteristic of him, using both hands in speaking to us, he said, "Hey, Buddy!"

I shall always remember him as he looked upon us at that time, because it so perfectly displayed a heart overflowing with friendship, carrying with it sunshine and that which would tend to make life worth while.

I attended his funeral at old Charleston, and the large attendance from all over the State indicated the high esteem in which he was held in the hearts of his friends and his fellow South Carolinians.

Tommie was a man of splendid ability, and he was devoted to his unselfish service to his people, his home city of Charleston, and to South Carolina.

Soon after coming to Congress he was made chairman of a very important subcommittee of the Appropriations Committee, where he had the privilege of distinguishing himself as a leader in piloting many important appropriation bills through the House.

Our colleague will answer the call of duty no more. He has answered the summons of the highest of all tribunals, and all of his colleagues can testify that he served his State and country well.

The influence of his upright and unselfish character, his loyalty and his devotion to his country will remain, as will his memory in the hearts of those with whom he served.

As a friend, along with his loved ones, and his many friends in South Carolina, I mourn his untimely death and extend to his bereaved family my heartfelt sympathy. His, as stated, was always a friendly greeting and with a smile.

Sleep on, dear friend, such lives as thine
Have not been lived in vain,
But shed an influence rare, divine,
On lives that still remain.

You remember Jesus said, "I go to prepare a place for you." The glorious thought that I have and that I would like to leave with his loved ones and his many friends is that today Tommie is enjoying the privileges and pleasures of a beautiful heavenly home prepared for those who love the Lord, and the years will not be many before we shall be privileged to see and be with him again.

'Tis easy enough to be pleasant
When life flows by like a song;
But the man worth while is the man who will smile
When everything goes dead wrong;
For the test of the heart is trouble,
And it always comes with the years;
But the smile that is worth the praise of the earth
Is the smile that comes through tears.

Samuel Davis McReynolds

MEMORIAL ADDRESS

OF

HON. ALFRED L. BULWINKLE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of the Honorable SAMUEL DAVIS MCREYNOLDS, late a Representative from the State of Tennessee

Mr. BULWINKLE. Mr. Speaker, the passing of Judge MCREYNOLDS was deeply felt by his colleagues in the House

of Representatives, by those who knew him, and especially by his friends in Tennessee; and as a part of my remarks I shall quote the resolution adopted by the bar association of the city of Chattanooga on the 2d day of August 1939:

SAMUEL DAVIS M'REYNOLDS, APRIL 16, 1872–JULY 11, 1939

To the Chattanooga Bar Association:

Your memorial committee begs leave to submit to you for consideration and action thereon the following relating to the life and achievements of SAMUEL DAVIS MCREYNOLDS, long on the membership roll of this bar, although for many years not an active practitioner, due to the fact that he had devoted the last 36 years of his life to public service.

SAMUEL DAVIS MCREYNOLDS, generally called Judge MCREYNOLDS, and by his intimate personal friends called SAM MCREYNOLDS, was born on a farm April 16, 1872, in Bledsoe County, near Pikeville, Tenn. He was the son of Isaac S. and Addie Davis McReynolds.

He attended the Peoples College at Pikeville, Tenn., which was a denominational school, being supported by and under the auspices of the Southern Methodist Church. This college maintained primary grades, secondary, and higher grades of learning. He never attended any other college or school, except the law department of Cumberland University, at Lebanon, Tenn., from which he graduated with the degree of doctor of laws with the class of 1893, at the age of 21.

Two of his classmates in the Peoples College at Pikeville were T. W. Stanfield and J. Lon Foust. The friendship and mutual admiration of these schoolboys deepened as the years passed without a ripple to mar this long, golden friendship. Mr. Stanfield successfully managed every political race for office made by Judge MCREYNOLDS.

Soon after graduating from the Lebanon Law School, SAM MCREYNOLDS was appointed assistant district attorney under Attorney General George W. Sutton of the sixth judicial circuit of Tennessee. When his tenure as assistant attorney general ended, he came to Chattanooga and entered the practice of law. Soon he entered into a law partnership with the late John H. Cantrell. This is the only law partnership that Judge MCREYNOLDS ever entered into and ended in 1903, when he (MCREYNOLDS) was appointed judge of the criminal court circuit comprising the counties of Hamilton, Sequatchie, Marion, and Franklin, which court was created by chapter 361 of the Acts of the State of Tennessee, passed by the fifty-third general assembly and approved April 15, 1903, by James B. Frazier, Governor. This appointment was until September 1, 1904, "and until his successor is elected and qualified." He succeeded himself in the successive elections until he was elected to Congress in 1922. He was elected to the Sixty-eighth, Sixty-ninth, Seventieth, Seventy-first, Seventy-second, Seventy-third, Seventy-fourth, Seventy-fifth, and Seventy-sixth Congresses.

Cordell Hull and SAM MCREYNOLDS were coworkers and close friends in the Congresses, each watching after the political interests of the other. It was upon the advice of Hull that MCREYNOLDS sought and was given an appointment to the Foreign Affairs Committee. He served faithfully and well as a member of that committee. In 1932, upon the death of Charles Linthicum of Maryland, MCREYNOLDS was elevated to the chairmanship of said committee. As chairman of the committee he was in position to and did render great service to President Roosevelt and Secretary of State Hull in conducting important diplomatic foreign relationships. Because of his knowledge of foreign affairs, President Roosevelt appointed him a delegate to the International Monetary and Economic Conference held in London in June 1933.

Judge MCREYNOLDS was an inveterate worker. His friends warned him that his health was being impaired and life threatened by his constant attention to his arduous responsibilities and admonished him to take it a little more easily; but his desire to serve his constituency and his country drove him inexorably on. He was forced finally to enter a hospital but his condition grew worse, and on Tuesday morning, July 11, 1939, he died in Washington, D. C., survived by his widow, Mary McReynolds (nee Davenport), whom he married March 1, 1910, and a daughter, Margaret, now Mrs. Darrell St. Claire, to whom two daughters have been born.

SAM MCREYNOLDS achieved his distinction and political preferment through hard work and fidelity to duty. His was an aristocracy of service. He was a lifelong Democrat, but he served his constituency honestly, efficiently, and impartially, whether of his political faith or not. When appealed to for help in getting a job for an individual, or for legislation he felt was for the good of his people, or for appropriations for projects, worthy in his estimation, he did his very best to get what was wanted. He had the high virtue of following through, so often lacking in public servants, especially in the legislative branch of our Government. He was fair to every faction, true to every trust, faithful to every friend, and loyal to the last.

Therefore, premises considered, be it

Resolved by the Chattanooga Bar Association, That it, and each member thereof, has suffered an irreparable loss in the death of SAMUEL DAVIS MCREYNOLDS, which is shared in by all the people whom he served long and well: Be it further

Resolved, That the members, collectively and individually, of this association extend his widow, his child, and his grandchildren deep sympathy in their great bereavement; and be it further

Resolved, That a copy of this memorial be furnished to the family of deceased; also a copy be presented to each of the courts of Hamilton County and to the court of appeals and the supreme court at Knoxville, and to the Federal district court at Chattanooga; also to the Chattanooga press: Be it further

Resolved, That a copy of these resolutions be sent to the Speaker of the House of Representatives with the request that the same be published in the CONGRESSIONAL RECORD.

Respectfully submitted.

W. E. WILKERSON,
Chairman.
J. L. LEVINE,
SILAS WILLIAMS,
Memorial Committee.

Santiago Iglesias

MEMORIAL ADDRESS
OF
HON. ALFRED L. BULWINKLE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public services of Hon. SANTIAGO IGLESIAS, late Resident Commissioner from Puerto Rico

Mr. BULWINKLE. Mr. Speaker, it was with extreme regret that the Members of the House of Representatives heard of the death of Mr. IGLESIAS on December 5, 1939. During the time that he had represented Puerto Rico as Resident Commissioner, in the Congress of the United States, the Members had become attached to him very much and had recognized in him those sterling qualities which made him such a valuable representative for the Territory of Puerto Rico.

As chairman of the Committee on Memorials, I desire to make as part of my remarks, and quote, two resolutions which I have received. The first is from the Honorable Gildo Masso, acting chairman of the council of deans of the University of Puerto Rico, and the second is a resolution adopted by the National Woman's Party at its biennial conference, which resolution was adopted on the 16th day of December 1939.

RESOLUTION APPROVED BY THE COUNCIL OF DEANS OF THE UNIVERSITY OF PUERTO RICO AT A MEETING HELD DECEMBER 6, 1939, REGARDING THE DEATH OF THE HONORABLE SANTIAGO IGLESIAS

Whereas the Honorable SANTIAGO IGLESIAS, Resident Commissioner from Puerto Rico in the National Congress, passed away in the early hours of December 5, 1939;

Whereas the distinguished public man consecrated his life to dignify and to orient the forces of organized labor as a vital factor in the economic and social structure of our people;

Whereas Mr. IGLESIAS was a notable promoter of inter-American relations;

Whereas his death has deeply moved the Puerto Rican community; and

Whereas the Council of Deans of the University of Puerto Rico is thoroughly aware of the import of this regrettable loss: Now, therefore, this council at its first meeting after the sad event

Resolves, First, to participate in the country's mourning and to express its condolence publicly.

Second. To suspend all public extracurricular activities in the University of Puerto Rico during the period of official mourning set by the Honorable Governor of Puerto and to adopt other measures deemed necessary to express the sympathy of this university.

Third. To send copies of this resolution to the relatives of the deceased and to those institutions with which he was closely connected.

GILDO MASSÓ, *Acting Chairman.*

RESOLUTION OF BIENNIAL CONFERENCE, 1939, NATIONAL WOMAN'S PARTY, DECEMBER 16, 1939

Whereas Commissioner IGLESIAS, Puerto Rican Delegate in the United States Congress, a stanch friend of equal rights for men and women, and a consistent and active supporter of all such measures in the Congress of the United States, has recently passed away;

Resolved, That the Biennial Conference of the National Woman's Party records its sorrow at the loss of this friend and its gratitude for the memory of his devotion to their cause; be it further

Resolved, That a copy of this resolution be sent to the family of the Commissioner, to the President of the Senate, and Speaker of the House of Representatives of the United States, and to the president of the senate and speaker of the house of representatives of the Puerto Rican Legislature.

America's Road to Peace

EXTENSION OF REMARKS
OF
HON. DAVID I. WALSH
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, May 2 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. JAMES A. FARLEY

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address recently delivered at Boston by Postmaster General Farley, entitled, "America's Road to Peace."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As I passed by the Boston Common tonight I was impressed with its calm and peaceful atmosphere. To every American the sight of Boston Common, or even the mention of its name, revives the heroic splendor of your Revolutionary patriots; patriots whose deeds have consecrated this ground as a perpetual shrine to brave men willing to give their lives to preserve their right to live and govern themselves as they see fit.

It is my earnest prayer that Boston Common will continue to wear the halo of peace which surrounds it tonight. But I am positive, beyond the shadow of a doubt, that should the welfare of this Nation ever be threatened by the aggression of a foreign invader, the soul of Boston Common will instantly vibrate with the rhythmic marching of completely equipped, determined young Americans.

There were periods in this Nation's history when the discussion and adjustment of international relations were confined almost exclusively to our diplomatic experts. But today, under the humanitarian leadership of Franklin D. Roosevelt, every American citizen, from Main Street to Broadway, inclusive, has a voice in the direction of the foreign policy of this Nation and a hand in shaping its future destiny.

We have a good deal to do, by the way, with just this subject in the Post Office Department. The Post Office Department, as you know, has one of the largest international businesses in the world. To us international relations are not matters of diplomatic exchange. They have to do with how we can get the mails from the United States to every country in the world, and how every country in the world can get the mail to us. We know that a nation which cannot communicate freely is a nation imprisoned within its national boundaries, and we know that for centuries civilization has been working toward wider and not more confined international contacts.

The present administration has never considered international relations as a political matter. Americans may differ about things here, and we do. It is our sacred right. But when we look outward and face the world we are one country, and our debates here are nobody's business except our own. I am very sure that no American wants any foreign country to attempt to influence our politics in the slightest degree. We are quite capable of doing that for ourselves. It is good democracy to be deciding international policies, as well as other policies, by a process of free and open discussion. But when the Government speaks, it speaks with but one voice, for all Americans, and it is our duty as Americans to support that decision without reserve. I think every American citizen feels that and knows it.

The first end and aim of this Government has been to make sure that the United States is safe at all times and in all quarters. Whatever else happens, we must begin there. This is particularly true when other nations are at war. The ability to keep this country at peace depends not on wishing for peace but on being able to defend ourselves if anyone tries to break it. There is nothing new about this simple principle. It is as old as the Republic. Students of American history will point out that Alexander Hamilton argued for the adoption of the Constitution partly because it would put this country in a position where it could build up a strong national defense.

Other countries were at war then, as they are now, and it was the intent and aim of the United States at that time to remain neutral. But you cannot stay neutral very long if anyone can cross your borders or violate your waters at will. It was then that Hamilton made his now famous remark in reply to a critic. The critic had insisted that if we went to work to build up our Army and Navy and national defense, we were taking a step toward war and away from neutrality. Hamilton's response was: "A nation despicable in its weakness forfeits even the right to neutrality." The history of the past few years in Europe sheds much light on the wisdom of his remark.

The safety and security of the United States depend on something more important than mere possession of guns and ships and airplanes. We need those, of course. But we need something more. The first principle of American safety is that no overseas power shall gain a foothold in the New World. Defense is a fairly simple matter if the nearest potential enemy is 3,000 miles or more across the water. It is not so simple if he has a base of operations on this side of either the Atlantic or the Pacific Ocean. Consequently we have to watch constantly to make sure that no such base is permitted to exist.

That is not a new doctrine. It was outlined by President Jefferson. It was set out in the Monroe Doctrine. It was the reason why President Cleveland let drive at the British when they appeared to be acquiring territory in Venezuela nearly 50 years ago.

The simplest, the best, and the most sensible way of making sure that no overseas power crosses the American base line is to see to it that everybody on this side of the Atlantic and the Pacific Oceans is our friend. Actually, the 20 other American republics have the same interest that we have. They propose to be safe if they can. They, too, are safe if the American base line is not crossed. And so, partly by good fortune and partly by good policy, we have a situation in which all of the independent nations of the New World want the same thing. The common sense of the situation was that we should all work together to see that we all get it. That has been the heart of the Pan American policy of this Government.

President Roosevelt, foreseeing the possible outbreak of European war, took the initiative in calling a Pan American conference in Buenos Aires in 1936, and got the work started. At the inter-American conference in Lima in 1938, Secretary Hull took it still further. The result is that all of the nations of this hemisphere made the agreement that any threat from outside this hemisphere to the peace or territorial integrity of any American country was the concern of all. In other words, the world was served with notice that the American base line shall not be crossed by any outsider. As you know, Europe did go to war a few months later; and we all got together in Panama a few days thereafter to work out the necessary means of keeping the Americas out of war and of protecting our neutrality. We had no illusions about it. Keeping neutral is mighty hard work, and it is not to be done by being weak.

I would like to carry this thought a little further. We know that while other nations are fighting each other, none of them would be particularly interested to attack us. But we cannot tell what will happen. The common sense of the situation is that we must be ready to meet any challenge to our security. That is why I am for the bringing of our Army and our Navy to the fullest possible measure of preparation; and that does not merely mean having men and ships in good working order.

It means having arrangements made so that we can manufacture rifles and aircraft, guns, planes, and shells, and whatever else we may need. If everyone knows that we have the ability and the determination to take care of ourselves, we shall not likely be called on to use the preparations we make. But we have seen plenty of situations in the last few months in which nations relied on their innocence to save them—and it has not been a very safe defense.

This also means that we have to lend such friendly assistance as we can to our neighbors on this hemisphere. Every once in a while someone says that we ought to let our American neighbors take care of themselves; that we should stick strictly to the United States. It is a good argument as far as it goes, but it does not go far enough. While it is true that the other American nations need us, it is equally true that we need them. The defense of the Western Hemisphere is a cooperative proposition. For that reason I have not grudged the money that we have spent in assisting our southern neighbors to develop their own resources for the production of noncompetitive supplies, like rubber, that we need. Moreover, one of the things that has been learned in the past few years is that the more our friends to the south are developed and assisted, the better business we have with them. I do not think that you will find many businessmen who want to change the good-neighbor policy. In fact, I can say with assurance that no political party will ever change the good-neighbor policy as long as it rests upon mutual cooperation.

If we are safe in the Americas first, we can then think of events beyond the seas. Now, matters overseas are not happy, and there is no way we can make them so. There is a tragic conflict going on in Asia. Europe is tearing itself to pieces in a war which has been steadily spreading to all parts of that unfortunate continent. To most Americans, who have lived their lives in a peaceful atmosphere, the whole business is a dreadful nightmare. We know it happens in Europe ever so often. We do know also that the United States does not propose to get mixed up in the system of Europe. We have not had these periodic earthquakes of war on this side of the water; and we do not propose or wish to get into a position which ties us in any way into these affairs.

For one thing, this country has lived through several such periods before. While the country was being born, a gigantic struggle was going on in Europe; and since at that time much of North America belonged to Europe, we had fragments of the war on this side of the Atlantic. Less than 20 years after we had declared our independence, Europe headed into the wars of Napoleon, which lasted until 1815. These wars involved a large part of the Western World before they ended. So you can see that the present situation is not a new thing. We have had some experience in riding out these storms.

But it does take extremely careful handling. I think the record of the present administration in keeping America out of war is

remarkably outstanding. The President and Secretary Hull foresaw the situation long before many people wanted to face the ugly fact that war seemed inevitable. We have been building up the Army and Navy. We shall have to do so still more. But we have also arranged our neutrality laws and taken care of our shipping. The result of that has been that in the first 7 months of war the United States has not lost a life or a ship, and that even the incidental inconveniences which cannot be avoided have been reduced to a minimum.

Our first line of defense is to avoid possibilities of involvement. But when that is said, we have to face another unpleasant fact. Here I am getting ahead of the story. I don't apologize for that, because it is the business of a party leader to be a little ahead of the story. One of his recognized obligations is to be sure that there is general agreement when the time comes, so that any needed action can be promptly taken.

The unpleasant fact is that the situation abroad may change at any time. No one of us is bright enough to figure the situation out ahead of time. You cannot take anything for granted in this insane war business. For that reason I hope that every American will keep constantly in mind the necessity for making sure that the war shall not cross the American base line. If it ever does, I don't think that we should be in the position of hesitating or wobbling for a moment. We must stand ready to take whatever measures may be needed, and take them at once.

But we must also have a long-range view. Wars do not last forever. Eventually the world will have to settle down to some sort of peace basis. We shall be in the world, and the basis of peace will affect us. It will do so because there is no known way of building a fence around this hemisphere. Other nations want to buy things here, and we want to sell them. Many of our people have relatives and friends beyond the sea. In commerce the western world is very closely knit together. If you cut us off from our European markets, the southern cotton workers and cotton planters go hungry. If you cut off Europe from much of our food and metals, the European farms and factories find themselves in trouble.

Because of that the United States has to work constantly toward a world which will be at peace and in which commerce can flow freely. We have made a beginning on that with the trade agreements which Secretary Hull has been negotiating. We have kept our communications through the Post Office Department freer than any other system of communication in the world. We have avoided, in general, the vicious crime of hatred. We are still working toward a world which aims at protecting human life, and not at destroying it.

On a common-sense basis, therefore, I think all Americans can agree on a program which President Roosevelt and Secretary Hull, and the officers of this Government, have carefully and firmly followed; and which has been carried out by every part of the Government, from the Postmaster General's office to the War Department. The program is simple. Anyone can understand it; nobody needs to be afraid of it. It is simply this:

Complete preparedness for American defense.

Complete exclusion of aggression or war from the Western Hemisphere.

Assistance, when necessary, to our American neighbors.

Maintenance of American neutrality and noninvolvement, without surrender of American rights.

Steady work toward mutually beneficial commercial relations with those parts of the world which will go along with us in the way of peace.

Steady insistence that the American interest calls for a world which wants peace, believes in peace, practices peace, and is willing to accept international law and good neighborship as the only means of getting it.

Without being experts in foreign affairs, all of us can understand that, and all of us can work for it. There must be no political divisions in foreign affairs. There must be no foreign influence in American politics. In foreign relations there is but one America, taking care of all Americans, and supported without reserve by every American citizen.

Recreational Opportunities in the Tennessee Valley

EXTENSION OF REMARKS

OF

HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, May 2 (legislative day of Wednesday, April 24), 1940

ADDRESS BY E. S. DRAPER

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject New Recreational Opportunities in the Tennessee Valley, delivered by E. S. Draper, Director, Department of Regional Planning Studies, Tennessee Valley Authority, before the southeastern meeting of the American Automobile Association, Knoxville, Tenn., April 22, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

From the standpoint of effectiveness, I can think of no organization I would rather address on the subject of recreation than the American Automobile Association, for it is the automobile, in my opinion, that is the greatest single factor responsible for the rapid rise of recreation as a major American industry.

With 25,000,000 passenger cars in America today—an average of 1 car for every 5 persons—with nearly half a million miles of highways in our State and Federal systems, and with the inherent curiosity and restlessness of the American citizen, it is no wonder that the provision of goods and services for tourists and other recreation seekers has become almost overnight a major source of income and employment for hundreds of thousands. New England, which has taken the lead in the regional approach to converting recreation into income, values its annual tourist crop at $500,000,000. You are no doubt familiar, through your own publications, with the United States Travel Bureau estimates of the value of tourism to the various States.

So the South, urgently in need of new sources of income, is becoming increasingly aware of the economic value of its recreational resources.

Let me tell you something of what the Tennessee Valley Authority is doing to assist in the development of the rich recreational possibilities of this region.

T. V. A. is a regional development agency. It has for its over-all objective the setting in motion of forces that will lead to the improvement of the social and economic well-being of the region it serves, and hence of the Nation as a whole.

The core of the regional development program is the unified development of the Tennessee River system, which calls for a series of 9 dams on the Tennessee River proper and 2 dams, Norris and Hiwassee, on its tributaries. Of these 11 dams, 2 were here when T. V. A. took over—Hales Bar Dam, 20 miles below Chattanooga, privately owned, and the well-known wartime Wilson Dam at Muscle Shoals. Since 1933 T. V. A. has completed Norris, Chickamauga, Guntersville, Wheeler, and Pickwick Landing Dams, with Hiwassee Dam virtually completed, and work now under way on Watts Bar and Kentucky Dams. Work will begin shortly on the last of the main-river dams, Coulter Shoals, which will create a lake within sight of this very hotel in which we are assembled.

In addition to these nine dams, located as shown on this map in four States, the Authority has recently acquired through purchase from the Tennessee Electric Power Co. a number of smaller dams and reservoirs on other tributaries in Tennessee and Georgia.

Now, what does all of this mean in terms of recreation? It means that where once flowed the muddy Tennessee—swirling viciously out of its banks at times of flood, shriveling up almost to a series of stagnant pools in time of drought—there is now being formed a 650-mile chain of interconnected deep-water lakes. And on the tributaries are the storage reservoirs, their sparkling blue waters reflecting the tree-clad slopes of their mountain backgrounds.

It means that in a region rich in all other scenic attractions—the highest mountains in eastern America; waterfalls, some twice as high as Niagara; the beautiful rolling hills of the valley of east Tennessee; the spectacular, rugged cliffs of the Cumberland escarpment—to all these and more has been added the one scenic feature that Nature forgot—lakes. In my own experience in 25 years of concern with recreational developments in the South the one main feature most needed in a recreational development is a body of water suitable for swimming, boating, fishing, and other water-use activities.

The T. V. A. river-development program means the creation of a chain of lakes whose total surface will exceed 500,000 acres, with an aggregate shore line of 6,000 miles, a total shore line equal to the highway distance from New York City to Los Angeles and return. Kentucky Lake alone, which will stretch across virtually the entire north-south breadth of western Kentucky and Tennessee, will have a shore line longer than that of Lake Michigan.

But the size of these lakes is not in itself their most significant recreational aspect. Each reservoir, other than those developed before the advent of T. V. A., is surrounded by a protective land strip of varying width. Most significant is the fact that every acre of water surface and every mile of shore line acquired by T. V. A. are held in public ownership. And they are being conserved and developed not to enrich any single individual or corporation, but to meet the requirements of the public at large.

Recreation, of course, is but one of the many uses of the multipurpose reservoirs and their publicly owned shorelands. Although a byproduct of the great dams, the recreation development of T. V. A. properties is exerting a tremendous influence on the region.

Our first line of contact with the recreation public is the very dams themselves. In all, more than 5,000,000 persons have visited the construction projects. At Norris Dam, perhaps the symbol of T. V. A. in the public mind, we have had approximately

three-quarters of a million visitors annually for the past several years. This is comparable to last year's attendance at the Great Smoky Mountains National Park, the second most popular national park, and undoutbedly the dam and park, only 65 miles apart, complement each other to constitute a dual tourist objective.

Several weeks ago the gates of Chickamauga Dam were closed and the lake began to form. On the second Sunday after the lake was up, 14,000 were counted. Relatively heavy attendance at other dams has been recorded.

The economic significance of these figures is tremendous. Seventy-five percent of the visitors who registered at Norris Dam came from beyond the borders of the State of Tennessee. Hundreds of cars crossing the dam bear license plates from the Illinois-Indiana-Ohio tier of States; undoubtedly many of them were routed to Norris Dam by the A. A. A. tour service.

By applying less than one-half of the A. A. A. tourist expenditure index of $6.40 per day per person—say, $3 per person—we get a figure of $2,250,000 annually spent by visitors to Norris Dam. And Norris is but one of the 11 dams in the T. V. A. system.

On the other side of the balance sheet, what do we do for these millions of visitors to T. V. A. projects? As custodians of public property, we eagerly recognize the obligation to provide the services and accommodations to which the American people, as owners of the property, are entitled. The size and scale of these gigantic dams and powerhouses demand an adequate setting, a treatment of the surroundings fitting the importance of the undertaking. Provision of high standards of public construction and operation will serve to stimulate like standards in visitor accommodations rapidly building through private initiative. Evidences of that are at hand.

That is why, when you visit Norris Dam, you will see the entire surroundings attractively landscaped, regulated parking spaces for 650 automobiles, information headquarters, a refreshment counter, spic-and-span rest rooms, and a craft shop which deals in locally made handicrafts.

Our second point of contact with the tourist is at the many parks and boat docks that dot the shores of the lakes. In establishing the Tennessee Valley Authority, Congress directed the President to undertake such demonstrations as seemed necessary to aid the proper use, conservation, and development of the natural resources of the valley. This mandate has, by Executive order, been delegated to the T. V. A.

To that end, the Authority has constructed a number of demonstration parks on its properties. We started with Norris and Big Ridge, both on Norris Lake. Each of these parks is provided with vacation cabins, a lodge and restaurant, and various facilities for outdoor activities such as horseback riding, hiking, and ball games. At Norris there is in addition a trailer parking area, and at Big Ridge there are a bathing beach and a bathhouse.

Results have been highly gratifying. Approximately 100,000 persons visited Norris Park during the past season, some of them on picnics, others on extended vacations, some as overnight guests en route to other destinations. During the 1938 season, 4,500 guests spent a total of 11,000 person-nights in the 25 cabins. The trailer camp accommodated 900 visitors for nearly 1,600 person-nights. Across the dam, the park includes accommodations for 200 boats at the boat harbor, the scene of an annual Labor Day regatta, drawing as many as 20,000 spectators.

At Big Ridge Park, where, unlike Norris, a 10-cent admission fee is charged on weekends and holidays, paid admissions alone totaled around 20,000 persons, with 14,000 paying an additional 15-cent charge for bathhouse privileges. During the 1938 season the cabins at Big Ridge were occupied by 1,200 persons for 7,000 person-nights. Cabins at both parks are often reserved long in advance, many occupants coming from distant States.

As demonstrations, those two parks have been highly successful. They demonstrated the need and demand for such recreation areas in an area where country parks were comparatively unknown. They demonstrated that such parks can be paying propositions; income at both Norris and Big Ridge Parks exceeds operating expenses. Furthermore, the parks provided a demonstration of standards of design.

In the opinion of recognized park authorities, the States of the Tennessee Valley region have, during the 7-year period from 1933 to date, made the greatest advance of any of the States in the Union in the provision of State park facilities. In Tennessee alone, for example, there was but one area that went by the name of State park. Today, with a network of 16 parks and forests, the Tennessee State park system is being developed into one of the finest in the Nation. It is generally admitted that the stimulation given to park and conservation activities during this period and the effective cooperation of T. V. A., N. P. S., and C. C. C. with the States of the valley has produced remarkable results. As one national-park official stated, a 5-year span has seen 25 years of progress.

I have described Norris parks in some detail because on Wednesday you will have an opportunity to see for yourselves some of these developments of which I have spoken.

There are, of course, other parks. At Pickwick Dam there is a park operated by a concessionaire, who has converted the hospital of construction camp days into an attractive resort hotel. This recreation area is but a few miles from Shiloh National Military Park, for years a prominent tourist objective; undoubtedly each park will contribute to the increased attendance at the other. At Wilson and Wheeler dams are several day-outing parks, including one for Negroes. In fact, no lake in the entire Tennessee River system will be without its fair share of recreational development.

There is also the Norris Freeway, a demonstration of a limited-access, high-speed tourist highway. Built primarily to provide access to the dam during construction, the road was designed also to meet the heavy recreation demands expected after completion of the dam. On this road we have applied freeway principles to a rural highway. The right-of-way is 250 feet, grades and curves have been kept to a minimum, consistent with the topography. In our landscape treatment the natural characteristics of the countryside were considered all important and were preserved by agreement with owners of abutting property. It is significant that the interest in freeways and limited-access highways in the United States has progressed by leaps and bounds since this demonstration freeway was observed by millions of motorists driving over it to visit the dam.

I should like to say at this point that I am in entire sympathy with the policies of the American Automobile Association regarding free-way legislation and roadside control. By adopting such policies, the association, being the unified voice of the American motorist, strongly demonstrates that the motorist today demands that the roadside be considered as much a part of the highway as the pavement itself; that the motorist demands, both in the interest of safety and scenic effect, a protected highway.

Having shown—through our experience at Norris and Big Bridge Parks, through our day-outing parks in the Muscle Shoals area, through our boat docks, visitors' facilities at dams and powerhouses, through the Norris freeway demonstration—that there exists a strong demand, both from residents of the region and from tourists, for recreational facilities, we must now step out of the demonstration role as developer of major recreational areas.

During the several years of demonstrational development of areas of State-park caliber, we have been working closely with State and local agencies. Quick to realize the importance and the significance, both social and economic, of this program, the Tennessee Valley States geared themselves to the task of developing their own park systems. Soon State parks, cooperatively developed by the C. C. C., the National Park Service, and the proper State agencies, were under way. I shall describe several interesting examples developed on lake-front lands leased from the T. V. A.

Those of you who came to Knoxville over United States Highway No. 25–W saw the development at Caryville, Tenn., where the highway bridges an arm of Norris Lake. In an ideal mountain-lake setting on this important north-south tourist route, on lands leased from T. V. A. at a dollar a year, and on additional lands donated by far-sighted citizens of the community, the State is developing a 900-acre park that will provide a tourist camp and related facilities as well as recreation facilities for residents of the immediate vicinity.

Where United States Highway No. 27, another important inter-regional tourist route, skirts an arm of Chickamauga Lake at Soddy, Tenn., several public agencies are cooperatively developing Soddy Marine Park. This, too, will unquestionably prove to be a popular stopping place for tourists. Personally, I look forward to the day when the residents of the Soddy community will find that recreation supplies the economic base that was lost when coal mining in the adjacent Cumberland Mountains was all but abandoned and the cut-over forest lands of the plateau represented a constantly dwindling source of revenue.

Also on Chickamauga Lake two of the most significant parks in the South are being built by the State conservation department on T. V. A. land through cooperation with the National Park Service and the C. C. C. These parks—obviously direct descendants of Norris and Big Ridge—are Harrison Bay State Park and Booker T. Washington State Park, the latter for Negroes. Both parks, when complete, will have such facilities as bathing beaches, playfields, lodge, and vacation cabins. Harrison Bay State Park will have a boat harbor with a capacity of 1,000 boats. I am told that this will be the largest pleasure-boat harbor on the 8,700-mile inland-waterway system of the United States. And the boats will be there—don't worry. Chattanooga expects the number of boats on Chickamauga Lake to exceed Norris.

Connecting Harrison Bay Park with Chattanooga, 10 miles away, is the Harrison Freeway, another direct result of our demonstration work.

Hiwassee Lake, in North Carolina, will also have its recreational developments. As the entire lake lies within the boundaries of the Nantahala National Forest, responsibility for recreation development has been accepted by the United States Forest Service, which, as you know, has a strong recreation program.

The city of Guntersville, Ala., on a 2-mile-long peninsula, jutting out into the blue waters of Guntersville Lake, is building a municipal boat harbor and water-front park. About a year ago Guntersville awoke one morning to find that it had a brand new resource base. The impounded waters of the reservoir had risen and the city had scheduled a dedication ceremony. Motorboat races were the main attraction on the program. Before that day was over, the largest crowd ever to attend a sports event in northern Alabama, a crowd estimated at more than 50,000 persons, had jammed into that little river town of 2,800 normal population. Waters of the lake, spouting outboard motors, cruisers, and yachts, where bottom lands formerly were devoted to corn, may be the harbinger of a new day.

Out of all this vast recreation development along the entire T. V. A. chain of lakes, there is one big question that arises—what is its effect on the region in terms of economic benefit?

Rather than generalize on the well-known fact that millions of dollars are being spent in the region for recreation, I should like to suggest the dollars and cents value of the T. V. A. recreation program by citing a few concrete examples.

We know that an average of 300 persons from far and near fish in Norris Lake every day. On the basis of interviews with these fishermen, we estimate that the average expenditure is between five and six dollars per day. Three hundred fishermen times five or six dollars is between $1,500 and $1,800 per day—between five and seven hundred thousands dollars a year. And there are plenty of fish in the other T. V. A. lakes—and plenty of fishermen after them.

In Morgan County, Ala., nearly twice as many State fishing licenses are sold as in any other county in the State, with the exception of Jefferson, the county in which populous Birmingham is situated. Morgan County borders the 60,000-acre T. V. A. Wheeler Lake.

A hardware dealer in Corinth, Miss., reported that he pays the entire overhead of his establishment by the sale of fishing tackle, most of which is sold for use on Pickwick Lake, 22 miles away.

Nine stores in the vicinity of Norris Lake reported that their sales of fishing tackle in 1939 were on the average 1,255 percent over the sales of 1935, one store alone reporting a 2,000-percent increase.

Boating: At the last count there were 1,800 boats on Norris Lake, ranging from the lowly rowboat to the majestic 40-foot cabin cruiser. Total value of these boats was placed by their owners at well over a quarter of a million dollars. The fact that most of this is new recreation business—not transferred but new—is shown by the growth in number of marine sales and service shops in Knoxville. In 1934 there were 2; 5 years later there were 9.

These are, of course, but isolated instances of the economic importance of the recreational development of the Authority's own properties. But what of regional recreation development? The viewpoint of recreation as an industry is a development of modern times.

So it was quite logical that our studies and surveys looking into regional possibilities by which the people of the Tennessee Valley could improve their opportunities should consider the relationships of the region's resource base to recreation.

In our regional recreation studies of the valley we have taken for our major premise the tenet that scenery is a resource. It is. However, unlike coal or oil, it is permanent; it cannot be used up or exhausted. But it can be, and all too often is, wasted or despoiled. A perfectly beautiful natural scenic area is thrown open for colonization and development by the building of a new highway. I do not have to describe to you the results where no control exists. You see it along most of our major highways.

As with any business firm opening up a new territory, our first major regional survey was an inventory. We took stock of the scenic and recreational resources, existing and potential, in our field of operation. From this exhaustive survey there emerged the published report "Scenic Resources of the Tennessee Valley." Thousands of copies of this volume were distributed to Government agencies, schools, libraries, newspapers, and other agencies. Copies were sent to the Washington headquarters of the American Automobile Association and to every affiliate and branch in the seven Valley States and are now on sale at all our dams.

Response to this publication was highly gratifying, particularly in terms of results. A number of the recreational areas described as "potential" have been developed, with others under consideration by State and local governments and by civic-minded citizen groups.

Incidentally, in commenting on this publication, the New York Times had this to say about scenery as a resource:

"Our forefathers would have scratched their heads in wonderment if they had come across such an expression as 'scenic resources.' Of course they weren't blind to natural beauty. Those who had time and gifts of self-expression were writing of it and trying to paint it more than a century ago. But Nature bothered the pioneer rather more than she delighted him. The mountains had to be crossed, the rivers forded or ferried, water found in the deserts, trees girdled or cut down to make clearings where corn would grow. Not until a good deal of the countryside was tamed could we really enjoy the wildness of the remaining part. Not until pretty recently have we perceived that this wildness has to be cherished or it will be lost.

"So 'scenic resources' now mean something definite to us, just as timber resources or mineral resources did a few decades ago. They are something we need to sustain or improve the quality of our lives. * * * The Tennessee Valley is one of the country's loveliest regions. If it competes unfairly with other regions, that is Nature's fault, not men's—certainly not the New Deal's.

"The White Mountains, the Green Mountains, the Sierras, the Rockies, the Adirondacks, the lavish spread of thundering coast from Maine to Florida, from San Diego to the mouth of the Columbia, the painted deserts of the Southwest, the Great Lakes, the rivers gathering and going down to the sea—these have intangible values that sometimes outweigh tangible ones. They are resources that, well-guarded, will feed the soul of man forever. It is the highest type of conservation that preserves them."

Also from our inventory of scenic resources sprang a special study of the opportunities for recreational development of the southern highlands, a mountainous region encompassing some hundred or more counties in the eastern half of the Tennessee Valley and adjoining territory.

A direct result of these studies was the formation of a committee composed of many representatives, serving ex officio, of regional and local organizations. Part of this committee's program included the preparation and release of newspaper stories concerning the scenic assets of the region. These stories, released over an 8-month period, were carried by many papers in the valley region.

Perhaps an indirect result of this stimulation was the recent formation by citizens of Tennessee and Kentucky of a southern highlands council to carry forward the promotional work which neither T. V. A. nor any other Federal agency is authorized to undertake. This is, indeed, a significant advance, for, after all, the real results must come from the people themselves.

Another study we have undertaken which I believe to be of such interest to automobile clubs that I will report it in some detail is an analysis of tourist travel in the Tennessee Valley region. This survey was undertaken through questionnaire cards distributed on a sampling basis by several States in connection with the recent State-wide highway-planning surveys.

This study disclosed, at least insofar as the sample went, that two-thirds of the "foreign cars"—and by that I mean cars foreign to the State in which they were traveling when recorded—two-thirds of all foreign cars carried persons traveling for pleasure, as against one-third business. It showed also that these recreation cars carried an average of 3.1 persons per car; business cars, 1.8 persons.

Of the total foreign pleasure cars checked, only one-third were bound for destinations within the valley, the others merely passing through—and in a hurry at that.

Approximately 30 percent seeking recreation in the valley were here to visit friends—I believe this is a higher percentage than that obtained by the A. A. A. in its 1939 poll of members.

Being interested in standards of accommodations, we inquired as to where these travellers stayed. About 33 percent said they were stopping at hotels, 20 percent in tourist homes and camps, 16 percent with friends. Only 2 percent provided their own accommodations.

We also learned from this sample that most of the tourists questioned revisit the region periodically, about half doing so annually. In all probability this is accounted for by the Florida traffic.

We discovered also that recreation travel, while naturally reaching its peak during the summer, accounts for as high as half the total foreign-car traffic in this region even in winter months.

As I have stated, the foregoing analysis was drawn from a very brief sample—enough of a sample, however, to hint strongly of the tremendous value, even more potential than existing, of tourism to the region, and to suggest the heavy flow of traffic through the region, rather than into it, that could be encouraged to linger here and enjoy our scenic attractions.

As a follow-up of this study, we are currently cooperating with the Tennessee Department of Conservation in a thorough, 12-month survey of the economic importance of tourism. In my opinion, this survey will prove as valuable to this region as a census of agriculture or industry.

To sum up in one concise volume the complete story of all activities undertaken to date by the Tennessee Valley Authority in the field of recreation, we recently prepared and submitted to the President a report on this subject.

This report, as you may have read in the newspapers, has been transmitted to the Congress and is now being printed for public distribution as a House document. In it we have traced the growth of recreation in the region from the time of early summer colonies. We have described the extent of our own activity, both on T. V. A. properties and in the region as a whole. We have indicated the tremendous economic importance of recreation to this region. And, most important, the President, in the interests of unified regional recreation development, has asked Congress to consider broadening the statutory powers of T. V. A. to permit us to undertake further limited development to meet public needs on land suitable for recreation in reservoir areas acquired by T. V. A. for primary purposes.

It is our hope that the surveys, studies, demonstrations, and cooperation of T. V. A. have shown the opportunities for recreational development in the Tennessee Valley and the part that the magnificent scenic resources of the southern highlands should play in the upbuilding of the region. Much remains to be done. Many facilities are inadequate. The fact that areas of lowest per-capita income coincide with highest scenic values renders difficult the finding of capital for local development of those resources. And we earnestly hope that the pattern of earlier exploitation of timber and other resources, with little economic benefit to the people to whom the resources belong, will not be followed in meeting tourist demands. This should be largely local enterprise. The returns can and should stay within the area, benefiting both urban and rural residents.

You who represent the American Automobile Association will, I believe, develop enthusiasm for routing tourists to visit this region. You have a unique opportunity. Your members will see new scenery and great projects. A region which has seen many natural resources decline in value will gain from the appreciation of a new resource—its mountains, lakes, and equable climate. And the Nation will gain from the steady climb upward of a group of States which can and will contribute more to the national economy as their assets improve and their opportunities increase.

Foreign Policy

EXTENSION OF REMARKS
OF
HON. A. B. CHANDLER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Thursday, May 2 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. BRECKINRIDGE LONG

Mr. CHANDLER. Mr. President, I ask unanimous consent to have printed in the RECORD an address on foreign policy delivered by Hon. Breckinridge Long, Assistant Secretary of State, at the Forum on Foreign Policy and National Defense at the National Institute of Government May 2, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As you know, the Department of State is the agency which carries out the foreign policy of the United States for the President. At the very outset, I would like to state that the primary policy of the United States is to keep out of this war in Europe. Every single act of the Department of State has been directed to that end. That is the policy today, and that has been the policy since the war started last September.

The specific steps taken to effectuate that policy have been numerous. The first was to get American citizens out of the danger zone and to bring back to the United States just as many of them as wanted to come. The regular passenger boats were utilized, and five additional boats were diverted from their regular runs and sent to Europe for them. Approximately 80,000 persons were repatriated in the first 6 weeks of the war.

The second step followed immediately. As soon as the Congress passed the neutrality law the President defined danger zones into which American ships were prohibited to enter. The zone, as first established, ran from a point on the northern coast of Spain well out to sea, then up north of the British Isles and across to the coast of Norway below Bergen.

As other war areas developed, first in Finland, and subsequently in Denmark and Norway, the efforts of the Department were directed to getting American citizens out of those danger zones and returning them to the United States. And, as the waters in those regions became infested with naval and air activities, the President enlarged the danger zone to cover the whole coast of Norway, extending as far north as Spitzbergen and down through the Arctic Ocean to the northern coast of Russia.

Complementary to those two steps, in the first days of the war, when it seemed possible that there might be belligerent air activity directed at the centers of population and industry scattered through the countries at war, American citizens, particularly women and children, were advised to leave such centers and to seek places of refuge in smaller towns, pending the time they could be accommodated aboard ship. The object of each of these activities was to guard the safety of Americans abroad and to eliminate, as far as possible, political complications which might follow if a number of Americans should be killed or wounded.

Furthermore, in conference at Panama with all the other American republics, a complete understanding was arrived at. It was the unanimous decision of that conference to follow a similar standard of neutral conduct and with the same objective—that is, not only to keep out of the war but to keep the war away from us. With that object, a "neutral zone" was declared. Belligerents were requested to keep their naval warfare out of that zone and away from American shores.

The prosecution of the war in Europe between three or four of the most powerful nations has had its repercussions in all parts of the world. Complicated situations have developed not only in Europe but in other continents and in the islands of the seven seas and on the broad highways of the oceans. American interests have received the attention of the Government wherever and whenever they have been involved, and whether they have concerned the lives of American citizens or properties of American ownership.

In a brief few minutes it is impossible to give more than a most generalized statement of American foreign policy. That largely concerns political and economic matters. It is these which give rise to complications between nations—these and the unjustifiable use of force to solve them. As many of these complications have their bases in some injury to our citizens, we have taken steps to have our citizens leave dangerous areas and to prevent others from entering those areas. This does not apply to officers of the Government who are stationed at posts of duty abroad, like those who went through the siege of Warsaw, like those in Finland and Norway, like those in Paris, London, Berlin, and many other points in belligerent territory, who remain at their posts of duty, outposts of our policy of peace and at the same time our first line of defense.

As you have heard from the officers responsible for the activities of the Army and the Navy, the Government is preparing against any possible eventuality. The Department of State is following the paths of peace and the difficult and tortuous course of neutrality. We want to keep out of the war. We are planning to keep out of it. We have surrendered none of the rights of any individual American. However, for the benefit of the country as a whole, and in pursuance of the desire of the American people to keep out of the war, we have refrained from the exercise of certain rights because the exercise of those rights would take American citizens and American property into combat areas.

While the war in Europe is claiming constant public attention and interest, it is important that we do not lose sight of the fact that hostilities are also in progress in the Far East.

In the Far East, as in Europe, this Government has sought, by a reasoned approach and by peaceful measures, to protect American rights and interests, and to uphold fundamental principles of this country's foreign policy—and continues so to do. There, as in Europe, it has acquiesced in certain situations but it has reserved its rights in every instance when they have been challenged.

In this way we hope to prevent incidents from arising which might otherwise lead to complications. However, this waiver of the exercise of rights, and the desire of the United States to keep out of war, should not be misconstrued by any person in this country, or by any government abroad, as a supine acquiescence in the face of any injury to the American people, or as supreme indifference to any threat at the freedom and independence of this or any other American Republic.

Our voluntary decision not to exercise certain of our rights is predicated on our desire for peace—an orderly, decent peace. It is that kind of a world we desire to live in. An orderly and decent peace presupposes the observance of treaties and international commercial relations on a basis of reciprocity and fair dealing. One of the most important of the Government's functions involves the protection of our foreign trade. But the performance of this function does not require that we proceed by the law of the jungle. On the contrary, in the short run as well as in the long run, our own interests will be best served if we adhere faithfully to a policy of fair dealing in our commercial relations with other countries and, in collaboration rather than in conflict with them, work toward lowering the many obstacles to peaceful trade among nations. The policy of equality of treatment in international commercial relations is traditionally one of the cornerstones of American foreign policy. Upon this foundation we have been building, during the last 6 years, effectuating a commercial program which has as one of its principal objectives the firm establishment of the conditions necessary to a peaceful world.

The relationship of the trade-agreements program to peace and order in the world is simple. Through trade agreements in a peaceful world nations can increase their commerce with other nations. They can procure the materials they lack in their own country. They may sell the products which they may have in abundance for the things they do not have and provide for the commercial and industrial prosperity of their citizens. When these citizens are happily employed, when commerce thrives, when people are contented, and when governments are using the peaceful processes of orderly commerce to provide for the prosperity of their citizens, then there is less likelihood that those citizens can be led into the snares and delusions of aggressive warfare, either economic or actual.

We deplore the existence of war today and foresee in its trail major difficulties of many kinds if it long continues, if normal trade is further impeded by military activity, if avenues of commerce are continuingly disrupted by artificial barriers, if financial structures are more seriously impaired, if discontent is rife, and injustice heavy-handed.

To obviate those consequences so unpleasant to contemplate, our foreign policy is—

First, to keep out of war;

Second, to keep alive and preserve all American rights;

Third, to minimize during its course the evil effects of war upon commerce and industry; and

Fourth, to plan with the hope that after the war conditions will be so stabilized that in peaceful pursuits, established under a broad program of trade agreements, nations will be prosperous, peoples contented, and the causes of war reduced to a minimum.

War

EXTENSION OF REMARKS
OF
HON. ROBERT R. REYNOLDS
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, May 2 (legislative day of Wednesday, April 24), 1940

ADDRESS BY DR. ARTHUR TALMAGE ABERNETHY

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD an

address delivered by Dr. Arthur Talmage Abernethy at Rutherford College, North Carolina, on the subject of war. For the information of those who read the article I should like to have the privilege of saying that Dr. Abernethy is an educator, a lecturer, and an author of North Carolina, and has the distinction of having written 52 books.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Every fiber of my nature rebels against any unholy effort to involve the United States in war. If we are sincere in our proclamations as the spiritual leader of the countries of the earth, we will accept the preachments of the Great Peacemaker and turn our full powers to avert rather than to promote war. We claim to be a Christian nation. No Christian nation can afford to make war. War is hell, hell regnant and rejoicing, and no Christian can lend his services to promote hell. War is the triumph of the devil. It can find no justification amongst men nor forgiveness from God.

There never was a good war nor a bad peace. War is the rule of brute force over human reason. It is the recrudescence of barbarism. War stands stripped of its mask.

What is war? Not the flying flag, martial music, throbbing drum, flashing sword, gleaming epaulets. It is God's earth guttered with graves; the silver sea stained with blood; mangled bodies; arms and legs torn off; eyes shot out; buried alive; strangling with poison gas; stumbling through life on crutches; gaunt famine stalking through gullies and chasms which were once fertile gardens, grain fields, and orchards; ashes instead of happy homes; mourning instead of music and merriment; children tugging at empty breasts, and starving to death while mothers cry their hearts out; men trampled in the red mud under the hoofs of horses.

War is the concretion of all crimes; the sublimation of all sorrows; it is the avatar of death. War is the procurer and restaurateur of the ravenous vultures that fatten on the flesh of the sons of God. It is the apotheosis of hellish greed and cruelty. It is the incarnation of hell's archruler; the coronation of the anti-Christ. On his throne of human bones he sits, and out of empty skulls he quaffs the blood of men and the tears of women. His music is the staccato snapping of heartstrings, measuring the moans of orphans and the idle prayers of widows.

War is the pimp and pander of his majesty the earthworm. War is an epicure feeding only on the flower of manhood. His triumphal march is marked by the livid light of burning churches, galleries of priceless art, libraries, and happy homes. His trail is followed by famine, pestilence, and disease and death. Thirty-five times the number that live on earth have been sacrificed on his red reeking altars, and yet he calls for more.

War is the siren that maddens men and transforms them into beasts. It dethrones reason, kills conscience, and destroys all sympathy. It is the deification of murder. To this arch demon the taste of blood is as sea brine to the sailor, exciting more thirst. War is the carnival of all devils dancing on an isolated world and deriding the God who pronounced it good. War never settled any question; it never will. In its murky slime all vices are spawned; in its holocaust all virtues are consumed.

War is a hellish wizard; it subsidizes the press; fires the flannel-mouthed jingoes; suborns the poet and painter; dazzles the diplomat; subverts science; crazes the clergy; stampedes statesmen; mocks at peace parleys; and poisons public opinion.

War is a pirate; it takes its toll and tithe of all production; it grinds the poor into powdered dust to enrich the profiteer, the bond baron, munition makers, the Coffin Trust, makers of surgical instruments, glass eyes, artificial legs and arms, the Steel Trusts, and the undertakers.

War is an anarchist and outlaw, laughing at all conventions, tearing all treaties into strips, and planting every peace pact with seeds of subsequent struggle. War is of the devil—and "war is hell."

Foreign Loans

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, May 2 (legislative day of Wednesday, April 24), 1940

ARTICLE BY HUGH S. JOHNSON

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very interesting article by Gen. Hugh S. Johnson.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News]

ONE MAN'S OPINION

(By Hugh S. Johnson)

This is the way to get mixed up in other peoples' wars. First, you sell them your goods. They become your "best customer." They make jobs for your unemployed and dividends for your stocks. When their purchases have become an important part of your economy, they run out of cash.

Your business is threatened. They ask for credits. Some old boat rockers begin to croak about this. Some say, "Where your treasure is there will your heart be also. This will surely compel you to send armies to protect your dollars."

Your politicians reply: "We shall never send an American mother's son to bleed on foreign shores." Your best customers add: "We don't want your military assistance. You are too far away. Your efforts to equip and transport armies would interfere with your value to us as a base of supplies."

The assurance of repayment of such loans is so slender that no private funds are available. No one person wants to risk, but if Congress authorizes the Treasury to loan, all the people will be forced to risk collectively what nobody would be willing to risk individually.

That is reckless statesmanship, but by this time hysteria and emotion have ousted both prudence and judgment.

From the beginning of this sequence there has been growing a sloganeering stupidity. "They are fighting our war. They are paying in blood. We shall only pay in dollars. It is the least we can do." When we opened a credit of $3,000,000,000 to the Allies in the World War the votes in the committees of the House and the Senate were unanimous. To the suggestion that Allied bonds were selling below par the answer was, "All the more necessary to loan them this money at the lowest possible rate of interest." When one Congressman said, "They will use it to retire private loans elsewhere," answer was, "Do not limit or qualify the use of this money." When mutual guaranties among borrowers was suggested the reply was (prophetically), "If we get this money back at all, we shall get off cheap."

Thus we buy an interest in a war we are going to fight with goods and dollars but not with blood—"just a few divisions as a token and a symbol to show the flag."

Then the going gets tough. We are in to the eyebrows on the economic and sympathetic side. Our friends' backs are "at the wall." The whole tune changes. "Send us men. If they haven't equipment, send them in their undershirts."

The demands on us become almost insulting to abandon our organizations and commands and conscript men to fight under foreign flags and officers.

So we finance most of the cost of the war from this point out for ourselves and our allies. We pack men by the millions like sardines into transports and send them untrained into battle. We are cursed for tardiness, stinginess, and timidity. Then comes victory—maybe—and we learn that we have been fooled on the war's objectives. The victors didn't share our ideals, and under secret treaties they take all and leave us nothing—and then repudiate all debts and villify us for even asking for repayment.

This is our actual World War experience, neither distorted nor exaggerated. We are going through it again step by chuckleheaded step. We have now reached the stage of "we don't want your men, only your dollars," and "they are fighting our battles," and "we will help them by everything short of war but not an American mother's son will be sent abroad."

"As a dog returneth to his vomit, so a fool returneth to his folly." (Proverbs XXVI:11.)

Work of Federal Housing Administration in Wyoming

EXTENSION OF REMARKS

OF

HON. H. H. SCHWARTZ

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Thursday, May 2 (legislative day of Wednesday, April 24), 1940

LETTER FROM STEWART McDONALD

Mr. SCHWARTZ. Mr. President, I ask to have inserted in the Appendix of the RECORD a letter addressed to me by Stewart McDonald, Administrator of the Federal Housing Administration, under date of April 29, 1940, together with a small tabulation attached thereto showing in detail, by counties, the extent of loans made by Wyoming banks and private lending agencies operating in conjunction with the Federal Housing Administration.

There being no objection, the letter and tabulation were ordered to be printed in the RECORD, as follows:

FEDERAL HOUSING ADMINISTRATION,
Washington, April 29, 1940.

Hon. H. H. SCHWARTZ,
United States Senate, Washington, D. C.

MY DEAR SENATOR SCHWARTZ: The semiannual summary of F. H. A. operations reveals that 5,813 families in Wyoming have received loans of $9,507,736.31 for home-financing purposes. These loans were made by private lending institutions and had been insured by Federal Housing Administration as of the close of business December 31, 1939.

Of this amount 3,266 families obtained $1,613,688.31 in order to improve, repair, and remodel their properties under the property-improvement provisions of title I of the National Housing Act.

In addition, F. H. A. insured loans totaled $7,894,048 in Wyoming for the purpose of financing home ownership for 2,547 families.

At the present time approximately 12,000,000 people in the United States are receiving the benefits of the F. H. A. program.

The F. H. A. insured mortgage has been a most instrumental factor in developing new home construction, the year 1939 breaking all records in volume of loans insured. The 1940 volume thus far exceeds even last year, and I feel confident in forecasting that 1940 will show the greatest small-home building program since 1927.

In accordance with your telephonic request sometime ago I am pleased to enclose the list showing the volume of these loans for each county in Wyoming.

Sincerely yours,

STEWART MCDONALD,
Administrator.

Volume of Federal Housing Administration insuring operations, by counties, in the State of Wyoming—Net cumulative totals through Dec. 31, 1939

County	Title I. Property-improvement loans insured		Title II. Small-home mortgages accepted for insurance		Total	
	Number	Amount	Number	Amount	Number	Amount
Albany	131	$64,130.27	167	$628,850	298	$692,980.27

South's Greatest Resource

EXTENSION OF REMARKS
OF
HON. A. B. CHANDLER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Thursday, May 2 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM LEXINGTON (KY.) HERALD

Mr. CHANDLER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the Lexington Herald, written by one of the ablest young editors of the country, entitled "South's Greatest Resource," in which reference is made to a speech of the junior Senator from North Carolina [Mr. REYNOLDS].

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Lexington (Ky.) Herald]

SOUTH'S GREATEST RESOURCE

The southeastern conference of motor clubs, conducted in Knoxville under the auspices of the American Automobile Association, attracted attention to the programs under way for the advancement of the South. Timely in connection with this conference was the announcement that President Roosevelt, from the "little White House" at Warm Springs, Ga., that he is going to visit Natchez before returning to Washington and will return later in the summer to dedicate the Great Smokies National Park area in Tennessee and North Carolina. In Knoxville at the same time for a businessmen's meeting that had no connection with the A. A. A. conference, Gen. R. E. Woods, a native Georgian, now chairman of the board of Sears, Roebuck & Co., declared that the industrial expansion of the South will be the outstanding development of the next few years.

Featuring the automobile club conference was a talk by Senator ROBERT REYNOLDS, of North Carolina, one of the livest wires in the United States Senate, who "electrified" his hearers with his discussion of what the T. V. A. area may become. Senator REYNOLDS pointed out that for the cost of two battleships the United States has been able to accomplish the tremendous development of the Tennessee Valley, touching Kentucky at several points, including nearly the entire State of Tennessee and much of Alabama. What Norris Dam and the Smokies have meant to eastern Tennessee can hardly be overestimated, and the State is overlooking no opportunities to make the most of the advantages offered. Pictures of elated fishermen pulling fish out of lakes and streams that would gladden the heart of any sportsman feature all the numerous booklets and maps.

Large promotion programs have been undertaken in many of these States. North Carolina voted $250,000 for publicity and promotion; Tennessee's conservation department has some $600,000 annually from all sources including fees to spend; Mississippi has invited the A. A. A. Southeastern Conference there for 1941, with a tour of the State planned for the representatives of motor clubs; and Virginia, of course, is the Old Dominion from the viewpoint of having long ago developed its history and its charm effectively.

In view of the extensive efforts through departments of cooperation, motor clubs, and national parks and recreational development in other States, it is gratifying to have heard David H. Lasley, executive secretary-manager of the East Tennessee Automobile Club at Knoxville, pay high tribute to Kentucky's steps taken largely through the In Kentucky magazine, which he says he finds the most popular and in many respects the most effective of all promotional material of this kind coming to the desk of his office.

The war in Europe, the Nation-wide revival of interest in southern scenes through Gone With the Wind, together with the closing down of tourist traffic to Europe and the interest in so many southern tours to Mexico and the growing winter seasons in Florida and New Orleans have given an impetus to this expansion in the new South.

While much has been said of the South as the Nation's No. 1 economic problem, there has been too little appreciation of the fact that there has developed culturally and slowly, due to the natural customs of the people, a solid foundation for peaceful, happy, contented life where there is an absence of unrest, animosity, and antagonism.

Often called the South's greatest weakness we nevertheless look upon the romance, tradition, and chivalry of the South as her greatest resource in the vision, the courage, and the strength of her people. Surely the hospitality, as immortalized in song by Stephen Collins Foster whose music with its pathos and beauty is heard on nearly every program today and who will soon figure on one of Postmaster General Farley's new postage stamps, and the home life and love of living found in the South are far to be desired over the bitterness and ambition that have led Europe to war and bloodshed. As has been said, "Give a man a home and he'll work for a home and fight for a home, but who ever heard of a man who would fight for a trailer?"

Kentucky's interest in this program that is being developed by the motor clubs was evidenced by presence at the conferences of Eugene Stuart, secretary-manager of the Louisville Automobile Club and Lexington's Glen Weinman, secretary-manager of the Blue Grass Automobile Clubs, both recognized as among the Nation's leading examples of what such organizations should be and both leading in the South in memberships and accomplishments.

Clearly and emphatically what these discussions bring out is that tourist programs must be developed for wider areas than single club areas or even State lines and, further, that all activities that are related, including conservation, park creation, maintenance, and development, waterways improvement for flood control or whatever purpose, industrial expansion and all these other activities should, by all means, work hand in hand because they are all integral parts of the same major plan.

Regulation of Modes of Transportation

EXTENSION OF REMARKS
OF
HON. HENRIK SHIPSTEAD
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Thursday, May 2 (legislative day of Wednesday, April 24), 1940

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the RECORD a statement and a letter to the President of the United States, prepared and released to the press by representatives of various farm groups.

There being no objection, the statement and letter were ordered to be printed in the RECORD, as follows:

A delegation of representatives of agricultural organizations including the National Grange, National Wool Growers' Association, American National Live Stock Association, and of Midwestern cooperative farm groups today presented to President Roosevelt a written protest against enactment of the Wheeler-Lea omnibus transportation bill.

Among the resolutions given the President were the following:

American Farm Bureau Federation; American National Live Stock Association; Indiana Farm Bureau, Inc.; Kansas Farm Bureau; Kansas Farmers' Union; Louisiana State-wide Conference, Baton Rouge, La.; Mississippi Farm Bureau Federation; Missouri Farm Bureau Federation; National Cooperative Elevator Association; National Farmers Union; National Grange; National League of Wholesale Fresh Fruit and Vegetable Distributors; Nebraska Farm Bureau Federation; Texas Sheep and Goat Raisers Association; Vermont State Grange, Bellows Falls, Vt.; National Wool Growers' Association; United States Live Stock Association.

The delegation visiting the White House included:

J. Elmer Brock, president, American National Live Stock Association; Frederick Brenckman, National Grange; J. B. Wilson, secretary, Wyoming Wool Growers Association, National Wool Growers Association; Irvin E. King, master, Washington State Grange; T. M. Hoskins, manager, Lone Tree Farmers Exchange, Lone Tree, Iowa; Oscar Heline, president, Farmer Grain Dealers Association of Iowa, Marcus, Iowa; Frank Rutherford, secretary, National Cooperative Elevator Association, Omaha, Nebr.; Earl Peterson, Midland Cooperative Wholesale, Minneapolis, Minn.

At the same time they presented a bound copy of resolutions adopted by 25 national and regional agricultural groups protesting against all legislation which would place water carriers and motortrucks under the Interstate Commerce Commission.

The communication to the President outlining the farmers' objections to the Wheeler-Lea transportation bill follows:

WASHINGTON, D. C., *May 2, 1940.*

Hon. FRANKLIN D. ROOSEVELT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: We are opposed to the adoption of the conference report on the Wheeler-Lea transportation bill for the following reasons:

1. It ignores the public interest and lays the basis for a transportation monopoly.

2. It will increase the cost of distributing agricultural products, which cost the farmer has to bear, thereby reducing his income.

3. It will increase the cost of things that the farmer has to buy, thereby further reducing his income.

4. The destructive effects of this legislation upon agriculture will retard the economic recovery of the Nation, and this in turn cannot fail to adversely affect the railroads themselves, who are the advocates of this bill.

5. Those who drafted this legislation appear to have lost sight of the fundamental purpose for which Government regulation was established, namely to protect the public interest. Instead of adhering to this sound principle, under the bill regulation would be employed to stifle competition and to bring water and motor rates up to the level of rail rates, regardless of the cost of rendering the service.

The cost of transportation is the heaviest service charge that the farmer has to pay. Approximately 20 percent of all the freight revenues accruing to the railroads are derived from carrying agricultural products to market. In 1929 the farmer's freight bill amounted to $1,000,000,000. In 1937, when the farmer's income was greatly reduced, the figure was $638,000,000. These items do not include the freight charges paid on commodities purchased by the farmer, which he must likewise pay.

Last year the farmer received only 39 cents out of every dollar paid by the consumer for food. At the depth of the depression the farmer's share of the consumer's dollar dropped to 33 cents. While transportation and distribution must be regarded as legitimate and indispensable functions in the affairs of civilization, the fact remains that when those who merely transport and distribute the products of our farms receive vastly more than the share that goes to the producer, it amounts to the same thing as the perpetration of an economic crime. Instead of ameliorating the conditions that have so long handicapped agriculture in matters relating to transportation, the pending bill would most certainly aggravate the situation.

We are sensible of the fact that railroads are a necessity, and we want every properly managed railroad to be solvent and prosperous, but we must not lose sight of the fact that agriculture is also a necessity, even more fundamental to the well-being and the very existence of man than the railroads or any other agency of transportation can possibly be. Common sense should teach those who are charged with the management of our railroads that they cannot expect to benefit by reducing to bankruptcy the fundamental industry upon which their prosperity rests.

There is justification for condemning the report of the Conference Committee on the transportation bill by virtue of the fact that the Miller-Wadsworth amendment, which passed both House and Senate, was entirely eliminated from the bill. The gist of this amendment was to the effect that no form of transportation could be compelled to charge higher rates than would be compensatory. The full wording of the amendment was as follows:

"In order that the public at large may enjoy the benefit and economy afforded by each type of transportation, the Commission shall permit each type of carrier or carriers to reduce rates so long as such rates maintain a compensatory return to the carrier or carriers after taking into consideration overhead and all other elements entering into the cost to the carrier or carriers for the service rendered: *Provided*, That nothing in this paragraph shall be construed so as to affect the long-and-short-haul provision of section 4."

It is manifest that with the Miller-Wadsworth amendment stricken out, the declaration of policy contained in section 1 constitutes nothing but empty words because nothing contained in the bill gives the public any assurance that it will receive the benefit of transportation at the lowest possible cost. In our opinion the Miller-Wadsworth amendment was so fair and reasonable that it would be nothing short of tragic to pass the bill without this provision.

Those who are engaged in agricultural pursuits find an additional reason for dissatisfaction in the report of the Conference Committee because an amendment adopted by the House which provided for reduced rates on farm products for export, comparable to the lower rates granted to industry in this connection, was eliminated.

We maintain that there are only two legitimate grounds upon which the Government could justify itself in attempting to regulate transportation on our inland waterways and in the coastwise trade. One of these grounds would be in the interest of public safety, and the other to protect the public against monopolistic practices. So far as safety is concerned, the Department of Commerce already looks after that; and when it comes to protecting the public against monopoly the truth is that no monopoly whatsoever exists among the carriers on our inland waterways nor in the coastwise trade. The rivers, the lakes, and the seas are open to all. So far from breaking up any monopoly among the water carriers, which in reality is nonexistent, the pending legislation takes a long step toward creating a monopoly.

The carriers now operating would be permitted to continue, subject to rules and regulations laid down by the Interstate Commerce Commission; but before it would be possible to establish a new service it would be necessary to secure from the Commission a certificate of public convenience and necessity. If this bill should be enacted, it is very doubtful if there would be any new water carriers, because the legislation is so worded as to virtually instruct the Interstate Commerce Commission to deny any person a certificate of convenience and necessity if the Commission comes to the conclusion that the present transportation facilities are adequate to take care of existing commerce. The fate that befell many of the common and contract carriers under the grandfather clause of the Motor Carrier Act of 1935 furnishes an example of what may happen to many of our water carriers if the present bill is passed.

As the Secretary of War, the Secretary of Agriculture, and the Chairman of the Maritime Commission well said in a joint letter addressed to Senator JOSIAH W. BAILEY on February 16, 1940, in opposition to this legislation:

"Certificates of public convenience and necessity should not be used to create a monopoly in the branch of transportation industry where monopoly is presently nonexistent, and where the public interest requires that competition, although it should be regulated to prevent abuses, should not be limited or discouraged. The great advantage of water transportation to shippers is the flexibility and variety of service it can offer. Certificates of public convenience and permits would destroy this advantage and stifle competition. The same effect of stifling competition is discernible in the provisions of the bills that, except with the permission of the Interstate Commerce Commission, no carrier can operate both as a common carrier and as a contract carrier."

We think the writers of the joint letter already mentioned are on the right track when they said:

"All the provisions of the bills seem designed to free the railroads from restraints and obligations, while imposing restrictions on their water competitors and making it more expensive for the public to move freight. Under these provisions inland water carriers can

easily be regulated out of existence without the recapture of enough tonnage to affect railroad earnings appreciably."

We also endorse the further statement of the writers of the joint letter when they declare:

"Farmers and other shippers should not be required to pay rates based on transportation costs of properties improvidently built, wastefully operated, or partially obsolete. The advocacy of thorough regulation of the minimum rates of motor and water carriers by a centralized agency appears to represent an attempt to use Government power to bring competing transportation agencies into a cartel, and in this manner to share traffic and adjust rates in such a way as to earn a return upon all transportation capital of these agencies. The present high rail-rate level would be protected from the impact of vigorous competition. Undoubtedly such a policy would also result in more rigid rates in times of depression, since the motor carrier and the boat line would no longer play their role as an effective competitive force in bringing down rail rates on commodities susceptible to rail or truck, and rail or water movement."

We are impressed by the fact that the general public has had no opportunity whatever to become acquainted with the conference report on the transportation bill; the Members of Congress as a whole have not had time to familiarize themselves with its details; there is no public demand for this legislation; it is filled with numerous objectionable features and ambiguities, and for the good of all we are strongly of the opinion that it should be defeated.

Respectfully submitted.

J. Elmer Brock, president, American National Live Stock Association; Frederick Brenckman, National Grange; J. B. Wilson, secretary, Wyoming Wool Growers Association, National Wool Growers Association; Irvin R. King, master, Washington State Grange; T. M. Hoskins, manager, Lone Tree Farmers Exchange, Lone Tree, Iowa; Oscar Heline, president, Farmer Grain Dealers Association of of Iowa, Marcus, Iowa; Frank Rutherford, secretary, National Cooperative Elevator Association, Omaha, Nebr.; Earl Peterson, Midland Cooperative Wholesale, Minneapolis, Minn.; Alfred D. Newson, master, Indiana State Grange.

More "Spinach"—An Answer to the President's Blast Against the Critics of Reorganization Plan IV

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1940

Mr. BRADLEY of Michigan. Mr. Speaker, in a prepared statement read to newspaper men at the White House executive offices Tuesday, the President of the United States, in item 1 of his statement, sets forth that adoption of the Reorganization Plan IV, "will provide for a program of basic significance to our national transportation and our national defense."

If that is the case, it is quite probable that Reorganization Plan IV does not conform with the basic provisions of the Reorganization Act itself. Further, if Reorganization Plan IV was really intended to make our civilian aviation ready for war, as is implied by the President, then I submit that the Civil Aeronautics Authority might better be placed under the Chief of the Army Air Corps than under the Secretary of Commerce. Certainly there is no sense to placing a growing transportation system under the direction of a body of trade boosters whose record in the field of aeronautics consists of a series of fatal fumbles.

Under Item 2 of his statement, the President states "the Civil Aeronautics Authority will continue to appoint and control its own personnel and submit its own budget." However, it appears that the President has forgotten that section 7, paragraph (c) of his own reorganization plan definitely states that such procurement of personnel and budgeting shall be "performed under the direction and supervision of the Secretary of Commerce."
